Certainly not the present high protective tariff, enacted by a Congress Democratic in both branches and allowed to become a law by a Democratic President, who nevertheless denounced it as too atrociously protective to receive his signature. The present tariff is one of the highest protective tariffs ever in force in the United States. Its average rate falls short of the average rate of the preceding tariff, distinguished as the McKinley tariff, by very little. A Presidential campaign waged in support of the general theory of protection as against the general theory of tariff taxation for revenue only is a conceivable thing. Such a campaign occurred four years ago. But a Presidential campaign turning on the question whether 41 per cent, let us say, or 47 per cent shall be the average rate of protection is utterly inconceivable to the ordinary mind. You are not going to fire up much enthusiasm in the hearts of either the forty-oners or the forty-seveners.

Is the fight to be for the rearrangement or readjustment of the protection afforded by the schedules of the existing tariff? That undertaking might involve differences of opinion important enough to start a controversy in a Committee on Ways and Means, or even to occasion a lively debate in the House, sitting as a Committee of the Whole. Hardly important enough to fill and inflame the length and breadth of the Union in a Presidential year.

Or is it merely to contend in behalf of the theory of protection, as an abstract proposition, that the warriors of McKinleyism are arming themselves? Do they want to smash the last Democratic national platform? The enterprise is superfluous; the Democracy has smashed the platform already. The Democrats themselves have abandoned the position which the McKinley Republicans propose to attack. The McKinley warriors may march forth to occupy a stronghold which has been evacuated by its garrison, but it is a strained use of the English language to speak of such a proceeding as a fight, much less as the principal fight of a great Presidential campaign.

It requires two sides to make a fight. It requires two political parties, both earnestly interested and hot for the wager of battle, to make a main issue for a Presidential campaign. What is the tariff issue which looms before the excited imaginations of those Republicans who profess to regard the cause of honest money and the gold standard as of subordinate importance?

Nobody yet has told us this in language clear enough to be comprehensible.

Mr. STEWART. It will be observed by that article, which I think fairly dissects the situation, how inconsequential the purposes of the Republican party are except to obtain the offices. I do not know about the Democracy, whether the Democratic party has any purpose or not. It has been without a purpose for many years, and whether it will ever have a purpose it is for the future to determine. So far as the Republican party and the Democratic Administration are concerned, they are one and the same; their purpose is the same. It is their purpose to maintain the gold standard by loading the nation with debt, paying a premium for gold, increasing that debt year after year—falling prices, stagnation, and hard times. That is their purpose. They have indicated no other policy.

Not one gleam of hope has come from either the Democratic Administration or the Republican managers. I defy any man to suggest a proposition put forth by either which by any possibility could relieve the present distress. On the contrary, they refuse to change the policy of borrowing money; they refuse to change the policy of impounding the greenbacks in the Treasury; they refuse to change the policy of buying gold for gold gamblers; they refuse to change the policy of contraction; they refuse any hope. They are in favor of retiring the legal tenders. They are in favor of depriving the people of money. They are in favor of an Asiatic tariff, built up by a difference of exchange, whereby the Asiatics and all silver-standard countries have at least 100 per cent advantage in the markets of Europe.

McKinleyism means what? It means to maintain the Asiatic tariff against American farmers. It means to build up for a special privileged class a tariff high enough to protect the manufacturers of the East. It means to make the necessaries of life dearer and dearer to the producers of this country. It means to make the products of the unprotected labor of this country cheaper and cheaper. It means to put the farmer in competition with 800,000,000 coolies, who are competing with him in the European markets. It means to impoverish the farmer. No one seeks to protect him.

I have been a protectionist and I have advocated protection; but I never dreamed that the party to which I belonged would abandon the producers of this country and build up a protection entirely in favor of the millions of coolies and see the struggling masses of this country reduced to powder. I never believed that. Why, the first move in protection is to equalize exchange, to give our people money, to make it possible to manufacture in different parts of the country. Protection with the gold standard means slavery for the masses. It means to build up classes, to build up and widen the gulf between the laborers and the money changers.

The Republican party in the House declared—Mr. REED, who is the Republican party of the House, declared—that nonaction should be their motto; that they dared not disturb the present condition of things—contraction, falling prices, and hard times, and borrowing gold for gold gamblers—and they have not disturbed it. They are going forth to the country and say it shall not be disturbed, that the tariff shall be the issue; and here we have got a tariff only about 5 or 6 per cent below the McKinley tariff. Mr. McKinley himself stated in several speeches that perhaps his tariff was too high, and perhaps it was extravagant. Certainly the present tariff is higher, on an average, than any other tariff we have had, except the McKinley tariff. It is higher than any other in the history of the country except the McKinley tariff. We are going forth now to fight for what? To fight for the gold standard. How are we going to do that? By smothering the real money issue and keeping this sham issue of tariff before the country. The New York Sun, in the article which has been read, describes what kind of a fight that is. They are going to fight bravely with nothing before them.

Now, as to the Democratic party, if any party could have done more to injure the country than it has done for the last three years it would have been something more than human. I think the wit of man has been about exhausted to plunge the country into distress. Whether the party will reform or not, there are men in the Democratic party who do not like the present situation. There are men in the Democratic party who do not like loading the nation with debt in time of peace to buy gold for a set of gold gamblers. There are men in the party—here in the Senate—who rebel against any such proceeding. There has been a strong vote of Democrats here against it, and some Republican votes, too; but the Republican votes came from men who are opposed to sinking the country under the gold standard and fastening the chains of bondage upon the people. There are men in the Democratic party, and in the Republican party, but more in the Democratic party, who do not like the single gold standard, who do not like the English gold standard, who want to restore the money of the Constitution, who believe in the money of the better days of the Republic, who believe that there is not too much of both gold and silver for use as standard money.

There is a movement in the country which, if it can have expression, will sweep from the earth the policy which is afflicting mankind. Four-fifths of the people of these United States are in favor of the restoration of the money of the fathers and the wise laws of Hamilton, Jefferson, and Jackson as they existed prior to 1873. If they do not give expression to their sentiments it will be because the leaders will manipulate and keep them apart. But they will come together if you will let them. They will embrace the opportunity if you give it to them. The great mass of them put country above party. They mingle together in their neighborhoods and make no distinction as to party. They want a party of patriots such as existed in the better days of the Republic. They are anxious to throw off this load; they are anxious for the restoration of peace and prosperity as it existed in the better days of the Republic, as it existed before the machinations of a few men destroyed one-half of the metallic basis of our circulation and brought on falling prices and enabled a few money manipulators to pool the gold in the world, to take the circulation from the people and to charge what they pleased for it.

There is no gold in circulation, but everything is to be sold at such prices as the gold kings may dictate. The gold is pooled, and the kings of that pool have held in bondage as slaves the politicians of both hemispheres, who have danced to the music of the stock jobbers, the smaller fry following on.

We are rushing to adjourn the Senate for what purpose? One party is going out to make war between tweedledee and tweedledum. The Republican party can not state an issue which they dare to meet. We see the papers filled for days as to how they can get a jumble of words to deceive somebody, not how they can express a sentiment upon which people may vote; but the whole discussion of the leading politicians of the day is how they can twist words to deceive somebody.

Nobody will be deceived this time. No jumble of words will do. In this campaign you must be for the single gold standard, as the English syndicate prescribe, or you must be for the restoration of the money of the Constitution. The common people have dropped on it; they understand it; and they are moving from the Lakes to the Gulf and from ocean to ocean and all around the coast. They begin to understand how you have deceived them.

Let me tell you politicians, who care not for country but are fixing words to deceive, the day will come when the common people will rise in their might and rescue this Government from your hands and place it in the hands of those who use plain English and do not boast of the power of deception. What a spectacle these newspapers present; and we are going to adjourn Congress to engage in a fruitless struggle, a struggle that will bring no hope to anyone, a struggle that will sink us deeper and deeper in poverty and want.

I tell you, Senators, this Congress ought to stay here and grant relief. If the gold men have any legislation to propose that will give relief, let us know it. Let them proclaim it. The only thing they have proposed or suggested was more contraction, more hard times, less money for the people, lower prices, more debt, harder competition with the Asiatics. This country, with its 70,000,000 people, ought to be the richest nation on earth, and it would be the richest if an English syndicate had not been allowed to rob us of our patrimony. If we could make American laws, if there was an American sentiment here so that we could make laws for America and not have them dictated from the other side of the Atlantic, we would be an independent and a free people.

What an outrage it is that here, after thirty years of profound peace and abundant harvests, the opportunity for an honest, industrious man should be worse that it has been at any period since the landing at Jamestown! Never in all history have there been such galling hard times, such discouraging conditions, so much despair and want and misery among the masses of the laboring people, and particularly among agriculturists, as there are to-day. No young man can go forth into legitimate business and make money, because prices are falling, and if he produces property it is worthless in his hands. And this condition, known of all men, has been treated with ridicule and contempt by this Congress! We have sat supinely here and never raised a hand to relieve the people from the burden under which they are groaning!

I suppose we may as well adjourn, for we shall do nothing. This is a do-nothing Congress, and it is proposed to carry on the business of doing nothing and have no issue except an issue to grind the people and to avoid giving them any relief. That is all that is proposed for the future, and I suppose the sooner Congress adjourns the better. I shall not prolong its session.

Mr. ALLISON. I hope we can now have a vote on the resolution.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. BUTLER. Mr. President, before the question is put, I desire to call the attention of the Senate and the country to a few pertinent facts. I have here a copy of this morning's Post, which contains an article that is very pertinent in view of the resolution now before the Senate, which I should like to have read.

Mr. HAWLEY. Will the Senator from North Carolina let me appeal to him? I wish to say that it is really a matter of very great consequence, of business consequence and in every other way tending to the comfort and satisfaction of Senators, to have the resolution providing for adjournment at 3 o'clock to-morrow go to the other House for their concurrence. The floor will still be open for Senators to make speeches. We might like to have a little dinner to-night and to take a recess for that purpose. Then speech making can go on at half past 8. But I wish, and I know Senators wish, the resolution to go to the other House for concurrence.

Mr. BUTLER. The thing that I want to talk on is the resolution. I do not care to talk after it has passed. I am willing to adjourn if it is a comfort to Senators and make my remarks to-night or in the morning, but I have got something to say on the resolution.

Mr. HAWLEY. I think it better that we spend the night in talking if we do not want to adjourn at all.

Mr. ALLEN. I rise for the purpose of making a suggestion to the Senator from Iowa. Would it not be better to let the resolution go over until to-morrow morning before voting on it?

Mr. FAULKNER and others. Oh, no.

Mr. ALLEN. I see nothing to be lost or gained particularly, although I can well understand that the President would have so many bills before him that he might not be able to approve them or prepare a veto if the hour is fixed.

Mr. ALLISON. I think there will be no difficulty in securing the signature of the President to such bills as he may approve. I should be very glad to accommodate Senators, but I think it is very important, if we are to deal with this subject, that the Senate should pass upon it to-night, in order that the resolution may go to the other House. It was my purpose later on, as soon as this matter is disposed of, to ask the Senate to take a recess until half past 8 or, say, 9 o'clock. It will be necessary, in order that enrolled bills may be signed and other business between the two Houses transacted, that the Senate shall be in session to-night. It will probably be in session to a reasonably late hour to-night, so that all the real business of the Senate may be transacted and sent to the President.

Mr. BUTLER. I suggest to the Senator from Iowa, to keep from inconveniencing Senators, as it is now our dinner hour, that he let the resolution go over until to-night, and when the Senate reassembles at 9 o'clock I wish to make some brief observations upon it.

Mr. ALLISON. I would prefer that the resolution should be passed and go to the other House before taking a recess.

Mr. BUTLER. Mr. President, before the resolution to adjourn Congress is passed, it is well enough to stop and see what has been done and where we are at and where the country is at. Senators are paid a salary by the year. We are about to leave here and proceed to draw four hundred and some odd dollars a month at home, while our constituents are unable to draw anything, which is quite a serious question to our constituents, and ought to be to us as their representatives.

We have been here since last December, and we have done absolutely nothing. I challenge any man in this Chamber or the other to point to a single bill which has become a law that will be of material benefit to the American citizens, or that will in the least relieve the real trouble lying at the root of financial ills and the economic evils that are now like a cankering sore eating and undermining the body politic. There is not a single measure. Here we have stayed, and we have hedged and sparred, one side trying to place the responsibility on the other, a Democrat rising in his seat and pointing at the Republicans as being responsible for the condition of the Treasury, a Democrat pointing at and blaming the Republicans for bringing evil times upon us, and just as often a Republican has risen and tried to show that it has all been brought upon us by the Democratic party and the Democratic Administration.

This sham battle has gone on, with Senators sparring for party advantage, while each hour has increased the evil conditions that have grown up for the last twenty years because of laws placed upon the statute books by the Republican party mainly, and indorsed by the Democratic party—because when it had its chance it did not repeal them and therefore it indorsed them, and not only indorsed them but augmented them, for it commenced where the Republicans left off and leaves the laws and therefore conditions worse.

A few days ago a most important measure passed this body, probably the most important measure that has been before Congress this session, probably the most important measure that has passed either House—a bill to put a barrier between the hands of the gold combine and the Treasury of the country, a measure to stop the endless chain which was invented by the Senator from Ohio [Mr. SHERMAN], put into operation by him, and which has been kept well greased and running at high speed by the Democratic President ever since he got a chance to operate it to deplete the people's Treasury, to put the dollars thus robbed from us, I may say truly, into the coffers of aliens.

That bill, I say, is more important than a free-coinage measure. Why? Because it strikes at the root of the evils that have brought hard times and distress upon the country, with the evils which have resulted, low prices, mortgage, debt. It was the bondholder who demonetized silver, and it was simply one of his many schemes to enhance the value of his bonds and to pillage and plunder the American people.

Mr. PEFFER. I wish to inquire whether it would suit the convenience of the Senator from North Carolina to conclude his remarks after dinner. We are all getting a little hungry. I know I am.

Mr. BUTLER. It would suit me just as well. I should like to be reenforced by my dinner before I proceed; but still I am prepared to go on.

Mr. ALLISON. Of course, this debate we understand to be political in its character, and I trust that the resolution may pass. Certainly the Senator from North Carolina will have ample time to complete his observations this evening in the line on which he seems to be proceeding or on any other line that may be agreeable to him.

Mr. BUTLER. Yes, it is political, and that is why it is pertinent now. It will not be so pertinent after this session of Congress has gone out of existence—is dead—and therefore unable to give the people relief. I do not desire now to engage in preaching funerals. I am talking over a live question and not a dead one. I will not allow the resolution to pass and then make my speech on it after Congress has decided to adjourn.

Mr. ALLISON. I did not suppose the Senator was engaged on a funeral address.

Mr. BUTLER. If you adjourn this Congress and do nothing I will preach the funeral address next November.

Mr. ALLISON. I ask the Senator if he is opposed to the resolution?

Mr. BUTLER. I want to have a chance to express my opinion about it before voting on it one way or the other.

Mr. ALLISON. Then I will not interrupt the Senator. I hope he will be allowed to proceed.

Mr. HILL. Permit me to make a suggestion. There are quite

a number of Senators who would simply like to have the vote taken in order that they may make their arrangements in reference to other matters. If it could be understood this evening whether the resolution is or is not to pass, it would be a great personal accommodation to them. Otherwise there is nothing about it.

The Senator may make his speech at any time. We shall be glad to hear him upon this or any other question. The only point is that we should like to know before we go to our dinners this evening. We may want to telegraph people—I do, and I know others do—as to whether there is a likelihood that we will adjourn at 3 o'clock to-morrow. If the Senator can accommodate us we shall be very much obliged to him. That is all. If he can see his way consistently to do that he will oblige a number of us.

Mr. BUTLER. I have been appealing here on a number of occasions to have the American people relieved from their inconveniences, and I want to show why the people have not been accommodated. I want to show where the responsibility rests, and then see whether or not we are willing to accommodate ourselves without accommodating the people.

Mr. PEFFER. I think the Senator from North Carolina has seen enough of the temper of the Senate to know that practically the unanimous sentiment here is in favor of an adjournment. The views which the Senator wishes to express I think we are all anxious to hear. I do not see why the Senator can not as well proceed after the resolution is disposed of as before, unless it is his purpose to oppose the resolution in the end.

I am personally in favor of it. I think we have done nothing and we are not going to do anything, and the sooner we adjourn and get away from here the better it will be for us all. But if the Senator insists upon delivering his remarks before the vote is taken, very well.

Mr. BUTLER. I saw there was rather a unanimous sentiment for adjournment or that the preponderance of sentiment was that way, but I had hoped to be able to convert some of the Senators by appealing to their sense of duty to their constituents before they voted. Of course my vote, if I should vote against the resolution, would not count by itself. We would have to have a majority to make it count, possibly. But the fact that I shall have to undertake to convert my friend the Senator from Kansas too, with the others whom we have been trying to convert all this session, of course embarrasses the situation very much.

However, I was interrupted at a very interesting point and now Senators are anxious to hear me to-morrow.

Mr. CULLOM. To-night.

Mr. BUTLER. To-night. It is very tantalizing for one to find himself in a position where Senators are naming a time when they are very anxious to hear him, because there are not many of us who can find a large number of our fellow-Senators who are kind enough to say that they are anxious to hear us at any time. That pleases my vanity a little, I admit. Although I was at a most interesting point in my remarks, I will not now resume. However, I have here a very important paragraph in a paper which I must have read. It shows why the very important bill which I was discussing has not passed the House, and that is very appropriate and pertinent now before we vote upon the resolution. I ask the Secretary to read the explanation as to why the other House has not acted upon the bond bill.

The PRESIDING OFFICER. The Secretary will read as indicated, if there be no objection.

The Secretary read from the Washington Post of June 10, as follows:

CAPITOL CHAT.

The "ghost dance," as Senator BRICE calls the silver agitation, has frightened the Republican leaders of the House of Representatives, and they did not consider it "expedient" to take a vote upon the bill, which passed the Senate last week, prohibiting the further issue of bonds. The question of expediency was, however, determined entirely from one point of view——

Mr. BUTLER. Let Senators note that. The House was controlled by one point of view.

The SECRETARY—

and that is the effect a division of the Republicans on this issue might have upon the St. Louis convention.

Quite a number of Republicans from the Southern States and the Northwest informed Mr. DINGLEY that they dare not vote against the bill.

Mr. BUTLER. That is important.

The SECRETARY—

Quite a number more informed him that they would be compelled to vote for it if it were taken up for consideration.

Mr. BUTLER. That is very important.

The SECRETARY—

They explained that their constituents are decidedly of the opinion that the President should be deprived of the authority to issue bonds at his pleasure——

Mr. BUTLER. That is highly important.

The SECRETARY—

and do not think the Government ought to borrow money to pay its running expenses when it has the means and the power of producing a sufficient amount of revenue without increasing the interest-bearing debt.

Mr. BUTLER. That is extremely important.

The SECRETARY—

They think it would be wise to deprive the President of the power to borrow money without the cooperation of Congress, and believe that he might in that way be convinced of the advisability of increasing the revenues.

Mr. BUTLER. Of course that is not correct, as every intelligent man must know, and as it seems to me must be admitted by every fair-minded, honest man. As I have already shown, the amount of revenue has nothing to do with these bond issues. The Senator from Ohio [Mr. SHERMAN] knows and the President knows that as long as they attempt to force upon the country the gold standard, that as long as they insist upon redeeming greenbacks in gold alone and in paying all our Government obligations in gold alone, just so long we will be forced to borrow the gold—be forced to issue bonds to buy gold. No matter how high the tariff or how much revenue is collected, we will still have to borrow gold under this infamous endless-chain gold-standard system. Why? Because the Government does not get gold when it collects its customs duties. Then what folly to insist on paying out gold, when we have no gold and can not collect taxes or duties in gold. Oh, the sham, the fraud, and the infamy of the whole thing! All this talk about more revenues being the remedy is the work of politicians in order that they may fool the people and get them to submit to further robbery. Let the Secretary read the balance of the article.

The SECRETARY—

Other Republicans whose constituents are engaged in the "ghost dance" did not wish to antagonize local sentiment, and from these two classes there would have been a considerable Republican vote in favor of the passage of the bill. The effect of such a division would stimulate the free-silver element in the St. Louis convention, and, therefore, Mr. DINGLEY, after consultation with the Speaker and other leaders on the Republican side, decided to allow the bill to remain on the Calendar.

Mr. BUTLER. That is the climax. The Post has some very bright newspaper men, and they are, as a rule, as they go—I am a newspaper man myself—responsible; but I will tell you that the newspaper reporter had better hide who put that article in the paper, because there is danger that the House will kidnap him—kuklux him, as we call it in North Carolina—when he treats them that way.

There is no doubt that the reporter gave the correct reason for their nonaction, but the point about it is the audacity of a newspaper man having the courage to tell the truth. It is outrageous. If I were a member of the House I would not stand it. It is outrageous to tell the truth on them in that way. It may be, however, that they will let him off easy on account of that reference to the Republican campaign slogan—more revenues—as the panacea of all our ills; that is, that the way to give the people relief is to tax them more.

Here is an important measure to protect the Treasury, to preserve the credit of the country, to prevent our Treasury from being filched, to prevent debt from being piled up on us for future generations to pay, and the House will not pass upon it. Why? Because the St. Louis convention meets next week, and they are afraid that they will start and give a new impetus to the silver movement, which they have been trying to smother down. But, like Banquo's ghost, it will not down. They are afraid to do anything. They will be d——d if they do, and they will be d——d if they don't. The people will place the responsibility upon them.

Yes, they are afraid that a large number of the members of the House will have to vote for the bond measure. They can not now hold it down, because their constituents are writing to them. That is a humiliating confession. It is almost a shame upon the American Congress that such a confession should be made from one of the great legislative branches as its excuse for not acting upon one of the most important measures that has been before these bodies in ten years. Now, what I wanted to say is this: If the House does not dare to pass that antibond bill now, then we should stay in session till after the Republican convention; then if the reasons given in the Post are correct, we might be able to get the bill passed through that House and save the people from another bond deal this summer. In my opinion we should not adjourn with matters standing in this shape.

Learning that the Senators are very anxious to get their dinners, and are equally anxious to have me continue afterwards, I will try to be agreeable to them. I wish I could be agreeable and obliging to my constituents at the same time.

Mr. ALLISON. I desire to modify the amendment by fixing the hour of final adjournment at 4 o'clock to-morrow instead of 3.

The PRESIDING OFFICER. Without objection, that modification will be made. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

The resolution as amended was agreed to.

Mr. ALLISON. I move that the Senate take a recess until half past 9 or 9 o'clock.

Mr. BUTLER. Half past 9 will be better.

Mr. ALLISON. Would the Senator from North Carolina prefer half past 9?

Mr. BUTLER. Yes.

Mr. ALLISON. I fixed it at 9 o'clock to suit the Senator from North Carolina. I will modify my motion and make it half past 9.

Mr. PEFFER. Before the motion for a recess is put to the Senate I desire to ask for a unanimous-consent agreement that there shall be no bills taken from the Calendar to-night for the purpose of putting them upon their passage.

Mr. ALLISON. I hope that suggestion will be adopted by unanimous consent.

The PRESIDING OFFICER. The Senator from Kansas asks unanimous consent that at the evening session no bills shall be taken from the Calendar and put upon their passage. Is there objection to such an agreement? The Chair hears none, and it is so ordered.

Mr. ALLISON. Now let us take a recess.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Iowa [Mr. ALLISON], that the Senate take a recess until half past 9 o'clock this evening.

The motion was agreed to; and (at 6 o'clock and 40 minutes p. m.) the Senate took a recess until 9 o'clock and 30 minutes p. m.

EVENING SESSION.

The Senate reassembled at half past 9 o'clock p. m.

SILAS P. KELLER.

The PRESIDING OFFICER (Mr. BACON in the chair) laid before the Senate the amendment of the House of Representatives to the bill (S. 361) for the relief of Silas P. Keller, which was, in line 6, to strike out the word "Indians" where it occurs the second time, and insert the words "Indian bands."

Mr. COCKRELL. Let the bill lie on the table for the present.

Mr. PLATT. I move its reference to the Committee on Indian Affairs.

Mr. COCKRELL. That is right.

The motion was agreed to.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes.

The message also announced that the House had passed a bill (H. R. 2663) to amend the laws relating to navigation; in which it requested the concurrence of the Senate.

The message further announced that the House had agreed to the amendment of the Senate to the concurrent resolution of the House of Representatives providing for the adjournment of the present session of Congress.

ENROLLED BILLS SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills; and they were thereupon signed by the Vice-President:

A bill (S. 1853) for the relief of Edward Rice; and

A bill (H. R. 9226) to change the time and places for holding the district and circuit courts of the northern district of Texas.

BILL INTRODUCED.

Mr. CANNON introduced a bill (S. 3296) granting to the State of Utah the Industrial Christian Home in Salt Lake City; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

PAY OF LETTER CARRIERS.

Mr. HALE (at 10 o'clock and 45 minutes p. m.). I enter a motion to reconsider the vote by which the Senate passed the bill (S. 3058) to increase the pay of letter carriers.

Mr. MITCHELL of Oregon. I thought it was the understanding that no business should be transacted this evening.

Mr. HALE. The understanding was that no bill on the Calendar should be called up for consideration. This bill was taken from the Calendar and put on its passage, and I enter a motion to reconsider the vote by which it was passed.

Mr. MITCHELL of Oregon. I move to lay the motion to reconsider on the table.

Mr. HALE. I do not make the motion. I enter the motion.

Mr. MITCHELL of Oregon. I should like to have the Secretary read the unanimous-consent arrangement entered into before we adjourn.

The PRESIDING OFFICER (Mr. BACON in the chair). The Secretary will read the agreement.

The Secretary read as follows:

Mr. PEFFER. Before the motion for a recess is put to the Senate I desire to ask for a unanimous-consent agreement that there shall be no bills taken from the Calendar to-night for the purpose of putting them upon their passage.

Mr. ALLISON. I hope that suggestion will be adopted by unanimous consent.

The PRESIDING OFFICER (Mr. BACON in the chair). The Senator from Kansas asks unanimous consent that at the evening session no bills shall be taken from the Calendar and put upon their passage. Is there objection to such an agreement? The Chair hears none, and it is so ordered.

Mr. MITCHELL of Oregon. I desire to inquire whether the bill referred to by the Senator from Maine has gone to the House of Representatives?

Mr. HALE. That makes no difference.

Mr. MITCHELL of Oregon. Let us know what the facts are.

Mr. HARRIS. For the information of the Senate I should like to know what the bill is.

Mr. HALE. It is a bill increasing the compensation of letter carriers. It adds about a million and a half dollars to the expenses of the Government, and so much taxation.

The PRESIDING OFFICER. The Chair is advised that the bill has been sent to the House of Representatives.

Mr. MITCHELL of Oregon. Then the Senate has no jurisdiction.

Mr. HALE. I enter a motion to reconsider.

Mr. MITCHELL of Oregon. I enter a motion to lay the motion to reconsider on the table.

The PRESIDING OFFICER. The motion to reconsider is entered. The motion to lay on the table will have to be made at the proper time.

Mr. HARRIS. I suggest to the Senator from Maine that if he desires to reconsider the vote he should connect with his motion, as it seems to me, a request that the House of Representatives shall return the bill, as it has gone to the House.

Mr. HALE. I have no doubt that, under the courtesy which exists between the Houses, if the motion is made within the necessary time under the Senate rules the bill will be held up, because otherwise that would always have to be done in every case.

Mr. HARRIS. Still, in the absence of the bill, can the Senator proceed with his motion——

Mr. HALE. Then let me suggest to the Senator, who is an old parliamentarian, that no motion to reconsider within the two days would ever amount to anything, because when a bill is passed it always goes to the other House.

Mr. HARRIS. That is quite true; but in reply I suggest to the Senator that so far as my memory goes back, where a bill has been passed by the Senate and has gone to the other House, and a motion has been made to reconsider the vote by which the bill was passed, there has been connected with such motion a request that the House should return the bill.

Mr. HALE. The Senator knows it would be useless now to make any motion. I simply enter the motion.

The PRESIDING OFFICER. The Chair will have read for the information of the Senate the second clause of Rule XIII, upon that subject.

The Secretary read as follows:

When a bill, resolution, report, amendment, order, or message, upon which a vote has been taken, shall have gone out of the possession of the Senate, and been communicated to the House of Representatives, the motion to reconsider shall be accompanied by a motion to request the House to return the same; which last motion shall be acted upon immediately, and without debate, and if determined in the negative, shall be a final disposition of the motion to reconsider.

Mr. MITCHELL of Oregon. I rise to a point of order. It is that the motion of the Senator from Maine to reconsider is not in order unless accompanied, as required by the rule, with the request that the House shall return the bill. Not being accompanied by that request, of course the motion is not in order.

Mr. HALE. I have only entered a motion to reconsider. I am entirely willing that it shall take its fate under the rule.

I have no idea that the House of Representatives, after the motion to reconsider is entered, will take any action until the Senate has had an opportunity to consider the matter. I do not think, and I suppose a great many Senators agree with me, that the present is an opportune time for increasing the salaries of a favored class. The whole course of Congress this winter has been against increasing salaries. There has been a great importunity and a great pressure to increase the salaries of the letter carriers all over the country. I do not sympathize with that movement, and I enter this motion now, although I am entirely aware that one result of it will be that I may be denounced in many quarters as lacking in my duty. But I enter the motion and take the responsibility of it.

The PRESIDING OFFICER. The Chair is of the opinion that when the motion is made it will have to be accompanied by the other motion under the rule. The Chair does not understand the Senator from Maine now to make the motion.

Mr. MITCHELL of Oregon. I understand by the ruling of the Chair that the motion can not now be entertained.

Mr. HALE. I do not make the motion. I simply enter the motion.

The PRESIDING OFFICER. But the Senator from Oregon misunderstood the Chair. The Chair ruled that it did not understand the Senator from Maine now to make the motion to reconsider, but that whenever a motion was made to reconsider under the rule the accompanying request for the return of the bill must also be made. But this is simply in the nature of a notice that such a motion will be made.

Mr. MITCHELL of Oregon. It amounts to nothing.

Mr. HALE. That is not for the Chair to say.

The PRESIDING OFFICER. That is not for the Chair to determine.

Mr. MITCHELL of Oregon. It amounts to nothing, as I shall contend when this matter comes up at the next session.

ENROLLED BILLS SIGNED.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the Speaker of the House had signed the following enrolled bills and joint resolution; and they were thereupon signed by the Vice-President:

A bill (H. R. 7664) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes;

A bill (H. R. 8321) to authorize the county of St. Louis, in the State of Minnesota, to build or authorize the building of a foot and wagon bridge across the St. Louis River, between Minnesota and Wisconsin, at a point near Fond du Lac, in said State of Minnesota;

A bill (H. R. 4580) to amend section 3449 of the Revised Statutes;

A bill (H. R. 3990) granting a pension to Mrs. Eliza G. Pyne;

A bill (H. R. 9447) to amend section 1 of an act to amend an act entitled "An act authorizing the Postmaster-General to adjust certain claims of postmasters for loss by burglary, fire, or other unavoidable casualty," approved May 9, 1888; and

A joint resolution (H. Res. 201) extending the time of payments due from settlers and purchasers on all ceded Indian reservations.

Mr. ALLISON. I move that the Senate adjourn, to meet at 11 o'clock to-morrow.

The motion was agreed to; and (at 11 o'clock p. m.) the Senate adjourned until to-morrow, Thursday, June 11, 1896, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate June 10, 1896.

PROMOTIONS IN THE ARMY.

Cavalry arm.

First Lieut. Franklin Oliver Johnson, Third Cavalry, to be captain, June 8, 1896, vice Bourke, Third Cavalry, deceased.

Second Lieut. Alexander Wallace Perry, Ninth Cavalry, to be first lieutenant, June 8, 1896, vice Johnson, Third Cavalry, promoted.

Infantry arm.

Second Lieut. Harry Raymond Lee, Eleventh Infantry, to be first lieutenant, June 8, 1896, vice Penn, Second Infantry, appointed quartermaster.

POSTMASTER.

Axel S. Ellis, to be postmaster at Sioux Falls, in the county of Minnehaha and State of South Dakota, in the place of B. F. Campbell, Alfred D. Tinsley now holding the commission under a recess appointment.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 10, 1896.

PROMOTIONS IN THE ARMY.

First Lieut. Franklin Oliver Johnson, to be captain, Third Cavalry.

Second Lieut. Alexander Wallace Perry, to be first lieutenant, Third Cavalry.

Second Lieut. Harry Raymond Lee, to be first lieutenant, Second Infantry.

POSTMASTERS.

Axel S. Ellis, to be postmaster at Sioux Falls, S. Dak.

William H. Chapman, to be postmaster at Farmersville, in the county of Collin and State of Texas.

Charles C. Field, to be postmaster at Puyallup, in the county of Pierce and State of Washington.

John L. Anable, to be postmaster at Mount Vernon, in the county of Skagit and State of Washington.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *June 10, 1896.*

[*Continuation of legislative day of Saturday, June 6, 1896.*]

The recess having expired, the House was called to order at 10 o'clock a. m. by the Speaker.

HOUSE BILLS LAID ON THE TABLE.

The SPEAKER laid before the House the following House bills, which are ordered to lie on the table, Senate bills covering the same subjects having passed the House:

A bill (H. R. 796) amending the act for the adjustment of railroad land grants;

A bill (H. R. 7868) to bridge the Missouri River near Boonville, Mo.;

A bill (H. R. 8885) amending the act approving the funding act of Arizona;

A bill (H. R. 6119) providing for a commission to investigate problems presented by labor, agriculture, and capital;

A joint resolution (H. Res. 191) authorizing a scientific investigation of the fur-seal fisheries; and

A bill (H. R. 6403) amending the act for the protection of the salmon fisheries in Alaska.

REBINDING OF PRESIDENTS' MESSAGES.

Mr. RICHARDSON. Mr. Speaker, I ask for the adoption of the resolution which I send to the Clerk's desk, which resolution I think is privileged.

The resolution was read, as follows:

Resolved, That the Public Printer is hereby authorized to rebind such of the original messages of the Presidents of the United States as may, in the judgment of the Clerk of the House, require rebinding, for preservation in the files of the House; and the Clerk of the House is hereby directed to deliver said original messages to the Public Printer for the purpose herein authorized.

The resolution was agreed to.

MATERIAL FOR MINOR COINS.

Mr. CHARLES W. STONE. Mr. Speaker, I desire to present from the Committee on Coinage, Weights, and Measures the resolution which I send to the Clerk's desk, with the recommendation that it do pass.

The resolution was read, as follows:

Resolved, That the Secretary of the Treasury be requested to communicate to the House at the commencement of the next session such information as he may have or may be able to obtain meantime as to the comparative merits and advantages of pure nickel, nickel alloy, aluminium combined or alloyed with other metals, and of copper bronze as material for our minor coins; and for the purpose of making such information as full and complete as possible the Secretary of the Treasury is authorized to have struck such experimental minor coins of the metals above mentioned, pure and in combination with other metals, as he may deem necessary and proper, and is requested to communicate to the House the results and conclusions derived from such experimental coinage.

The resolution was agreed to.

REPORT ON JAPANESE COMPETITION.

Mr. DINGLEY. Mr. Speaker, I desire to submit a privileged resolution for printing some additional copies of a report.

The resolution was read, as follows:

Resolved, That there be printed for the use of the House 10,000 copies of the report of the Committee on Ways and Means on Japanese competition.

Mr. RICHARDSON. I should like to ask the gentleman from Maine if this was a unanimous report?

Mr. DINGLEY. There is no minority report presented. The understanding was that if one was presented it would be printed with the majority report.

Mr. RICHARDSON. There have been no views of the minority submitted?

Mr. DINGLEY. There have been no views of the minority presented, but if they should be there would be leave for printing them in connection with the report.

The resolution was agreed to.

UNITED STATES COURT AT HARTFORD, CONN.

Mr. HENRY of Connecticut. Mr. Speaker, I move to suspend the rules and pass the bill (S. 2850) changing the time for holding circuit courts of the United States in the district of Connecticut.

The bill was read, as follows:

Be it enacted, etc., That a term of the United States circuit court in the district of Connecticut shall be held at Hartford, in said district, on the second Tuesday of October, 1896, and thereafter in each year on the second Tuesday of October, and that after the third Tuesday of September, 1896, the term of said circuit court now by law provided to be held annually on the third Tuesday in September shall be discontinued.

Mr. RICHARDSON. Mr. Speaker, I should like to have some explanation from the gentleman about this.

Mr. HENRY of Connecticut. I will say that this bill is an exact copy of a bill which has been considered by the Judiciary

Committee of the House and favorably reported. The passage of the bill is asked for by the bar of the State, and also by the judge of the United States district court. Nobody objects to it. It is merely for the convenience of the bar of the State.

The SPEAKER. The question is on suspending the rules and passing the bill.

Accordingly, two-thirds having voted in favor thereof, the rules were suspended and the bill passed.

AMERICAN REGISTER FOR STEAMER MENEMSHA.

Mr. LOW. Mr. Speaker, I move to suspend the rules and pass the bill (S. 2978) to provide an American register for the steamer *Menemsha*.

The bill was read, as follows:

Be it enacted, etc., That the Commissioner of Navigation is hereby authorized and directed to cause the foreign-built steamer *Menemsha*, owned by Charles W. Hogan, a citizen of the United States, to be registered as a vessel of the United States.

SEC. 2. That the Secretary of the Treasury is hereby authorized and directed to cause the inspection of said vessel, steam boilers, steam pipes, and their appurtenances, and cause to be granted the usual certificate issued to steam vessels of the merchant marine without reference to the fact that said steam boilers, steam pipes, and appurtenances were not constructed pursuant to the laws of the United States, and were not constructed of iron stamped pursuant to said laws; and the tests in the inspection of said boilers, steam pipes, and appurtenances shall be the same in all respects as to strength and safety as are required in the inspection of boilers constructed in the United States for marine purposes.

Mr. DINGLEY. I should like to have the report read, or some explanation.

The report (by Mr. MCCORMICK) was read, as follows:

The Committee on the Merchant Marine and Fisheries, to whom was referred the bill (S. 2978) granting an American register for steamer *Menemsha*, have examined the bill and accompanying papers, and report the same back to the House and recommend its passage.

An identically similar bill was favorably reported from this committee May 8 last, and that bill (H. R. 8557) is now upon the House Calendar.

The following are the facts in the case as taken from the committee's report on the House bill:

"The *Menemsha* is an iron steamer, built at Newcastle, England, in 1885. Her length is 310 feet 6 inches; beam, 38 feet 8 inches; depth of hold, 27 feet; tonnage, 1,724 net and 2,743 gross. She was classed in Lloyds prior to her wreck as 100 A1, and, by the repairs put upon her by the Newport News Shipbuilding and Dry Dock Company, she is now in first-class condition.

"The owner of the *Menemsha*, Mr. Charles W. Hogan, is a citizen of the United States, and purchased the vessel from the Mendota Steamship Company, of England, for $43,000, which price included the bill for repairs put upon said vessel, which were made by the Newport News Shipbuilding and Dry Dock Company, amounting to $35,558.25, which Mr. Hogan assumed and paid. Smaller bills, amounting to $900, were also paid by him.

"The *Menemsha* encountered fearful weather during the month of February when coming west. One of her ballast tanks collapsed, and for a number of days the condition of those upon the vessel was extremely critical. The principal trouble and disaster occurred in mid ocean during the voyage from Leith, Scotland, to Newport News, Va., where she arrived in an unseaworthy condition. Her present value is shown to be $46,000, and the repairs put upon her by the Newport News Shipbuilding and Dry Dock Company have amounted to $35,558.25, being in excess of the three-fourths of her value, as required by law."

In view of these facts your committee report the bill favorably and recommend that it pass.

Mr. DINGLEY. As I understand from the report, the only reason for the passage of this bill is that the wreck occurred outside of the jurisdiction of the United States—beyond the three-mile limit?

Mr. LOW. Yes.

Two-thirds voting in favor thereof, the rules were suspended and the bill passed.

CONTESTED ELECTION CASE—HOPKINS VS. KENDALL.

Mr. MOODY. Mr. Speaker, I desire to call up the contested election case of Hopkins *vs.* Kendall, of the Tenth Congressional district of Kentucky, and ask for the passage of a resolution which has been unanimously reported by the Committee on Elections No. 1.

The Clerk read as follows:

Resolved, That the parties in the contested election case of N. T. Hopkins *vs.* J. M. Kendall be permitted to take additional testimony touching the election in Clark County up to the 1st day of August, 1896, according to the rules for taking testimony in contested election cases prescribed in the statutes of the United States. Said testimony to be confined to the issues made by the notices of contest and the answer thereto.

Mr. BAILEY. I would like to have some explanation of this. I make the inquiry if this is from the Committee on Elections No. 1?

Mr. MOODY. It is from the Committee on Elections No. 1. This resolution was considered by all the members of the committee present. The gentleman from Georgia [Mr. BARTLETT] was present when it was adopted in the committee, and it meets his approval.

Mr. BAILEY. I have no further questions.

Mr. MOODY. I move the adoption of the resolution.

The resolution was agreed to.

FOREST FIRES ON THE PUBLIC DOMAIN.

Mr. SHAFROTH. Mr. Speaker, I move to suspend the rules and pass the bill H. R. 9123.

The Clerk read as follows:

A bill (H. R. 9123) to prevent forest fires on the public domain.

Be it enacted, etc., That any person who shall willfully or maliciously set on fire, or cause to be set on fire, any timber, underbrush, or grass upon the public domain, or shall carelessly or negligently leave or suffer fire to burn unattended near any timber or other inflammable material, shall be deemed guilty of a misdemeanor, and, upon conviction thereof in any district court of the United States having jurisdiction of the same, shall be fined in a sum not more than $5,000 or be imprisoned for a term of not more than two years, or both.

SEC. 2. That any person who shall build a camp fire, or other fire, in or near any forest, timber, or other inflammable material upon the public domain, shall, before breaking camp or leaving said fire, totally extinguish the same. Any person failing to do so shall be deemed guilty of a misdemeanor, and, upon conviction thereof in any district court of the United States having jurisdiction of the same, shall be fined in a sum not more than $1,000 or be imprisoned for a term of not more than one year, or both.

SEC. 3. That in all cases arising under this act the fines collected shall be paid into the public-school fund of the county in which the lands where the offense was committed are situate.

The SPEAKER. The question is on suspending the rules and passing the bill.

Mr. BAILEY. I should like to ask the gentleman from what committee this proposition comes?

Mr. SHAFROTH. I will state to the gentleman that this comes from the Committee on Public Lands; and I will make a little statement concerning the necessity of this legislation. At the present time there is no law on the statute books punishing persons for setting fire to forests. Great destruction to the timber on the public domain is caused by forest fires. There has been considerable legislation on cutting timber; but the amount of timber that is cut compared with the destruction by fire is almost infinitesimal. The cutting is simply done near lines of railroads, which upon the map would be indicated simply by a line; but a forest fire will begin and it will sometimes in three days cover 100 square miles, thus destroying a growth of years.

Now, the necessity for legislation like this is apparent to everyone. We in the West for years have seen the necessity of preserving the timber on the public domain. We are interested in preserving the shade, so that the snows on the mountains will not melt until the summer, and when they do melt will furnish a copious supply of water for irrigation purposes in the plains below. There is nothing in the United States statutes that prohibits persons from setting fire to forests, and this bill has been considered by the Committee on Public Lands, which has reported it unanimously. It has been referred to the Secretary of the Interior, and he has recommended its enactment; and so, it seems to me, there should be no opposition whatever to the measure.

Mr. BAILEY. If the gentleman will permit me, I believe this is a bill that ought to have come from the Committee on the Judiciary, inasmuch as it creates and punishes a crime. I cordially assent to the proposition that a man who willfully and maliciously sets fire to the public domain ought to be severely punished; but it appears to me that the punishment is out of all proportion to the offense, in that it sends a man to the penitentiary for two years because he negligently or carelessly happens to set fire to the public domain. Though it may not burn a square mile nor a square foot, under this bill he could be put in the penitentiary and made infamous during the balance of his life. I think the bill ought to be limited to men who "willfully and maliciously" or who "willfully or maliciously" commit the offense, but to punish a man by two years in the penitentiary for carelessly setting fire to the public domain is altogether out of proportion to the offense.

Mr. SHAFROTH. I think if you will examine the first section of the bill you will find that it is: "That any person who shall willfully or maliciously set on fire." The words "willfully or maliciously" are used.

Mr. BAILEY. I may have misunderstood it, but I think it covered the case of carelessness or negligence.

Mr. SHAFROTH. That feature is covered in the second section. I want to explain the necessities for that. Nine-tenths of the forest fires occur on account of campers who go out and camp near some stream and leave a fire burning. They do not totally extinguish it. A wind comes up and blows the fire into the adjoining forest, and then you have a conflagration, and it is almost impossible to extinguish it. The fires have to burn until they come to barren land or a stream of some kind which the fire can not leap; this bill is to meet the case of those people who will start camp fires and will not extinguish them. There is no minimum punishment prescribed, so that the court can take into consideration all the circumstances. It says not more than $1,000; so that the court may inflict a punishment of only $1. We thought it best to leave it entirely in the discretion of the court, which would take into consideration all the circumstances.

Mr. BAILEY. That is the second section. I thought I was not mistaken in what the first section contained. I find that it reads:

That any person who shall willfully or maliciously set on fire or cause to be set on fire any timber, underbrush, or grass upon the public domain or shall carelessly or negligently leave or suffer fires to burn unattended near any timber or other inflammable material, etc.

This is a matter in which my constituents can not possibly be interested, for we have not and never had an acre of public land in

our State. I simply suggest that you are defining a crime and punishing it out of proportion to the offense, which, I think, is always bad legislation. I make no objection if the House desires to pass it.

Mr. SHAFROTH. In answer to the suggestion of the gentleman, I simply desire to say that there is no minimum fine or imprisonment imposed by this bill, but it leaves the punishment to the judge, who can fine the party found guilty a dollar if he chooses.

Mr. LITTLE. What is to hinder the States or Territories in which these lands lie from enacting laws for the punishment of this offense?

Mr. SHAFROTH. They have passed laws concerning the subject-matter. It is difficult to enforce the State laws. It is fear of Federal jurisdiction that will make the offenders observe the law.

Mr. LITTLE. If the people of the Territories or States who are to be protected by this will not respect the laws of their own States, it will not justify Congress, I think, in placing the matter under the jurisdiction of the Federal courts.

Mr. SHAFROTH. In answer to that suggestion, I wish to say just this: We have had some legislation of this kind on our State statute, of course; but persons living in the immediate vicinity of this timber are not so much interested in its preservation as those who live on the plains below who want the water during the summer months.

Mr. DOOLITTLE. What States will this proposed legislation cover?

Mr. SHAFROTH. All the States.

Mr. LITTLE. Every one of them.

Ms. DOOLITTLE. A great deal of timber has been destroyed in my State through the carelessness of campers and sheep herders—most valuable timber—worth hundreds, thousands, and even millions of dollars. I think legislation of this character is very urgently required in the West to preserve the timber against the criminal carelessness of the persons who go there.

Mr. SHAFROTH. The people against whom we seek to protect this timber are not so much those residing permanently in those portions of the country as the hunters who go there transiently and do not care anything about the permanent welfare of the State. The class of persons whom we desire to reach do not yield so readily to State law as they would to the authority of the United States Government.

Mr. BAILEY. The gentleman makes a very serious accusation against his own people when he says that they do not respect the laws which their own representatives make.

Mr. SHAFROTH. It is not an accusation against my own people; it is an accusation against offenders of the law, and often they are not residents of the State. At any rate, we know that a law on this subject emanating from Federal authority would be better observed than a State enactment, on account of the greater certainty of prosecution.

Mr. LITTLE. In my State portions of the public domain are scattered here and there over the State; and under this proposed legislation a citizen who might happen to touch off fire on one of those tracts would be subject to prosecution in the Federal courts, and in order to be tried might be carried 80 or 100 miles away. Now, I think that if the citizens of the States sought to be protected by this bill will not enforce their own State laws, then the jurors who would be furnished to the Federal courts in those States from the same citizenship can not be intrusted to enforce a law of this kind.

The fact is, I do not think Congress is justified in exercising jurisdiction through the Federal courts in matters where the State courts already have ample authority and power under State laws framed for the purpose of dealing with this question. I can not see why a citizen should be in greater terror of going to the penitentiary under a conviction in a Federal court than of going to the penitentiary through a conviction in a State court. If the evil of which gentlemen complain is so serious, then the States that suffer in this way ought not only to pass laws, but to enforce them.

Mr. DOOLITTLE. It is more difficult to detect these men through the officials of the State than it would be through the power of the Federal Government.

Mr. LITTLE. It strikes me that the State organization, with its power to detect and punish offenses against the law through the instrumentality of constables, sheriffs, etc., of the respective counties, must be better equipped for the discovery and prosecution of these offenses than Federal officers scattered here and there.

Mr. DOOLITTLE. With all due deference to the gentleman, I think he is mistaken.

Mr. SHAFROTH. In reply to the suggestions which have been made against this bill, I wish to say that the timber which the bill seeks to protect is on the public domain, and it seems to me absurd to say that the United States Government can not or should not pass laws to protect the timber upon its own domain.

Mr. LITTLE. My views on this question impel me to object to the passage of the bill.

The SPEAKER. The question is on the motion of the gentleman from Colorado [Mr. SHAFROTH], to suspend the rules and pass the bill.

The question having been put,

The SPEAKER. In the opinion of the Chair, the ayes have it.

Mr. LITTLE. I call for a division.

The question being again taken, there were—ayes 93, noes 3.

Mr. LITTLE. No quorum.

Mr. SHAFROTH. I withdraw the bill.

The SPEAKER. The bill is withdrawn; and the gentleman from Wyoming [Mr. MONDELL] is recognized.

Mr. LITTLE. I withdraw the point of no quorum.

The SPEAKER. As the Chair understands, the point of no quorum is withdrawn.

Mr. SHAFROTH. The bill has been withdrawn. The gentleman withdrew his point after I had withdrawn the bill.

WORK ON UNION PACIFIC RAILROAD LAND PATENTS.

Mr. MONDELL moved to suspend the rules and adopt the following concurrent resolution:

Resolved by the House of Representatives (the Senate concurring), That the Secretary of the Interior be, and he hereby is, authorized and directed to resume work upon and to issue patents to the Union Pacific Railway Company without delay to all lands which have been sold by said company to bona fide purchasers: *Provided*, That nothing herein contained shall be construed as waiving any right that the United States may have to declare a forfeiture as to the lands which have not been so sold by said company: *Provided*, That the words "bona fide purchasers" herein contained shall not be held to include the holders of lands secured by mortgage on such land grant.

Mr. DINGLEY. I should like to have this resolution explained briefly.

Mr. MONDELL. The lands referred to in this resolution are lands along the line of the Union Pacific Railway and within its land-grant limit. About a year ago the Secretary of the Interior issued orders to the Commissioner of the General Land Office to cease patenting lands to the Union Pacific Railway Company and other land-grant roads pending legislation by Congress in regard to those roads and their land grants. It is evident that this Congress will take no action in regard to those roads or their land grants. In the States of Colorado, Wyoming, Nebraska, and Utah there are some two and a half millions of acres which have been sold by the Union Pacific Railway Company to actual settlers. In a great many cases those lands were entirely paid for several years ago, and in other cases they are under contract and partly paid for. They are absolutely in the hands of actual settlers and are for the most part the only real estate owned by them. It is a great hardship to those settlers that they are unable to obtain patents for their lands. The resolution provides that it shall not affect the title of the Government in any Union Pacific Railway Company lands that have not been sold to bona fide purchasers. Citizens of the States interested are very anxious to have the Department resume the patenting of the lands that have been actually sold to bona fide settlers.

Mr. PARKER. I would like to ask the gentleman whether this proposed legislation will make good the title to lands sold by the railway company after the United States declared that the grant should be forfeited?

Mr. MONDELL. I will say to the gentleman that the United States has never declared these lands forfeited. There is no question between the United States and the Union Pacific Company as to the forfeiture of their lands. That question never has been raised. The company has fulfilled the terms of its agreement with the Government in full. There has simply been an arbitrary ruling of the Secretary that, temporarily, patents for these lands shall not issue.

Mr. PARKER. Is not some reason given for that ruling?

Mr. MONDELL. In reply to the question of the gentleman from New Jersey, I will read an extract from the annual report of the Secretary of the Interior:

I have recently deemed it advisable to direct the Commissioner of the General Land Office to allow his force to give their time to selections of lands made by roads other than bond-aided roads. I have not undertaken to pass finally upon the rights of the bond-aided roads, but I have considered, in view of the fact that this whole subject must come before Congress, that it is advisable to leave the lands as they are for the present.

Now, this resolution simply provides that the Secretary shall issue patents to the Union Pacific Company for all lands which have been sold by said company to bona fide purchasers: "*Provided*, That nothing herein contained shall be construed to affect any right that the United States may have to declare a forfeiture as to lands that have not been sold." Thus it absolutely protects the Government, and what we ask is simply that these settlers who have bought their lands in good faith shall receive title to them.

Mr. McEWAN. I desire to ask the gentleman what is meant by the words "resume work" in this resolution. Does it mean the expenditure of money upon these lands?

Mr. MONDELL. No, sir. The Secretary instructed the Commissioner of the General Land Office last year to cease work in his department upon the lists of these lands furnished by the roads to be patented.

Mr. MCEWAN. But what is that "work"?

Mr. MONDELL. It is simply labor in the department. The Secretary directed the Commissioner to suspend work upon the issuing of patents for these lands, and this resolution proposes to direct him to resume that work.

Mr. BELL of Texas. I desire to ask the gentleman whether this bill has been reported by the Committee on Pacific Railroads?

Mr. MONDELL. It has been reported unanimously by the Committee on Public Lands of this House.

Mr. BELL of Texas. But has it been reported by the Committee on Pacific Railroads? Was it referred to that committee?

Mr. MONDELL. No, sir; it went to the Committee on Public Lands in both Houses.

Mr. BELL of Texas. I remember the bill now, and I want an opportunity to make a little explanation in regard to it, but I will not interrupt the gentleman at this time.

Mr. MONDELL. I yield to the gentleman.

Mr. BELL of Texas. Mr. Speaker, this bill, or one exactly like it, was referred to the Committee on Pacific Railroads. The gentlemen who represented the railroad companies appeared before the committee and made arguments, and the position taken by them was this: They contended that a mortgage made in good faith would have exactly the same effect as a sale, and if we should pass this bill or the bill similar to it which was pending before that committee, the effect would be to at once not only authorize but require the Secretary of the Interior to issue patents for all the lands covered by mortgage as well as for those which have been actually sold. There may have been some disposition made of the bill at a time when I was not present in the committee, but I know there was a very general opposition to the passage of such a bill, and I am sure that a matter of this great importance ought not to be disposed of at this time, especially in the absence of the chairman of that committee. The bill has a much more far-reaching effect than seems to be anticipated by the gentleman in charge of it, unless the attorneys who appeared before the committee were entirely mistaken in their contention, and I do not think the subject ought to be disposed of summarily at this time.

Mr. MONDELL. Mr. Speaker, in reply to the gentleman from Texas it seems to me that he does not understand the scope of the resolution or else he must have in mind some very different character of legislation than that proposed here. This is simply a concurrent resolution, not even a joint resolution, and can not in any manner change existing law or affect in any way the existing law relating to the Union Pacific Railway land grants. It is simply a resolution providing that men who have gone into these States and in good faith invested their all in real estate for the purpose of securing homes shall have their lands patented to them as they have been patented heretofore.

I wish to call the attention of the gentleman to the fact that up to one year ago there was no delay whatever in the issue of the patents to these people; but the Secretary of the Interior, pending possible legislation (understand that the question never was raised as to the right of the company to any of the lands)—but pending possible legislation by Congress the Secretary felt that it might be better to use the force in the Department in other lines rather than in patenting these lands in view of possible action by Congress. That is the only reason for their suspension. This resolution simply directs the Secretary of the Interior to issue to these settlers—in other words, it is an expression of Congress on the subject.

Mr. BELL of Texas. Does it not say "purchasers"?

Mr. MONDELL. Yes; to issue to the bona fide purchasers the patents to which they are clearly entitled.

Mr. BELL of Texas. Now, the point is that a lawyer of eminence nominated by the President of the United States or one of the justices of the Supreme Court of the United States was asked recently the specific question before the committee when this matter was under consideration as to what effect the passage of such a law would have. He replied that it would not only affect the issuance of patents, and thus affect claims to titles, but would also require the issuance to the bona fide and good-faith mortgagee of patents to them. That was the position taken by Mr. Justice Peckham, who I understand to be very eminent as a lawyer, and while of course he may be mistaken, we certainly ought not to commit ourselves to a policy that may have that effect, when it is clearly not intended by the gentleman in charge of the measure.

Mr. MONDELL. If the gentleman will look at the list set forth in this report by Senator ALLEN, a list which is printed to accompany the report—and remember that this bill passed the Senate unanimously—he will find that it refers to certain lists containing some two and one-half million acres of land which are affected by the present conditions. It is true that the Union Pacific land grant—the entire grant—is covered by bonds; but in no possible way can a concurrent resolution affect any law in reference to the Union Pacific land grants, especially when it provides specifically that it shall be confined exclusively to the issuance of patents with reference to lands held by absolute and bona fide purchasers.

Mr. BELL of Texas. Not settlers, but purchasers, as I understand the resolution.

Mr. MONDELL (continuing). And the Government absolutely retains the right of forfeiture.

Mr. BELL of Texas. But it is well known to all lawyers who are familiar with such subjects that when a patent is issued by the Government it puts an end to the contention.

Mr. MONDELL. But it is true that patents are being annulled every day by the Department.

Mr. BELL of Texas. I understand that; but only in cases of fraud, or something of that kind.

Mr. MONDELL. And this resolution simply directs the Secretary to do what has been done heretofore by all the Secretaries. There has never been a question heretofore up to one year ago that these men were not entitled to their patents. Up to that time they were receiving the patents as fast as they complied with the conditions required by the road and the railroad company applied for patents.

Now, I am certain that the gentleman from Texas does not ask me to go back home, and other gentlemen who represent the States interested in this matter—some twenty-two or twenty-three thousand farmers being involved—and say to them that the House absolutely refuses to allow the Secretary of the Interior to issue patents to the railway company for their lands.

Mr. BELL of Texas. No, but I would like him to say this to these people, that we do not think it safe, just on the close of the session, when there is not a quorum present, to pass a law or a joint resolution, which is practically the same thing, which will have the effect, in the judgment of some of the best lawyers of the country, to not only settle these questions so far as they are concerned, but also so far as the mortgagees or holders of mortgages are concerned.

Mr. SHAFROTH. The gentleman from Texas labors under a misapprehension. He assumes that this is a joint resolution.

Mr. BELL of Texas. I so understood the gentleman in charge of it.

Mr. SHAFROTH. This is not a joint resolution but a concurrent resolution; and such a resolution can not change existing law. In one instance—in the case of a joint resolution—it requires the signature of the President, and then it has the effect of a law; but a concurrent resolution has no such effect. It is simply directory to the Secretary of the Interior.

And I wish to say now that I am a member of the committee, and made the report in this instance, and that the resolution introduced, which came before the committee and members of the Public Lands Committee (which passed the Senate unanimously), does not contemplate any such action as the gentleman from Texas seems to apprehend.

The Committee on Public Lands believe that the Secretary of the Interior should be directed to resume the issue of patents to these lands, and the gentleman from Arkansas [Mr. MCRAE], who was chairman of the Committee on Public Lands in the last Congress, drew this resolution himself. He did not like the wording of the resolution that was brought to the Committee on Public Lands, but drew this resolution in his own handwriting, and modified it in the manner that he wanted to. It unanimously passed the Committee on Public Lands. It does not change existing law. It could not change existing law, because it is simply advisory to the Secretary of the Interior.

Mr. MONDELL. Mr. Speaker, I yield to the gentleman from Montana [Mr. HARTMAN].

Mr. HARTMAN. Mr. Speaker, in reply to the suggestion of the gentleman from Texas [Mr. BELL] and to obviate his objection, I will ask leave to propose the following amendment, which I think will do away with his objection entirely, if it does exist in fact:

Provided, That the words "bona fide purchasers" herein contained shall not be held to include the holders of bonds secured by mortgage on such land grant.

That obviates the gentleman's objection.

Mr. MONDELL. I accept that amendment.

Mr. BELL of Texas. I think that probably obviates some of my objections; but I still make the point that this bill ought to have been referred to the Committee on Pacific Railroads. The chairman of that committee is not here, and I see only two members of that committee present besides myself. I do not think that a bill of this kind and of this importance should be passed in the closing hours of this session, when there is no quorum present,

when there is nobody present to whom it was referred who can explain particularly the effect of it. Therefore I object to it, regardless of any amendment that may be offered.

Mr. MONDELL. I yield to the gentleman from Indiana [Mr. FARIS].

Mr. BELL of Texas. I should like to hear what the gentleman from Indiana [Mr. FARIS] has to say about this.

Mr. FARIS. Mr. Speaker, I think my colleague on the Pacific Railroads Committee [Mr. BELL of Texas] is laboring under some misapprehension relative to this matter. I believe I attended all the meetings of the Pacific Railroads Committee. I do not believe that this resolution or any similar bill or resolution was ever before that committee. This, however, did occur: In the early days of this session the receivers of the Union Pacific came before our committee and presented this difficulty that the management of the railroad was and is under, expressing the hope that the committee would take the matter in hand and that some legislation would be had on the subject, they representing to our committee that the Secretary of the Interior had arbitrarily, of his own motion, entirely suspended the issuance of these patents. For the information of the committee the Secretary of the Interior appeared before us and made a long statement on the subject, and, as I remember, he assumed the entire responsibility for the present status in the matter of the issuance of patents, justifying himself because of the default on the part of the company and the expected continued default on the part of the company as to its obligations to the Government. He stated that he thought that the status quo should be maintained as to the matter when he stopped issuing these patents. Now, I do not remember that we have had any bill on the subject before the committee. I think, indeed, we never had, and I agree with my colleague, the gentleman from Texas [Mr. BELL], that this matter ought to have been referred to the Committee on Pacific Railroads. Mr. Speaker, as I understand it, there is no purpose or object in this resolution except to protect the bona fide purchasers of lands along the line of the Union Pacific road, and understanding the situation as I do from the hearings before our committee, I think this resolution ought to pass.

Mr. BELL of Texas. Do you not remember that Judge Peckham appeared before our committee and made a speech in behalf of the mortgage bondholders, asking for this very legislation, and stating that the effect of it would be to require the issuance of patents not only where the land had been sold and the settler had gone upon it but also wherever it had been mortgaged in good faith?

Mr. FARIS. I will say in answer to my colleague that I do not remember——

Mr. BELL of Texas. You remember Judge Peckham being before the committee?

Mr. FARIS. Judge Peckham and Mr. Ellery Anderson were before our committee on the same day, one following the other, and they made a statement or argument, with a great deal of elaboration, upon this and kindred subjects. I have no recollection that Judge Peckham stood in antagonism to Mr. Anderson on this proposition.

Mr. BELL of Texas. No; on the contrary, representing the holders of the mortgages, he of course favored it and wanted the legislation.

Mr. TAWNEY. Will not the amendment proposed by the gentleman from Montana [Mr. HARTMAN] obviate your objection?

Mr. BELL of Texas. It certainly will to a certain extent. It does modify it very much.

Mr. FARIS. My recollection is very clear that Mr. Anderson, one of the receivers for this road, insisted to the committee that some such relief as this ought to be accorded to these people buying these lands, and, if my colleague will permit me, I will say that I have no recollection that Judge Peckham or anybody else ever referred to that subject or made any argument before the committee subsequent to that day.

Mr. BELL of Texas. No, not subsequent to that day, but right on that day.

Mr. BRODERICK. You understood that there were a great many lands in several States that purchasers had been in possession of for a number of years, for which they had no patents?

Mr. FARIS. Yes.

Mr. BRODERICK. And they wanted their patents?

Mr. FARIS. Yes; had paid the money in good faith; that many of them were living on the lands and all of them were affected by what was conceded and not disputed by the Secretary of the Interior to be his own arbitrary act in the premises.

Mr. BRODERICK. I understand, also, that the bill went to the Committee on Public Lands of the Senate?

Mr. FARIS. I heard that this morning, but did not know it before.

Mr. BRODERICK. That committee is a safe committee, composed of good lawyers.

Mr. FARIS. I make no point on that. I only refer to the failure to present this matter to our committee, because such distinguished men had appeared before us and given us information, including the Secretary of the Interior. I think the resolution ought to pass.

Mr. BRODERICK. I think so, too.

The SPEAKER. The question is on suspending the rules and passing the concurrent resolution.

Several MEMBERS. There is an amendment.

The SPEAKER. Under the rules, on a motion to suspend the rules there can be no amendment.

Mr. HARTMAN. Can not it be done by unanimous consent?

The SPEAKER. Yes. If there be no objection, the amendment will be considered as agreed to.

There was no objection.

The question was put.

The SPEAKER. In the opinion of the Chair, two-thirds having voted in favor thereof, the rules are suspended and the concurrent resolution is agreed to.

JONATHAN SCOTT.

Mr. KIRKPATRICK. Mr. Speaker, I desire to present a privileged report. The Committee on Invalid Pensions, to whom was referred the bill (H. R. 4526) granting a pension to Jonathan Scott, together with the message of the President of the United States, bearing date May 30, 1896, vetoing the same, directs me to report the bill back with the recommendation that the bill pass, the veto of the President to the contrary notwithstanding.

Mr. DINGLEY. One moment. I desire to call the gentleman's attention to the fact that under the Constitution the yeas and nays will have to be taken on the passage of that bill over the veto; and in view of the circumstances that exist it is hardly wise that they should be called.

Mr. KIRKPATRICK. I realize that; but it seems to me that a quorum is present here this morning. [Cries of "Oh, no!"]

Mr. DINGLEY. I think you had better withdraw the bill for the present and wait until we have a quorum.

Mr. KIRKPATRICK. In your judgment will there be a quorum here?

Mr. DINGLEY. I can not tell. Of course the gentleman very well understands that if the absence of a quorum should be developed on the yeas and nays it will be fatal to some matters of very great importance, among which is final adjournment.

Mr. KIRKPATRICK. I will allow the matter to stand for the present, and may call it up a little later.

The SPEAKER. The report is withdrawn.

FOREST FIRES.

Mr. SHAFROTH. Mr. Speaker, I wish to call up again the bill (H. R. 9123) to prevent forest fires on the public domain, and move to suspend the rules and pass the bill. The gentleman from Arkansas [Mr. LITTLE] has withdrawn the point of no quorum.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

TITLES TO CERTAIN LANDS IN MISSISSIPPI.

Mr. WILLIAMS. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 9345) to enable certain persons in the State of Mississippi to procure title to public land.

The bill was read, as follows:

Be it enacted, etc., That all persons who, prior to January 19, 1895, purchased in good faith from the State of Mississippi any lands within the 6 miles or granted limits of the Mobile and Ohio Railroad, and which lands were included in approved swamp-land list No. 7, Augusta series, their heirs or assigns, shall have the preference right of entry for one year from the passage of this act, either under the homestead law or by purchase at private entry, at $1.25 per acre; and the fact that persons affected by this act have heretofore made entry of lands under any law or laws shall not work a disqualification to make entry as herein provided.

Mr. WILLIAMS. Mr. Speaker and gentlemen of the House, this is a bill that was unanimously reported by the Committee on Public Lands, and which is worded precisely as the Commissioner of the General Land Office recommended that it should be worded. The case is this: On September 20, 1850, there was a law passed by the United States Government granting a right of way and granting the even-numbered sections within a 6-mile limit to a certain railroad, styled in the act the Mobile and Chicago Railroad Company, the Government reserving the odd-numbered sections, having granted the even ones to the railway company, at an increased price of $2.50, in order to indemnify the Government for the lands granted to the railroad company. Upon September 20, 1850, the Government of the United States passed what is known as the land-grant act, by means of which they allowed States to select certain lands as swamp lands. The State of Mississippi proceeded under the swamp-land-grant law to select certain lands, and selected, among others, a great many of these lands which were upon this list of lands reserved to be sold at $2.50 an acre. The governor of the State of Mississippi certified

that land to the Interior Department. The Interior Department, on August 23, 1883, approved the list selected by the governor of the State of Mississippi, and transmitted to the governor on February 19, 1884, his approval of the list. The approval was never carried into patent.

Now, subsequently the Interior Department, upon January 19, 1895—years after these lands had been sold to parties who had bought them and had been living upon them for a generation, in many instances had buried their ancestors on them—the Department came to the conclusion that these lands were reserved, and revoked the approval which had been previously given. The consequence has been to leave the lands of a great many people who have been living upon them for a generation or longer subject to homestead entry, and it is very natural for a man who wants to enter a homestead to prefer one with a house and barn and other conveniences upon it rather than to go into the woods. A great deal of trouble has grown up in the counties where these lands are situated, and where about 15,000 acres are involved. The bill is worded in the exact language recommended by the Commissioner of Public Lands of the United States, and the passage of the bill is of immediate necessity in order to cure a crying evil which, if not cured, will cause a great deal of damage to actual, bona fide settlers upon these lands.

Two-thirds having voted in the affirmative, the rules were suspended and the bill was passed.

ENROLLED BILLS SIGNED.

Mr. HAGER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles:

A bill (H. R. 2) disposing of two condemned cannon; and

A bill (H. R. 7542) making appropriations for the naval service for the fiscal year ending June 30, 1897, and for other purposes.

WILLIAM H. SCOFIELD AND OTHERS.

Mr. FAIRCHILD. Mr. Speaker, I call up House bill No. 7338, and I move that the rules be suspended for the present consideration of the bill.

The SPEAKER. Not for the passage of the bill?

Mr. FAIRCHILD. No; my object is to amend it so that it will correspond to the form in which the bill is about to pass the Senate.

The SPEAKER. Why does not the gentleman move to suspend the rules and pass the Senate bill?

Mr. FAIRCHILD. I accept the suggestion of the Chair, and move to suspend the rules and pass the bill in the form in which I send it to the Clerk's desk.

The bill was read, as follows:

Be it enacted, etc., That William H. Scofield, Jacob Brady, James Ketcham, Annie Booth, as administratrix of the goods, chattels, and credits of George W. Booth, deceased; Wilson P. Billar, Ezra L. Waterhouse, Moses C. Bell, George W. Byles, and George A. Scofield be, and they are hereby, released from any liability as sureties on the bond of Neil Hepburn, by reason of the defalcation of Neil Hepburn, as late postmaster at City Island, N. Y. And the Secretary of the Treasury is hereby authorized and directed to discontinue as against said William H. Scofield, Jacob Brady, James Ketcham, Annie Booth, as administratrix of the goods, chattels, and credits of George W. Booth, deceased; Wilson P. Billar, Ezra L. Waterhouse, Moses C. Bell, George W. Byles, and George A. Scofield any action that may have been instituted against them to enforce such liability, and to cause to be satisfied of record any judgment that may have been entered against said sureties in any such action: *Provided, however*, That the provisions hereof shall apply only to the bond covering amounts accrued subsequent to September 30, 1893.

By unanimous consent a second was considered as ordered.

Mr. BAILEY. Mr. Speaker, I desire to have some explanation of this bill.

Mr. FAIRCHILD. I will say to the gentleman from Texas that this is a bill that was reported some time ago unanimously by the Committee on the Judiciary and was before the House on a former occasion and went over on the objection of my colleague, Mr. BARTLETT. Subsequently my colleague called at the Post-Office Department and satisfied himself as to the propriety of the bill to the extent that he said he would not renew his objection.

Mr. BAILEY. Does the Post-Office Department recommend the passage of the bill?

Mr. FAIRCHILD. The Auditor's department, having charge of the subject, favors the passage of the bill.

Mr. BAILEY. Do they recommend the passage of the bill?

Mr. FAIRCHILD. They have not specifically in any writing recommended the passage, but they have written a letter which is now before the Judiciary Committee of the Senate, upon which that committee has reported the bill favorably, and which indicates that the Department favors the passage of the bill. It was upon that communication that the Senate Judiciary Committee recommended the passage.

Mr. BAILEY. Mr. Speaker, the chairman of the Judiciary Committee tells me that this has been before that committee, and that it is a proper bill, so I make no further question about it.

The SPEAKER. The question is on the motion to suspend the rules and pass the bill.

Mr. BRUMM. Mr. Speaker, one moment. I want to get some information about this. I will ask the gentleman why this bill was sent to the Judiciary Committee, if it involves a claim?

Mr. FAIRCHILD. This is not a claim against the Government. The bill relates to a suit by the Government against the parties named in it.

Mr. MCEWAN. Mr. Speaker, I do not think we have sufficient information yet to vote intelligently on this matter. The Government is either going to give away money when it should not do so, or it is not——

Mr. CANNON. Let me ask the gentleman from New York——

Mr. MCEWAN. I believe I have the floor, Mr. Speaker. These people went on this man's bond knowing that they assumed a liability. We are now asked to relieve them from that liability, and if we do it I think we are doing wrong. We have no right whatever to vote away the people's money and give it to these men who assumed this liability. Let them pay. In other words, by this kind of legislation we are doing our best to entirely nullify the system of taking bonds for the protection of the Government.

Mr. FAIRCHILD. Mr. Speaker, I think I can satisfy my friend on that point. These men were sureties on two bonds. The first expired September 30, 1893, and under it a liability accrued of $1,900. The second bond expired three quarters later, and under that bond a liability accrued of $2,800. Under the law the Department is required to notify sureties immediately of any deficiency discovered on the part of any postmaster. The Department neglected to do that.

A deficiency in the accounts of this postmaster was discovered as early as June, 1893, amounting to more than $500; but the Government failed to notify the sureties of this fact, although the officers of the United States were corresponding with the postmaster urging him to make good his default. The bill as originally introduced and as originally reported by the Judiciary Committee proposed on that state of facts to relieve the sureties from both bonds. The bill as now amended relieves them from only the second bond, thus according with the views of the Judiciary Committee of the Senate. With regard to the second bond the equities in favor of the sureties are greater, for the reason that one of the sureties on the first bond died and the Department, owing to the death of that surety, wanted a new bond; and although the Government officials had knowledge at the time that this postmaster was in default to the extent of $1,900 the same men were accepted as sureties upon the second bond, they being kept in ignorance of the defalcation.

Mr. BRUMM. From the statement just made by the gentleman from New York [Mr. FAIRCHILD] it strikes me that this bill should have been sent to the Committee on Claims.

Mr. FAIRCHILD. I think I can satisfy the gentleman on that point. At the time when this bill was introduced in the House, proceedings had been commenced against these parties; and it was a question whether or not the Government should discontinue that action. It was to that view of the case that the bill applied. Owing to objection made by my colleague from New York [Mr. BARTLETT], at the time when the bill first came up, proceedings were continued and judgment entered. Execution is now in the hands of the marshal for enforcement, and will be enforced unless before this Congress adjourns this bill becomes a law. If that judgment should be enforced, these sureties, who are poor men with nothing in the world but their little homes which they have earned by a lifetime of labor and by husbanding their earnings in building associations, will be sold out to satisfy this judgment.

Mr. MITCHELL. Has this bill the unanimous approval of the two committees?

Mr. FAIRCHILD. It has.

Mr. BRUMM. This is really a claim of the Government against the sureties?

Mr. FAIRCHILD. That is correct.

Mr. BRUMM. Judgment has been obtained and execution is in the hands of the marshal. Now, a bill proposing to release the claim of the Government against these people should have gone to the Committee on Claims; the Committee on the Judiciary has no jurisdiction of such a matter.

Mr. FAIRCHILD. I wish to say to my friend from Pennsylvania [Mr. BRUMM] that in introducing this bill and having it referred to the Judiciary Committee I had no disposition at all to prefer one committee above another. My only object was to have a proper reference; and I followed in the matter the advice of those who had been in the House longer than I had.

Mr. BRUMM. That is not a matter of law; it is a matter involving a claim; and of course it should have gone to the Committee on Claims.

Mr. RAY. When the bill was referred to the Judiciary Committee this judgment had not been rendered; so that the bill appeared to be of the same class as other bills which are usually sent to the Judiciary Committee.

The question being taken on the motion to suspend the rules

and pass the bill, it was agreed to, two-thirds voting in favor thereof.

SANTA BARBARA, CAL., A SUBPORT OF ENTRY.

Mr. MCLACHLAN. I move to suspend the rules and pass the bill (S. 2412) to make the city of Santa Barbara, county of Santa Barbara, State of California, a subport of entry.

The bill was read, as follows:

Be it enacted, etc., That the city of Santa Barbara, State of California, be, and the same is hereby, made a subport of entry in the district of Los Angeles, with the privileges of section 7 of an act entitled "An act to amend the statutes in relation to immediate transportation of dutiable goods, and for other purposes," approved June 10, 1880.

Mr. MCLACHLAN. This bill, which proposes merely to make Santa Barbara a subport of entry, has already passed the Senate and is unanimously recommended by the House committee. I know of no objection to it whatever.

The question being taken, the motion of Mr. MCLACHLAN to suspend the rules and pass the bill was agreed to, two-thirds voting in favor thereof.

LIFE-SAVING STATION ON NEW ENGLAND COAST.

Mr. MOODY. I move to suspend the rules and pass Senate bill No. 2783. This bill, which was drawn by the Superintendent of the Life-Saving Service, has been passed by the Senate and has been unanimously reported by the House committee.

The bill was read, as follows:

A bill (S. 2783) to establish a life-saving station on the coast of New Hampshire or Massachusetts, between the Hampton and the Merrimac rivers.

Be it enacted, etc., That the Secretary of the Treasury be, and is hereby, authorized to establish a life-saving station on the coast of New Hampshire or Massachusetts at such point between the Hampton and Merrimac rivers as the General Superintendent of the Life-Saving Service may recommend.

Mr. RICHARDSON. I demand a second on the motion to suspend the rules.

Mr. MOODY. I ask that a second may be considered as ordered.

Mr. RICHARDSON. I agree to that.

There being no objection, a second was ordered.

Mr. RICHARDSON. Now I should like to hear some explanation of this bill.

Mr. MOODY. Mr. Speaker, this bill proposes to permit the establishment of a life-saving station on a certain part of the coast of Massachusetts or New Hampshire. As I have said, it was drawn by the Superintendent of the Life-Saving Service. It has been presented in consequence of the fact that during the storm of last February four vessels were wrecked on the Massachusetts coast in one night; and there was no means of rescue for the sailors, so that eleven lives were lost. I do not know that I need add anything except to say that the bill has passed the Senate and has been unanimously reported in the House.

Mr. RICHARDSON. As I understand, the bill is only permissive, and does not order that this station be established.

Mr. MOODY. It does not order the establishment of the station.

The question being taken, the motion to suspend the rules and pass the bill was agreed to, two-thirds voting in favor thereof.

GETTYSBURG NATIONAL CEMETERY.

Mr. CURTIS of New York. Mr. Speaker, I ask that the Senate bill (No. 2490) to authorize the Secretary of War to improve and maintain the public roads within the limits of the national park at Gettysburg, Pa., be taken up, and move to suspend the rules and pass the same.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of War is hereby authorized, in his discretion, to improve and maintain the public roads within the limits of the national park at Gettysburg, Pa., over which jurisdiction has been or may hereafter be ceded to the United States: *Provided*, That nothing contained in this act shall be deemed and held to prejudice the rights acquired by any State or by any military organization to the ground on which its monuments or markers are placed nor the right of way to the same.

Mr. RICHARDSON. I demand a second in order to hear an explanation of this bill.

Mr. CURTIS of New York. I will give an explanation if the gentleman will just allow me.

Mr. RICHARDSON. Very well.

Mr. CURTIS of New York. This bill was before the House some time ago, and the gentleman from Nebraska objected. It was explained to him, and later he said he would withdraw the objection.

The bill simply allows the Secretary of War to improve the roads in the Gettysburg Park, and lay out such other roads as may be necessary to get to one monument or from one set of monuments of the States to the others. It requires no appropriation but simply authorizes the use of the money already set apart for this purpose. It passed the Senate unanimously, and comes with unanimous report from the Committee on Military Affairs of the House.

I ask a vote.

The question was taken; and two-thirds voting in favor thereof, the rules were suspended and the bill passed.

ERIE, PA., PORT OF IMMEDIATE TRANSPORTATION.

Mr. GRISWOLD. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 180) to make the city of Erie, Pa., a port of immediate transportation.

The bill was read, as follows:

Be it enacted, etc., That the privileges of the seventh section of the act approved June 10, 1880, governing the transportation of dutiable merchandise without appraisement, be, and the same are hereby, extended to the port of Erie, in the State of Pennsylvania.

The motion to suspend the rules and pass the bill was agreed to, two-thirds voting in favor thereof.

REPRINT OF BANKRUPTCY BILL.

Mr. RICHARDSON. Mr. Speaker, I desire to submit a privileged report from the Committee on Printing.

The SPEAKER. The report will be read.

The Clerk read as follows:

Resolved, That 5,000 copies of House bill No. 8110, entitled "An act to establish a uniform law on the subject of bankruptcy throughout the United States," as the same passed the House, be reprinted for the use of the House.

Mr. RICHARDSON. There is also a report presented by the committee which I ask to have printed in the RECORD.

The report is as follows:

The Committee on Printing, to whom was referred resolution 405, providing that 5,000 copies of House bill No. 8110, entitled "An act to establish a uniform law on the subject of bankruptcy throughout the United States," as the same passed the House, be reprinted for the use of the House, having had the same under consideration, recommend that it do pass.

Mr. ALLEN of Mississippi. Mr. Speaker, in view of the record made by this Congress, it does seem to me that we should do all in our power to give the people instruction and information on the subject of bankruptcy.

The result of the action of this Congress will certainly be to produce that condition among the people. And why should we not put them in a condition to avail themselves of the benefits of laws suitable to their condition? But, sir, before elaborating my views fully on this resolution I desire to make something in the nature of a personal explanation. Both in the public press and this House I have been criticised for my silence during this session of Congress. [Laughter.] I want to say, sir, there has been very little during this session of Congress to inspire a Christian man with loquacity. [Renewed laughter and applause.]

Mr. Speaker, I am not the only great statesman who has been observing a great deal of silence for the last few months. "There are others." [Laughter.] In fact, Mr. Speaker, there are several of us great leaders who have not been talking much of late. [Laughter and applause.]

I suppose we all have our reasons for being silent. In my life there have been some discouraging incidents during this session. When I returned here last winter and found this Hall so full of Republicans, with such a scarcity of Democrats, when I found myself crowded back from my old seat on the middle aisle, where it had been for ten years, and the Republicans lapping over and occupying nearly half of the west side of the Hall, whereas the Democrats had for years occupied not only all of that side, but had lapped over and occupied a part of the Republican side of the House; I say when I found I had been driven away from this commanding position I occupied so long, and from which I speak to-day by courtesy, to make room for a Republican majority, in the language of my friend General WHEELER, "I trembled for my country." [Laughter]. While I still occupy the seat that is the outpost of the Democratic position in this House, it is entirely too far away from the center aisle, and there are too many Republicans on what was formerly Democratic territory.

I sat in the gallery the other day and heard some one ask, "Which is the Democratic side?" The response came that there is no Democratic side; that there was only a Democratic strip. [Laughter and applause.]

Now, Mr. Speaker, I insist that individually I am not to blame for the disasters that have come upon my party. I feel it is due myself that I should make this explanation, because, in yielding to the pressure brought to bear on me to stand for reelection to Congress [laughter], I consulted an old friend, who wrote me that there was some dissatisfaction among the people because, he said, I had lead the party to defeat, and some were demanding a new leader. [Laughter and applause.]

I want the country to understand that the Democratic party never went to defeat so long as it followed my leadership. It will be remembered, Mr. Speaker, that three years ago a great many of the Democrats of this House went off under the lead of my friend Tracy, from New York, and ceased to follow me. They began to condone the crime of 1873, by which silver was demonetized; began to talk about its being "the recognition of a condition"; about "the act of 1873" being "the tombstone on an old grave"; turned their backs on silver, and became worshipers at the shrine of gold! It was this departure from the time-honored principles of the Democratic party that caused a great many people to lose confidence in it and filled this Hall with the opponents of Democracy.

There was another incident in the early part of the session, a Senatorial election that occurred down in Mississippi, the result of which rather impressed me with the conviction that the best men were not being selected for high positions this year. [Laughter.] I doubt not, Mr. Speaker, that there are others who have occasion to feel and do feel about this as I do. [Laughter.]

I do not know, Mr. Speaker, how you feel about it, but these mistakes of the people at times have a tendency to make me despair of the perpetuity of our republican institutions. [Great laughter and applause.]

And then, Mr. Speaker, when I remember the circumstances under which this House met and the promises and professions of the Republican leaders as to what they would do when they got possession of the House, and when I have watched their performances, it has not been calculated, as I said before, to produce talk from a Christian man who was unwilling to "cuss."

This Congress met in the midst of great industrial and business depression. Business was paralyzed, people poor and growing poorer, their products selling for almost nothing, discontent and unrest with both labor and capital, the Administration selling bonds to buy gold to keep up a gold reserve, the gold brokers and bond buyers taking this gold in turn out of the Treasury to force the issue of more bonds, and the great Republican party that had professed so much capacity for relieving this condition of distress—the only remedy they proposed was one bill to increase taxation, and a bill to authorize the issuance of a different series of bonds. The people asked for bread, and you offered them a stone. They wanted to be rid of the bond-selling business; your remedy was to facilitate it. They did not need to be taxed any more, but the Republican prescription for every governmental evil is to increase taxation.

Mr. Speaker, I desire to call special attention to the extravagance of this Congress. It has already passed appropriation bills which carry directly in round numbers about $520,000,000, and has authorized contracts that will require the expenditure of $100,000,000 more, practically making a voting away by this Congress of $620,000,000 of the people's money; and it should be remembered that in some of these appropriations provision is only made for eight months, instead of the whole year, as has always been done heretofore. Besides this, many of the claims against the Government, such as war claims passed upon by the Court of Claims, are denied payment in pursuance of the policy of Republican managers to keep down the figures, as far as possible, in a Republican Congress, for party purposes in the coming Presidential election.

But, Mr. Speaker, the amount is already large enough to damn the party responsible for it. This money must all be raised by taxing the people; there is no other way to get it. The figures are so stupendous it is hard for the mind to grasp them, and this money is voted at a time when the Treasury and the people are in no condition to pay it.

The people are already overtaxed and the revenues insufficient to meet the expenses of the Government. I am aware that it is very difficult to make any impression on this body or to arouse the country on the question of economy against extravagance. But I do hope and believe that the condition of the people of this country at this time will make them call their public servants to account for wasteful extravagance.

Let me call your attention to how this thing is growing. In 1860, when the Democratic party was in power, and the country was prosperous, the entire governmental expenditures amounted to $63,200,875.65; and if you will look at the platform adopted by the Republican party that year you will see that they arraigned the Democratic party for its wasteful and extravagant appropriations. That was one of its greatest charges against Democracy.

Now, with the population of the country only about doubled, you have appropriated almost ten times the amount of money required to run the Government when your party said it was run extravagantly. Ten years ago, when the country was comparatively prosperous and the Treasury was overflowing with a large surplus, we appropriated $336,439,918.20 for the expenses of the Government, and that was regarded and was, in my opinion, an extravagant appropriation. But in ten years, without any excuse for it, with the purchasing power of money nearly doubled, $185,000,000 of direct appropriations and $100,000,000 of continuing contracts have been added—and see how easily you do it!

A bill creating a Government liability of $75,000,000 or $80,000,000—I refer to the river and harbor bill—is passed through this House under a suspension of the rules with only thirty minutes' debate, no opportunity being allowed to offer amendments or vote out improper items; and when it is returned here by the President with his veto, the previous question is called and no opportunity given to discuss it and show the President's characterization of it to be true or false.

There has been added nearly $300,000 this year by law to the annual expense of running the two Houses of Congress.

Mr. Speaker, my vote has been against every proposition to increase appropriations and expenses during this Congress, and in my efforts I have had some assistance from the President. [Laughter.] In some instances we have succeeded, and in others we have failed.

Mr. Speaker, the prudent business man, when he finds his expenses exceeding his income, goes to work to cut down expenses that he may live within his means. I do think the most sensible and patriotic proposition that has been made during this session with reference to our expenditures came from the gentleman from Alabama [Mr. WHEELER] when he proposed to make a cut of 25 per cent in the salaries of all Government officials and employees.

We could have made the revenues of the Government square with our expenses if we had adopted this plan, and there would have been no injustice in it, for the 75 per cent left will buy more of the necessaries of life now than the 100 per cent would buy when most of these salaries were fixed. I would be glad to see such a measure pass yet before we adjourn. But this wise proposition was only laughed at. No, the Republican party does not want to reduce expenses; they want a pretext for increasing taxation for the benefit, not of the Government, but for the few who have grown rich through governmental favor.

The gentlemen who we are told by some of the Republicans are this year having the "fat fried out" of them to get money to nominate and elect the great apostle of protection to the Presidency no doubt expect to get their money back with ten and an hundred fold interest.

I cite to prove this statement the fact that the Republicans in this Congress have rejected every proposition to increase the revenue unless it comes in that shape that individuals would get more money out of it than the Government. We could raise $25,000,000 or $30,000,000 of revenue by an additional tax on beer, and it would not affect the price but little, if any, paid by the consumer. The tax would fall mainly on the brewing trust, and the Republican party will not have it, because it does not enable any private interest to exact any of the tax. The same might be said of a tax on tea; but that meets the same objection from the Republicans—it would be a tax for revenue.

Mr. Speaker, I do hope and believe that the farmers of the South and West, and the farmers of the whole country, for that matter—I mention the South and West, as they are the great agricultural and producing sections of this country—will look at this thing in a sensible way and go to the polls next November prepared to vote not only patriotically but in their own interest. I call your attention here to a portion of an article on the relative prosperity of the agricultural and manufacturing sections of the country, the facts of which are taken from the last census returns. It presents some startling and interesting facts. In this article New England, New York, New Jersey, and Pennsylvania are reckoned as the East:

With 5 per cent of the area and 26 per cent of the population, the East possesses 43 per cent of the assessed wealth of the nation—above two-fifths. What is more, it was able to capture of the wealth gained in the ten years from 1880 to 1890, 41 per cent.

THE EAST NOT A PRODUCING SECTION.

How did it do it? How, with one-twentieth of the land to work on and with one-fourth of the population to do the work, was this little section able to secure so large a percentage of the increment of the nation's stored-up riches? Be it understood that this little section is not to any considerable degree a "producing" section. It does not "raise things." For example, it has only 18 per cent of the farm capital of the country and only 11 per cent of the acreage improved for cultivation. Of the total agricultural product of the country—and in this is to be included all the cotton, wool, hides, and the like, as well as all the cereals—this section raises only 17 per cent.

Again, it has only 15 per cent of the total railway mileage of the country which may represent transportation facilities.

Clearly it did not grow rich out of these. But the East is a manufacturer. With only 5 per cent of the area on which to locate its mills and factories, it still does more than half the manufacturing for the whole country. The States of New York and Pennsylvania alone turn out more than one-third of all the manufactured product of the United States.

In a word, the West produces the materials and the East makes them up. Precisely the relative profits of these two operations probably no man could determine. The following facts are presented for just what they may be worth:

At the time the census was taken there were 9,000,000 workers employed on the farms, in the fisheries, and in the mines of the whole country. The annual value of their produce was about $2,500,000,000. That was an average value of product per worker of $273.

RATIO IN FAVOR OF MANUFACTURERS.

In the same year there were 5,000,000 men and women employed in manufactories. The total value of the product they turned out was above $9,300,000,000. Deducting from this sum the computed cost of the raw materials, and the total value added to these raw materials in the process of manufacturing was $4,210,000,000. That was an average of $842 per worker, or a ratio of 3 to 1 in favor of the manufacturing worker as against the man on the farm.

One dollar invested in farming earns 15 cents.

One dollar invested in manufacturing earns 64 cents.

Or, to put the matter in another way, it took nearly $16,000,000,000 of farm capital to turn out a product of $2,500,000,000—a relationship of $1 to 15 cents. On the other hand, $6,000,000,000 of manufacturing capital was able to take $5,000,000,000 worth of raw material and make it worth above $9,000,000,000, or a net gain of $4,000,000,000 and more. That was a relation of capital to net gain of $1 to 64 cents.

Whether this be a hint or a path to the solution of the question, it is certain that the wealth gain of the manufacturing States in the last decade was

extraordinarily greater than that of some of the leading agricultural or producing States. There is a little book published by the Arena Company. It is called Bread Winners and Bond Holders, and was written by S. S. King, of Kansas.

In one of his illustrations Mr. King has taken the State of Massachusetts as an example of what he calls a "nonproducer," and set it in contrast to the nine great producing States shown on the opposite side. Taking land, labor, and capital as the three chief factors of production, he shows that the nine States of what he calls "the produce district" had land in proportion to Massachusetts as 58 to 1; they had labor as represented by population as 7 to 1, and capital as represented by assessed value as 2 to 1.

And yet in ten years the nine great producing States added to their assessed wealth $559,000,000, while the single little State of Massachusetts gained $569,000,000. The one small exceeds the nine great!

Mr. Speaker, the farmers of this country are a great, conservative class. They are as much entitled to the kindly consideration of the Government as any class of people in it. They help fight our battles in time of war. They feed our armies and our people both in war and peace. They furnish most of our exports with which we liquidate our debts and balances abroad. They pay more taxes in proportion to their wealth than any other class. Their holdings are of such a character that they could not escape them if they would.

In the very nature of things, they can not be protected to any appreciable extent by tariff laws, because we raise a large surplus of agricultural products that must find a market beyond the reach of our tariff laws. In these markets the price of their products are fixed.

Representing, as I do, an agricultural district, and familiar, as I am, with their struggles, misfortunes, and disappointments, I, sir, intend in the future, as I have in the past, to give my votes and influence toward relieving them of every unnecessary burden placed upon them, whether it be in the interest of extravagant appropriations or for the benefit of individual corporate gain, and I wish to warn them that they make a great mistake if they give their votes for any party or policy that increases unnecessarily their burdens.

There is no flowery path ahead of the American farmer; his lot will be hard enough with the very best the Government can do for him, and it is a grievous wrong to require him to bear taxation unnecessarily in any interest.

Mr. Speaker, there is another silent man about whose prospects and silence a good deal is being said at this time, and I desire to pay my respects to him. I refer to the distinguished gentleman from Ohio whom they say is to be nominated for the Presidency by the Republican party at St. Louis next week. I will not speak of the methods by which it is said his successful campaign has been won. I leave that for Senator CHANDLER and other Republicans who exposed the methods of his managers not long ago. But suffice it to say if his nomination is secured by the practices charged against him by his party friends, he should be defeated at the polls.

Mr. Speaker, there is about this time a very great interest and desire in the public mind to ascertain what are now the views of this silent man on the financial question, which is exciting so much interest just now. But they say his manager, Mr. Hanna, will not allow him to talk. While he is profoundly silent himself, he has friends in every part of the country certifying to what his real views on the question are, and these certificates seem to be made to suit the locality in which they are given; and I confess that his friends, by going to his past record on this question, can find warrant for certificates to suit all shades of opinion.

When I see the trouble some people are having with speeches made in the past, I am more reconciled to my own silence. But at this time, when the public mind is so wrought up and concentrated on the financial question, would it not look better for this leader of Republican thought to define his own position? Certificates as to what a man's opinions are might do very well if he were so situated he could not speak for himself. A certificate ought to be the last resort of the man whose word would be taken about his own position.

I have always heard that an egg that goes around with a certificate attached that it is a good egg is not a safe egg to buy, for they do say an egg never feels called upon to take around a certificate of its soundness until it is under suspicion.

Mr. Speaker, I have read and reread the platform adopted by the Republican convention of the State of Ohio, from which the Republican candidate for the Presidency will come; and of all the conglomerations of financial declarations that have appeared in this year of our Lord, the Ohio platform on this question "takes the cake." It declares for gold, silver, and paper money; wants each of them to be "as sound as the Government and as untarnished as its honor."

If you will look at the wording of this platform and the speech made by Mr. McKinley before the Marquette Club at Chicago, you will find the wording of the platform is almost in the exact words of this speech. We are therefore authorized to conclude that the Ohio platform was written by the Republican candidate for the Presidency. It is susceptible of all and more misleading constructions than have been put on the platforms of the two great political parties adopted at their last national conventions, and we all know what that means.

I here call attention to the financial plank of the Ohio Republican State platform:

THE FINANCIAL PLANK.

We contend for honest money, a currency of gold, silver, and paper, with which to measure our exchange, that shall be as sound as the Government and as untarnished as its honor, and to that end we favor bimetallism, and demand the use of both gold and silver as standard money either in accordance with a ratio to be fixed by an international agreement, if that can be obtained, or under such restrictions and such provisions to be determined by legislation as will secure the maintenance of the parities of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

I now give you a sentence from Governor McKinley's speech before the Marquette Club at Chicago last February, that you may see who wrote the Ohio platform. In speaking of the Republican party he said:

It stands for a currency of gold, silver, and paper, with which to measure our exchanges, that shall be as sound as the Government and as untarnished as its honor.

I could now give extracts from his speeches showing him on every side of this question. He voted for free coinage in 1878 and for the Bland-Allison law, for the Sherman law in 1890, denounced the Democrats for repealing the Sherman law, and now stands for any sort of money the national Republican convention will prescribe.

I would like, Mr. Speaker, to see the great parties this year adopt platforms susceptible of no double or misleading construction and then nominate candidates on them who have real convictions in accord with them, and who would be willing to stand by them. But the Ohio candidate seems to be waiting and willing to take his views from the convention from which he seeks the nomination. The Republican party may desire to observe the same rule in selecting their candidate that the cavalryman observed in selecting his horse. He said the kind of a horse he wanted was one that could turn quick and go fast. [Great laughter.] I doubt if the Republican party can find a candidate who can turn quicker or go faster than the gentleman from Ohio. But, Mr. Speaker, there is one thing about this candidate for the Presidency against which I wish to enter my protest here and now, and I hope the convention, if it does nominate him, will take a stand as between the English and American handshake. Mr. McKinley's rallying cry is "Americanism; American systems; American policies." Why should he be permitted to abandon the American handshake? Have any of you seen him in the last few years shaking hands; seen him raise his arm high in the air for his overhanded English handshake? Just think of how the American simplicity of a Jefferson or a Lincoln would be shocked by this effort to imitate the English handshake! We want an American President to shake hands right out from the shoulder—good old American style—none of this overhanded business. [Great laughter.]

Mr. Speaker, I served in this House with Mr. McKinley; I knew him very well. If he should be the nominee of the St. Louis convention I hope he will get on a straight, frank, and unequivocal platform. And if the American people should make the mistake of putting him in the White House I hope he will come down to the good old American handshake; and, so far as I am concerned, the same intimate and cordial relations that have existed between the occupants of the White House and myself for so many years will be continued. [Applause and laughter.]

Mr. Speaker, the efforts of the Republican party to divert the people in this campaign from the financial question to the tariff will, in my judgment, be abortive. The financial question is uppermost in their minds, and the friends of silver are going to stand up and be counted this year. The gold standard has had a fair trial; it has been weighed in the balance and found wanting. It does not suit the masses of the American people. I grant you that the people who want to invest their money in United States bonds, where they escape all taxation and where the owners can live in idleness and luxury, free from all care and secure from all obligation to contribute to the support of the Government, those who are interested in having their dollars buy as much as possible of products of labor. They seem to like the gold standard, for it is working just to suit them; but the great body of the people who have no fixed incomes are catching onto the fact that they are the victims of this system.

Mr. Speaker, I am no prophet, but in my speech more than two years ago I predicted just about what has happened with reference to our currency. The demand now is for the retirement of all our paper money except the issue of the national banks, and that what silver we have is to be practically mere subsidiary coin or token money. It will require the sale of seven or eight hundred millions more of bonds to carry out the programme, and then the people will be without a currency except such as the national banks see proper to let them have. I do not wonder that the

American Bankers' Association are interested in preserving the existing standard of value, as shown by this letter:

THE AMERICAN BANKERS' ASSOCIATION,
2 WALL STREET AND 90-94 BROADWAY,
New York, March 23, 1896.

[President, Eugene H. Pullen, vice-president National Bank of the Republic, New York; first vice-president, Robert J. Lowry, Lowry Banking Company, Atlanta, Ga.; chairman executive council, Joseph C. Hendrix, president National Union Bank, New York; treasurer, William H. Porter, vice-president Chase National Bank, New York; secretary, James R. Branch, 2 Wall street, New York.]

To the Bankers of the United States:

At a meeting of the executive council of the American Bankers' Association, held in this city on March 11, 1896, the following declaration was made by unanimous vote:

THE EXISTING STANDARD OF VALUE.

"The executive council of the American Bankers' Association declare unequivocally in favor of the maintenance of the existing gold standard of value, and recommend to all bankers and to the customers of all banks the exercise of all their influence as citizens in their various States to select delegates to the political conventions of both the great parties who will declare unequivocally in favor of the maintenance of the existing gold standard of value."

Your influence is earnestly requested to give practical effect to this action.

EUGENE H. PULLEN, *President.*
JAMES R. BRANCH, *Secretary.*
JOSEPH C. HENDRIX,
Chairman Executive Council.

This shows an effort on their part to control the national conventions, but I am thankful to be able now to say that they will not be able to control the Democratic convention this year. We will see next week how they succeed with the Republicans. You will see, I think, they will control, and demand either a gold-standard platform or one that is a great deal worse—a straddle. I do hope the people of these United States will require of public men and parties that they make an intelligible declaration on the great issues before the people, and then require them to live up to it. I will speak for no party that attempts to straddle on any great issue again.

I desire to call attention to one or two objections to free coinage as stated by the opponents of that proposition when the Senate sent us the free-coinage bill some few months ago. The gentleman from New Jersey, Mr. PARKER, in speaking of the free coinage of silver at 16 to 1, said:

I believe that if this be done the dollar will buy less, will pay less wages, will be worth less, and that this practically will effect partially a repudiation of debts, both public and private.

He is more honest than most of his crowd. His objection to the dollar we want is that it will buy less and pay less wages and will be worth less. That is just the sort of dollar we want—one that will buy less and one that will pay less wages. Your dollars are now worth too much. It takes too much labor and too much of the products of labor to get one. It is the appreciation of the dollar that makes the falling prices for property and commodities, and that is what is ruining the country and what we are trying to stop. We are as much interested in restoring the parity between the dollar and commodities as we are in maintaining the parity between the dollars. My friend Colonel BLUE, of Kansas, in his speech against free coinage, gave as one of his reasons for opposing it that he had so many pensioners in his district and that free coinage would lessen the purchasing power of their pension money.

Mr. Speaker, these arguments give the whole case away, as I understand it. It is hard on the American people if they must be required to double the purchasing power of these pensions because they have of their bounty given them. You see the pensioners belong to the fixed-income class; but it does seem to me the farmers in Colonel BLUE's district would protest against their products being sold for nothing in order that the pensioners' money should buy more. No, sir; this policy will not do. We must get out of it and go back to old Democratic principles. We must go back to the money of the Constitution. We can not afford to have all the business interests in our country disturbed by the fact that some gold broker is raiding the little gold in the Treasury.

They try very hard to frighten us by telling us of the calamities that will follow free coinage, but they do not stop to think about the calamities that are on us from the present condition, and they are growing worse every day, and whenever what the gold standard really leads to comes there is no financial calamity could be worse. Let the Democratic party declare for an honest and economical administration of the Government and for the restoration of silver to the place it occupied prior to 1873.

Let Democrats cease to talk about this being a billion-dollar country and necessarily a billion-dollar Congress; let the Democratic party in its platform and in its practices be what it was organized to be—a party of the masses of the people of this country contending for their rights and their welfare against the encroachments of the classes. Let Democrats cease to follow where JOHN SHERMAN leads on the financial question, and we will fill this House again with Democrats, and disappoint the silent man from Ohio by electing a Democratic President. [Loud applause.]

The SPEAKER. The question is on agreeing to the resolution. The question was taken; and the resolution was agreed to.

HENRY A. WEBB.

Mr. ARNOLD of Rhode Island. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 1256) for the relief of Henry A. Webb.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to redeem, in favor of Henry A. Webb, of Providence, R. I., the following-described bonds of the United States, issued under acts of Congress approved July 17, 1861, and August 5, 1861, namely: Bonds numbered 30049 to 30051, inclusive, for $500 each; also bonds numbered 5495 to 5497, inclusive, for $100 each; also bonds numbered 18433 to 18437, inclusive, for $100 each; also bonds numbered 4345 to 4353, inclusive, for $50 each, amounting in all to $2,750, with interest for sixteen and one-half years on said bonds numbered 30049 to 30051, inclusive, 5497, 18436, 18437, and 4345 to 4350, inclusive, from January 1, 1865, to July 1, 1881, the said Henry A. Webb claiming that he owned said bonds on February 11, 1865, when it is alleged they were stolen from him, and have never been recovered by him: *Provided*, That before the redemption of said bonds the said Henry A. Webb, or some one in his behalf, shall execute or cause to be executed and deposit with the Secretary of the Treasury a bond of indemnity, with good and sufficient sureties, subject to the approval of said Secretary, to secure the United States against loss or damage in consequence of the redemptcion of said bonds.

The SPEAKER. The question is on suspending the rules and passing the bill.

Mr. DINGLEY. One moment before that is done. Do I understand from the gentleman from Rhode Island that this is for the payment of certain bonds that were stolen, upon giving to the United States bonds sufficient to indemnify the Government if the bonds should ever be discovered.

Mr. ARNOLD of Rhode Island. Yes, sir.

Mr. DINGLEY. That is all.

Mr. BLUE. Mr. Speaker, I would like to ask the gentleman in charge of this matter if an investigation has been had to see whether any of these bonds have been presented for payment. We have had one bill vetoed that provided for the payment of bonds which it seems had been paid. What is the information in regard to that?

Mr. ARNOLD of Rhode Island. Six hundred and fifty dollars of these bonds has been paid. If the gentleman would like to have the report read, I will ask that it be read.

Mr. BLUE. I do not understand that. If there has been $650 of these bonds paid, why should there be an appropriation to pay them? It seems to me that that is objectionable.

Mr. ARNOLD of Rhode Island. The report will give a better explanation than I can.

The Clerk proceeded to read the report.

Mr. BLUE. Mr. Speaker, I understand, as to this payment of this $650, it was the fault of the Department, as proof had already been made that these bonds were stolen. If that is correct, I will withdraw my objection and not ask for the further reading of the report.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

IMPROVEMENT OF PUBLIC ROADS.

Mr. WILLIS. Mr. Speaker, I move to suspend the rules and pass the joint resolution H. Res. 194.

The joint resolution was read, as follows:

A joint resolution (H. Res. 194) extending the scope of the investigations by the Agricultural Department in the matter of the improvement of public roads.

Resolved, etc., That the inquiries and investigations relating to public roads with which the Secretary of Agriculture is charged by the act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1897, be extended to the following subjects, namely:

First. The scientific location of highways on the public domain.

Second. The practical use that can be made of the Geological Survey in the discovery of road materials.

Third. The methods and conditions under which free testing of road materials can be afforded.

Fourth. The feasibility and most practical methods of securing instructions in road building at agricultural colleges, the Military Academy, and all institutions having military instructors.

Fifth. What measures can be adopted to secure the general reduction of transportation rates on road materials.

And for the furtherance of these inquiries and investigations the Secretary of Agriculture is authorized to request the cooperation of the Secretary of War, the Secretary of the Interior, and the Interstate Commerce Commission.

Mr. WILLIS. Mr. Speaker, I move to suspend the rules for the purpose of passing the joint resolution; and I will remark simply that the purpose of the resolution is to extend and make more specific the scope of road inquiry. There is no appropriation and no additional expense involved in this other than the necessary use of the appropriations already made for that purpose.

Mr. BLUE. How much is that?

Mr. DINGLEY. Let me ask the gentleman from Delaware if this is to be done by a division of the Agricultural Department? Is this simply an extension of their work?

Mr. WILLIS. Exactly. It is simply an extension of work that is now under their direction. The whole thing is to be done under the Agricultural Department as formed before. The attention of the Department is desired to be called to this scheme and interest is purposed to be excited in the country generally on this very important and very vital question of road improvement. That is all there is in it.

Mr. DINGLEY. This is for the purpose of diffusing information, as I understand?

Mr. WILLIS. Yes, sir.

Mr. HENDERSON. Why can not all this be done by the Department now? They have full power.

Mr. WILLIS. But they do not do it.

Mr. HENDERSON. That is another matter. It is one thing to have the power and another thing to exercise it.

Mr. CHARLES W. STONE. I will say to the gentleman from Illinois that the appropriation bill provides that the inquiry shall be directed to certain matters, and this simply adds certain other matters which the road bureau of the Agricultural Department desires to direct attention to.

Mr. HENDERSON. This does not appoint a new commission?

Mr. CHARLES W. STONE. No new commission and no additional expense.

Two-thirds having voted in the affirmative, the rules were suspended and the bill was passed.

BRIDGE ACROSS THE ALLEGHENY.

Mr. WILLIAM A. STONE. Mr. Speaker, I move to suspend the rules and pass the bill which I send to the desk, being the bill (S. 3170) to authorize the Butler and Pittsburg Railroad Company to construct and maintain a bridge across the Allegheny River.

The bill was read.

By unanimous consent, a second was considered as ordered.

The rules were suspended, and the bill was passed.

ENLISTED MEN IN THE NAVY.

Mr. BOUTELLE. Mr. Speaker, I move to suspend the rules and pass Senate joint resolution No. 149, extending the benefits of sections 1426 and 1573 of the Revised Statutes to all enlisted persons in the Navy.

The joint resolution was read, as follows:

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That the benefits of honorable discharge, as conferred by section 1426 of the Revised Statutes, and of three months' pay upon reenlistment after honorable discharge, as conferred by section 1573, upon seamen, ordinary seamen, landsmen, firemen, coal heavers, and boys, be, and the same are hereby, extended and made applicable to all enlisted persons in the Navy.

Mr. BAILEY. Mr. Speaker, I demand a second, in order that we may have an explanation of the resolution.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. BOUTELLE. Mr. Speaker, this measure is to correct the effect of a recent ruling of the Assistant Comptroller which has reversed the action of the Navy Department for more than forty years, by applying a technical rule to the construction of the statute. A statute more than forty years of age provides that where an enlisted man, after serving his term and receiving an honorable discharge from the Navy, reenlists within three months, he shall receive his pay of the interim. The provision was intended to create a species of bounty which should serve to retain the best men in the service, and it has been very effective in giving us the best class of men. The original law was intended to cover all classes of enlisted men, and was so construed for many years.

In the evolution of the service they have got into a way of rating enlisted men for different minor positions and giving them special designations, such as stewards, boatswain's mates, and so on. They are all enlisted men, they are neither appointed nor commissioned, but the Comptroller has made a ruling that inasmuch as he does not find the specific titles of these different rates of enlisted men in the law, none of the enlisted men who are so rated, as the yeomen, or stewards, or cooks, or by any of these special designations, come under the operation of the statute, and he has held up the application of the statute in those cases. This joint resolution is to provide that the law shall apply as it was intended to apply, and as it had been construed to apply for more than forty years—to all the enlisted men in the service. It affects, as I am informed by the Department, 36 per cent of the very best men in the Navy, and serious trouble will be caused unless this remedy is applied. There is an amendment recommended by the Comptroller which I desire to have incorporated in the joint resolution.

The amendment was read, as follows:

Add after the word "Navy," in line 9, the words "and all accounts of paymasters who have made payments to enlisted men, not of the classes named in sections 1426 and 1573 of the Revised Statutes as if they had been included in the provisions of said sections, shall be allowed and passed by the accounting officers of the Treasury as if they had been included in said sections."

Mr. BAILEY. I presume that the amendment is intended to relieve officers who have acted upon the former construction of the law.

Mr. BOUTELLE. That is the object.

The SPEAKER. Without objection, the resolution will be modified so as to include the amendment.

There was no objection.

The rules were suspended and the joint resolution as amended was passed.

HAHNEMANN MONUMENT.

Mr. JOHNSON of North Dakota. Mr. Speaker, I move to suspend the rules and pass the joint resolution (S. R. 27) granting permission for the erection of a monument in Washington, D. C., for the ornamentation of the national capital and in honor of Samuel Hahnemann.

The joint resolution was read, as follows:

Resolved, etc., That permission be, and the same is hereby, granted the Hahnemann monument committee of the American Institute of Homeopathy to erect said monument in such place in the city of Washington, D. C., as shall be designated by the officer in charge of the new Library building, the Joint Committee on the Library, and the chairman of the monument committee; and the sum of $4,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the building of a foundation upon which to place said monument, said monument to be presented to the people of the United States by the American Institute of Homeopathy, kindred associations, and citizens, and to be erected in the city of Washington, D. C.

Mr. RICHARDSON. I demand a second, Mr. Speaker.

Mr. DALZELL. I ask unanimous consent that a second be considered as ordered.

The SPEAKER. Is there objection?

Mr. RICHARDSON. Mr. Speaker, I do not like to consent to this in view of the fact that the joint resolution contains a large appropriation. It seems to me that it is a very unusual kind of legislation.

Mr. DALZELL. It does not contain a large appropriation.

Mr. RICHARDSON. It appropriates $4,000 for a monument to a private individual.

Mr. JOHNSON of North Dakota. I will say to the gentleman that the statue——

Mr. RICHARDSON. I do not object, Mr. Speaker, to having a second considered as ordered.

Mr. BAILEY. I do.

Mr. JOHNSON of North Dakota. Let me say to the gentleman from Texas——

Mr. BAILEY. I will say to the gentleman that I have no objection in the world to the Government giving space for this statue—all the space that may be needed—if the appropriation be struck out.

Mr. JOHNSON of North Dakota. The statue, including the pedestal, will be the gift of private parties. The only expenditure asked on the part of the Government is for leveling the ground so as to make a proper foundation.

Mr. BAILEY. I am informed that this work has been largely completed——

Mr. JOHNSON of North Dakota. Certainly.

Mr. BAILEY. And while I shall vote against the appropriation for this purpose, I withdraw the objection to a second being considered as ordered.

There being no objection, a second was ordered.

Mr. JOHNSON of North Dakota. This is a proposition to present to the United States a seventy-five-thousand-dollar statue, including the pedestal. As to the merits of the statue, I wish to say that a number of the leading sculptors of the world were invited to compete for this work, and 24 models, coming from some of the greatest men in this line of art, were submitted. These models were publicly exhibited in New York City under the auspices of the American Sculptors' Society, being the first instance in the history of art in the United States where a public exhibition of models was made before a selection. The committee appointed to make the selection, including the American Sculptors' Society, decided unanimously on the model selected. As a work of art this statue is superior to anything now existing in the city of Washington, except the statues on horseback. The simple request is that the parties who have planned the execution of this work may present this beautiful statue to the United States. The only possible expenditure on the part of the Government (and that is the object of the small appropriation) will be for leveling the ground and digging down to build a foundation. The statue itself and the pedestal are complete, and are offered as a gift.

Mr. KIEFER. Who offers them?

Mr. JOHNSON of North Dakota. The American Society of Homeopathists, besides whom a great many citizens have contributed.

Mr. BLUE. Mr. Speaker, if I understand this proposition, it contemplates an appropriation of something like $4,000.

Mr. JOHNSON of North Dakota. It can not possibly exceed

that. The actual expenditure will depend upon the quality of the ground as it may appear when excavations are made for the foundation.

Mr. BLUE. This proposition involves the establishment of a precedent in the direction of making an appropriation by the Government whenever some society or organization comes along and proposes to make a presentation of a statue. I think, Mr. Speaker, the precedent is a bad one.

Mr. DALZELL. The gentleman will allow me to say this is not making a precedent. The precedent has already been established a number of times.

Several MEMBERS. Time and again.

Mr. BLUE. Well, the precedent ought not to have been established. It is sufficient for the Government to permit the statue to be erected here without appropriating money for the purpose.

Mr. DALZELL. I want to say to my friend that there is not a city in this country that would not be glad to make an appropriation for a work of art of this kind. I venture to say that when this statue is erected it will be the most artistic of all the works of art in this capital city. I know it was one of the pet projects of General Casey, recently in charge of the construction of the Library building, that this statue should be erected on the grounds of the Library; and he marked out the spot which he himself would select for the purpose. It seems to me that when a society—not a society, but numerous citizens representing this particular faith in medicine throughout the country—have had the enterprise to secure such a monument at a cost of $75,000, this Government ought to be glad to furnish in this capital city not only a place on which to erect the statue but a pedestal for it to rest upon.

Mr. JOHNSON of North Dakota. The pedestal is already prepared, and is presented along with the statue. The only expense to the United States in connection with this matter will be the erecting of the foundation—the expense connected with the excavation. The pedestal is part of the present, and is already paid for.

Mr. BLUE. Well, Mr. Speaker, I have not yet been convinced; and it seems to me that if this expense is incurred in connection with the statue of one individual, there may be no restriction or limit in this direction; and whenever somebody comes along with a statue having the indorsement of some gentlemen of taste and who are reputed to be judges of the fine arts, this case will be cited as a precedent. It seem to me the whole business is bad and the appropriation ought not to be made.

Mr. DALZELL. Let me say to my friend from Kansas that the chances of parties coming along in the future and contributing seventy-five-thousand-dollar statues for the adornment of the city of Washington are not going to be "plenty as blackberries."

Mr. BINGHAM. In the case of two or three of the military statues which now adorn the city of Washington the pedestals and foundations have been furnished by the Government, the statues themselves being the contributions of army organizations. The precedent of the Government contributing a part of the expense in connection with these works of art is already established; the only difference being that in the other cases the statues, being military, have belonged to a class exceptionally popular.

Mr. BLUE. Well, to my mind there is a vast difference between such cases and a matter of this kind. There are different schools of medicine——

Mr. BINGHAM. Take this statue at the foot of the Capitol; that was a contribution of citizens.

Mr. BLUE. I understand that. But statues which commemorate distinguished military service or something of that character are of a different class from this. If the Government once starts out in the direction proposed here, there is no telling what will be the limit. If we once set the precedent, we do not know how soon another society may come along with a similar proposition; and thus year after year and month after month these appropriations may be urged, supported by the precedent now sought to be established. I do not think it is right.

Mr. JOHNSON of North Dakota. I suggest to the gentleman that in the matter of nonmilitary statues the capital of the United States is singularly deficient.

Mr. BINGHAM. Gentlemen will recall the large foundation work in connection with the statue in the Botanical Gardens. That statue was a contribution of the French Government, having been first exhibited at the Centennial Exposition in Philadelphia. The presentation having been made, the Government expended $8,000 for the foundation and the erection of the statue. I merely wanted to give the gentleman facts, showing that there are precedents for the action proposed here.

Mr. DALZELL. And I would say to the gentleman further that there is a statue of Dr. Gross, near the Smithsonian Institution, built under similar circumstances at the close of the last session of Congress, I am informed; and also one of Professor Henry in the Smithsonian Grounds.

Mr. BLUE. I will content myself simply with voting against the proposition. I will not obstruct its passage, but I think it wrong, all the same.

The question was taken; and two-thirds having voted in favor thereof, the rules were suspended and the bill passed.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. GROUT. Mr. Speaker, I call up the conference report on the District of Columbia appropriation bill.

The SPEAKER. The Clerk will read the report.

The Clerk proceeded to read the report.

Mr. DOCKERY. Mr. Speaker, that report was agreed to last evening, and the only question at issue now is to further insist on the disagreement to the remaining Senate amendments.

Mr. GROUT. I move, Mr. Speaker, that the House further insist on its disagreement to the remaining Senate amendments, and ask for a conference on the disagreeing votes thereon.

Mr. RICHARDSON. I understand from the motion of the gentleman from Vermont that there has been no agreement upon any one of the amendments in dispute since the last report?

The SPEAKER. The Chair understands that there has been no agreement since the last report.

The motion of Mr. GROUT was agreed to.

The SPEAKER appointed as conferees Mr. GROUT, Mr. PITNEY, and Mr. DOCKERY.

Mr. DINGLEY. Mr. Speaker, before this matter goes into conference I desire to ask the gentleman in charge of the bill as to the prospect of an agreement upon the points of difference now remaining between the two Houses.

Mr. GROUT. Mr. Speaker, the remaining points of difference, I will state, in response to the gentleman from Maine, relate to the District charities and to the lighting of the city west of Rock Creek. These are the only points on which there is any disagreement.

Mr. DINGLEY. Has there been any progress made since the prior report?

Mr. GROUT. I was going to say further, if the gentleman will allow me a moment, that the conferees have been together informally this morning, and there is a bright prospect of coming to an early understanding so far as the District charities are concerned, and I have no doubt that the other question, with reference to the lighting of the city west of Rock Creek, will also be settled in some satisfactory manner.

Mr. DINGLEY. Because, if the gentleman will pardon me a moment, there seems to be, as I understand it now, only two points of difference between the Senate and the House, one on the District bill, with reference to the matters suggested by the gentleman in charge of the bill, and the point of difference with reference to the few public buildings embraced in the sundry civil bill in the Senate amendments. That is all that stands between the completion of the work of the House and the final adjournment of this session of Congress.

Now, it seems to me that with such slight differences remaining between the two Houses there ought to be a conclusion reached at a very early moment [applause] in order that we may be able to wind up the business of the session and adjourn Congress.

Mr. GROUT. I beg to say in response to the gentleman that the House conferees have been working diligently and have been prepared to make reasonable concessions in order to secure a settlement of these differences, and they have spared no effort toward reaching an agreement. I give the gentleman hope, however, that an understanding may be reached on the question of the charities in the District bill, and I presume we shall be able to reach an understanding also on the other matter, so that apparently a final agreement is in sight.

Mr. RICHARDSON. I would like to ask the gentleman from Maine a question. I suppose the statement the gentleman has made is equivalent to an official announcement that nothing will be done with the bond resolution pending before the Committee on Ways and Means?

Mr. DINGLEY. Well, in all probability there will not be much opportunity for any matters of that kind at this late stage in the session.

Mr. TAWNEY. I presume the gentleman from Tennessee refers to the bond resolution recently passed by the Senate. That was referred by the House to the Committee on Ways and Means, but is not before the committee now, having been adversely reported to the House.

Mr. RICHARDSON. I take it, therefore, from the statement of the gentleman from Maine that we are to understand officially that no action is to be taken on that question.

Mr. DINGLEY. What does the gentleman refer to?

Mr. DOCKERY. The gentleman refers to the bill of the Senate prohibiting the further issue of interest-bearing bonds.

Mr. RICHARDSON. A matter the consideration of which could easily be reached. But I was simply asking if we are to understand that nothing is to be done in regard to that question.

Mr. DINGLEY. The gentleman well knows that the House is very thin, and members are eager to get away; and there is no probability of any such action as he contemplates.

Mr. RICHARDSON. Well, with a majority of some hundred and sixty-odd, and growing rapidly——

Mr. DOCKERY. Sometimes at the rate of two a day.

Mr. RICHARDSON. Yes; sometimes at the rate of two a day; it seems that the gentleman ought to be able to secure and keep a majority for action on such an important measure as that.

Mr. HOPKINS. The gentleman from Tennessee, if he is anxious to get at the circumstances of the case, will find a report from the Committee on Ways and Means which has been prepared and submitted to the House. If he will get that report and read it he will obtain some information upon this subject.

Mr. CORLISS. Mr. Speaker, I ask for the regular order.

The SPEAKER. This debate does not seem to be germane to the question before the House. [Laughter.]

PUBLIC BUILDING AT DETROIT, MICH.

Mr. CORLISS. Mr. Speaker, I move to suspend the rules and pass the joint resolution (S. R. 161) authorizing the Secretary of the Treasury to place a bronze tablet or inscription on the Government building now being erected in Detroit, Mich.

The joint resolution was read, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to cause to be prepared and placed in some suitable position on the Government building now being erected in the city of Detroit, Mich., a bronze tablet or an inscription commemorative of the fact that the said public building is erected on the site of the British Fort Lernoult, which was surrendered to the United States in 1796; and is also on the site of the American Fort Shelby, which was demolished in 1826: *Provided*, That the cost of such tablet shall be paid from the appropriation already made for the said building.

Mr. CORLISS. I ask that a second be considered as ordered.

Mr. DINGLEY. Mr. Speaker, as I understand it, this simply gives permission to private individuals to place on this building a tablet commemorative of an historical event.

Mr. CORLISS. This building is erected on the site of an old fort, evacuated by the British one hundred years ago, and this authorizes the placing on the building of a tablet containing an appropriate inscription commemorative of that event, without any additional expense to the Government.

Two-thirds voting in favor thereof, the rules were suspended and the joint resolution was passed.

SUBMARINE CABLES.

Mr. BINGHAM. I move to suspend the rules and pass the bill (H. R. 9149) to regulate the establishment of submarine telegraphic cable lines or systems of the United States.

The bill was read, as follows:

Be it enacted, etc., That the shore end of any new submarine telegraphic cable line or system that shall be established after the passage of this act, which line or system shall be protected in any foreign country by exclusive landing rights or by any other special privileges or franchises, shall not be permitted to be landed or operated on the territory of the United States until the consent of the Congress of the United States shall have been obtained therefor. But this prohibition shall not apply to the renewal or renewals of any submarine telegraphic cable or cables now in operation.

The SPEAKER. The question is on suspending the rules and passing the bill.

Mr. RICHARDSON. Mr. Speaker, I demand a second, in order to have some explanation of this matter.

Mr. BINGHAM. The bill comes from the Committee on Interstate and Foreign Commerce, and is unanimously reported. Heretofore the permission for the landing of submarine cables has been granted by the State Department. Under date of December 21, 1893, the late Secretary Gresham stated that since March 1, 1893, no permission had been given by the Department of State to any foreign cable company to land its line on the coast of the United States, and that he knew of no law of Congress authorizing him or any other executive officer to grant such permission. That emphasized the necessity of this legislation. This bill vests the granting of the permission in Congress.

Two-thirds voting in favor thereof, the rules were suspended and the bill passed.

STRATTON H. BENSCOTER.

The SPEAKER laid before the House the bill (H. R. 3771) for the relief of Stratton H. Benscoter, with Senate amendments thereto.

The Senate amendments were read.

Mr. LACEY. I move to nonconcur in the Senate amendments, and ask for a conference.

The motion was agreed to; and the Speaker appointed as conferees on the part of the House Mr. HULL, Mr. FENTON, and Mr. MCCLELLAN.

JAMES A. MOORE.

Mr. NEWLANDS. Mr. Speaker, I move to suspend the rules and pass the bill (S. 768) for the relief of James A. Moore.

The bill was read, as follows:

Be it enacted, etc., That the proper accounting officers of the Treasury are hereby authorized and directed to settle the accounts of James A. Moore for services rendered and expenses incurred as United States marshal for the district of Nevada from October 12, 1892, the date of the expiration of his commission, until May 15, 1893, the date when his successor qualified, in the same manner as if section 793 of the Revised Statutes of the United States, providing for ad interim appointments, had been complied with.

Mr. LOUD. I demand a second, in order that the gentleman may make some explanation. I am willing to have a second considered as ordered.

Mr. NEWLANDS. I ask unanimous consent that a second be considered as ordered.

There was no objection.

The SPEAKER. The gentleman from Nevada [Mr. NEWLANDS] has twenty minutes and the gentleman from California [Mr. LOUD] twenty minutes.

Mr. NEWLANDS. I wish to say with reference to this bill that it simply authorizes the accounting officers of the Treasury to audit the account of a man who served as United States marshal for some few months after the expiration of his term. There was some informality in his appointment. Mr. Bowler, the Comptroller of the Treasury, admits the equity of the claim, but insists that he must have authority from Congress to audit it. The letter of the Comptroller of the Treasury appears in the report. The bill has been passed by the Senate and favorably reported by the Committee on Claims of the House. It involves only a matter of ten or twelve hundred dollars. It makes no appropriation, but simply authorizes the accounting officers to audit the claim.

Mr. LOUD. I would like to state that passage by the Senate is no recommendation of a bill, Mr. Speaker, especially if it carries an appropriation.

Mr. NEWLANDS. This bill carries no appropriation.

Mr. LOUD. Is not there some money involved in this bill?

Mr. NEWLANDS. It authorizes the Comptroller of the Treasury to audit these accounts.

Mr. LOUD. Has it been reported by a House committee?

Mr. NEWLANDS. It has been reported by a House committee. This man actually served under the orders of the judge of the United States circuit court there, rendered the services, presented his accounts, which have not been audited, on the presumption that there was some informality in the appointment. The Comptroller of the Treasury recommends the passage of the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

WASHINGTON NATIONAL PARK.

Mr. DOOLITTLE. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 4058) to set apart certain lands now known as the Pacific Forest Reserve as a public park, to be known as the Washington National Park. I ask that the bill be passed with the amendments recommended by the committee.

The bill was read, as follows:

Be it enacted, etc., That all those certain tracts, pieces, or parcels of land lying and being situate in the State of Washington, and within the boundaries particularly described as follows, to wit: Beginning at a point 3 miles east of the northeast corner of township No. 17 north, of range 6 east, of the Willamette meridian; thence southerly through the central parts of townships Nos. 17, 16, and 15 north, of range 7 east, of the Willamette meridian, 18 miles more or less, subject to the proper easterly or westerly offsets, to a point 3 miles east of the northeast corner of township No. 14 north, of range 6 east, of the Willamette meridian; thence east on the township line, between townships Nos. 14 and 15 north, 18 miles more or less, to a point 3 miles west of the northeast corner of township 14 north, of range 10 east, of the Willamette meridian; thence northerly, subject to the proper easterly or westerly offsets, 18 miles more or less, to a point 3 miles west of the northeast corner of township No. 17 north, of range 10 east, of the Willamette meridian (but in locating said easterly boundary line, wherever the summit of the Cascade Mountains is sharply and well defined, the said line shall follow the said summit, where the said summit line bears west of the easterly line as herein determined); thence westerly along the township line between said townships Nos. 17 and 18 to the place of beginning, the same being a portion of the lands which were reserved from entry or settlement and set apart as a public reservation by proclamation of the President on the 20th day of February, in the year of our Lord 1893, and of the independence of the United States the one hundred and seventeenth, are hereby dedicated and set apart as a public park, to be known and designated as the Washington National Park, for the benefit and enjoyment of the people; and all persons who shall locate or settle upon or occupy the same, or any part thereof, except as hereafter provided, shall be considered trespassers and be removed therefrom.

SEC. 2. That said public park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be to make and publish, as soon as practicable, such rules and regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonders within said park, and their retention in their natural condition. The Secretary may, in his discretion, grant leases for building purposes, for terms not exceeding twenty-five years, of small parcels of ground at such places in said park as shall require the erection of buildings for the accommodation of visitors, all of the proceeds of said leases, and all other revenues that may be derived from any source connected with said park, to be expended under his direction in the management of the same and the construction of roads and bridle paths therein. And through the lands of the Pacific Forest Reserve adjoining said park rights of way are hereby granted, under such restrictions and regulations as the Secretary of the Interior may establish, to any railway or tramway company or companies, through the lands of said Pacific Forest Reserve, and also into said

park hereby created, for the purpose of building, constructing, and operating a railway or tramway line or lines through said lands, also into said park. He shall provide against the wanton destruction of the fish and game found within said park, and against their capture or destruction for the purposes of merchandise or profit. He shall also cause all persons trespassing upon the same after the passage of this act to be removed therefrom, and generally shall be authorized to take all such measures as shall be necessary or proper to fully carry out the objects and purposes of this act.

SEC. 3. That upon execution and filing with the Secretary of the Interior, by the Northern Pacific Railroad Company, of proper deed releasing and reconveying to the United States the lands in the reservation hereby created, also the lands in the Pacific Forest Reserve, which have been heretofore granted by the United States to said company, whether surveyed or unsurveyed, and which lie opposite said company's constructed road, said company is hereby authorized to select an equal quantity of nonmineral public land, so classified as nonmineral at the time of actual Government survey which has been or shall be made, of the United States not reserved, and to which no adverse right or claim shall have attached or have been initiated at the time of the making of such selection, lying within any State into or through which the railroad of said Northern Pacific Railroad Company runs, to the extent of the lands so relinquished and released to the United States.

SEC. 4. That upon the filing by the said railroad company at the local land office of the land district in which any tract of land selected in pursuance of this act shall lie, a list describing the tract or tracts selected and the payment of the fees prescribed by law in analogous cases, and the approval of the Secretary of the Interior, he shall cause to be executed, in due form of law, and deliver to said company a patent of the United States conveying to it the lands so selected. In case the tract so selected shall at the time of selection be unsurveyed, the list filed by the company at the local land office shall describe such tract in such manner as to designate the same with a reasonable degree of certainty; and within the period of three months after the lands including such tract shall have been surveyed and the plats thereof filed in the local land office, a new selection list shall be filed by said company describing such tract according to such survey; and in case such tract, as originally selected and described in the lists filed in the local land office, shall not precisely conform with the lines of the official survey, the said company shall be permitted to describe such tract anew, so as to secure such conformity.

SEC. 5. That the mineral-land laws of the United States are hereby extended to the lands lying within the said reserve and said park.

Amend the title so as to read: "A bill to set apart a portion of certain lands in the State of Washington, now known as the Pacific Forest Reserve, as a public park, to be known as the Washington National Park."

The SPEAKER. The question is on suspending the rules and passing the bill.

Mr. BAILEY. I demand a second on that.

Mr. DOOLITTLE. I ask that a second be considered as ordered.

Mr. BAILEY. I object.

The SPEAKER. Objection is made. The gentleman from Texas and the gentleman from Washington will take their places as tellers.

Mr. BAILEY. If the gentleman will permit me, I am entirely willing that the United States Government shall cede this land to the State of Washington to be made a park. The matter I am objecting to is that the Federal Government undertakes to maintain this park after it is made.

Mr. DOOLITTLE. I would like to say to the gentleman from Texas that all we are asking for in this bill is for three sections square of mountain land about the foot of this mountain, which is 16,000 feet above the sea level, snow-capped with eternal snow and ice fields. We ask that it be set aside, and that the people of my State be permitted to improve that as a park. Many people travel across the continent and from foreign lands to view the grandeur of that mountain scenery. We are simply asking that this matter be placed under the authority of the Secretary of the Interior——

Mr. LACEY. The land has already been withdrawn as a forest reservation.

Mr. DOOLITTLE. The land has already been withdrawn as a forest reservation, and we ask that the Secretary of the Interior be given authority to formulate regulations as to what shall be done in the park in the way of its improvement, and so on.

Mr. BAILEY. I thoroughly sympathize in the desire of the gentleman to obtain this land for his State, and I am more than willing that he should have double the amount; but——

Mr. DOOLITTLE. We do not ask a nickel of appropriation.

Mr. BAILEY (continuing). I object to the Secretary of the Interior becoming the keeper of a park; and I object to taxing all the people of the United States to maintain a park in the State of Washington. If the gentleman will prepare an amendment that gives this land absolutely to the State of Washington I will support it.

Mr. DOOLITTLE. You understand that we are not asking for an appropriation, and do not intend to ask for a nickle from this Government. We propose to make the necessary improvements, for the benefit of all the people of this country, out of our own pockets, every dollar of it, and are asking nothing in the way of appropriation. It seems to me that no fairer proposition has ever been made to Congress than this.

Mr. BAILEY. The difficulty I have is that I have not learned how it is possible to maintain a park by any government without expense.

Mr. DOOLITTLE. I will explain——

Mr. BAILEY. If the gentleman will excuse me, this Congress ought to be advised by what has been the result in the Yellowstone Park. Annually we are called upon to make appropriations to maintain it. I will, however, accept the assurance of the gentleman from Washington that they do not intend to ask a dollar from the Government in the way of an appropriation; but I am willing to put it in the RECORD now that I will, in less than two years, remind him of it; and he agrees to have it stricken out.

Mr. DOOLITTLE. Why, most assuredly.

Mr. BAILEY. Then I withdraw the demand for a second.

Mr. DOOLITTLE. I ask for a vote, Mr. Speaker.

Mr. LACEY. There were amendments reported by the committee.

The SPEAKER. The question is on the motion to suspend the rules and pass the bill with the amendments as reported by the committee.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

UNITED STATES COURTS—TEXAS.

Mr. BELL of Texas. Mr. Speaker, I move to suspend the rules and pass the bill which I send to the desk, being a bill (H. R. 9226) to change the time and places for holding the district and circuit courts of the northern district of Texas.

The bill was read, as follows:

Be it enacted, etc., That the United States circuit and district courts for the northern district of Texas shall be composed of the counties hereinafter named, and the terms of the said courts shall be held in each year at the time and places as follows:

At Dallas, in the county of Dallas, on the second Monday of January and the third Monday of May.

At Waco, in the county of McLennan, on the second Monday of April and the third Monday of November.

At Fort Worth, in the county of Tarrant, on the first Monday of March and the third Monday in September.

At Abilene, in the county of Taylor, on the third Monday of March and the third Monday in October.

At San Angelo, in the county of Tom Green, on the fourth Monday of March and the first Monday in November.

SEC. 2. That all process issued against defendants residing in the counties of Brazos, Robertson, Leon, Limestone, Freestone, McLennan, Falls, Bell, Coryell, Hamilton, Bosque, Somervell, and Hill shall be returned to Waco. All process issued against defendants residing in the counties of Navarro, Johnson, Ellis, Kaufman, Dallas, Rockwall, Hunt, Collin, Denton, Cooke, and Montague shall be returned to Dallas. All process issued against defendants residing in the counties of Comanche, Hood, Erath, Tarrant, Parker, Palo Pinto, Wise, Clay, Jack, Young, Archer, Wichita, Wilbarger, Baylor, Hardeman, Cottle, Motley, Briscoe, Hall, Childress, Collingsworth, Donley, Armstrong, Randall, Deaf Smith, Oldham, Potter, Carson, Gray, Wheeler, Hemphill, Lipscomb, Ochiltree, Roberts, Hutchinson, Hansford, Sherman, Moore, Hartley, and Dallam shall be returned to Fort Worth. All process issued against defendants residing in the counties of Eastland, Stephens, Throckmorton, Shackelford, Callahan, Taylor, Jones, Haskell, Knox, Nolan, Fisher, Stonewall, Kent, Dickens, King, Crosby, Garza, Lubbock, Gaines, Andrews, Mitchell, Scurry, Borden, Howard, Martin, and Midland shall be returned to Abilene. All process issued against defendants residing in the counties of Glasscock, Sterling, Coke, Tom Green, Crockett, Schleicher, Sutton, Irion, Mills, Runnels, Coleman, and Brown shall be returned to San Angelo.

SEC. 3. That all actions or proceedings now pending in the courts of said district against parties residing in either of the counties from which process is made returnable to the courts to be held at Fort Worth, San Angelo, and Abilene, respectively, may, on the application of either party to such actions or proceedings, be transferred to the court at which the said proceedings would be returnable as provided in this act; and in case of such transfer all papers and files therein, with copies of all journal entries, shall be transferred to the office of the deputy clerk of the said court, and the same shall proceed in all respects as if originally commenced in said court.

SEC. 4. That there shall be appointed, in the manner required by law, a deputy clerk, who shall keep his office at the city of Fort Worth, and also one who shall keep his office at the city of Abilene, and also one who shall keep his office at the city of San Angelo.

SEC. 5. That no session of the said circuit court and district court of the northern district of the State of Texas shall be held at the city of Graham after this law shall take effect, and the records of said courts shall be removed from said town of Graham to the said town of Abilene, and the change of the places of holding the terms of the said courts as herein provided shall not affect the validity of any process or any bond or other obligation heretofore issued or made, and the same shall be held and taken as returnable and otherwise to the respective courts to which they would be returnable as provided after this law takes effect.

The rules were suspended and the bill was passed.

JOHN KEEFE.

Mr. POOLE. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 4538) which I send to the desk.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to John Keefe, of Syracuse, N. Y., the sum of $220, in full compensation for his services as engineer in the United States court-house and post-office building in Syracuse, N. Y., for the months of July and August, 1888, and from June 1 to August 17, 1889.

The rules were suspended and the bill was passed.

FORT BLISS MILITARY RESERVATION.

Mr. CATRON. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3206) to grant a right of way through the new Fort Bliss Military Reservation to the El Paso and Northeastern Railroad Company.

The bill was read, as follows:

Be it enacted, etc., That there is hereby granted to the El Paso and Northeastern Railroad Company a right of way 100 feet wide, on such route as the Secretary of War may designate, through the new Fort Bliss Military Reservation, Tex. If said railroad shall not be built across said reservation within three years next after the passage of this act, this grant shall absolutely cease and determine.

The rules were suspended and the bill was passed.

JAMES P. VEACH.

Mr. FARIS. Mr. Speaker, I move that the Committee on Military Affairs be discharged from further consideration of Senate joint resolution No. 138, for the relief of James P. Veach, and that the rules be suspended and the joint resolution be passed.

The joint resolution was read, as follows:

Resolved, etc., That the Secretary of War be, and he hereby is, empowered, authorized, and directed to cause record to be made in the military history of James P. Veach, a private of Company I of the One hundred and nineteenth (Seventh Cavalry) Regiment of Indiana Volunteers, in the service of the United States, that the said James P. Veach, having received from the President of the United States a full and unconditional pardon of all military offenses for which he was tried and convicted by court-martial, and sentence of which court was promulgated January 8, 1866, in General Orders No. 6, Department of Texas, is thereby absolved from said offenses and from all the penalties of such offense and sentence, and is therefore entitled to an honorable discharge; and thereupon to discharge said Veach as of the date October 8, 1865.

The SPEAKER. The question is on discharging the Committee on Military Affairs from further consideration of the joint resolution and suspending the rules and passing the resolution.

Mr. TALBERT. Mr. Speaker, I demand a second, in order that we may have some explanation of the resolution.

Mr. PAYNE. I ask unanimous consent that a second be considered as ordered.

There was no objection.

Mr. FARIS. Mr. Speaker, in response to the gentleman from South Carolina [Mr. TALBERT], I desire to say that this resolution was passed by the Senate at a former session of Congress. Its object is simply to make effective the pardon by President Harrison of this soldier, who was resting under a military sentence. This soldier enlisted in 1863 when he was 15 years old. After about two years of honorable service he fell sick and left his command, and in a short time, being recovered, he voluntarily returned to it, there being no record of his arrest. This was in October, 1865, when the soldier believed the war was over, and when it was actually ended. He was court-martialed, however, and sentenced to two years' confinement and served a part of his sentence, and in December, 1866, escaped and went home in Indiana. This was when he was about 18 years old. He was a good soldier and he is a very reputable man. The records will bear out the statements which I make in relation to him as a soldier in the service, and subsequently as a citizen. This joint resolution carries no appropriation whatever. It simply authorizes the Secretary of War to make effective the President's pardon and issue to this soldier an honorable discharge.

Mr. LOUD. Mr. Speaker, I wonder what this soldier's meritorious services were and where they were performed in 1866.

Mr. BISHOP. He had been for some years in the Army.

Mr. LOUD. He could not have been many years in the Army, if he was only 18 years of age when this trial took place, unless he was born there. [Laughter.]

Mr. FARIS. The report shows that he enlisted in September, 1863.

Mr. LOUD. And he was only 18 years of age at the time of the trial?

Mr. FARIS. He was only 15 when he enlisted, and he was about 18 at the time of the court-martial.

Mr. LOUD. This court-martial was in 1866.

Mr. FARIS. It may have been early in that year, but it was long after the offense was committed. He was down in Texas in the service before that.

Mr. LOUD. Permit me to say that soldiers who deserted during the war were not tried in 1866. The President's proclamation pardoned them all.

Mr. BISHOP. Mr. Speaker, if I remember the case correctly, this soldier enlisted as a recruit some time about 1863 or 1864, with the expectation of serving only until the end of the term of service of the regiment in which he was placed as a recruit. When the war was over they took him, with some others, and sent them down on the Mexican border. He remained there until 1866, when he got sick and went to New Orleans. He then went back, and some time afterwards he was tried for going to New Orleans when he was sick. Upon that trial he was convicted and sentenced. The President of the United States thought an injustice had been done him and granted him a pardon, but that does not give him an honorable discharge, and this joint resolution simply directs that he be given an honorable discharge.

Mr. LOUD. Why not bring in a bill at once granting a pension to this man? That is evidently what he wants.

Mr. BISHOP. Well, I think his service in the Army from the time he was 16 until he was 18 years old, two years, would probably entitle him to a pension; and for one I should be perfectly willing to give it to him.

Mr. LOUD. Why not be consistent and go right at it at once?

Mr. PAYNE. We can not do it all in so short a time. The gentleman wants us to work too fast. [Laughter.]

Mr. LOUD. That course would save time.

Mr. FARIS. Mr. Speaker, I ask for a vote.

The question being taken, the motion of Mr. FARIS to suspend the rules, discharge the Committee on Military Affairs from further consideration thereof, and pass the joint resolution was agreed to, two-thirds voting in favor thereof.

Mr. FARIS. Mr. Speaker, there is on the House Calendar a resolution (H. Res. 161) which has been favorably reported by the House Committee on Military Affairs. As it is exactly similar in its provisions to the Senate joint resolution just passed, I move that it be laid on the table.

There being no objection, it was so ordered.

BRIDGE ACROSS ST. LOUIS RIVER.

Mr. HARTMAN. I move to suspend the rules and pass the bill which I send to the desk.

The bill (H. R. 8321) to authorize the county of St. Louis, in the State of Minnesota, to build or authorize the building of a foot and wagon bridge across the St. Louis River between Minnesota and Wisconsin, at a point near Fond du Lac, in said State of Minnesota, was read.

The question being taken, the motion to suspend the rules and pass the bill was agreed to, two-thirds voting in favor thereof.

BURIALS AT NATIONAL CEMETERIES.

Mr. BAKER of New Hampshire. I move to suspend the rules and pass the bill (H. R. 8443)) to amend section 4878 of the Revised Statutes, relating to burials in national cemeteries.

The bill was read, as follows:

Be it enacted, etc., That section 4878 of the Revised Statutes be amended so as to read as follows:

"SEC. 4878. All soldiers, sailors, or marines dying in the service of the United States, or dying in a destitute condition after having been honorably discharged from the service, or who served during the late war, either in the regular or volunteer forces, may be buried in any national cemetery free of cost. The production of the honorable discharge of a deceased man shall be sufficient authority for the superintendent of any cemetery to permit the interment. Army nurses honorably discharged from their service as such may be buried in any national cemetery; and if in a destitute condition, free of cost. The Secretary of War is authorized to issue certificates to those army nurses entitled to such burial."

Mr. BAKER of New Hampshire. The only change which this bill proposes to make in existing law is to permit army nurses regularly discharged and so certified by the Secretary of War to be buried in national cemeteries.

Mr. HULICK. Does the bill require the presentation of the discharge before authority is granted for burial in a national cemetery?

Mr. BAKER of New Hampshire. There must be a certificate from the Secretary of War.

Mr. HULICK. Suppose there is other authority.

Mr. BAKER of New Hampshire. The other evidence, whatever it may be, must be presented to the Secretary of War, and he will furnish the certificate. This bill applies only to army nurses.

The question being taken, the motion of Mr. BAKER of New Hampshire to suspend the rules and pass the bill was agreed to, two-thirds voting in favor thereof.

SUBPORTS OF ENTRY, ETC., IN FLORIDA.

Mr. COOPER of Florida. I move to suspend the rules, and pass the bill (S. 1767) to provide for subports of entry and delivery in the State of Florida.

The bill was read, as follows:

Be it enacted, etc., That such places in the collection districts in the State of Florida as the Secretary of the Treasury may from time to time designate shall be subports of entry and delivery, and customs officers shall be stationed at such subports, with authority to enter and clear vessels, receive duties, fees, and other moneys, and perform such other services and receive such compensation as, in the judgment of the Secretary of the Treasury, the exigencies of commerce may require.

SEC. 2. That all acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Mr. LOUD. I demand a second on this motion, in order that we may have an explanation of the measure.

Mr. COOPER of Florida. I can explain it to the gentleman in a few moments.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. COOPER of Florida. Mr. Speaker, this bill has been unanimously reported from the Committee on Ways and Means. In consequence of the extension of a railroad down the Atlantic coast of Florida there has been a development of commerce with the Bahamas, the West Indies, etc., and thus there has arisen a need for several subports of entry. This is a Senate bill, and has been passed by that body. The suggestion was made (and it was approved by the Committee on Commerce) that the shortest way of meeting the demands of the present case would be to pass this bill, which simply authorizes the Secretary of the Treasury to establish these subports at the needed points.

Mr. LOUD. I should like to ask the gentleman from Maine [Mr. DINGLEY], the chairman of the Committee on Ways and Means, whether he thinks it advisable that the Secretary of the Treasury be empowered to establish subports of entry wherever, in his judgment, he may see fit to do so.

Mr. DINGLEY. Such legislation as this is ordinarily undesirable. It has been adopted in the case of Alaska——

Mr. COOPER of Florida. And Washington.

Mr. DINGLEY. And in the case of the State of Washington. The justification for legislation of this kind arises from peculiar circumstances where the ports in a given State for the transaction of this class of business are changing in consequence of peculiar conditions. Under such circumstances measures of this kind are resorted to as a temporary expedient. In the case of Florida, the establishment of lines to Cuba and various other points brings about a continual change in the requirements of trade; so that on conference with the Treasury Department, it was thought best to give this exceptional authority in the case of Florida, which has been given in the case of Washington and Alaska, until the regular conditions of trade should settle down. Hence the Committee on Ways and Means believed it justifiable to give this authority, which is exceptional, of course, and ought not ordinarily to be given.

Mr. LOUD. Would it not be wise to insert in the bill a proviso that the number of officials shall not be increased? Surely the commerce of Florida is not growing so rapidly as to require the appointment of new officials. If the current of business is changing, I realize that there may be need for new subports of entry and delivery. But this is a great discretionary power which it is proposed to lodge in the hands of the Secretary of the Treasury.

Mr. DINGLEY. Under existing law the Secretary of the Treasury has authority to appoint as many of these subordinate officials as may be necessary for the transaction of the public business, so that as far as that matter is concerned this bill confers no additional power. On the whole, under the peculiar circumstances, the committee thought it advisable to give the authority contemplated by the bill.

Mr. LOUD. If the gentleman from Maine can stand it I can. He is going to stay here longer than I am.

Mr. DINGLEY. In that respect there is no change in existing law. There is no limit now.

The SPEAKER. The question is on the motion to suspend the rules and pass the bill.

The question was taken; and two-thirds having voted in favor thereof, the rules were suspended and the bill passed.

LOSSES BY POSTMASTERS, ETC.

Mr. CONNOLLY. Mr. Speaker, I move to suspend the rules and pass the bill I send to the desk.

The SPEAKER. The bill will be read.

The Clerk read as follows:

A bill (H. R. 9447) to amend section 1 of an act entitled "An act authorizing the Postmaster-General to adjust certain claims of postmasters for loss by burglaries, fire, or other unavoidable casualties," approved May 9, 1888.

Be it enacted, etc., That the first proviso in section 1 of said act be so amended as to read as follows:

"*Provided*, That no claim exceeding the sum of $10,000 shall be paid or credited until after the facts shall have been ascertained by the Postmaster-General and reported to Congress, together with his recommendation thereon, and an appropriation made therefor."

Mr. LOUD. Mr. Speaker, I demand a second.

Mr. CONNOLLY. I ask that a second be considered as ordered.

Mr. LOUD. I have no objection to that.

A second was ordered.

Mr. CONNOLLY. Mr. Speaker, this bill simply amends the section of the statute which now authorizes the settlement of that kind of claims in the Post-Office Department where the amount involved does not exceed $2,000. As a result, every burglary of a post-office, which has been investigated by the Department, or loss of any kind arising in the post-offices without fault on the part of the postmaster, if the amount stolen is less than $2,000, is settled at the Department at once; but if it exceeds that sum, say $2,001, the postmaster must come to Congress and wait until a bill is passed for his relief. As a result of that, there are not less than a dozen or fifteen bills now pending for such claims, that have been recommended by the Department.

The purpose of this act is to change the limit fixed by the law from $2,000 to $10,000, so that the great bulk of the claims investigated by the Department, which they would settle if they had authority, may be settled when the limit is so raised.

The chairman of the Post-Office Committee understands the situation; he has examined the amendment to the law, and other gentlemen who are interested in it have also examined it, and there seems to be no objection to it so far as I am aware.

Mr. COOKE of Illinois. Mr. Speaker, I desire to say in favor of the passage of this bill that I have a case coming directly under the provision of the proposed amendment, in which case the committee have reported favorably upon a bill for the allowance to Mr. James A. Sexton, the late postmaster of Chicago, of the sum of $3,757.05 on account of funds stolen from his office in 1893. The report of Mr. Bissell, the Postmaster-General, which was made in 1894, uses this language:

Being satisfied from the evidence that the loss resulted from no fault or negligence on the part of said postmaster, I respectfully recommend the passage of a bill authorizing the credit claimed and making appropriation of said amount.

A complete examination and investigation of the case was made by the inspectors of the Post-Office Department, and the postmaster having gone out of office there is no way in which he can settle his final accounts aside from a special act for his relief, unless some such provision as this is adopted, whereby the limit shall be raised above the amount now fixed by law to such an extent as to cover the amount of his loss.

I heartily approve of the bill, as it simply places it in the power of the Postmaster-General to pass on such cases promptly when on a thorough investigation he ascertains that there is no fault resting upon the postmaster whereby the funds are lost, stolen, or otherwise destroyed.

Mr. BINGHAM. Will the gentleman from Illinois allow an inquiry?

Mr. CONNOLLY. Certainly.

Mr. BINGHAM. In this proposed change of the statute is it simply a change of the limit from two to ten thousand dollars, the wording of the statute in other respects remaining the same?

Mr. CONNOLLY. Precisely. The word "two" is stricken out and "ten" inserted. That is the only change.

Mr. LOUD. Mr. Speaker, just a word on this matter. While I demanded a second, I have no objection to the bill proposed by the gentleman from Illinois, and think it ought to pass. But still the House should know before it is passed exactly what is contained therein. This bill, of course, will extend the law or make it retroactive for fifteen years. I think the House should be in possession of the facts. It will take every claim that is now pending before Congress, or that is not pending before Congress, back for fifteen years preceding 1882. Not fifteen years back of the present date, but, as I understand, in amending the act of 1882, which this does, that act extends back a period of fifteen years, and this act passed in 1896, as we passed it, of course, would extend it back, I think, fifteen years prior to 1882.

Mr. HILL. Why should it not?

Mr. COOKE of Illinois. Mr. Speaker, I desire to call the attention of the gentleman from California [Mr. LOUD] to the fact that the act which is amended by the pending bill provides, it is true, that only those claims which accrued within fifteen years prior to March 17, 1882, should be covered by the act, but it also contains a proviso which is not disturbed by the bill now pending, which proviso is as follows:

And no claims for losses which may hereafter accrue shall be allowed unless presented within six months from the time the loss occurred.

It seems to me that is an ample provision for the protection of the Post-Office Department concerning any old claims which have not been presented.

Mr. LOUD. Possibly it is. There is a question about it. As I said, Mr. Speaker, I do not propose to oppose the bill. I think it is a meritorious one, because I am satisfied that the Post-Office Department is more competent to investigate these claims, and to judge as to whether they ought to be paid, than Congress is. I am perfectly willing to allow the Department to investigate those cases. But while I am on my feet I can not refrain from offering this suggestion, that there are a great many laws that need amending, but there is one in particular, and that is the law relating to lost checks. The limit, as I understand it, is now $2,500, and that law needs amendment more than this one does. I will say that there are several other bills amending the postal laws which, in my opinion, will be of great benefit to the Government. This bill of course can only be of great benefit to the claimants. There are a great many bills before Congress which would aid very materially the better management of the Post-Office Department, and while I congratulate the gentleman from Illinois [Mr. COOKE] who has written this bill within the last hour, on the alacrity with which he has brought it before the House, and on the alacrity with which he has gained recognition, I do still feel that if bills of this character, where there is no one especially interested except the claimants, can receive the attention of Congress, it would have been better for Congress to have turned its attention to such matters of legislation as would have improved the service.

I hope this bill will pass.

Two-thirds voting in favor thereof, the rules were suspended and the bill passed.

BRIDGE ACROSS THE ARKANSAS RIVER.

Mr. SHERMAN. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 5482) authorizing the Cleveland Bridge Company to construct a bridge across the Arkansas River between Pawnee County, Okla., and the Osage Indian Reservation.

The bill was read. It provides that the Cleveland Bridge Company, a corporation duly organized and existing under the laws of the Territory of Oklahoma, and its successors or assigns, be, and is hereby, authorized to construct and maintain a bridge and approaches thereto across the Arkansas River between a point in Pawnee County and the Osage Indian Reservation, in the Territory of Oklahoma, on section 9, township 21 east, of range 8 east. Said bridge shall be constructed to provide for the passage of

wagons and vehicles of all kinds, for the transit of animals, foot passengers, and all kinds of commerce, travel, and communications, and said corporation may charge and receive such reasonable tolls therefor as may be permitted by the laws of the Territory of Oklahoma.

Two-thirds voting in favor thereof, the rules were suspended and the bill passed.

ARTHUR P. SELBY.

Mr. JOY. Mr. Speaker, I move to suspend the rules and pass the bill (S. 261) for the relief of Arthur P. Selby.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby directed to pay to Arthur P. Selby the sum of $946, being an amount paid into the Treasury by said Selby, as clerk of the United States circuit court of the eastern district of Missouri, by mistake on his part and on the part of the accounting officers of the Government.

Mr. DINGLEY. I understand that there is a letter from the Comptroller stating the facts in this case.

Mr. JOY. Yes.

Mr. DINGLEY. I suggest that that letter be put in the RECORD.

The SPEAKER. The Clerk will read.

The Clerk read as follows:

TREASURY DEPARTMENT,
OFFICE OF COMPTROLLER OF THE TREASURY,
Washington, D. C., December 6, 1895.

SIR: I am in receipt of your letter of the 3d instant inclosing a copy of the report of the Committee on Claims of the House of Representatives (Fifty-second Congress, first session, Report 1069, April 13, 1892), on the claim of Arthur P. Selby, late clerk of the United States circuit court for the eastern district of Missouri. You ask whether said report states the facts of said claim and whether there is any appropriation from which it can be refunded.

On March 6, 1886, the First Comptroller stated the emolument account of the clerk for the calendar year 1885 by report 95797, and found that a balance of $2,400.70 was due to the United States, arising principally from the fact that the Attorney-General had approved his expenditures for clerk hire in the sum of $3,000 for the year when, according to his vouchers, he had expended $4,946. In his letter of June 2, 1886, to the First Comptroller, the Attorney-General stated that Mr. Selby's allowance for clerk hire is $4,000 instead of $3,000, as the Department of Justice had authorized the former amount by letter of August 4, 1885. Thereupon the First Comptroller stated a supplemental emolument account (No. 97571) allowing Mr. Selby the additional credit, reducing his balance to $1,400.70. This latter balance was deposited by Mr. Selby June 29, 1886, and covered into the Treasury, and his account of emoluments for calendar year 1885 was closed by First Comptroller's report 98926.

So far as the records of this Department show, the facts in the case are as stated in the committee's report.

There is now no appropriation from which said claim, amounting to $946, could be paid.

Respectfully, yours, R. B. BOWLER, *Comptroller.*

Mr. THO. C. FLETCHER,
Attorney for estate of Arthur P. Selby, deceased,
11 Sun Building, Washington, D. C.

Two-thirds voting in favor thereof, the rules were suspended and the bill passed.

PRINTING OF NICARAGUA CANAL REPORT.

Mr. CHICKERING. Mr. Speaker, I wish to present a privileged report from the Committee on Printing.

The Clerk read as follows:

Your committee, having had under consideration the resolution for printing 10,000 copies of the hearings before the Interstate and Foreign Commerce Committee upon the Nicaragua Canal, report in favor of the passage of the same.

Resolved, That there be printed 10,000 copies of the hearings before the Interstate and Foreign Commerce Committee upon the Nicaragua Canal, 3,000 copies for the use of the Senate and 7,000 for the use of the House.

The resolution was agreed to.

PROTECTION OF FOREST RESERVATIONS.

Mr. BELL of Colorado. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 119) to protect forest reservations.

The bill was read, as follows:

Be it enacted, etc., That the objects for which public forest reservations shall be established under the provisions of the act approved March 3, 1891, shall be to protect and improve the forests for the purpose of securing a continuous supply of timber for the people and insuring conditions favorable to water flow. And it is not the purpose of this act to authorize the inclusion within such forest reservations of lands more valuable for mining or agricultural purposes than for the timber thereon.

SEC. 2. That the Secretary of the Interior shall make such rules and regulations and shall establish such service as shall be required to regulate the occupancy and use of forest reservations which have been heretofore, or shall be hereafter, created under the said act of March 3, 1891, and to preserve the timber and other natural resources, and such natural wonders and curiosities and game as may be therein, from injury, waste, fire, spoliation, or other destruction: *Provided*, That all such forest reservations shall be controlled and administered in accordance with the provisions of this act and the rules and regulations so prescribed hereunder; and all acts and parts of acts inconsistent with the provisions of this act and the rules and regulations prescribed thereunder are hereby repealed in so far as the same relate to public lands embraced within such forest reservations.

SEC. 3. That for the purpose of preserving a sufficient supply of living and growing timber and facilitating its growth, and with a view to proper utilization of same, the Secretary of the Interior may, under rules and regulations prescribed by him, permit the cutting, removal, and disposal of so much of the dead or mature timber on such reservations as may, in his judgment, be expedient. That in disposing of such timber the Secretary of the Interior shall cause the same to be properly marked and designated, and thereafter appraised and advertised for sale to residents of the State or Territory in which the lands to be cut upon are situated. Such advertisement shall be made for not less than thirty days in a newspaper of general circulation throughout the State or Territory in which the said lands are situated, and like publication shall also be made, for the same period, in a newspaper published in the county or counties in which the lands lie. Such advertisement shall offer the timber for sale at not less than the appraised value and in limited quantities to each purchaser, specifying that payments therefor shall be made to the receiver of public moneys of the local land office of the district wherein the said timber is situated, subject to conditions prescribed by the Secretary of the Interior. No timber so purchased shall be removed until payment in full therefor has been made and receipt for such payment has issued by the receiver of public moneys. And no timber shall be either cut or removed under the foregoing provisions of this section except under such rules and regulations as the Secretary of the Interior may prescribe. The proceeds of all such sales shall be accounted for by the receiver of public moneys in a separate account, and shall be covered into the Treasury of the United States as a special fund, to be expended in the care and management of public forest reservations under the direction of the Secretary of the Interior or as Congress may provide.

SEC. 4. That in behalf of miners, prospectors, agriculturists, and other bona fide settlers occupying lands within or near forest reservations, who have not a sufficient amount of timber on their own claims or lands for use in developing the natural resources of same or for firewood, fencing, or building purposes, that the Secretary of the Interior may permit such parties, under rules and regulations prescribed by him, to procure from the public lands within such reservations, free of charge, so much timber as may be needed for their own individual use in developing the natural resources of their own claims or lands, or for firewood, fencing, and building purposes.

SEC. 5. That nothing herein shall be construed to prohibit in any wise any person or persons from free ingress and egress in respect to such reservations, or from crossing the same, or from constructing through the same necessary wagon roads: *Provided further*, That a strict compliance with the statutes and rules and regulations thereunder governing such reservations is observed.

SEC. 6. That the settlers and other residents within the boundaries of such reservations or in the vicinity thereof may maintain schools, churches, and cemeteries within such reservations; and for that purpose may occupy any of the unappropriated and unoccupied lands in said reservations, not exceeding 10 acres for each school building and for each cemetery.

SEC. 7. That nothing herein shall be construed to prohibit the use of any and all water on such reservations for power, domestic purposes, or for general irrigation purposes, under the laws of the State or Territory wherein such reservations are situated.

SEC. 8. That in cases in which a tract covered by an unperfected bona fide claim or by a patent is included within the limits of a public forest reservation, the settler or owner thereof may, if he desires to do so, relinquish the tract to the Government, and may select in lieu thereof a tract of vacant land open to settlement not exceeding in area the tract covered by his claim or patent; and no charge shall be made in such cases for making the entry of record or issuing the patent to cover the tract selected: *Provided further*, That in cases of unperfected claims the requirements of the laws respecting settlement, residence, improvements, etc., are complied with on the new claims, credit being allowed for the time spent on the relinquished claims.

SEC. 9. That all public lands withdrawn from settlement and entry for such forest reservations which, upon due examination by personal inspection on the part of a competent person or persons, appointed or detailed for that purpose by the Secretary of the Interior, shall be found to be more valuable for mining or agricultural purposes than for forest uses, shall be duly restored to entry under the general mining or settlement laws. The restoration to entry of such withdrawn lands shall be made only after due publication or proclamation of restoration by the President, based upon recommendation by the Secretary of the Interior. Publication in such cases shall be made for not less than sixty days in two papers published nearest the lands in question, and which are of daily issue and of general circulation in the State or Territory wherein the said lands lie: *Provided further*, That prospectors and mineral claimants shall have free access to such forest reservations for the purpose of prospecting, locating, and developing the mineral resources thereof, and that title to mineral claims may be acquired in the same manner as upon other mineral lands of the United States.

SEC. 10. That any person who shall willfully set fire or cause to be set fire to any timber upon any public forest reservation, or shall negligently leave or suffer fire to burn unattended near any such reservation, shall be deemed guilty of a misdemeanor, and, upon conviction, be fined in a sum not less than $50 nor more than $5,000, or be imprisoned not more than two years, or both.

SEC. 11. That any person who shall build a camp fire other fire in any public forest reservation shall, before breaking camp or leaving the same, totally extinguish such fire. Any person failing to do so shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine of not less than $25 or more than $1,000, or imprisoned not more than one year, or by both such fine and imprisonment.

SEC. 12. That the State or Territory wherein such forest reservations are situated shall have civil and criminal jurisdiction over persons within such reservations.

Amend the title so as to read: "A bill to protect and administer public forest reservations."

The SPEAKER. The question is on suspending the rules and passing the bill as read.

Mr. TERRY. For the purpose of obtaining information, I demand a second.

Mr. LACEY. I ask that a second be considered as ordered.

The SPEAKER. Without objection, a second will be considered as ordered. [After a pause.] The Chair hears none.

Mr. TERRY. I would like to ask the gentleman from Colorado if this is the bill that was prepared or revised by my colleague, Mr. MCRAE?

Mr. BELL of Colorado. Yes, sir; it is.

Mr. LACEY. The bill is the joint work of Mr. MCRAE, the Forestry Commission, the Land Office, and the Committee on Public Lands. It is a bill that has been prepared with a great deal of labor, and covers the question of the preservation and management of the forest reservations.

Mr. ELLIS. And has the approval of all the members of the committee and members from the public-land States.

Mr. HERMANN. It embraces the Senate amendments prepared at the last session.

Mr. SHAFROTH. It is the same bill that passed the Senate last session, but failed to pass the House.

Mr. HERMANN. It meets the approval of all the members from the public-land States.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

INTERNATIONAL EXPOSITION AT OMAHA, NEBR.

Mr. MERCER. Mr. Speaker, I move to suspend the rules and pass the bill S. 1306. Inasmuch as the bill has been read once in this legislative day, I ask unanimous consent that the reading be dispensed with.

The SPEAKER. The gentleman asks unanimous consent to dispense with the reading of the bill. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the title of the bill.

The Clerk read as follows:

A bill (S. 1306) to authorize and encourage the holding of a transmississippi and international exposition at the city of Omaha, in the State of Nebraska, in the year 1898.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

LAYING SUBWAYS IN THE DISTRICT OF COLUMBIA.

Mr. BABCOCK. Mr. Speaker, I move to suspend the rules and pass the resolution which I send to the desk.

The Clerk read as follows:

Resolved, That a subcommittee consisting of three members of the Committee on the District of Columbia, to be appointed by the Speaker, be, and they are hereby, authorized to sit during the recess of Congress, at such times and places as they may deem advisable, for the purpose of investigating the subject of the laying of subways in the streets, roads, avenues, and alleys of the District of Columbia, as recommended by the Commissioners of said District in the letter of the president of the Board of District Commissioners transmitted to the chairman of the Committee on the District of Columbia, under date of February 8, 1896, and as provided for by the bill (H. R. 5920) accompanying said letter, with authority to summon witnesses, to send for persons and papers, to administer oaths, to employ a stenographer, and such clerical and other assistants as may be necessary, the expense of such investigation to be paid from the contingent fund of the House, but not to exceed the sum of $2,000, said committee to make a full report of the proceedings of such investigation and their opinions thereon to the House of Representatives on the 1st day of December, 1896.

The SPEAKER. The question is on suspending the rules and agreeing to the resolution.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the resolution was agreed to.

MOBILE AND OHIO RAILROAD COMPANY.

Mr. WHEELER. Mr. Speaker, I move to suspend the rules and pass the bill (S. 2943) to authorize the construction of a bridge across the Warrior River by the Mobile and Ohio Railroad Company.

The bill was read at length.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

BRIDGE ACROSS THE ALABAMA RIVER.

Mr. STALLINGS. Mr. Speaker, I move to suspend the rules and pass the bill which I send to the desk, being the bill (S. 2945) to amend an act approved August 6, 1888, entitled "An act to authorize the construction of a bridge across the Alabama River."

The bill was read, as follows:

Be it enacted, etc., That the rights, powers, and privileges granted to the Alabama Great Northwestern Railway Company by the act of Congress entitled "An act to authorize the construction of a bridge across the Alabama River," and approved August 6, 1888, be, and the same are hereby, in all respects extended to and vested in the Mobile and Ohio Railroad Company.

SEC. 2. That the time within which said railway company was authorized to complete the construction of said bridge, which construction has already been begun in accordance with the provisions of said act, be, and the same is hereby, extended for three years from the date of the passage of this act.

The rules were suspended and the bill was passed.

BRIDGE ACROSS THE CAHABA RIVER.

Mr. STALLINGS. Mr. Speaker, I move to suspend the rules and pass the bill which I send to the desk, being the bill (S. 2944) to authorize the construction of a bridge across the Cahaba River, in Bibb County, Ala., by the Mobile and Ohio Railroad Company.

The bill was read at length.

The rules were suspended and the bill was passed.

CAPT. JAMES REGAN.

Mr. FISCHER. Mr. Speaker, I move to suspend the rules and pass the bill (S. 1011) for the relief of Capt. James Regan, United States Army.

The bill was read, as follows:

Be it enacted, etc., That the proper accounting officers of the Treasury are hereby authorized and directed to credit the account of Capt. James Regan, Ninth United States Infantry, as first lieutenant and regimental quartermaster of said regiment, for a shortage of subsistence stores at Fort D. A. Russell, occasioned by the dishonesty of Com. Sergt. James Boling, without misconduct on the part of said Regan, with the sum of $2,455.82, and said Regan is discharged from paying the same.

The SPEAKER. The question is on the motion to suspend the rules and pass the bill.

Mr. BLUE. Mr. Speaker, I ask for a second, in order that we may have some explanation of this bill.

By unanimous consent, a second was considered as ordered.

Mr. FISCHER. The case in brief is this: Captain Regan was commissary of stores at the point mentioned in the bill, Fort D. A. Russell. He was detailed by the War Department to act on a court-martial which took him a long distance from his post, some 300 miles, which he was compelled to travel on horseback. He was absent for about a month, and when he returned he found this sergeant had absconded and had left this shortage. Legally and technically Captain Regan was responsible, but the loss was not due in any degree to his dishonesty, but to that of the sergeant, who has ever since evaded justice. Captain Regan is now an old man, without means to make good this money, and the claim is a cloud upon his life and his record.

Mr. LITTLE. I will ask the gentleman whether this bill provides for a pension? [Laughter.]

Mr. FISCHER. No, sir. Captain Regan is already on the Army roll. He is an old man and desires to be retired. He has not a dollar and can not possibly make good this shortage.

Mr. BLUE. Was there any other commissioned officer at that post who could have been detailed to this duty when Captain Regan was absent?

Mr. FISCHER. The War Department ordered him away from his post on court-martial duty.

Mr. BLUE. That does not answer my question.

Mr. FISCHER. The commandant of the post was there.

Mr. BLUE. Why was not some commissioned officer detailed to take this captain's place while he was absent?

Mr. FISCHER. That I do not know. He was not responsible for it, however. He was only a junior officer himself.

A MEMBER. What committee has reported this bill?

Mr. FISCHER. The Committee on Military Affairs of the Senate. Captain Regan was certainly entirely innocent in the premises. As I have stated, he was away when this sergeant absconded.

Mr. LOUD. Has this bill been up for consideration before?

Mr. FISCHER. Yes, sir; and it has passed two Congresses, and has been reported favorably by the subcommittee No. 5 of the Committee on Military Affairs. I ask for a vote.

The rules were suspended and the bill was passed.

Mr. PAYNE. Mr. Speaker, I move that the House do now take a recess until 3 o'clock p. m.

The motion was agreed to; and the House accordingly (at 1 o'clock and 54 minutes) took a recess until 3 p. m.

The recess having expired, the House resumed its session.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed bills of the following titles; in which the concurrence of the House was requested:

A bill (S. 525) for the relief of Thomas Guinean, of Oregon;

A bill (S. 2054) for the relief of Rinaldo P. Smith, of Baltimore, Md.; and

A bill (S. 2840) to incorporate the East Washington Heights Traction Railway Company, of the District of Columbia.

A further message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment the bill (H. R. 9253) to amend an act approved August 19, 1890, entitled "An act to adopt regulations for preventing collisions at sea."

The message also announced that the Senate had passed resolutions of the following titles; in which the concurrence of the House was requested:

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound 60,000 extra copies of the report of the Joint Committee on the Dedication of the Chickamauga and Chattanooga National Park; 18,000 copies shall be for the use of the House of Representatives, 6,000 copies for the Senate, 1,000 copies for the National Park Commission to supply the twenty-eight State commissions, and 500 copies for the Secretary of War to supply the governors of the States, and 100 copies for each speaker at the dedication.

Also:

Resolved by the Senate (the House of Representatives concurring), That there be printed 5,000 copies of Senate Miscellaneous Document No. 274, Fifty-third Congress, second session, Proceedings of the Berlin Silver Commission of 1894, with index, 3,000 to be for the use of the House of Representatives and 2,000 for the use of the Senate.

The message also announced that the Senate had passed without amendment the following resolution:

Resolved by the House of Representatives (the Senate concurring), That the Secretary of the Interior be, and he hereby is, authorized and directed to resume work upon and to issue patents to the Union Pacific Railway Company without delay to all lands which have been sold by said company to bona fide purchasers: *Provided*, That nothing herein contained shall be construed as waiving any right that the United States may have to declare a forfeiture as to the lands which have not been so sold by said company: *Provided*, That the words "bona fide purchasers" herein contained shall not be held to include the holders of lands secured by mortgage on such land grant.

The message also announced that the Senate had insisted upon its amendments to the bill (H. R. 9409) making appropriations to supply deficiencies in the appropriations for expenses of the House of Representatives, and for other purposes, for the fiscal year 1896, numbered 2, disagreed to by the House of Representatives, had asked a conference with the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. HALE, Mr. ALLISON, and Mr. COCKRELL as the conferees on the part of the Senate.

A further message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment the bill (H. R. 180) to make the city of Erie, Pa., a port of immediate transportation.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes, had disagreed to the amendment of the House to the amendment of the Senate numbered 99; had still further insisted upon its amendments numbered 99, 100, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 193, 194, 195, disagreed to by the House of Representatives; had agreed to the further conference asked by the House of Representatives on the disagreeing votes of the two Houses thereon, and had appointed Mr. TELLER, Mr. ALLISON, and Mr. COCKRELL as the conferees on the part of the Senate.

A further message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed the bill (S. 3058) to increase the pay of letter carriers; in which the concurrence of the House was requested.

The message also announced that the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 7664) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes, was unable to agree.

The message also announced that the Senate had passed joint resolution (S. R. 161) authorizing the Secretary of the Treasury to place a bronze tablet or inscription on the Government building erected in Detroit; in which the concurrence of the House was requested.

ELECTION CONTEST—MARTIN VS. LOCKHART.

Mr. BAILEY. I ask unanimous consent that the views of the minority of the Committee on Elections on the contested election case of Martin against Lockhart may be printed as a public document, as they would have been——

The SPEAKER. Does the gentleman ask that they be printed in the usual form?

Mr. BAILEY. In the usual form.

The SPEAKER. The gentleman from Texas asks unanimous consent that the views of the minority of the Committee on Elections in the case of Martin against Lockhart may be printed in the usual form. Is there objection? The Chair hears none, and it is so ordered.

MARTHA M. GIBSON.

Mr. STRONG. I move to suspend the rules and pass the bill which I send to the desk.

The Clerk read as follows:

A bill (H. R. 8159) to pension Mrs. Martha M. Gibson.

Be it enacted, etc., That the Secretary of the Interior be, and hereby is, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws, the name of Martha M. Gibson, widow of William H. Gibson, late colonel of the Forty-ninth Regiment Ohio Volunteer Infantry and brevet brigadier-general United States Volunteers, and pay her a pension at the rate of $50 per month.

The question being taken, the rules were suspended and the bill was passed, two-thirds voting in favor thereof.

HIRAM T. CORUM AND SILAS W. DAVIS.

Mr. ELLIS. I move to suspend the rules and pass the bill (H. R. 8886) for the relief of Hiram T. Corum and Silas W. Davis, of Oregon.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to pay to Hiram T. Corum and Silas W. Davis, of Wapinitia, Oreg., out of any money in the Treasury not otherwise appropriated, the sum of $300, being in full of a claim for seed wheat and potatoes furnished the Indians on the Warm Springs Indian Agency in Oregon, which said claim was allowed by the Commissioner of Indian Affairs December 15, 1894, as "F, No. 80960."

The question being taken, the rules were suspended and the bill was passed, two-thirds voting in favor thereof.

SETTLERS ON INDIAN RESERVATIONS.

Mr. SHERMAN. I move to suspend the rules and pass the joint resolution which I send to the desk.

The Clerk read as follows:

Joint resolution extending the time of payments due from settlers and purchasers on all ceded Indian reservations.

Resolved by the Senate and House of Representatives, etc., That the homestead settlers and settlers who purchased with the condition precedent of actual settlement on all ceded Indian resevations be, and they are hereby, granted an extension of one year in which to make payments as now provided by law.

Mr. RICHARDSON. What committee has reported this resolution?

Mr. SHERMAN. A provision similar to this is contained in the Indian appropriation bill of this year; but that provision does not cover certain persons who have taken out homestead reservations under a special act passed, I think, in 1881. This affects a comparatively few people who are in a similar condition to those covered by the provision in the Indian appropriation bill. This involves no appropriation.

Mr. LACEY. Does this affect only the lands being sold for the benefit of the Indians, or does it affect also lands which have been sold and the proceeds covered into the Treasury?

Mr. SHERMAN. Both, as I understand.

Mr. LACEY. What committee has examined this joint resolution?

Mr. SHERMAN. This particular resolution has not been examined by any committee; but the subject has been examined by the Committee on Indian Affairs; and, as I have stated, a provision similar to this is contained in the general appropriation bill.

Mr. LACEY. Then it involves two classes of lands, a part of which would come within the jurisdiction of the Committee on Public Lands and another part under the jurisdiction of the Committee on Indian Affairs?

Mr. SHERMAN. It covers both questions, as I understand.

The question being taken, the rules were suspended and the joint resolution was passed, two-thirds voting in favor thereof.

SILAS P. KELLER.

Mr. VAN HORN. I move to suspend the rules and pass the bill (S. 361) for the relief of Silas P. Keller, with an amendment reported by the Committee on Indian Affairs.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and hereby is, authorized and directed to examine and adjudicate the claim of Silas P. Keller, late licensed Indian trader with the Pottawatomie Indians in Kansas, for supplies furnished said Indians for their subsistence, and to determine the amount thereof justly due said Silas P. Keller, and whether there is any fund belonging to said Indians which can be applied to the payment of such claim, and, if so determined, then to report and certify the amount found due to said Silas P. Keller, without interest, to be paid from the funds of said Indians to the Secretary of the Treasury, to be so paid by him.

The amendment reported by the Committee on Indian Affairs was read, as follows:

In line 6, strike out "Indians" and insert "Indian band."

Mr. RICHARDSON. I was unable from the reading to catch fully the purport of this bill. I should be very glad if the gentleman from Missouri would make some explanation.

Mr. VAN HORN. A bill similar to this was passed at the last Congress but did not reach the President in time for his signature. This bill has passed the Senate at this session and has been favorably reported by the Committee on Indian Affairs of this House. It proposes simply an inquiry into a personal account. It does not take any money from the Treasury.

Mr. RICHARDSON. Has the bill been reported by the Committee on Indian Affairs at this session?

Mr. VAN HORN. It has been.

Mr. RICHARDSON. Is there a unanimous report from that committee?

Mr. VAN HORN. I do not know whether the report is unanimous or not. I know the bill has been regularly reported.

Mr. RICHARDSON. I will ask that the report be read in my time.

The Clerk proceeded to read the following report by Mr. STEWART of Wisconsin:

The Committee on Indian Affairs, to whom was referred the bill (S. 361) for the relief of Silas P. Keller, report it back favorably with an amendment.

The subjoined letters from the Secretary of the Interior and Commissioner of Indian Affairs are made part of this report.

DEPARTMENT OF THE INTERIOR, *Washington, December 20, 1894.*

SIR: I have the honor to be in receipt of your communication of 10th instant, requesting the opinion of the Department on bills (S. 2364 and S. 2365) for the relief of Silas P. Keller and Northrup & Chick, late licensed traders with the Pottawatomie Indians, for supplies alleged to have been furnished the said Indians.

In reply I beg to hand you herewith a copy of a letter, dated 18th instant, from the Commissioner of Indian Affairs, wherein report is made of the facts and circumstances under which the liabilities referred to were incurred by the said Indians and the steps that have since been taken to secure payment therefor by the claimants.

As suggested by the Commissioner, I see no objection to the proposed legislation, providing the adjudication of said claims be left to the Department, as indicated in the bills referred to.

Very respectfully, HOKE SMITH, *Secretary.*

Hon. JAMES K. JONES,
Chairman Committee on Indian Affairs, United States Senate.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, December 18, 1894.

SIR: I have the honor to acknowledge the receipt, by your reference of the 11th instant, for report, of Senate bill 2364, for the relief of Silas P. Keller, late licensed trader with the Pottawatomie Indians of Kansas, for supplies furnished said Indians, and Senate bill 2365, for the relief of Northrup & Chick, late licensed Indian traders with the Pottawatomie Indians in Kansas, for supplies furnished said Indians; also by your reference of the 13th instant, for consideration in connection with the two above-named bills, of a communication from the clerk of the Senate Committee on Indian Affairs, in which

he refers to the above bills submitted for the opinion of the Department and states that Senator JONES had just directed him to request that the Senate committee be furnished, in the report of the Department thereon, with a full and complete history of these transactions, and that such suggestions and opinions as the Department may have on the subject be given the committee as early as practicable.

Senate bill 2364 provides "that the Secretary of the Interior be, and hereby is, authorized and directed to examine and adjudicate the claim of Silas P. Keller, late licensed Indian trader with the Pottawatomie Indians in Kansas, for supplies furnished said Indians for their subsistence and to determine the amount thereof justly due said Keller, and whether there are any funds belonging to said Indians which can be applied to the payment of such claims, and if so determined, then to report and certify the amount found due to said Keller, to be paid from the funds of said Indians, to the Secretary of the Treasury, to be so paid by him."

Senate bill 2365 provides that the same course be pursued in the matter of the claim of Messrs. Northrup & Chick.

The following is a history of the claims, as ascertained from the records and files of this office: Prior to 1864 Pottawatomie Indians residing in Kansas were largely indebted to traders and others for supplies furnished them for some years previous, and at the urgent request of the said Indians, through their business committee, and upon the recommendation of their agent, Mr. W. W. Ross, this office determined to appoint a commission to examine and report upon the merits of said claims. Accordingly a committee of two was appointed, one of whom was the Pottawatomie agent, W. W. Ross, and the other Mr. J. A. Steele. On the 13th of January, 1864, the committee rendered its report to this office, in which it stated that claims to the amount of $98,601.11 were examined, and recommended to be allowed $43,365.91.

On the 14th day of March, 1863, the Pottawatomie business committee addressed a letter to Mr. Ross, in which they stated that they desired to have him pay $15,000, or as much as might be necessary, out of their funds upon their national debts at the rate of 50 cents on the dollar, for all accounts that are approved and recommended to be paid by the commission appointed by the Department to investigate the same.

A great many of the claimants accepted 50 cents on the dollar for their claims and were paid, but others objected to this mode of settlement and demanded payment in full, among whom were Messrs. Northrup & Chick, named in Senate bill 2365, whose claim had been approved in part.

The claim of Mr. Keller was disallowed in toto by the commission, the said commission having attached a certificate to the claim, in which is set forth the statement that evidence of fraud or dishonesty appeared in making up the account, and recommended the rejection of the whole claim, amounting to $11,189.33, it being impossible for them or anyone else to determine what parts of said claim, if any, are paid or unpaid.

On the 31st of October, 1864, Mr. Keller filed in this office his protest against the report of Agents Ross and Steele against his claim, and filed an affidavit of his clerk, Mr. Ewing M. Sloan, who swears that during the years of 1853, 1854, 1855, and 1856 he was a clerk in the employ of Silas P. Keller; that in 1854 and 1855 S. P. Keller kept a larger stock of goods in the Pottawatomie Reservation than any other trader there, save during payment, at which time others, perhaps, had stocks as large as Keller's, but that he resided continually on the reservation during the years named, and he knew positively that Keller kept a large, well-assorted stock of such goods as the Indians most needed, and when the tribe was in need of credit, that the credit extended them by said Keller through him was larger, and for such articles as the Indians most needed, than any other trader there. Mr. Sloan answers in detail every point made against the claim by the commission, and in closing his affidavit states that the claim of Mr. Keller having been made and filed by him, it was proper for him to state that the goods charged in the accounts against the different Indians were all actually sold and delivered to parties to whom they are charged, and that the prices at which they were sold were the fair market price for the goods at the time they were sold and delivered, and that he believes the amount claimed by said Keller is justly due him, of course allowing for such clerical errors as will be found upon careful examination to have been made.

On the 24th day of April, 1865, the then Commissioner of Indian Affairs, W. P. Dole, submitted a report to the Secretary of the Interior, in which he stated that several claimants against the Pottawatomie Indians, whose books, transcript, and testimony relative thereto were examined and reported upon by W. W. Ross and J. A. Steele, commissioners, June 13, 1864, having through their attorney protested against the decision of said commission, he had at his earnest repeated requests caused the same to be reexamined in this office in connection with new testimony filed by some of the parties interested, viz:

Claim No. 40, Northrup & Chick, called for $5,522.68; $3,529.98 allowed.

Claim No. 47, S. P. Keller, $11,189.33, rejected by commission.

In this report the Commissioner states in regard to claim No. 40 as follows:

"This claim was allowed by the commissioners to the extent of $3,529.98, but Messrs. Northrup & Chick protest against the finding—both, I presume, against the reduction and the taking of the pro rata.

"The claim is badly prepared, and I do not see how the commission could make an intelligent examination. They seem, however, by some process to have arrived at the conclusion that there was due, after deduction for errors, etc., $4,011.34, from which amount they deduct 12 per cent, and arbitrarily, as I think, take $481.36 from the $4,011.34. After a consideration of the claim, I think it should have been allowed for $4,011.34.

"Claim No. 47, S. P. Keller; amount claimed, $11,189.33. This claim was rejected by the commission in toto. It was the largest one examined by the commission, and perhaps for that reason and the fact that it was known that only a 'pro rata' was to be paid the traders it was attacked by some of the other claimants. In this connection I would respectfully refer you to the affidavit of Lewis Ogee and E. G. Nadean, with the explanation that when Mr. Keller's late clerk was in this city for the purpose of making his explanatory affidavits those affidavits were not observed, but were afterwards found folded in the leaves of the transcript; besides by consulting the schedule you will find that the parties named are themselves claimants.

"I consider that Mr. E. M. Sloan's testimony in the above case, he being a reliable gentleman, as appears from the affidavit of A. S. Johnson, filed by S. N. Blackidge on the 15th instant, removes all the aspersions cast upon the claimant; and I can not see that any deduction should be made, except of the individual accounts of Lewis Ogee and E. G. Nadean."

The Secretary of the Interior, under date of May 5, 1865, in reply to the above report of April 26, 1865, returned the claims, books, etc., with the statement that, as there was no appropriation for paying these debts and no express authority for their examination and adjudication, he was of the opinion that all attempts to adjust them would be unavailing to the claimants, concluding no one, and that the books, etc., might be filed for future reference, it being possible that Congress will provide for their settlement. Mr. Keller states that since 1865 he has several times called up his claim for examination and settlement, but that until recently the papers could not be found.

Since the date of the reports referred to 1,400 Indians of the Pottawatomie Nation have become citizens of the United States and received their pro rata share of the assets of the tribe, and 780 preserved their tribal relations and are now residing upon their reservation in Kansas; consequently, if these claims should be paid, $\frac{1}{2123}$ thereof would be chargeable to the Citizen Band and $\frac{780}{2123}$ thereof to the Prairie Band, or Indian class. Within the last five years large sums of money have been appropriated for the Pottawatomie Nation on account of annuities growing out of various unfulfilled treaty stipulations, which money has been distributed among the two classes named upon the above basis.

The citizen class has now to its credit in the Treasury the sum of $61,123.32, being the aggregate of unexpended balances of the appropriations made for said class, and the Prairie Band receive an annual appropriation of $20,647.65 under treaties, besides trust-fund interest amounting annually to $9,204.72, the principal being $184,094.57.

The papers referred are respectfully returned herewith, with the above statement of facts, and with the remark that I can see no objection to the legislation proposed by the two bills named.

Very respectfully, your obedient servant,

D. M. BROWNING, *Commissioner.*

The SECRETARY OF THE INTERIOR.

Mr. RICHARDSON (before the reading of the report was concluded). Mr. Speaker, I do not ask for the further reading of the report; let the residue be printed.

The SPEAKER. Without objection, the complete report will be printed in the RECORD.

There was no objection.

The question being taken, the motion to suspend the rules was agreed to, two-thirds voting in favor thereof, and the bill was passed.

KETURAH WILSON.

Mr. McCREARY of Kentucky. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 7500) granting a pension to Mrs. Keturah Wilson, widow of James Wilson, deceased.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place upon the pension roll the name of Mrs. Keturah Wilson, formerly of Madison County, Ky., and widow of James Wilson, deceased, late a private in Captain Stone's company Mounted Volunteers, First Kentucky Regiment, Mexican war, and allow her a pension at the rate of $8 per month.

Mr. THOMAS. Mr. Speaker, I would like to have the report read in that case.

Mr. McCREARY of Kentucky. I ask unanimous consent that a second be considered as ordered.

There was no objection.

The SPEAKER. The Clerk will read the report.

The report (by Mr. COLSON) was read, as follows:

The Committee on Pensions, to whom was referred the bill (H. R. 7500) entitled "A bill to grant a pension to Mrs. Keturah Wilson," submit the following report, and recommend that said bill do pass:

The claimant herein is the widow of James Wilson, deceased, who served from June 8, 1846, to January 1, 1847, in the Mexican war. He was pensioned at $8 per month under the act of January 29, 1887, and this was subsequently increased to $12 per month under the act of January 5, 1893, upon his proving his indigent circumstances and his inability to earn a support by manual labor.

The said soldier, James Wilson, died April 10, 1894, and his widow, the beneficiary, filed an application for pension, which was rejected because he did not serve sixty days in Mexico, etc., the said soldier having been prostrated by typhoid fever for months in Louisville, Ky., while en route to Mexico with Captain Stowe's company, First Kentucky Cavalry, in which he had enlisted. The report at the War Department shows his discharge on account of disability.

Mrs. Keturah Wilson is 62 years old and is very poor and physically feeble, has no property and is dependent for support on her children, who are all very poor. Her statement is in writing, regularly signed and verified, and is filed with the Committee on Pensions.

Under the original ruling of the Department claimant would have been granted a pension, but on account of a new ruling made since the pension was granted to her husband, her application was rejected.

The committee recommend the passage of the bill.

Mr. TALBERT. I would like to ask if that bill has been considered in Committee of the Whole?

Mr. McCREARY of Kentucky. It was considered by the Committee on Pensions and unanimously reported to the House. My motion is to suspend the rules and pass the bill, and that will suspend any rule requiring its consideration in Committee of the Whole.

Mr. TALBERT. I am not objecting to the bill, but I just came in, and I did not know but that we were passing a bill for some more "coffee coolers."

Mr. McCREARY of Kentucky. This bill is all right.

The motion to suspend the rules and pass the bill was agreed to, two-thirds having voted in favor thereof.

LAWS RELATING TO NAVIGATION.

Mr. PAYNE. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 2663) to amend the laws relating to navigation as amended by the Committee on Merchant Marine and Fisheries.

The bill was read, as follows:

Be it enacted, etc., That section 4507 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4507. The Secretary of the Treasury shall assign in public buildings or otherwise procure suitable offices and rooms for the shipment and discharge of seamen, to be known as shipping commissioners' offices, and shall procure furniture, stationery, printing, and other requisites for the transaction of the business of such offices."

SEC. 2. That on and after June 30, 1898, every place appropriated to the crew of a seagoing vessel of the United States except a fishing vessel, yacht, or pilot boat, and all vessels under 100 tons register, shall have a space of not less than 72 cubic feet and not less than 12 square feet measured on the deck or floor of that place for each seaman or apprentice lodged therein: *Provided*, That any such seagoing vessel built or rebuilt after June 30, 1898, shall have a space of not less than 108 cubic feet and not less than 18 square feet measured on the deck or floor of that place for each seaman or apprentice lodged

therein. Such place shall be securely constructed, properly lighted, drained, heated, and ventilated, properly protected from weather and sea, and, as far as practicable, properly shut off and protected from the effluvium of cargo or bilge water; and failure to comply with this provision shall subject the owner and vessel to a penalty of $500.

Fishing vessels, yachts, and pilot boats are hereby exempted from the provisions of section 1 of chapter 173 of the laws of 1895, entitled "An act to amend section 1 of chapter 398 of the laws of 1882, entitled 'An act to provide for deductions from the gross tonnage of vessels of the United States,'" so far as said section prescribes the amount of space which shall be appropriated to the crew and provides that said space shall be kept free from goods or stores not being the personal property of the crew in use during the voyage.

SEC. 3. That section 4576 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4576. The master of every vessel bound on a foreign voyage or engaged in the whale fishery shall exhibit the certified copy of the list of the crew to the first boarding officer at the first port in the United States at which he shall arrive on his return, and also produce the persons named therein to the boarding officer, whose duty it shall be to examine the men with such list and to report the same to the collector; and it shall be the duty of the collector at the port of arrival, where the same is different from the port from which the vessel originally sailed, to transmit a copy of the list so reported to him to the collector of the port from which such vessel originally sailed. For each failure to produce any person on the certified copy of the list of the crew the master and vessel shall be severally liable to a penalty of $400, to be sued for, prosecuted, and disposed of in such manner as penalties and forfeitures which may be incurred for offenses against the laws relating to the collection of duties. But such penalties shall not be incurred on account of the master not producing to the first boarding officer any of the persons contained in the list who may have been discharged in a foreign country with the consent of the consul, vice-consul, commercial agent, or vice-commercial agent there residing, certified in writing, under his hand and official seal, to be produced to the collector with the other persons composing the crew, nor on account of any such person dying or absconding or being forcibly impressed into other service, of which satisfactory proof shall then also be exhibited to the collector."

SEC. 4. That section 4541 of the Revised Statutes be, and is hereby, amended by striking out the words "district judge for the district," in the seventh line of said section, and substituting in place thereof the words "circuit court of the circuit"; and that said section be, and is hereby, further amended by striking out the words "district judge" where they occur in the eleventh and twelfth lines of said section and substituting in place thereof the words "circuit court."

SEC. 5. That rule 11 of section 4233 of the Revised Statutes, relating to pilot boats, be amended by adding thereto a paragraph as follows:

"Steam pilot boats shall, in addition to the masthead light and green and red side lights required for ocean steam vessels, carry a red light hung vertically from 3 to 5 feet above the foremast headlight, for the purpose of distinguishing such steam pilot boats from other steam vessels."

SEC. 6. That section 4542 of the Revised Statutes be, and hereby is, amended by adding thereto the words "or where he died."

SEC. 7. That section 4545 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4545. A circuit court, in its discretion, may at any time after the expiration of three months from the receipt thereof direct the sale of the whole or any part of the effects of a deceased seaman or apprentice which it has received or may hereafter receive, and shall hold the proceeds of such sale as the wages of deceased seamen are held. When no claim to the wages or effects or proceeds of the sale of the effects of a deceased seaman or apprentice, received by a circuit court, is substantiated within six years after the receipt thereof by the court it shall be in the absolute discretion of the court, if any subsequent claim is made, either to allow or refuse the same. Such court shall, from time to time, pay any moneys arising from the unclaimed wages and effects of deceased seamen, which, in their opinion it is not necessary to retain for the purpose of satisfying claims, into the Treasury of the United States; and such moneys shall form a fund for, and be appropriated to, the relief of sick and disabled and destitute seamen belonging to the United States merchant-marine service."

SEC. 8. That chapter 97 of the laws of 1895, entitled "An act to amend an act entitled 'An act to amend the laws relative to shipping commissioners,' approved August 19, 1890," be, and is hereby, amended by striking out the word "seventh" where it occurs in the twelfth line of said act; and that said act be, and is hereby, further amended by inserting therein the words "and forty-six hundred and two" after the words "forty-five hundred and fifty-four" where they occur in the twenty-eighth line of said act.

SEC. 9. That fees for the entry direct from a foreign port and for the clearance direct to a foreign port of a vessel navigating the waters of the northern, northeastern, and northwestern frontiers of the United States otherwise than by sea, prescribed by section 4382 of the Revised Statutes, are abolished. Where such fees, under existing laws, constitute in whole or in part the compensation of a collector of customs, such officer shall hereafter receive a fixed sum for each year equal to the amount which he would have been entitled to receive as fees for such services during said year.

SEC. 10. That section 4165 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4165. A vessel registered pursuant to law which by sale has become the property of a foreigner shall be entitled to a new register upon afterwards becoming American property, unless it has been enlarged or undergone change in build outside of the United States."

SEC. 11. That section 13 of chapter 344 of the laws of 1874 be, and is hereby, amended to read as follows:

"SEC. 13. The Secretary of the Treasury may, upon application therefor, remit or mitigate any penalty provided for in this act, or discontinue any prosecution to recover the same, upon such terms as he, in his discretion, shall think proper, and shall have authority to ascertain the facts upon all such applications in such manner and under such regulations as he may think proper. All penalties herein provided may be sued for, prosecuted, recovered, and disposed of in the manner prescribed by section 4305 of the Revised Statutes."

SEC. 12. That rule 14 of section 4233 of the Revised Statutes be, and is hereby, amended to read as follows:

"Rule 14. The exhibition of any light on board of a vessel of war of the United States may be suspended whenever, in the opinion of the Secretary of the Navy, the commander in chief of a squadron, or the commander of a vessel acting singly, the special character of the service may require it. The exhibition of any light on board of a revenue cutter of the United States may be suspended whenever, in the opinion of the commander of the vessel, the special character of the service may require it."

SEC. 13. That section 4233 of the Revised Statutes be, and is hereby, amended by adding thereto:

"Rule 25. A sail vessel which is being overtaken by another vessel during the night shall show from her stern to such last-mentioned vessel a torch or a flare-up light.

"Rule 26. Nothing in these rules shall exonerate any ship, or the owner or master or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper lookout, or of the neglect of any precaution which may be required by the ordinary practice of seamen or by the special circumstances of the case."

SEC. 14. That the Secretary of the Treasury be, and he is hereby, authorized to direct the inspection of any foreign vessel admitted to American registry, its steam boilers, steam pipes, and appurtenances, and to direct the issue of the usual certificate of inspection, whether said boilers, steam pipes, and appurtenances are or are not constructed pursuant to the laws of the United States, or whether they are or are not constructed of iron stamped pursuant to said laws. The tests in the inspection of such boilers, steam pipes, and appurtenances shall be the same in all respects as to strength and safety as are required in the inspection of boilers constructed in the United States for marine purposes.

SEC. 15. That section 2834 of the Revised Statutes be, and is hereby, amended by repealing the following words therein:

"The master of any vessel bound to any district in Connecticut, through or by the way of Sandy Hook, shall, before he passes the port of New York and immediately after his arrival, deposit with the collector for the district of New York a true manifest of the cargo on board such vessel. The master of any vessel bound to the district of Burlington shall, before he passes the port of Philadelphia and immediately after his arrival, deposit with the collector thereof a like manifest: and the collector shall, after registering the manifest, transmit the same, duly certified to have been so deposited, to the officer with whom the entries are to be made; and the."

SEC. 16. That sections 2570, 2571, 2572, 2573, 2574, 2575, 2584, 2585, 2824, 2835, 2897, 4133, 4134, 4234, 4306, 4307, 4589, and 4590 of the Revised Statutes are repealed.

SEC. 17. That section 2797 of the Revised Statutes be, and is hereby, amended by adding thereto the following words:

"Sea stores and the legitimate equipment of vessels belonging to regular lines plying between foreign ports and the United States, delayed in port for any cause, may be transferred in such port of the United States under the supervision of customs officers from one vessel to another vessel of the same owner without payment of duties, but duties must be paid on such stores or equipments landed for consumption, except American products."

SEC. 18. That section 5347 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 5347. Every master or other officer of any American vessel on the high seas, or on any other waters within the admiralty and maritime jurisdiction of the United States, who willfully beats or wounds or without justifiable cause imprisons any of the crew of such vessel or withholds from them suitable food and nourishment or inflicts upon them any cruel and unusual punishment, shall be punished by a fine of not more than $1,000 or by imprisonment not more than five years, or both. This section shall apply to the coastwise and foreign trade."

SEC. 19. That article 7 of section 4511 of the Revised Statutes be, and is hereby, amended to read:

"Seventh. Any regulations as to conduct on board and as to fines, short allowances of provisions, or other lawful punishments for misconduct, which may be sanctioned by Congress or authorized by the Secretary of the Treasury not contrary to or not otherwise provided for by law, which the parties agree to adopt."

SEC. 20. That this act shall take effect three months after its passage.

Mr. TALBERT. I ask a second.

Mr. TERRY. I hope the gentleman will not press the consideration of so important a bill as that at this time, because I shall feel compelled to raise the point of no quorum.

Mr. PAYNE. I think if the gentleman from Arkansas will allow a second to be considered as ordered, I can explain this bill to him so that he will not insist upon his objection.

Mr. TERRY. I have no objection to a second being ordered.

Mr. TALBERT. I demand a second.

Mr. PAYNE. I ask that a second be considered as ordered.

There was no objection.

Mr. PAYNE. Mr. Speaker, this bill, I have been informed by the Commissioner of Navigation, is approved by seamen and vessel owners alike. There is no objection to it, according to his statement, from any quarter. Certainly no objection from any quarter has come to me; but, on the contrary, the bill is demanded by nearly everybody.

This bill was introduced and referred to the Committee on Merchant Marine and Fisheries, who, after a full investigation and thorough discussion of the matter, after going through the bill carefully and proposing a number of amendments which are embodied in the bill, present it to the House, make a favorable report upon the bill, and recommend its passage.

The first section of the bill simply authorizes some provision to be made for the accommodation of the shipping commissioners, to be used as offices by them for the transaction of their business. These commissioners are appointed under the authority of the Commissioner of Navigation. They receive $1,500 per annum for their salary, and it is provided that they may have a suitable provision in the Government offices at the port, or, if necessary, they may have a rented office for that purpose.

Passing now to section 2, the act of March 2, 1895, provided that in all seagoing vessels built after June 30 of that year the crew's quarters should have a space of not less than 72 cubic feet, and not less than 12 square feet on deck or floor for each seaman. We continue that provision which gives the sailors this space allowed under that act, making it apply to all seagoing merchant vessels on and after June 30, 1898. A further provision is made that all vessels that are built or rebuilt after June 30, 1898, shall have a crew space for each seaman of not less than 182 cubic feet, and not less than 18 square feet measure on the deck or floor. Under the former regulation the floor space for sleeping quarters was 6 feet high, 6 feet long, and 2 feet wide. The provision to go into effect after 1898 gives, as will be seen, a larger space than this, namely, 6 feet high by 6 feet long and 3 feet wide. The bill exempts, however, from this provision fishing vessels, yachts, pilot boats, and all vessels under 100 tons burden, there being no demand and no need for this provision on these vessels. This provision was of course designed for the comfort and health and

well-being of the merchant seaman, and imposes no hardship on the owner of the vessel. We deemed it, therefore, a most reasonable provision to be inserted in reference to new vessels only, or vessels entirely or practically rebuilt, so that there may be no extra expense or hardship on the owners of old vessels requiring them to remodel their ships to give this space.

The abolition of the requirement of bonds upon the registering, enrollment, or license of vessels, and the substitution of a penalty in place thereof for the misuse of the ship's papers, is a provision that has given general satisfaction to shipping interests. It has also been a saving to the Government. Section 3 of this bill proposes to extend that principle to crew bonds. The present law, enacted in 1803, requires the master of every foreign-going vessel, or vessel engaged in whale fishing, to give bonds and sufficient security in the sum of $400 for the production of all members of the crew in the return to the United States. This is known as the crew bond. We abolish this, and instead of that we enact a fine which, of course, the Secretary of the Treasury is authorized to remit or mitigate at his discretion.

Section 4 amends section 4541 of the Revised Statutes. It corrects an error in the former section. The law evidently contemplated that the custody of the wages and effects of deceased seamen shall be with the circuit courts of the United States, and not with the district judges. We make an amendment giving the custody of the effects of deceased seamen to the circuit courts, and not to the district judges. The other sections of the law show that it was intended to give it to the circuit courts.

Section 5: The pilot associations of the United States are, in many instances, substituting steam pilot boats for sailing vessels used as pilot boats. We simply propose in this section to give steam pilot boats a distinctive light. Of course this is in the interest of safety in the navigation both of the steam pilot boats and in the navigation of other vessels. This section has the approval of the Supervising Inspector-General of steam vessels.

Mr. TERRY. I will ask the gentleman at that point if that is not carrying out to some extent the principle of the bill you had up some time ago, which was defeated?

Mr. PAYNE. Oh, no; not in the least. The general law now applying to sailing pilot boats gives them a distinctive light, and this gives a distinctive light to steam pilot boats, for the safety of the boats themselves and of the vessels which they may meet. It does not in any way interfere with the compulsory pilotage system. The bill does not interfere with that in the slightest degree.

Section 6 of the bill is to protect the interest of a seaman who ships at a foreign port for a round voyage, and dies during the voyage at some point in the United States, by providing that his wages and effects shall be paid over to the commissioner of the port where he may die. The present law provides that payment shall be made only where he was discharged or was to have been discharged. It is simply for the protection of a seaman's wages in case he dies in the United States.

Section 7 makes it discretionary with the circuit court to dispose, by sale, of the effects of a deceased seaman after the expiration of three months after the receipt thereof by the circuit court. Under the present law if a seaman dies at a port his effects may be sold by the United States consul; or if he dies at sea, the effects may be sold by the master at the mast; but if he dies in the United States they must be held six years before they can be disposed of. These effects are for the most part clothing, and there is no suitable space provided in which to store them, and they are thoroughly valueless and likely to be offensive before the six years during which they must now be kept expires. Better pecuniary returns can be procured for the heirs of the deceased seaman by permitting an earlier sale of his effects. It simply authorizes the circuit court to sell his clothing after six months instead of six years.

Mr. LOUD. I should like to ask the gentleman——

Mr. PAYNE. In a moment. It is still left with the discretion of the court to retain keepsakes or articles of value to be preserved and held for those entitled to claim them.

Mr. LOUD. How are you going to provide for the shipping station down at Little Rock if you do not give them that public building?

Mr. PAYNE. I understand the gentleman from California is now trying to mix up the public building at Little Rock with this bill, and he can not do it.

Mr. LOUD. Little Rock is a great commercial port.

Mr. PAYNE. The gentleman from Arkansas [Mr. TERRY] who represents the district in which Little Rock is situated, appreciates the fact that this bill does not at all affect the question of the public building at Little Rock.

Mr. TERRY. I am afraid you are trying to interfere with my pilots, and my lodge is against that bill.

Mr. PAYNE. I am not going to interfere with your pilots at all. The gentleman from Arkansas knows that whenever I try to interfere with anybody's pilots I always do it in an open way.

Mr. TERRY. I hope so.

Mr. PAYNE. Section 8 of the bill refers to item 2 of section 4511 of the Revised Statutes. This item is as follows:

Any regulations as to conduct and as to fines, short allowance of provisions, or other lawful punishments for misconduct which may be sanctioned by Congress as proper to be adopted, and which the parties agree to adopt.

Mr. TERRY. Who wants this bill? What interest is demanding this bill?

Mr. PAYNE. The seamen are demanding it.

Mr. TERRY. The common sailors?

Mr. PAYNE. The common sailors.

Mr. TERRY. The gentleman states that as a fact?

Mr. PAYNE. Oh, yes.

Mr. MAGUIRE. They are demanding a part of it.

Mr. PAYNE. I think we can take a vote now. The gentleman from Arkansas [Mr. TERRY] seems to be satisfied.

The question was taken, and two-thirds voting in favor thereof, the rules were suspended and the bill passed.

SPECIAL DEFICIENCY BILL.

Mr. CANNON. Mr. Speaker, I desire to call up the little deficiency bill.

The SPEAKER. The Clerk will report the title of the bill.

The Clerk read as follows:

A bill (H. R. 9409) making appropriations to supply deficiencies in the appropriations for the House of Representatives, and for other purposes, for the fiscal year 1896.

Mr. CANNON. Mr. Speaker, I move that the House further insist on its disagreement to the Senate amendment and assent to a conference.

Mr. RICHARDSON. I would ask the gentleman what is the only difference now between the two Houses?

Mr. CANNON. There is only one.

Mr. MILLIKEN. What is that?

Mr. CANNON. It is an amendment that the Senate put on for a month's salary to the employees of the House and Senate who were on the rolls on the 2d day of December last.

Mr. RICHARDSON. That is the amendment we voted on yesterday, as I understand?

Mr. CANNON. Oh, certainly.

Mr. RICHARDSON. Some one suggested that perhaps the members of the House conferees had yielded. [Laughter.]

Mr. CANNON. We put that out of the general deficiency bill, it being a Senate amendment.

Now, in this little deficiency bill, carrying a smaller amount for the pay of members, the Senate put this amendment on, and we disagreed to it. The Senate insists on the amendment, and has sent it back. I want to say to the House, in all fairness, that in my judgment when it goes back the Senate will give way. If it does not, so far as I am concerned, the bill can be lost.

The SPEAKER. The question is on agreeing to the motion insisting on the disagreement to the Senate amendment and agreeing to the conference.

The question was put; and the motion was agreed to.

The SPEAKER. The Chair will appoint the following conference committee: Mr. CANNON, Mr. HAINER of Nebraska, and Mr. SAYERS.

EDWARD RICE.

Mr. SPERRY. Mr. Speaker, I move to suspend the rules and pass the bill (S. 1353) for the relief of Edward Rice.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Edward Rice, of Denver, in the State of Colorado, formerly of Worcester, in the State of Massachusetts, the sum of $2,700, in full for the following coupon bonds issued under the act of March 3, A. D. 1865, known as consols of 1867, namely: Nos. 104568 and 104569, of $100 each; Nos. 61857, 61858, 61859, of $500 each, and No. 101302, of $1,000, and, in addition thereto, the interest maturing on said bonds after July 1, A. D. 1868, to the date when said bonds ceased to bear interest: *Provided*, That said Edward Rice shall first give bond, with sureties to the satisfaction of the Secretary of the Treasury, in a sum double the amount of said bonds, conditioned to secure the United States harmless against said bonds and coupons, said bonds having been lost by said Edward Rice on the 19th day of July, A. D. 1868.

Mr. BAILEY. I demand a second.

The SPEAKER. A second is demanded.

Mr. BAILEY. I am willing that it should be considered as ordered.

The SPEAKER. Is there objection to a second being considered as ordered? [After a pause.] The Chair hears none.

Mr. BAILEY. I desire to ask the gentleman from Connecticut why it is necessary to come to Congress for this relief?

Mr. SPERRY. I ask that the report be read.

The report (by Mr. DE WITT) was read, as follows:

The Committee on Claims, to whom was referred the bill (S. 1353) for the relief of Edward Rice, have examined the same and respectfully report:

Edward Rice was, on the 19th day of July, 1868, the owner of the certain described bonds set forth in the bill; but on that day said bonds, with the coupons attached thereto, were lost. Every means was taken to regain possession of them, but up to the present time no trace of them has been discovered; neither have the bonds been presented to the Treasury for payment, although they were long since called in for redemption.

Your committee are of opinion that, from the lapse of time (twenty years),

the destruction of the bonds is fully established. They therefore recommend the passage of the bill, which authorizes the Secretary of the Treasury, after securing a proper bond for indemnity, to pay the said claimant the amount of the bonds, with interest to date when the bonds ceased to bear interest.

The SPEAKER. The question is on suspending the rules and passing the bill.

Mr. BAILEY. Mr. Speaker, I desire to ask why it was necessary to come to Congress in this matter, my understanding being that where the proper proof can be made the Treasury Department is itself, without the enactment of a special law, allowed to duplicate lost or destroyed bonds?

Mr. SPERRY. That is not so. I have tried it, and they do not do it. It has to be done by an act of Congress.

Mr. BAILEY. Then I have no further question.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

SILAS P. KELLER.

The SPEAKER. The gentleman from Kansas notified the Chair that he desires to move to reconsider a vote by which a bill was passed.

Mr. BRODERICK. I move to reconsider the vote by which the bill (S. 361) for the relief of Silas P. Keller was passed. It is a bill that passed in my absence a few minutes ago.

The SPEAKER. Was the bill passed under a suspension of the rules? [After a pause.] The Chair understands it was passed under a suspension of the rules; and it can not be reconsidered.

Mr. BRODERICK. I ask unanimous consent to make a motion to reconsider the vote by which the bill was passed.

Mr. VAN HORN. I object.

Mr. BRODERICK. The bill was wrong, and the gentleman knew that I objected to it. It affects my constituents. I have talked to the gentleman and to the parties interested a number of times about this bill, and they know I object to the passage of the bill. It is absolutely wrong. It is an old claim fifty years old. It has been passed upon by one of the Departments and has been rejected, and should not have been called up at this time.

Mr. VAN HORN. Mr. Speaker, the bill has passed two Congresses, it has passed the Senate this time, and passed through the Committee on Indian Affairs. The gentleman knows that I have tried to call it up. I have talked to him about it, and there is no reason in the world why it should not pass, except that some of his constituents object to it. That is all there is about it. No more honest claim has ever passed this House.

Mr. BRODERICK. The parties interested object; and the last talk I had with the gentleman from Missouri was that it should not come up during this session——

Mr. VAN HORN. Oh, no.

Mr. BRODERICK. While there was no stipulation that it was not to come up, that was the understanding.

Mr. VAN HORN. I told the gentleman I was trying to get it up.

Mr. BRODERICK. I was necessarily absent from the House when this bill was called up. Had I known that the parties intended to call it up I would not have been absent. It was a surprise to me, and will be a surprise to my constituents.

The SPEAKER. The gentleman asks unanimous consent to reconsider the vote by which the bill was passed. Is there objection?

Mr. VAN HORN. I object.

The SPEAKER. Objection is made by the gentleman from Missouri.

Mr. BRODERICK. I move to suspend the rules and annul the action of the House in passing that bill.

The SPEAKER. That would only be another way of accomplishing it, and would not be in order.

Mr. WALKER of Massachusetts. I suggest to the gentleman that the President has been looking anxiously for an opportunity to veto something, and if the gentleman will reveal his trials and troubles to the President he will undoubtedly veto that bill. [Laughter.]

Mr. BRODERICK. That is what I will do. [Laughter.]

Mr. WALKER of Massachusetts. Mr. Speaker, at the request of the committee, I would like to engage the attention of the House for about two minutes in relation to matters concerning the Committee on Banking and Currency. That committee has made but four reports at this session, and those, to be sure, not upon matters of the greatest magnitude. The Speaker was ready to recognize the committee for action upon them, but the committee decided they could not be enacted into law. It has diligently pursued the investigation of this subject, one of the greatest magnitude and of the most far-reaching consequences of any that can engage the attention of Congress. It has been made manifest that the conservative financiers of the Government and in Congress and in the country did not think it wise to enter upon the solution of the financial and bank difficulty on the eve of a Presidential election; that the cool, careful, and wise decision the subject demanded might not be reached. In this opinion the committee agree. The House may rest assured that early in December that committee will bring in a bill covering the whole question of the currency and finances of the country, and give members ample opportunity to discuss and act upon it. [Applause.]

WILLIAM GEMMILL.

Mr. GAMBLE. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 8250) for the relief of William Gemmill.

The bill was read, as follows:

Be it enacted, etc., That there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $75, to be paid to William Gemmill, of Yankton, S. Dak., in full payment for quartering and boarding United States soldiers during a terrific and protracted snowstorm in the month of April, 1873.

Mr. RICHARDSON. Mr. Speaker, I demand a second, in order that we may have some explanation of the bill.

Mr. GAMBLE. Mr. Speaker, I ask that a second be considered as ordered.

There was no objection.

Mr. GAMBLE. Mr. Speaker, I will ask for the reading of the report. It contains, I think, as condensed a statement of the facts as I could orally make to the House. The bill in every way is meritorious, and the money should have been paid long ago.

The report (by Mr. FENTON) was read, as follows:

The Committee on Military Affairs, to whom was referred the bill (H. R. 8250) for the relief of William Gemmill, having had the same under consideration, recommend that the same do pass.

This is a claim for quartering and boarding 12 men of the Seventh United States Cavalry during a terrific snowstorm or blizzard in the month of April, 1873. A portion of this regiment was encamped in the suburbs of the city of Yankton, and during the storm, which lasted for three days and which was of extreme violence, the men were driven from their tents and took shelter in neighboring houses, and remained for two day succeeding on account of the condition of the weather and tents. Claims which grew out of this compulsory hospitality were settled and paid by the Government, but the claim of Mr. Gemmill, which he swears was filed with the proper officer, appears to have been mislaid or overlooked. The amount claimed appears to the committee to be reasonable, and should be paid. The claim was before this committee in the first session of the Forty-fourth Congress and favorably reported.

Mr. LOUD. How many men were there in the party?

Mr. GAMBLE. Fifteen, I believe.

Mr. LOUD. The report does not say 15.

Mr. GAMBLE. No; the number is 12—12 men for five days at $1.25 a day. All the other claims of this character have long since been paid by the Government.

Mr. LOUD. I do not see how you can make $75 out of it.

Mr. GAMBLE. I will say to the gentleman that the claimant is personally known to me and is a reputable man, and the claim is entirely just. It is for the board of 12 men for five days at the rate of $1.25 per day.

The rules were suspended and the bill was passed.

ALBERT AUGUSTINE.

Mr. LITTLE. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 1021) granting relief to Albert Augustine for property taken for the Cayuse war.

The bill was read, as follows:

Be it enacted, etc., That there is hereby appropriated, out of any moneys not otherwise appropriated, the sum of $350, to be paid to Albert Augustine, of Rose Hill, Iowa, for property taken for use of the United States Army in the Cayuse war, in 1847 and 1848.

Mr. DALZELL. Mr. Speaker, I demand a second.

Mr. LITTLE. I ask unanimous consent that a second be considered as ordered.

There was no objection.

Mr. DALZELL. Now, Mr. Speaker, in my time, I would like to have the report on that bill read.

SUNDRY CIVIL APPROPRIATION BILL.

Mr. CANNON (pending the reading of the report on the bill H. R. 1021). Mr. Speaker, I rise to present a conference report.

The conference report was read, as follows:

The committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to House bill 7764, making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes, having met, after full and free conference have been unable to agree.

J. G. CANNON,
E. J. HAINER,
J. D. SAYERS,
Conferees on the part of the House.

W. B. ALLISON,
EUGENE HALE,
Conferees on the part of the Senate.

Mr. CANNON. Mr. Speaker, I move that the House further insist on its disagreement to the Senate amendments and ask for a conference.

The SPEAKER. The gentleman from Illinois moves that the House further insist on its disagreeing votes with the Senate and ask for a conference.

Mr. WILSON of Idaho. Mr. Speaker, I move as an amendment that the House recede from its disagreement to the Senate amendments as to public buildings and concur therein.

Mr. HOPKINS. Mr. Speaker, before there is any discussion on that I would like to ask my colleague one or two questions.

The SPEAKER. Does the gentleman from Illinois [Mr. CANNON] yield?

Mr. CANNON. Yes.

Mr. HOPKINS. When was the first conference held on this bill?

Mr. CANNON. I do not recollect. I think this is the seventh, or eighth, or ninth—I am not certain; but there have been a good many.

Mr. HOPKINS. During all those conferences has the Senate insisted upon its amendments relating to public buildings?

Mr. CANNON. I do not know that it is apt for me to say what has passed in the conference room. The official statements of the House and of the Senate, insisting and reinsisting, back and forth, appear upon the respective Journals of the two Houses.

Mr. HOPKINS. They give us a bare outline of what was done; but the gentleman can perhaps tell the House whether there is any probability of the Senate receding from these amendments, or whether in the last conference they exhibited the same stubborn persistence in their wrongdoing that they had manifested in previous conferences. [Laughter.]

Mr. CANNON. I will tell my colleague, in answer to his question, what I understand to be the situation. The Senate amendments in question—it is not necessary to describe them more particularly—propose legislation. The House conferees have uniformly insisted, and the House has in effect instructed them to insist, upon its disagreement to those legislative provisions. In the last report, which was made yesterday, the House further insisted upon its disagreement to all those Senate amendments except one. My opinion is, as an individual, that if the House had on yesterday insisted upon its disagreement to all of those amendments, including the Savannah building amendment, this bill would have been before the President and signed by this time. That was my opinion then; that is my opinion now.

Now let me exhaust this subject in a minute, so far as I am concerned. These are the closing hours of the session. Here is the sundry civil bill, that carries thirty or thirty-five million dollars, in this peculiar situation: The Senate, as I am informed, with a quorum——

A MEMBER. Barely a quorum.

Mr. CANNON. Well, a quorum of the Senate are insisting on these legislative provisions. Now, the House can do and will do as it pleases. For a month past I, substantially as the messenger of the House, representing it in conference, have tried to carry out its will; and the House has exhibited great determination. Now, if the House is still of the opinion it has heretofore expressed, it can show its faith by its works. Nothing ventured, nothing gained, in individual and in parliamentary life. In my judgment this bill is not to fail. So far as my individual vote is concerned in this House touching these matters upon which the House has taken a stand, I shall vote to further insist and let this bill go back. [Applause.]

Mr. HOPKINS. Will the gentleman allow me a question right there?

Mr. CANNON. Certainly.

Mr. HOPKINS. Is it not the opinion of the gentleman in charge of this bill on the part of the House that if the House sustains him in his position the Senate will yield and we can have this bill settled?

Mr. CANNON. If I were a member of the Senate, as I do not desire to be at this time, but as possibly I may be some time [laughter], I could give a better opinion perhaps than I can now. I will say to my colleague that under all parliamentary precedents the body proposing legislation, when the other body will not assent, recedes; and if the Senate, proposing legislation in this case, lets this bill fail because the House will not assent to the legislation, then let the responsibility be upon the Senate. [Applause.] For one I will not be bulldozed. That, briefly stated, is my position.

Let there be no paltering. If the House or a majority of its members as they shall now rise and be counted—and it is just as well to take the vote on all these amendments at once—as members stand to be counted, or as they pass through the tellers, let the House understand that it is an expression of its will and determination as heretofore expressed, that it will not assent to these legislative provisions. If members want to assent to them, let them do so, and that passes the bill. This is all I can say about it.

Mr. SAYERS. Mr. Speaker, I desire to say a few words in connection with this matter.

Mr. CANNON. I yield to my colleague on the committee.

Mr. SAYERS. I am not willing that the opinion expressed by the gentleman from Illinois [Mr. CANNON] should be considered as representing the opinion of all the conferees of the House on this bill. I am not so sanguine as the gentleman from Illinois that if the House should continue to insist upon its disagreement to these amendments the Senate will recede. Again and again and again have the conferees of the two Houses met to consider these items of difference, and every time the conferees of the Senate have sternly insisted upon at least four of these amendments—the four amendments which relate to public buildings in the newly admitted States—and they have said to us, Mr. Speaker, that they would not make a report to the Senate receding from those four amendments.

Now, this bill carries about $34,000,000. It is intended to provide for the necessities of the Government in almost every branch of the service. We have but little more than a quorum in this House; there is not, I understand, a quorum in the Senate; and the question remains with the House whether or not we will continue this contest until the numbers in both Houses shall continue to abate and abate until we scarcely have a dozen members in either House.

It is no new thing for the Senate to insist upon such amendments. We had a struggle in the last Congress upon the amendments providing public buildings for the four new States. The House continued to insist on its disagreement; but finally the conferees of the House, with myself at the head, had to yield. There is not a single item involved in this disagreement which, considered separately and alone, would be objectionable to this House. The only objection to these amendments is that they come here upon the sundry civil bill and that they ought to have come before the two Houses of Congress as separate propositions. That is the objection as I understand it.

Having said this much, having made a candid statement as to the condition of the case, I will only add that the majority of the House can do with these amendments just as it pleases. The majority of this House is responsible for the conduct of public business.

Mr. HARTMAN. Is it not a fact that we have already made four or five exceptions to the rule suggested—for instance, yesterday, in agreeing to one of these amendments of the Senate to this bill?

Mr. SAYERS. That is entirely within the knowledge of the House. I frankly confess I have sympathized with the gentleman from Illinois in this struggle, and I still sympathize with him. I think he has been in the right. I think the majority of the House has been right in this struggle. But I believe it my duty to give to the House as far as I can a fair and truthful statement of the situation as I understand it.

URGENT DEFICIENCY APPROPRIATION BILL.

Mr. CANNON. Mr. Speaker, I withdraw the report temporarily and rise for the purpose of presenting another conference report, one which can be closed up at once and disposed of without delay, and for that reason I call it up at this time.

The SPEAKER. The Clerk will read the report.

The Clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 9409) making appropriations to supply deficiencies in the appropriation for the expenses of the House of Representatives, and for other purposes, for the fiscal year ending June 30, 1896, having met after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendment numbered 2.

J. G. CANNON,
JOS. D. SAYERS,
Managers on the part of the House.

EUGENE HALE,
WM. B. ALLISON,
F. M. COCKRELL,
Managers on the part of the Senate.

The statement of the House conferees was read, as follows:

The managers on the part of the House of the conference on the disagreeing votes of the two Houses on Senate amendment No. 2 to the bill H. R. 9409, submit the following written statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report on said amendment, namely:

Strikes from the bill the amendment proposed by the Senate, to pay a sum equal to one month's pay to certain discharged employees of the House and Senate.

J. G. CANNON,
JOSEPH D. SAYERS,
Managers on the part of the House.

The report was agreed to.

SUNDRY CIVIL APPROPRIATION BILL.

Mr. CANNON. I now call up again the conference report on the sundry civil bill, and yield two minutes to the gentleman from Idaho [Mr. WILSON].

Mr. WILSON of Idaho. Mr. Speaker, I desire the attention of the House for a very few moments in support of my motion, which is that the House recede from its disagreement and concur in the Senate amendments heretofore disagreed to in this bill.

The chairman of the Committee on Appropriations, our genial and able friend from Illinois [Mr. CANNON], says that there is an invariable rule in parliamentary bodies that where one body proposes legislation affirmative in its character, and the other body

dissents from it, that the body offering such legislation must yield in the end. I submit in all fairness that that principle can not be relied upon now. We have waived it in the House, and we have done it in no less than five different instances upon this very bill, and even no later than yesterday we abandoned the same principle on a yea-and-nay vote. We are, therefore, committed to a waiver of that principle or else the House will be guilty of an invidious discrimination against the section of country represented by these new States which is directly interested in this matter.

I call your attention to the number of exceptions which have been made in this bill. We agreed to the amendment for the construction of a public building at St. Albans, Vt.; we also agreed to the amendment proposed by the Senate for Little Rock, Ark.; we agreed to the item for a building in West Virginia, and we agreed on yesterday, by a yea-and-nay vote, to the item for the construction of a public building in Savannah, Ga., and the increase of the appropriation, with the extension of the limit of cost of that building.

Mr. VAN HORN. We also agreed to the New York matter.

Mr. WILSON of Idaho. Now, Mr. Speaker, I have the honor to represent in this House a State—one of the youngest States of the Union—which has no Federal building of any kind or character. It has been the invariable rule of Congress heretofore that whenever a new State was admitted, at least one public building should be authorized at its State capital. It has been done from time immemorial, and done also on the sundry civil appropriation bill. You provided in the last sundry civil bill such a building at the capital in my State, and the site has been selected and purchased. We have the United States courts there, with valuable records, and no vault or place of security in which to keep them—records upon which depend the title to hundreds of thousands of dollars worth of property, and no vault for their protection.

We have the surveyor-general's offices there, in which are employed a large number of clerks, and which require a large floor space. We have secured a larger appropriation than ever before for public-land surveys, and it is expected that our State will receive an apportionment thereof sufficient to survey large tracts on which settlers are now residing. If these surveys are carried on it will necessitate an increase in the force of the surveyor-general's office, and it is therefore necessary that from time to time more space shall be provided for this purpose.

We have the United States land offices there, the deputy collector of internal revenue, the post-office, the United States marshal and deputies, the United States attorney, the clerk of the United States court, the United States district judge, and other Federal officials, all of whom need the use of a Federal building.

The rents which the United States Government is compelled to pay for these various offices is more than sufficient to justify the erection of this building from a plain business standpoint; but, aside from this feature of it, it has been the policy of the Government from time immemorial to erect Federal buildings in the several States, and especially at the State capitals. That this is a wise public policy is not now open to question. It serves a manifold purpose. The flag of the United States will always wave from this Federal building, so that the citizens of the States, and especially the youth of the land, have an object lesson of patriotism given them when they behold the emblem of their country's honor unfurled from the flagstaff of their Federal building.

It has been contended on the floor of this House that it is unwise to legislate in this manner on appropriation bills, and that by putting public-building riders on these bills in the nature of things a true investigation of the measure in question can not be had by the House. If this criticism were well founded the House has waived it in so many instances, and particularly during this session, that it is not a reason worthy of advancement against these items. While I will agree, generally speaking, in the unwisdom of any kind of riders on appropriation bills, nevertheless, in view of the record we have made, and the record of preceding Congresses on this question, and in view of the special merits of these cases, I do not think this objection is well founded.

These building bills have been considered in committee. The Senate Committee on Public Buildings and Grounds has reported all of them favorably and the Senate has passed them as separate bills, and the item which I am especially interested in—the building at Boise City—has been reported favorably by the subcommittee on Public Buildings and Grounds of the House, and I was only a few days ago invited to prepare a report for the full committee. Moreover, the public buildings in the far Western States referred to in my amendment were originally provided for in the sundry civil bill of last year. This special exception was made because these four new States were the only ones not provided with Federal buildings, save and except the State of Washington and the State of Maryland. Congress, recognizing the special merit in these cases, made provision for them in the sundry civil bill of last year. It is apparent, however, that in the case of Boise City $150,000 is not sufficient to properly construct and equip a Federal building commensurate with the requirements of the Government in that State. Our people, realizing this, have been anxious for the enlargement of the aggregate of the appropriation. I therefore introduced a bill at the beginning of the session increasing the limit of cost to $200,000, and such bill has been reported as above stated.

Under the law passed by the last Congress which provided for the construction of this building at a cost of $150,000 no right to contract was given and no appropriation was made available except sufficient for the purchase of a site. I am therefore informed by the chairman of the Committee on Appropriations [Mr. CANNON] that under such law we have no right to enter into a contract for the construction of this building. We are therefore left in the anomalous position of having a building provided for by law, with no authority or right to enter into a contract for the construction of it.

Senate amendment No. 2 to the present sundry civil bill corrects this mistake and will increase our limit to $200,000, making an appropriation of $50,000 immediately available. From this appropriation we are given the right to contract for the entire building; and thus the law originally passed may be carried out in its full intent and meaning.

Further objection has been made against these items on the ground that it has not been determined that these particular places are the proper ones for the construction of these Federal buildings. In the case of Boise City, I may say that our State constitution, adopted in 1890, provides that the capital shall be there located for a period of twenty years. There is no disposition on the part of our people to change this location, and by almost universal consent it is conceded that we have the best location for the capital in the State.

Boise City is a thriving town of 8,000 inhabitants, and is to-day one of the most prosperous little cities in the far West. It lies about midway between Salt Lake City, Utah, and Portland, Oreg., and is the most important point between those two cities. It is situated at the head of the celebrated Boise Valley, which is far-famed for its agricultural and horticultural products.

As a fruit-growing and cereal-producing section this valley has no superior. A mineral belt of almost untold wealth forms a half circle to the east, north, and northwest of the city, while the celebrated Owyhee mines are to the southwest. Boise Basin is to the north, and is likewise rich in mineral resources, all tributary to Boise City. Vast timber resources abound to the north of us, while stock raising flourishes over a large area of country surrounding this city. Natural hot water has been discovered in artesian wells almost within the city limits, and our buildings, public and private, are heated by it. A beautiful natatorium has been constructed by our citizens near these wells, and Boise City in the near future is destined to be a celebrated health resort.

Our State legislature has provided for a beautiful capitol building, which is almost entirely paid for. We have three magnificent public school buildings, and our public school facilities are not excelled by any State in the Union. Boise City is substantially constructed; it has electric car lines, electric lights, and all modern improvement which are to be found in a thriving, advancing American city.

There was taken in at the United States assay office there more than twelve hundred thousand dollars in gold last year, and indications point to a large increase in this respect during the coming fiscal year. Our mines are developing rapidly, and indications are that they will shortly astonish the mining world.

With all of these advantages and improvements, Mr. Speaker, I submit that it is a disgrace to the Government that it can not provide a Federal building for the use of the Government officers. We have joined with our friends in the East in voting appropriations for battle ships, fortifications, and rivers and harbors. We are protected from the encroachments of foreign enemies, and our people do not need these Government expenditures for their especial use; nevertheless, they heartily sustain their representatives in voting these appropriations, because, being patriotic, they recognize that it is for the public good. In return we ask recognition at your hands in the matter of our public buildings. We think it is only fair, just, and right that we should get them.

The chairman of the Committee on Appropriations [Mr. CANNON] has made a magnificent fight against these items, and he has done it on the broad ground that they should not be tacked onto an appropriation bill. I admire him for the courageous fight he has made, and I desire to bear witness now that that fight has been eminently fair. I have no word of criticism to make against his course in that respect; but this House, as I have before stated, has already discriminated in five instances, and has gone on record against the principle which he contends for. In view of that fact, I believe it should now yield. I do not want to say what would be the effect of remaining longer in session here, contending against the opposition of the Senate. I believe, however, I can truthfully say that the Senate will not yield. Moreover, it ought not to yield. The House has surrendered its position on

this question, and now to fail to recede from these amendments is to go to the height of inconsistency itself.

This matter has been in conference for six weeks. The first report of the conferees was made April 26, 1896, and we have been contending for a settlement ever since. We are no nearer an agreement now than we were six weeks ago. In the meantime you have waived the principle for which the gentleman from Illinois contends, and now if you continue to resist you make a plain and clear discrimination against these Western States. I tell my Republican friends that you can not afford to do this. The other side of this House stands ready and willing to join you in support of my motion. They demonstrated that by their vote on the Savannah case yesterday.

In conclusion, permit me to say we are now on the eve of adjournment, and a settlement must be had soon if at all. Even the chairman of the Committee on Appropriations admits we ought to have these buildings, and that there is no important reason from the standpoint of the public interests why they should not be provided for, except the objection that such provision is made on an appropriation bill. Inasmuch as you have surrendered your position on that question, in the interest of consistency I appeal to you to accept the Senate amendments. Let these buildings be authorized and let us adjourn and go home in peace. [Applause.]

Mr. CANNON. I yield now a few minutes to the gentleman from Missouri [Mr. DOCKERY].

Mr. DOCKERY. Mr. Speaker, I desire to ask the gentleman from Illinois what amount of money is involved in the five buildings—I believe there are but five—yet in disagreement?

Mr. CANNON. Well, the amendment has increased the limit to $541,000.

Mr. DOCKERY. But the cash involved—the appropriation?

Mr. CANNON. Three hundred and sixty thousand dollars. The legislation increases the limit $541,000 and establishes one new building.

Mr. DOCKERY. Now, Mr. Speaker, a word in reference to the motion of the gentleman from Idaho [Mr. WILSON]. I would prefer greatly that the motion to concur or recede from the disagreement should be made in each case separately. I think I would support most of the propositions, and perhaps all, if presented separately on the motion to recede from the disagreement to the Senate amendments. But I do not like a motion that comes in such a "questionable shape."

Mr. WILSON of Idaho. Personally I am willing to do that.

Mr. DOCKERY. I have had some experiences recently with "logrolling" propositions that have not been satisfactory to me. I prefer to consider these items singly.

Now, if I understood the gentleman from Illinois [Mr. CANNON], the chairman of this committee, in reply to his colleague he failed to answer the direct question as to whether, in his opinion, the Senate would recede as to these amendments. Mr. Speaker, I am not authorized to speak for the Senate of the United States—and I am very glad I am not—but unofficially I may say, having spent some time at the other end of the Capitol during the last two or three days in connection with another bill, that I do not believe the Senate will recede.

Mr. CANNON. I do not think it is fair for the gentleman to undertake to terrorize the House by that statement. I think my opinion is a fair offset to it. But let each body perform its function and take the responsibility.

Mr. DOCKERY. That is very true; but the inquiry was propounded to the gentleman by his colleague, and if I understood the gentleman, he did not make a direct answer.

Mr. CANNON. If the gentleman will allow me, I said I was not of the Senate, nor responsible for it, but that under the invariable rule the body that proposed legislation receded if the other body insisted.

Mr. WILSON of Idaho. We have violated that rule.

Mr. DOCKERY. The gentleman is correct about the general rule, and I am in sympathy with his general position, but we are face to face with this situation: a constantly dwindling attendance upon the House, hence we must come to some sort of an accommodation in respect to this bill.

Accommodations have been reached upon other bills that have not reflected my views upon many of the matters at issue; but we have reached agreements because agreements were necessary in order to terminate this session.

Mr. Speaker, I want to say for myself that I do not favor a policy that looks to the failure of the sundry civil bill and the extension of the appropriations for six months. I am in favor of some sort of an adjustment on this question by which a conclusion can be reached and this session terminated to-night. I hope the gentleman from Idaho [Mr. WILSON], however, will modify his motion so that the House can take up each item separately. There is one item for my own State, an extension of the limit of cost at Kansas City $116,000, recommended by the Secretary of the Treasury; but I believe that item can go over with entire safety, if I am properly advised, until the next session. If, however, the other amendments are agreed to, then I want this one agreed to. But as I said a moment ago, I think, probably, that can go over until the next session without serious detriment to the building.

Now, Mr. Speaker, it seems to me the issue is this: We must reach an accommodation in respect to these disagreements or this bill will fail, and I suppose it is contemplated in such an event to extend the appropriations by resolution for six months. To that policy I object.

Mr. CANNON. I yield three minutes to the gentleman from Kansas [Mr. BLUE].

Mr. BLUE. Mr. Speaker, it is not true, as I understand it, that these amendments all stand on the same footing. It has been urged by gentlemen here that this House has violated the rule by acceding to the demands of the Senate in a number of instances similar to those now presented. If the House up to the present moment has acceded to a single amendment that looked to the establishment of an entirely new building, I should like to be told what that amendment is.

Mr. WILSON of Idaho. What about the building at St. Albans, Vt.?

Mr. BLUE. The building at St. Albans, Vt., is a building that had been practically completed.

Mr. WILSON of Idaho. Yes, and destroyed by fire.

Mr. BLUE. It was partially consumed by fire, but the photographs of that building, exhibited at the time the matter was discussed, show that it was only injured and not destroyed. Every single instance in which there has been a receding in this matter has been an instance of repair or some sum for completion. The violation of the rule made in the instance of Savannah the other day was made under a misapprehension in part, I am satisfied, upon the part of a number of gentlemen here. If it had been understood, as it now seems to be understood by some here, that about $100,000 of the original appropriation for that building had been devoted to a site, when it was not originally so intended to be devoted—if that had been understood here yesterday, in my judgment the action which was taken would not have been taken.

Gentlemen speak of this as a compromise, and say "Let us compromise." What compromise is there in it? We have acceded in these matters of improvement, like that in West Virginia, like that in St. Albans, like that in New York City, where it was simply placing another floor in a building; but now it is insisted that we shall give away all the rest of them. There is no compromise in this. It is a mere accession to the Senate in every respect.

Mr. SWANSON. Will the gentleman allow me to ask him a question?

Mr. BLUE. I have not time. If this rule is to be followed, then no difference how conservative this body may attempt to be, no difference how well it may intend, as it did at the commencement of this session, in seeking to have the Committee on Public Buildings and Grounds report no bills, or at least advocate the appropriation of no money for this purpose, then it is left for the diligence of Senators to thrust upon this body, out of favoritism, a number of projects that are the least deserving and the most unworthy of all. [Applause.] For myself, as one member of the House, I am willing to take responsibility, and say to the Senate that if Senators wish to take the responsibility of the delay and, in violation of the rules, stand by the Senate and force these amendments upon us, let them accept it. It is about time that this House should let the Senate understand that the House will not be driven and dragged about at its pleasure. [Applause.]

So, Mr. Speaker, in my judgment we should still adhere and still insist upon the ground the House has heretofore taken, and insist that the Senate shall recede from these amendments that it has thrust upon this bill. No time has been fixed to adjourn; no concurrent resolution has been passed or suggested; and there is no haste about this matter. They talk about a vanishing quorum. Does not the same condition exist in the Senate?

Mr. Speaker, it seems to me utterly absurd and impracticable to insist upon this House at this time accepting the propositions of the Senate. Let the House assert itself, preserve its independence, and compel the Senate to follow the well-established parliamentary practice in such cases, and all will be well.

Mr. CANNON. I yield two minutes to the gentleman from Washington.

Mr. DOOLITTLE. Mr. Speaker, I live in the State of Washington and the city of Tacoma, and the State of Washington has no public buildings within its limits. It is a State with a population of 500,000. Two-thirds of the goods landed in the United States from Oriental countries come through the port at Tacoma. The courts are held there. The commercial interests are very great and very rapidly growing. When we came here at the beginning of this session of Congress we introduced our bills providing for the construction of public buildings, and it was soon announced in this Congress by those who have shaped its business and the transaction of matters before it that owing to the present

condition of the country it would be unwise policy on the part of the party to permit public-building bills to be passed during this session. All gentlemen interested in public buildings went before the Committee on Public Buildings and Grounds——

Mr. WILSON of Idaho. Will the gentleman allow me to ask him a question?

Mr. DOOLITTLE. After a while. [Continuing.] And represented their causes, and in many instances a favorable report was ordered on those bills; but the reports on the bills by the committee have not been made. I respect our friends highly, and do not wish to say a word that would in any wise reflect upon their course, or that would change or affect their hopes, because I know how desirous they are to have these buildings, but it was the understanding here in the House that no public-building bill should be passed through this session, so that we could all go back and say the same thing, and some of our friends have gone over to the Senate and there introduced this legislation upon this bill. Now, if that course is to be followed, Mr. Speaker, when I shall attempt to get a public building I will go to the Senate and not trouble myself with the committees of the House. But I supposed that this was the proper place to initiate legislation of that kind and pass it in the Congress of the United States; and I still think so.

Mr. CANNON. I yield two minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Speaker, I understand that the principal objection to the passage of this legislation for public buildings is that it is not brought before the House from the Committee on Public Buildings. I have not heard any objection on the floor of this House to these public buildings, or to the appropriation, on the ground that they were not appropriations that were justified. It has been stated here that there are a great many gentlemen representing constituencies on the floor of the House who desire public buildings within their districts. That is undoubtedly true. There is no question but what every gentleman here would like to have a public building in his district, regardless of the number he already has.

Now, the Senate simply did this: It provided, first, in this amendment, that where public buildings were under construction and the Senate believed that an increase of the appropriation was necessary in order to finish these buildings in accordance with the plans, to make them harmonious as a whole, they made an appropriation for these buildings; and these appropriations are certainly in the line of good business principles.

It has been the custom in this country to provide a public building in all the new States and Territories. That is the other proposition in this amendment. In the far West there are four daughters of the Republic that have not received the customary birthday present. There are 400,000 square miles in the intermountain region, comprising four sovereign States, where, if your Uncle Samuel should visit them, there is not within the limits of that vast territory a single roof under which he could rest upon his own ground and under his own rooftree. We simply ask that these States shall, each and every one of them, have one public building at least, and that the flag of the Union shall float in the capital of each State in this Union from a building erected by the Government. [Applause.]

Mr. CANNON. I yield three minutes to my colleague from Illinois [Mr. HOPKINS].

Mr. HOPKINS. Mr. Speaker, this matter is degenerating into a question of physical endurance between the two bodies. The first conference that was held on this bill was on the 27th day of April last. According to the statement of my colleague, eight separate conference meetings have been held since that time, and the Senate has persisted in adhering to these amendments. As the conference reports have come back here, the House has receded from time to time until the 17 items originally in the Senate amendments have been reduced to 10, and an aggregate of something over a million dollars embraced in those 17 items has now dwindled down to the sum of $360,000, which, I understand, is the amount of the present difference between the two Houses.

Mr. CANNON. My colleague is slightly mistaken. Three hundred and sixty thousand dollars is the appropriation that would be made if these limits were broken, but the limits are broken by the Senate amendments to the extent of $541,000, making an aggregate of about $900,000.

Mr. HOPKINS. How much was the aggregate of the appropriations which the Senate added?

Mr. CANNON. I do not really recollect exactly; about two millions.

Mr. HOPKINS. Then, as a matter of fact, the House has yielded on items amounting to more than a million dollars?

Mr. CANNON. On the contrary, the Senate has yielded on several items, amongst others the National Museum item, amounting to $120,000.

Mr. HOPKINS. But that does not answer my question. Has not the House yielded on the New York, the Vermont, the Georgia, and other items more than a million dollars in the aggregate?

Mr. CANNON. I think not so much, but we have yielded on the items the gentleman mentions, in some cases on my motion, and in some cases on the motion of the gentleman from Georgia.

Mr. HOPKINS. Now, Mr. Speaker, the question presents itself to us whether we are to stay here for a week or a month longer, or whether we are to concur in these Senate amendments. I know from what I learn at the other end of the Capitol that there is a determination on the part of the Senate to adhere to these amendments, and if the House does not agree to the motion made by the gentleman from Idaho [Mr. WILSON], to accept the Senate amendments, the members of this House can settle down to the fact that we shall not adjourn during the month of June or the month of July. That is the question that we have to settle by the vote that is about to be taken.

Now, why should not we concur in these amendments? Does my colleague from Illinois show that any one of these items separately considered is not proper and just? Is there any man on this floor who will say that any one of these items, aggregating $541,000, is not proper and just? The only argument that the gentleman makes is that some other gentleman will indirectly be injured because his public building is not in this bill. I have a public-building bill that has been pending before the Committee of this House on Public Buildings and Grounds, a bill that has been favorably considered, and to please my constituents, I would like exceedingly well to have that bill reported and passed at this session, but I recognize that it can not be done. I recognize the fact that none of the public-building bills except those that are on this appropriation bill can be passed at this session.

Mr. Speaker, it seems to me that there is not a single member of this House who can afford to say, "Because I can not get what I want I will not permit any other gentleman to get what he wants." It seems to me that no member, at this stage of the session, can afford to say that we ought still to adhere to our disagreement upon these amendments and force a delay upon this appropriation bill. Everyone understands that we can not adjourn until this bill becomes a law, because it carries appropriations affecting all the great Departments of the Government, and it is a bill which if it should fail would necessitate an extra session of Congress. So far as I am concerned, I have steadily followed my colleague during these eight conferences and have voted with him every time he has asked for a disagreement, but I think the time has now come when the House should say that there shall be a limit to this, and should agree to the Senate amendments and let this bill become a law. In saying this I make no reflection upon my colleague, because I think he has conducted these conferences with ability and integrity, and has only sought to carry out the wishes of this House as expressed from time to time. Furthermore, the House in now concurring would simply be endeavoring to close a prolonged disagreement between the two branches of Congress which, as I have already said, has already degenerated into a question of physical endurance.

Mr. CANNON. I yield one minute to the gentleman from New York.

Mr. FAIRCHILD. Mr. Speaker, I only wish to make a suggestion in response to the arguments that I have heard upon this floor with regard to these public buildings, particularly in the Western States. As a Representative from New York who in the early days of this session introduced a bill for a public building in a place of sufficient size to deserve it, and who has been unable to get that bill out of the committee room, I want to say that I shall be the last man in this House to indulge in a "dog-in-the-manger" policy, and say that because I can not get my bill passed I will not vote for those bills for public buildings which are before us in this appropriation bill. I believe that this is a matter for the House to decide now upon its merits. So far as I have heard this discussion, I have heard nothing against the merits of these buildings, but simply technical points and assertions of a "dog-in-the-manger" policy, and I hope the House will now vote to concur in the Senate amendments. [Applause.]

Mr. CANNON. I yield five minutes to the gentleman from Indiana [Mr. HENRY].

Mr. HENRY of Indiana. Mr. Speaker, I do not intend to say very much on this question, for the reason that I have expressed my views already. I am surprised at the gentleman from Illinois [Mr. HOPKINS] who has just taken his seat, that he does not want to say, "I won't because I can't"; yet he tells us, in the very same sentence almost, that we should yield to the Senate because they will insist upon a thing which they ought not to insist upon and thereby cause this bill to fail. These gentlemen put the Senate in the position which they say we are in. If the Senate insist upon a thing which they ought not to insist upon and thereby cause this bill to fail, they are the "dogs in the manger," not we. [Applause.] We are not asking anything that we have not the right to ask.

Now, I am ready to recede from our disagreement and to agree to these Senate amendments whenever the chairman of the committee in charge of this bill comes into the House and gives us to understand that we ought to do it, and not till then. [Applause.] The gentleman [Mr. MONDELL] has eloquently talked about the sister States in the far West that have no public buildings. But, Mr. Speaker, let it be remembered that those three States that are now asking for the passage of these amendments have already had a step taken in that direction. They have had provision made for public buildings, and now they want an increase. Not content with what we first voted to give them, they want to increase the amount.

Mr. MONDELL. Will you allow me a moment?

Mr. HENRY of Indiana. Yes, sir.

Mr. MONDELL. You say we wish to have an increase.

Mr. HENRY of Indiana. Yes, sir.

Mr. MONDELL. We do; and for this reason——

Mr. HENRY of Indiana. I did not yield for a speech.

Mr. MONDELL. Will the gentleman allow me to explain why we are asking this increase?

Mr. HENRY of Indiana. No, sir; not in my time.

Now, Mr. Speaker, there have been passed by Congress acts authorizing a public building at each one of these places; and these amendments are not for new buildings, but for an increase of the limit, just like the case voted on yesterday, and wrongly voted on.

Now, how does it stand with the rest of the Western States? Two of them are not recognized in these amendments and have no public buildings provided.

A MEMBER. What two?

Mr. HENRY of Indiana. Utah and——

Mr. SAYERS. Utah is in the bill.

Mr. HENRY of Indiana. Then I correct myself on that.

Mr. BINGHAM. It is in the bill for a new building, not an increase.

Mr. SAYERS. Allow me a moment. The only States that are not provided with public buildings——

Mr. HENRY of Indiana. I know which.

Mr. SAYERS. Are Utah and Maryland. Maryland has no public building provided for.

Mr. HENRY of Indiana. You forget about Washington.

Mr. SAYERS. Washington has about $100,000 in this bill for military posts.

Mr. SWANSON. The gentleman from Indiana has stated that it was distinctly understood at the commencement of this session of Congress that no public building bills should go through the House of Representatives at this session. Now, the gravamen of the gentleman's complaint is that the Senate, in a "revolutionary" manner, has seen proper to put amendments for public buildings upon this appropriation bill. I wish to ask whether it is not as "revolutionary" in the House, or those who manage the House, to say that no appropriation for public buildings that Senators think should go through shall have consideration in the House—is not that as "revolutionary" as the course adopted by the Senate?

Mr. HENRY of Indiana. I take pleasure in answering the gentleman. If we are to select a few public building enterprises like those put upon this bill by the Senate and vote them through each session of Congress, we never shall provide the country with the public buildings that ought to be provided for. What we need is the consideration of public building measures in this House. And if the members of this House make up their minds to vote down these amendments, and at the beginning of the next session of Congress insist on taking up public buildings and considering them and voting them where they ought to go, then the country can be provided with them, but not in this way. [Applause.]

Mr. SWANSON. We have understood the policy to be not to give public buildings any chance this session.

Mr. HENRY of Indiana. I do not know what the gentleman understood. I know this much—that the Public Buildings Committee has not had any opportunity to present matters of this kind in this House. But it can have such opportunity at the next session; and it ought to have it.

One thing further: Not a single one of these enterprises will suffer in the least from the delay if we refuse to authorize them now. If there were any such danger, I for one would concede the point. But, Mr. Speaker, they will not suffer; and hence there is no occasion for yielding on that point.

Mr. CANNON. I yield two minutes to the gentleman from Kentucky [Mr. OWENS].

Mr. OWENS. Mr. Speaker, I am not inclined to play the part of "the dog in the manger"; but there is something more than that involved, I think, in the objection which has been urged against the proposition that we agree to these Senate amendments. It is true that a great many members, myself among them, introduced into this House bills which we thought had merit, providing for the erection of public buildings. I introduced one, I remember, asking for a pittance of $50,000 for a public building in a county that has paid from $250,000 to $400,000 a year in direct taxes to the Federal Government during the last twenty-five years. But assenting to the assurance made on all sides that there was to be no legislation of that kind at this session, I did not seek to force that bill through, and did not attempt to get that sort of legislation from the Senate.

Now, it is true, as the gentleman from Virginia [Mr. SWANSON] has said, that the Senate has a right to its own policy in regard to these appropriation bills and in regard to public building bills. But I do insist that while it is true they have a right to pass public building bills if they choose, they ought to pass them as separate measures and send them here on their merits, and not put them on an appropriation bill containing appropriations necessary for the existence of the Government, and in that way attempt to force them down our throats. [Applause.]

Mr. Speaker, I believe everybody in the Senate, from the pages up, understand that all the Senate has to do when it passes an amendment to a House bill is to be firm, and the House will "lie down" as soon as it gets a decent opportunity. Let us fool them once. That is my proposition. Let us "stand to our guns" once and show them that the policy we have enunciated and undertaken to carry out we intend to carry out, and are able to endure the consequences as long as they are.

Mr. FAIRCHILD. Does not the gentleman think that is rather a poor basis on which to rest our action with reference to legislation which is before us?

Mr. WILSON of Idaho. And which we admit is right.

Mr. OWENS. I do not know as to that. We know nothing about it. We have the report of no committee. The gentleman is assuming that the Senate is right upon the merits of these propositions. I do not know whether it is or not. But I say that where we have a fixed policy we should not recede from that fixed policy every time the Senate says we must recede.

Mr. FAIRCHILD. We receded on yesterday.

Mr. OWENS. Well, I do not care if we receded on yesterday and the day before; that does not settle the controversy. I do not think that we ought to do anything of the kind at their dictation. Let us stand by our own guns; let us have our own policy and adhere to it, and let them recede a little while. [Applause.]

Mr. CANNON. I yield now a minute to the gentleman from Montana [Mr. HARTMAN].

Mr. HARTMAN. Mr. Speaker, in reply to the gentleman from Indiana [Mr. HENRY], who says he will not vote to recede from the disagreement to the Senate amendments until the chairman of this committee informs the House that he wants us to do so, I wish to remind him that the chairman of this committee on yesterday said, when this matter was up, that he would stand here opposing any concession until he was instructed by the House as to its wishes.

Now, are you going to follow him on that suggestion and instruct? I say that he has made a gallant fight. I honor him for it. He stood up manfully with his colleagues in this controversy, and I have no fault and the House can have no fault to find with him. But we have no right to ask him to carry the burden further. He would be doing his full duty, I claim now, to ask the House to yield to the demand of the Senate, and I ask him now to come to us and concur in the Senate amendment.

In the language of the topical song—

I want you, I want you mighty bad;
I want you, ma honey, I do.

[Laughter and applause.]

Mr. CANNON. I yield now two minutes to the gentleman from Indiana [Mr. FARIS].

Mr. FARIS. Mr. Speaker, it seems to me that when the proposition is presented to us, as has just been done by the gentleman from Illinois [Mr. HOPKINS], that this contention has resolved itself into a question of endurance between the two Houses, we have the best of it. We are well equipped to enter that sort of contest with the body at the other end of this building. We are not only fresher from the people, but we are fresher in every other way. [Laughter and applause.] The influence that we have to meet now from the Senate, as I understand it, is the influence of its younger men from the far West, who do not hesitate when they want anything to reach for it; and they are well seconded by the members from the far West in this body.

I suggest, sir, that our colleagues on the floor from the far West have seen but very little loose in this session of Congress that they have not attempted to take hold of and appropriate to themselves for the benefit of their growing section.

Mr. WILSON of Idaho. How about fortifications, and rivers and harbors?

Mr. FARIS. I am in sympathy with my colleagues from the West. I participate in the sentiment uttered by my friend from Wyoming as to these daughters in that great empire; but for one I am willing to stand here fast, by the honored chairman of this committee, and adhere to the policy adopted by the House in the early days of the session, that we should have respect for the

depressed condition of our industries and the deplorable condition of our Treasury in this question of additional public buildings. I hope, Mr. Speaker, that we will stand by the leadership of the honored gentleman from Illinois [Mr. CANNON], and not submit to such legislation as riders upon appropriation bills, but await providing for other public buildings until the revenues are increased, and until we can have the orderly procedure in this matter that we have hitherto followed; and I hope we will insist in our disagreement to this unusual method of legislation. [Applause.]

Mr. CANNON. Now, but a single moment, Mr. Speaker, and I am ready for a vote.

The State of Illinois, at its capital in Springfield, from 1818 to 1868 never had a public building. So much now for the precedents along that line.

Now, then, I will say again, I do not discuss the merits of this provision. If it is the temper of any member of this House, if it is the temper of the majority in this House on the merits, considering the manner in which the amendments come, with all the surrounding conditions, to concur with the Senate, then I say "Amen," vote that way. But I protest that I will not vote, I will not stand and ask anybody else to vote—I never have done so, do not now, and will not in the future beg a vote from this House presenting the alternative that the Senate will not agree, and thereby seek to affect the votes of my colleagues, when the Senate amendment ought to go out under the invariable rule, acknowledged by such men as Senator SHERMAN himself and the other great parliamentary leaders through all of the years in the past.

Now I am ready for a vote. [Applause.]

Mr. FAIRCHILD. When the gentleman quotes Senator SHERMAN of Ohio I want to suggest to him that I also can quote him as saying a very few moments ago, in the Senate Chamber, that as these appropriations are for buildings already authorized, they do not come within the rule the gentleman from Illinois has quoted. [Applause.]

Mr. CANNON. My information is entirely different from that of the gentleman from New York. But the man who has read the history of his country understandingly in the parliamentary contests in 1878, 1879, and 1880 understands—and this contest began before the breaking out of the later war—that the rule is unvarying that the body proposing legislation as a rider upon a money bill must recede if the other body will not assent.

I want now to take off from this House any duress, if I have that power. I do not want you to agree with the Senate because perchance the Senate will not agree with you. That is not a good way to legislate. It rubs the hair the wrong way on me. I can not do it and keep my respect. Now I am ready for a vote.

The SPEAKER. The question is on receding and concurring in the Senate amendments.

The question being taken, the Speaker announced that the noes seemed to have it.

Mr. WILSON of Idaho demanded a division.

Mr. CANNON. Let us take the vote by tellers.

Mr. HAINER of Nebraska. I understood that the vote was to be separate; but if it is to be taken on all the amendments jointly, then I wish to move to recede and concur with an amendment.

Several MEMBERS. Too late.

The SPEAKER. The gentleman has a right to do that.

Mr. HAINER of Nebraska. I send the following amendment to the Clerk's desk——

The SPEAKER. To which amendment?

Mr. LOUDENSLAGER. Mr. Speaker, I raise the point of order that the question has been put, and the House is dividing, so the amendment is not in order.

Mr. SAYERS. I will suggest, Mr. Speaker, that the gentleman from Nebraska [Mr. HAINER] must have a separate vote upon the particular amendment in which he is interested, and then we can take a vote on the other amendments.

The SPEAKER. The Chair thinks that whether the gentleman was too late or not the motion to recede and concur has precedence. The House was dividing, and upon that question the vote must be taken. If the House votes that down, then the matter of the amendment of the gentleman from Nebraska would be before the House. As many as are in favor of receding and concurring will rise in their places and be counted.

The House divided; and there were—ayes 81, noes 88.

Mr. WILSON of Idaho. Tellers, Mr. Speaker.

Tellers were ordered; and the Speaker appointed Mr. CANNON and Mr. WILSON of Idaho.

The SPEAKER. The Chair desires that the House shall understand the proposition. As many as are in favor of receding and concurring in the Senate amendments will now pass between the tellers.

The House again divided; and the tellers reported—ayes 90, noes 74.

Mr. RANEY. I demand the yeas and nays, Mr. Speaker.

The yeas and nays were ordered.

The question was taken; and there were—yeas 100, nays 88, not voting 166; as follows:

YEAS—100.

Acheson,	Dockery,	Johnson, N. Dak.	Payne,
Adams,	Dovener,	Knox,	Phillips,

Dolliver,	Kyle,	Robinson, Pa.	Yoakum.
Draper,	Latimer,	Royse,	
Fenton,	Lawson,	Rusk,	

So the motion to recede and concur in the Senate amendment was agreed to.

Mr. CLARKE of Alabama. Mr. Speaker, I desire to know how I am recorded.

The SPEAKER. The gentleman is recorded in the affirmative.

Mr. CLARKE of Alabama. I did not vote, Mr. Speaker. I am paired, and simply announce that I am present.

The following pairs were announced:

Until further notice:

Mr. DALZELL with Mr. CRISP.

Mr. GILLETT of Massachusetts with Mr. COWEN.

Mr. GROSVENOR with Mr. MCMILLIN.

Mr. STEPHENSON with Mr. NEILL.

Mr. JOHNSON of Indiana with Mr. COX.
Mr. MCCALL of Massachusetts with Mr. DE ARMOND.
Mr. PICKLER with Mr. MILES.
Mr. JENKINS with Mr. DENNY.
Mr. MILNES with Mr. STRAIT.
Mr. BARNEY with Mr. BUCK.
Mr. HITT with Mr. WASHINGTON.
Mr. HENDERSON with Mr. CULBERSON.
Mr. SPALDING with Mr. SPENCER.
Mr. STEELE with Mr. MCCLELLAN.
Mr. HEATWOLE with Mr. DINSMORE.
Mr. FOSS with Mr. MCLAURIN.
Mr. COUSINS with Mr. LIVINGSTON.
Mr. TOWNE with Mr. WILSON of South Carolina.
Mr. SMITH of Michigan with Mr. BERRY.
Mr. TRACEY with Mr. MCRAE.
Mr. BARHAM with Mr. KYLE.
Mr. MEIKLEJOHN with Mr. CROWLEY.
Mr. FOOTE with Mr. HUTCHESON.
Mr. COLSON with Mr. KENDALL.
Mr. WHITE with Mr. SPARKMAN.
Mr. LEISENRING with Mr. TUCKER.
Mr. WILSON of Ohio with Mr. RUSK.
Mr. WILLIAM F. ALDRICH with Mr. MOSES.
Mr. BOWERS with Mr. MINER of New York.
Mr. WILLIAM A. STONE with Mr. LAWSON.
Mr. WATSON of Ohio with Mr. COCKRELL.
Mr. ROYSE with Mr. TURNER of Virginia, except on Tucker-Yost election case.

For this day:

Mr. SNOVER with Mr. YOAKUM.
Mr. MCCLEARY of Minnesota with Mr. CLARKE of Alabama.
Mr. HICKS with Mr. JONES.

Mr. OTEY. Mr. Speaker, I would like to know how I am recorded.

The SPEAKER. The gentleman is recorded in the affirmative.

Mr. OTEY. I wanted to vote in the negative. I desire to change my vote to "nay."

The name of Mr. OTEY was called, and he voted "nay."

The result of the vote was then announced as above recorded. [Applause.]

SUBWAYS IN THE DISTRICT OF COLUMBIA.

The SPEAKER. The Chair desires to appoint as a subcommittee on the resolution relating to the subways in the District of Columbia Mr. BABCOCK, Mr. ODELL, and Mr. RICHARDSON.

SOLDIERS' HOME AT LEAVENWORTH.

The SPEAKER. The Chair appoints on the committee to investigate the Soldiers' Home at Leavenworth Mr. GROUT of Vermont, Mr. CHARLES W. STONE of Pennsylvania, Mr. WARNER of Illinois, Mr. SAYERS of Texas, and Mr. LAYTON of Ohio.

The Chair will lay before the House the following House bill with a Senate amendment.

Mr. LITTLE. A parliamentary inquiry. I would like to know if it would not be in order to proceed with the consideration of the bill which was under consideration when the conference report was called up.

The SPEAKER. There will be a conference report presented.

Mr. LITTLE. That was a bill where the second had been ordered. I would ask if it would be in order to proceed with the consideration of that bill?

The SPEAKER. It would, unless a conference report is presented.

Mr. EVANS. I would be glad if the Speaker will allow the matter to proceed.

The SPEAKER. If there be no objection, a House bill with Senate amendment will be laid before the House.

There was no objection.

FRAUDULENT BOTTLING OF LIQUORS.

The SPEAKER laid before the House the bill (H. R. 4580) amending section 3449 of the Revised Statutes, with Senate amendment.

The bill and Senate amendment were read.

Mr. EVANS. Mr. Speaker, I move that the House concur in the Senate amendment.

The motion was agreed to; and accordingly the House concurred in the Senate amendment.

On motion of Mr. EVANS, a motion to reconsider the vote by which the Senate amendment was concurred in was laid on the table.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment the bill (H. R. 7338) for the relief of William H. Scofield, Jacob Brady, James Ketcham, Annie Booth, as administratrix of the goods, chattels, and credits of George W. Booth, deceased; Wilson P. Billar, Ezra L. Waterhouse, Moses C. Bell, George W. Byles, and George A. Scofield.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H. R. 9409) making appropriations to supply deficiencies in the appropriations for expenses of the House of Representatives, and for other purposes.

The message also announced that the Senate having proceeded in pursuance of the Constitution to reconsider the bill entitled "An act granting a pension to Francis E. Hoover," returned to the House of Representatives by the President of the United States with his objections, and sent by the House of Representatives to the Senate with the message of the President returning the bill:

Resolved, That the bill do pass, two-thirds of the Senate agreeing to pass the same.

The message also announced that the Senate had passed the bill (S. 2555) to authorize the Secretary of the Treasury to issue leases of certain islands in Alaska for the breeding of foxes; in which the concurrence of the House was requested.

The message also announced that the Senate had passed without amendment bills of the following titles:

A bill (H. R. 8321) to authorize the county of St. Louis, in the State of Minnesota, to build or authorize the building of a foot and wagon bridge across the St. Louis River between Minnesota and Wisconsin, at a point near Fond du Lac, in said State of Minnesota; and

A bill (H. R. 9226) to change the time and places for the district and circuit courts of the northern district of Texas.

The message also announced that the Senate had passed with amendments the bill (H. R. 4580) to amend section 3449 of the Revised Statutes; in which the concurrence of the House was requested.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes.

A further message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment the bill (H. R. 9447) to amend section 1 of the act to amend an act entitled "An act authorizing the Postmaster-General to adjust certain claims of postmasters for loss by burglary," etc., approved May 9, 1888.

DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. GROUT. Mr. Speaker, I desire to present a conference report on the District appropriation bill.

The conference report was read, as follows:

The committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendments of the Senate numbered 100, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 187, 188, 189, 190, and 191.

Amendment numbered 99: That the Senate recede from its disagreement to the amendment of the House to the amendment of the Senate numbered 99 and agree to the same with an amendment as follows: In lieu of the matter inserted by said House amendment insert the following: "*Provided*, That the Commissioners of the District of Columbia may, under such reasonable restrictions as they may prescribe, authorize any existing electric light company having overhead wires to maintain and use for a period of eight months, and no longer, its existing poles and overhead wires west of Rock Creek in places outside of the existing fire limits of the city of Washington and of the District of Columbia, and any such overhead wire system may be extended west of Rock Creek and outside of said fire limits, to continue only for the said period of eight months, and at the end of said period all right or authority hereby conferred shall cease. And the said Commissioners may also authorize any such existing electric light company to construct and use, under such regulations as the Commissioners may fix, conduits for the reception of existing overhead wires within the territory formerly known as Georgetown, and to extend the same by an aggregate of not more than one and a quarter miles of conduit in the same territory. And the United States Electric Lighting Company may extend its underground conduits and wires east of Rock Creek and within the said fire limits to Mount Pleasant and Washington and Columbia Heights under such regulations as the Commissioners of the District of Columbia may prescribe"; and the House agree to the same.

Amendment numbered 193: That the House recede from its disagreement to the amendment of the Senate numbered 193, and agree to the same with an amendment as follows: Strike out all after the word "dollars," in line 3, down to and including the word "denomination," in line 6 of said amendment; and the Senate agree to the same.

Amendment numbered 194: That the House recede from its disagreement to the amendment of the Senate numbered 194, and agree to the same with an amendment as follows: On page 40, after line 19 of the bill, insert as a separate paragraph, before amendment numbered 195, the following:

"And it is hereby declared to be the policy of the Government of the United States to make no appropriation of money or property for the purpose of founding, maintaining, or aiding by payment for services, expenses, or otherwise, any church or religious denomination, or any institution or society which is under sectarian or ecclesiastical control; and it is hereby enacted that from and after the 30th day of June, 1897, no money appropriated for

charitable purposes in the District of Columbia shall be paid to any church or religious denomination, or to any institution or society which is under sectarian or ecclesiastical control."

And the Senate agree to the same.

Amendment numbered 195: That the House recede from its disagreement to the amendment of the Senate numbered 195, and agree to the same with amendments as follows: In line 15 of said amendment, after the word "denomination," insert the words "or any institution or society which is under sectarian or ecclesiastical control." After the word "extent," in line 22 of said amendment, insert the words "within the limitations of the policy hereinbefore declared; and if not, the probable expense of providing and maintaining public institutions for such purpose." Strike out lines 28 and 33, inclusive, of said amendment and insert in lieu thereof the following: "Said committee is authorized to sit during the recess; and the necessary expenses of the committee, including clerical and stenographic work, shall be paid out of the contingent funds of the Senate and House of Representatives jointly, on the certificate of the chairman of the committee;" and the Senate agree to the same.

WILLIAM W. GROUT,
MAHLON PITNEY,
ALEX. M. DOCKERY,
Managers on the part of the House.

H. M. TELLER,
W. B. ALLISON,
F. M. COCKRELL,
Managers on the part of the Senate.

The statement of the House conferees was read, as follows:

The managers on the part of the House of the conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 5210) making appropriations for the government of the District of Columbia submit the following written statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report on said amendments, namely:

On the amendment of the House to Senate amendment numbered 99: In lieu of the provision proposed by the House relative to electric light and power wires in the District of Columbia west of Rock Creek and outside of the fire limits of the District, inserts as a substitute therefor the provision the text of which is fully set forth in the conference report.

On No. 100: Strikes out the provision proposed by the House regulating the prices to be paid for electric light and electric power in the District of Columbia.

On Nos. 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 193, 194, and 195, relating to the charities of the District of Columbia: The appropriations for the various charitable institutions are made in specific terms, as proposed by the Senate, and a provision is inserted declaratory of the policy of the United States with reference to appropriations for charities in the District of Columbia, the full text of which provision is set forth in the conference report; and provision is made, as proposed by the Senate, for a joint committee of Congress to inquire and report as to the best methods of caring for the poor and destitute in the District of Columbia after the close of the fiscal year 1897.

WILLIAM W. GROUT,
MAHLON PITNEY,
ALEX. M. DOCKERY,
Managers on the part of the House.

Mr. GROUT. Mr. Speaker, this is the fourth report that the conferees on this bill have submitted, and I am sure the House will be glad to learn that we have at last fully agreed. I will occupy but a minute or two in giving a summary of figures showing what has been done in the bill:

The bill as finally agreed upon appropriates $5,905,082.48, being an increase over the current appropriations of $159,639.23, and $359,403.91 over the appropriations for the preceding fiscal year of 1895.

For paving streets the appropriations amount to $163,500, an increase of $19,000.

For constructing county roads the appropriations are $90,500, an increase of $25,500.

For sewers the appropriations are $376,000, an increase of $44,700, and authority is given to contract for $75,000 more.

For public schools the appropriations are $1,193,056, including authority to contract for completion of certain school buildings, an increase of $55,440 over current law; provision being made for four new school buildings, including a high-school building in Georgetown; for the reconstruction of three old buildings and the enlargement of another.

An increase of 50 privates in the Metropolitan police is authorized—twice the number that has ever been authorized heretofore in any single appropriation bill.

The fire department is increased by provision for two new engine houses, engines therefor, and for a new hook-and-ladder truck.

For lighting streets with gas a reduction is made from $20.50 per lamp to $20, and an increase in the service is required from the old "moonlight" schedule of 3,000 hours per annum to an all-night schedule of 3,762 hours per annum; and about $7,500 is given for extension of the service. If this be reckoned according to the old schedule, there is a reduction of about $17,000 or more in the cost of lighting by gas.

For lighting streets with electricity a reduction is made in the limit of cost from 40 cents to 30 cents per lamp per night, a reduction, as will be seen, of 25 per cent in the cost of lighting by electricity. And new service is provided for to the amount of $11,000 or thereabouts.

Mr. PITNEY. According to my understanding of the bill, as we have agreed upon it in conference, the effect of the gas-lighting provision is to reduce the price of gas for public lighting to 85 cents per thousand.

Mr. GROUT. I should have stated in passing that while the bill which the two Houses recently agreed upon, and which has been approved by the President, reduces the cost of gas 25 per cent to private consumers and to the Government where used through the meter—that is, in the public buildings—it did not touch the subject of gas used in the street lamps. Your conferees insisted that there should be in this branch of the service a corresponding reduction; and they struggled long and resolutely for that reduction, but were unable to carry a reduction to that extent. They did, however, secure a provision for gas through the public lamps at the rate of 85 cents per thousand, or in that neighborhood, which, as I have already stated, amounts to about $17,000——

Mr. Speaker, I have given these figures for the information of our constituents, the people of the District of Columbia, who have found much fault with the Appropriations Committee on account of what they have termed the small appropriations made in this bill. But the bill, as will be seen, is much larger than the bill for the last two years; and I now say that it is the largest District bill ever passed by the two Houses. It has never been equaled in amount. While I make this statement, I would not have you think your conferees have been extravagant. On the other hand, we think we have succeeded in keeping the bill within reasonable limits. As the bill went over to the Senate from the House it carried $5,418,960.39. The Senate added thereto $1,866,179.03. Of this amount of increase put on by the Senate that body yielded in conference $1,380,056.94 and the House yielded $486,122.09, leaving the aggregate of appropriations in the bill as finally agreed upon $5,905,082.48.

Mr. PITNEY. Will the gentleman allow me to say that in addition to the increase of $1,866,179.03 the Senate reappropriated an unexpended balance of a former appropriation amounting to $266,546.38, so that the actual addition made by the Senate was $2,152,725.41?

Mr. GROUT. The statement of the gentleman is correct.

Now, one word about an item which was stricken from the bill and which has been a subject of much criticism in another place, as well as in the public prints of the city. I refer to the proposal to resume work on what is known as the Lydecker tunnel, upon which there has heretofore been expended, as gentlemen may generally know (though some may not), between two and three million dollars, to bring water from the reservoir above Georgetown to the new reservoir up by the Soldiers' Home, which is still empty, carrying the water through an underground conduit, in some places 170 feet beneath the surface.

Well, it was abandoned five or six years after the expenditure of this large sum of money, not only as an impracticable scheme, but because there was a wicked waste of money in conducting the work, on account of certain frauds which were discovered. Recently a board of engineers has examined this tunnel, and they recommend that an appropriation be made by which it is believed it can be made available for use. That report, however, was not submitted to the House Committee on Appropriations. The proposition was put in on the bill in the Senate. In fact, it was too late for the House committee to act upon it. We had, therefore, no investigation of the matter. The amendment of the Senate called for some $600,000 appropriation now, and involved the total expenditure of nearly $900,000.

Now, Mr. Speaker, for one I want to say for myself, and I also speak the sentiments of my associates in that conference, I felt unwilling to enter upon an expenditure of that sum until we could take the matter more carefully under consideration; could, in short, talk it over with the gentlemen who made this report, and ask them certain questions touching, first, if you please, the practicability of clearing out the silt that would certainly form in the tunnel and yet keep up the supply of water to those dependent on the tunnel for water. I do not say that the scheme is an impracticable one; but my mind was not clear. I wanted the information I have indicated; also information on other points. It may be all right; I do not know. I want a chance, before I consent to this expenditure, to ask these gentlemen who recommend the completion of the tunnel about several important matters connected with it; and all your conferees were of the same opinion. We wanted more information upon the subject, and we resisted this item, which was stricken out of the bill in the conference. When I know more about it I may be for it first and last. Congress has been soundly berated by the District press for not having entered on the scheme, and now before we take it up again I think we should be sure it is the best way to furnish an additional supply of water.

I will also say in further explanation that your conferees were not clear but that the present supply of water is fully equal to the immediate necessities of the city.

The fact is, at the time this tunnel was abandoned, or soon after, and to take the place, in part at least, of this tunnel, some six or seven hundred thousand dollars was appropriated for a high-pressure service on Capitol Hill, which is but just completed. It was also said that the dam at the Great Falls was not high

enough to supply the aqueduct with all the water it would carry and that it should be increased in height. An appropriation was accordingly made for that purpose and the dam was raised. It was also ascertained that the aqueduct was about one-fourth full of a silt sediment; an appropriation of $14,000 was made in the last appropriation bill to clean it out. That work is now about completed, and when the increased volume of water is turned into the aqueduct by reason of the raised dam at Great Falls, and when the aqueduct is thoroughly cleaned out, it is estimated that the supply of water will be increased 25 per cent, and your conferees were not at all certain but the increased supply would meet all the demands for some time to come. Not having full information on this point we put in a provision calling on the Secretary to investigate and report on the subject.

Mr. Speaker, there is another consideration in this connection: Sewers should go ahead of an increased water supply in this as in every city, for which we have liberally provided in this bill. When we get the sewers under way we will then be sure to have plenty of water.

As to the charities, I will say that after fully considering the sectarian question involved your conferees finally concluded to agree to the same limitation attached to the Indian appropriation bill as to sectarian schools; and principally for the reason that the House had already agreed to that provision.

This provision will give time to prepare for the change which the bill provides for in that respect, and at the same time after June 30, 1897, forbids the appropriation of any public money to any institution or society under sectarian or ecclesiastical control. This fully saves the principle declared in the House bill, and ought to be satisfactory to the most exacting.

Now I yield to the gentleman from Michigan [Mr. LINTON] so much time as he may desire.

Mr. LINTON. I wish to congratulate the Congress and the people of this country upon the outcome of the acrimonious controversy which we have had over the question of Government support of sectarian institutions. Yesterday at each end of the Capitol men of all parties, men of all creeds and of no creed, voted almost as a unit in favor of the clause inserted in the Indian bill stating that "it is hereby declared to be the settled policy of the Government to hereafter make no appropriation whatever for education in any sectarian school." The adoption of this section was a great victory for the free schools of America as against the so-called sectarian or parochial schools that have for many years been receiving subsidies from the public Treasury, and to which our entire people, against the bitter protest of a great majority, have been contributing. The fact that the measure carried a small appropriation, only 50 per cent of last year, and then only to be expended at the discretion of the Secretary of the Interior in places where schools are necessary and where nonsectarian schools can not possibly be provided at once, is simply an incident in the triumph of the principle for which we have been so ardently striving. The appropriation, small as it is, is but temporary; but the declaration that the Government will not again, under any circumstances, pay for education in this class of schools is permanent and becomes a part of the law of the land. To-day we go still further, and, with hardly an objection in either House of Congress, adopt in the pending measure a section or declaration framed in practically the precise language of the joint resolution it was my honor to introduce early in the session, as follows:

And it is hereby declared to be the settled policy of the Government of the United States to make no appropriation of money or property for the purpose of founding, maintaining, or aiding, by payment for services, expenses, or otherwise, any church, religious denomination, or religious society, or any institution, society, or undertaking, which is wholly or in part under sectarian or ecclesiastical control, and it is hereby enacted that from and after the 30th of June, 1897, no money appropriated for charitable purposes shall be paid to any church or religious denomination or to any institution or society which is under sectarian or ecclesiastical control.

This should cause the demands for church subsidies to cease for all time to come, and I hope they may never again be presented to Congress in any shape or form, because if they are there will against them be the gathering of that storm predicted by the New England Senator, as the great mass of our people, irrespective of party or religion, will not again permit them to exist for a moment.

I believe that the enactment of to-day's legislation puts a stop to this agitation at the nation's Capitol, and will cause a better feeling among our citizens throughout the country. Therefore, again I desire to congratulate the members of the House and Senate upon the outcome of the fight in having firmly established the principle that the Government of our country will not in the future in any way support the schools of creed or the institutions of sect. The last two days have seen the enactment of laws that will remain in history and mark an epoch in the nation's progress.

Mr. GROUT. I now yield to the gentleman from Illinois [Mr. CANNON].

Mr. CANNON. Mr. Speaker, I beg the attention of the House for a few moments now in the closing hour of this first session of the Fifty-fourth Congress.

In a word, I want to congratulate the House on the work of this session. Coming here, most of us, new to legislation in the beginning of the Congress, we brought a sincere desire to faithfully represent our constituents, and by wise legislation and appropriation to enact the will of the majority into law.

Mr. Speaker, this is a Government through parties. The Government is best served when a party that in fact stands for the majority of the people has full power. It then writes its policies, economic and financial, upon the statute book.

The Republican party has not power, except in the House of Representatives. The Senate is worse than Democratic, and Mr. Cleveland is President. To the best of our ability, from the practical standpoint, we proposed revenue measures that in these trying times would save us from borrowing money, and the House has performed its duty. But not having the power in the Senate, that bill slept the sleep of death there. Nothing was left us but to make the appropriations necessary to carry on the Government, taking care that we only appropriated the money absolutely necessary to supply the needs of the Government, and in no instance entering upon new fields of appropriation save where their importance was so manifest that a sound public sentiment would justify even the borrowing of money to carry them on. [Applause.]

Therefore we have authorized expenditures for the fortification of our seacoasts, in order to give our people assurance of permanent safety, in a greater sum than the aggregate of all appropriations for the like purpose made from 1888 to 1896; and we believe that the country will justify us in that expenditure. A liberal naval bill has been enacted. Wise legislation has been written upon the statute book, by which (fashioned by the Committee on the Judiciary) we correct abuses that abounded through the administration of justice in the courts of the country. The House has done promptly, with wisdom, what it was possible to do. To sum it all up in a word, no scandals can be charged to this House.

While we have been unable to do all that we desired, we have been enabled to keep our record clean; and now, in these last hours, we can unite in assuring all the people, if they will give us, next November, full power in House and Senate and Executive Mansion, that we will write upon the statute book the protective, economic policy of the Republican party. [Applause on the Republican side.] And while in the future, with full power, we will make wise and economical appropriations, not scant and insufficient, but wise and economical, we give assurance to the country that through our system we will bring revenue enough from the business and commerce of a prosperous people to pay the appropriations that we make, and at the same time restore confidence to the country; and, with that renewed confidence, under that economic policy, employment will again seek the laborer instead of the laborer seeking employment. [Applause on the Republican side.]

In a word, we believe, with the Republican party restored to complete power, with its protective economic revenue policy written on the statute book, and the Democratic policy taken off the statute book, that the cause of the disease which now infects the body politic, and has done so since November, 1892, will be removed; that the cause of the disease being removed, the patient will again become sound and healthy, and that, with the cause of the disease removed, its symptoms will disappear, and the Populist quack, the Democratic free-silver quack, and the fiat-money quack, who all seek to treat symptoms only, will vanish as the vapors of the night vanish before the rising sun. [Great applause.]

Then, Mr. Speaker, we will again have universal employment, increased production and consumption, and plenty of money, all as good as gold, to do the business of the country, just as we had all these blessings from 1879 to 1892, inclusive.

Mr. Speaker, having made these general remarks, I proceed to state the work of the session in detail touching appropriations for the public service.

The appropriations for the session just closing amount to $515,759,820.49.

The estimates on which these appropriations were based, and submitted by the Executive to Congress at the beginning of the session in the regular Book of Estimates, or from time to time in special or supplemental estimates, amounted to $529,134,193.92, or $13,374,373.43 more than has been appropriated.

The whole amount of appropriations, $515,759,820.49, charged to this session includes $119,054,160 under permanent laws, of which amount $50,000,000 is for sinking fund and $30,500,000 for interest on the public debt, or $3,355,614.40 more than was included at the last session of Congress in the statements of appropriations, and is on account of the increase of $162,315,400 in the bonded indebtedness of the country by the present Administration up to February, 1895, the interest and sinking-fund charge on account of the later bond issue of $100,000,000 in February, 1896, amounting

to $4,400,000, not being included in the estimates of permanent appropriations, as stated and submitted to Congress in the last regular Book of Estimates.

The increase in the principal of the interest-bearing debt of the country under the present Administration, by the loans negotiated in February and November, 1894; February, 1895, and February, 1896, amounts to $262,315,400, which entails an annual interest charge of $11,492,616, and to meet the sinking-fund obligations the further sum of $2,623,154.

During the Administration of Mr. Harrison, from March, 1889, to March, 1893, the principal of the interest-bearing debt of the United States was reduced in amount $258,192,900, and the annual interest charge was thereby diminished $10,327,716.

The Table B, giving a history of the appropriation bills for this session, which I shall incorporate at the conclusion of my remarks, shows in detail, by bills and in the aggregate, the estimates submitted to Congress, the amount of the bills as reported to the House, as passed by the House, as reported to the Senate, as passed by the Senate, and as they became laws, and the appropriations made at the last session of the last Congress.

An examination of the table shows that the regular annual bills, including deficiencies, as passed by the House, made a reduction in the total estimates submitted by the Executive of $26,083,191.67; that they were increased by the Senate $22,920,442.30, and that as they became laws they appropriate $10,636,624.06 less than as passed by the Senate, $12,283,818.24 more than as they passed the House, and $13,374,373.43 less than the estimated requirements of the Administration.

The regular annual appropriations, including deficiencies, made at the last session of Congress, amounted to $383,636,896.97, and included no river and harbor bill. So, excluding the river and harbor act passed at this session, it will be seen that the regular annual bills as passed by the House appropriated only $373,505,082.25, or more than $10,000,000 less than was appropriated by the last Democratic Congress, with the approval of a Democratic Executive.

The following shows by titles the appropriations made at this session, in comparison with those made at the last session of Congress, with the increase or reduction in each:

TABLE A.

Title.	Amount this session.	Amount last session.	Reduction.	Increase.
Agriculture	$3,255,532.00	$3,303,750.00	$48,218.00	
Army	23,278,402.73	23,252,608.09		$25,794.64
Diplomatic and consular	1,642,558.76	1,574,458.76		68,100.00
District of Columbia	5,905,082.48	5,745,443.25		159,639.23
Fortification	7,397,888.00	1,904,557.50		5,493,330.50
Indian	7,390,496.79	8,762,751.24	1,372,254.45	
Legislative, etc.	21,518,834.71	21,891,718.08	372,883.37	
Military Academy	449,525.61	464,261.66	14,736.05	
Navy	30,562,739.95	29,416,245.31		1,146,494.64
Pension	141,328,580.00	141,381,570.00	52,990.00	
Post-Office	92,571,564.22	89,545,997.86		3,025,566.36
River and harbor	12,621,800.00			12,621,800.00
Sundry civil	33,031,152.19	46,568,160.40	13,537,008.21	
Total	380,954,157.44	373,811,522.15	15,398,090.08	22,540,725.37
Deficiencies	15,326,503.05	9,825,374.82		5,501,128.23
Total	396,280,660.49	383,636,896.97	15,398,090.08	28,041,853.60
Miscellaneous (estimated for this session)	425,000.00	297,667.37		127,332.63
Total, regular annual appropriations	396,705,660.49	383,934,564.34	15,398,090.08	28,169,186.23
Permanent annual appropriations	119,054,160.00	113,073,956.32		5,980,203.68
Grand total, regular and permanent annual appropriations	515,759,820.49	497,008,520.66	15,398,090.08	34,149,389.91

Net increase this session over last session, $18,751,299.83.

It will be noted from this exhibit that, while at this session reductions have been made in many of the appropriation acts, increases of any considerable amount appear in but few.

Thus the fortification act is increased from $1,904,557.50 to $7,397,888, and in addition to the latter sum, authority is given to enter into contracts to the further sum of $4,195,076, making, in all, $11,592,964 authorized at this session for the work of strengthening our coast defenses, or nearly as much as had been given in all of the previous eight years combined, since the Government entered on the present plans of fortification and harbor defense.

The Post-Office bill is increased from $89,545,997.86 to $92,571,564.22, which is the usual increase requisite to keep pace with the growth of population and commerce of the country.

The river and harbor bill appropriates $12,621,800, the whole of which is an apparent increase, no bill having been enacted at the last session. The river and harbor act that was passed during the first regular session of the last Congress appropriated $11,643,180.

The inadequacy of appropriations made during the last Congress accounts for the apparent increase in deficiencies.

The permanent appropriations show an apparent increase of a little less than $6,000,000, accounted for in part by the increase for sinking fund and interest on the public debt, to which I have already adverted, and to an increase in the amount estimated to be required during the coming year for the redemption of notes of national banks that have surrendered circulation.

Aside from a necessary increase in the number of seamen and men in the Navy and Marine Corps, in order to place in commission the new ships of war provided for by previous Congresses, there has been no appreciable increase in employments or of salaries of employees authorized in any of the several Departments of the General Government. On the contrary, appropriations for 337 employees, with salaries aggregating $475,190, in the Internal Revenue Service, have been omitted because of the failure of the income-tax law under the decision of the Supreme Court.

At the beginning of the session the Committee on Appropriations in its first report to the House called attention to the abnormal growth in the expenditures under the fee system on account of United States courts, and to the fact that they had more than doubled during the period between 1885 and 1896. With commendable zeal the Judiciary Committee of the House took up the question, and reported a well-digested measure, which was incorporated into the legislative, executive, and judicial appropriation bill, and is now the law, abolishing the fee system as to United States attorneys and marshals, and placing those officials on fixed salaries; revising and reducing the schedule of fees of United States commissioners, and requiring their appointment to be made by the district instead of the circuit courts, and for terms of four years each instead of for life, as heretofore. This legislation will, it is confidently asserted by those in position and competent to judge, reduce expenditures annually on account of United States courts more than $1,000,000, and will reduce to a minimum frivolous and malicious prosecutions. Under the fee system attorneys and marshals received as compensation during the fiscal year 1895 $708,219.70, or $160,719.70 more than the aggregate of their salaries as fixed by the new law. The aggregate of their salaries as prescribed is $547,500, or $292,500 less than it was possible for them to earn under the fee system.

As against this record of reformatory legislation inaugurated by this House, it has been developed that the present administration of the Treasury Department, under the discretion vested in it by law, has increased, since July 1, 1895, the number of employees in the customs service by 331, and raised the compensation of 281 others, at a total cost for nine months for both of $206,385.02; that it has expended or incurred expenditures amounting to $7,377,440 for the present year in collecting the revenue from customs estimated at $165,000,000; whereas for the last whole fiscal year 1892, under President Harrison's Administration, there was collected under the McKinley tariff act $177,452,000 of customs revenue at a total cost of only $6,607,517, or $12,000,000 more of revenue and $770,000 less of expense in collecting it.

The following table shows the aggregate appropriations made during the Fifty-first, Fifty-second, and Fifty-third Congresses, and at the present session of the Fifty-fourth Congress:

Appropriations, fiscal years 1891 to 1897, inclusive.

FIFTY-FIRST CONGRESS.		
1891.		
Regular annual appropriations	$361,770,057.79	
Permanent appropriations	101,628,453.00	
		$463,398,510.79
1892.		
Regular annual appropriations	402,531,864.55	
Permanent appropriations	122,486,808.00	
		525,018,672.55
Total appropriations Fifty-first Congress		988,417,183.34
FIFTY-SECOND CONGRESS.		
1893.		
Regular annual appropriations	$385,736,308.71	
Permanent appropriations	121,863,880.00	
		$507,600,188.71
1894.		
Regular annual appropriations	404,036,085.29	
Permanent appropriations	115,468,273.92	
		519,504,359.21
Total appropriations Fifty-second Congress		1,027,104,547.92

FIFTY-THIRD CONGRESS.

1895.		
Regular annual appropriations	$391,156,005.03	
Permanent appropriations	101,074,680.00	
		$492,230,685.03
1896.		
Regular annual appropriations	383,934,564.34	
Permanent appropriations	113,073,956.32	
		497,008,520.66
Total appropriations Fifty-third Congress		989,239,205.69

FIFTY-FOURTH CONGRESS—FIRST SESSION.

1897.	
Regular annual appropriations	$396,705,660.49
Permanent appropriations	119,054,160.00
Total first session	515,759,820.49

The Fifty-first Congress was Republican in both branches, with a Republican Executive.

The Fifty-second Congress was composed of a House with a more than two-thirds Democratic majority, and a Senate with a narrow Republican majority. The Executive was Republican.

The Fifty-third Congress was Democratic in both branches, with a Democratic Executive.

The Fifty-fourth Congress is composed of a Republican House, a Senate having a Democratic and Populist majority, and the Executive is a Democrat.

RECEIPTS AND EXPENDITURES.

The revenues of the Government from all sources, except postal receipts, which are devoted exclusively to the postal service, for the three complete fiscal years of the Harrison Administration, ending June 30, 1892, and just preceding the last election of Mr. Cleveland, were as follows:

1890	$403,080,982.63
1891	392,612,447.31
1892	354,937,784.24
Total	1,150,631,214.18
Average per annum	383,543,738.06

The ordinary expenditures of the Government for the same period, exclusive of the postal service, premium on redemption of bonds, and to meet requirements of the sinking fund, were as follows:

1890	$297,736,486.60
1891	355,372,684.74
1892	345,023,330.58
Total	998,132,501.92
Average per annum	332,710,833.97

The entire surplus of $152,133,565.52 of revenues over expenditures was applied during the period named to the reduction of the public debt.

During the two complete fiscal years of Mr. Cleveland's present Administration the revenues of the Government, except from postal receipts, have been as follows:

1894	$297,722,019.25
1895	313,390,075.11
Total	611,112,094.36
Average per annum	305,556,047.18

The ordinary expenditures of the Government for the same period, exclusive of the postal service and to meet requirements of the sinking fund, were as follows:

1894	$367,525,279.83
1895	356,195,298.29
Total	723,720,578.12
Average per annum	361,360,289.06

The excess of expenditures, $112,608,483.76, over revenues for the first two years of Mr. Cleveland's present Administration, together with the excess of expenses over receipts of $26,504,984.04 for the first eleven months of the present fiscal year 1896, has been met out of moneys derived from the sale of bonds.

When Mr. Harrison retired from the White House on March 4, 1893, there was a net cash balance in the Treasury of $124,128,087.88.

On the 1st day of June of this year, but for moneys derived from the sale of bonds, there existed an actual deficiency in the Treasury of $26,261,062.28.

TABLE B.—*Chronological history of appropriation bills, first session of the Fifty-fourth Congress; estimates and appropriations for the fiscal year 1896-97; and appropriations for the fiscal year 1895-96.*

[Prepared by the clerks to the Committees on Appropriations of the Senate and House of Representatives.]

a No amount is included in the estimates for 1897 for the Agricultural Department for agricultural experiment stations in the several States authorized by the act of March 2, 1887. The amount appropriated for this purpose for 1896 is $750,000.

b One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1897 at $215,047.75), which are payable from the revenues of the water department.

c "Supplementary estimates" for the District of Columbia of $5,019,700 are submitted, but not carried into the total, in Book of Estimates for 1897.

d This amount includes $1,660,000 for payment of installment due the Cherokee Nation for the purchase of the Cherokee Outlet.

e Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

f This is the amount estimated for rivers and harbors for 1897, exclusive of $4,044,597, required to meet contracts authorized by law included in the sundry civil estimates, and exclusive of $4,992,000 for improving the Mississippi and Missouri rivers under the Mississippi and Missouri River commissions, submitted but not carried into the total in Book of Estimates. "The amount that can be profitably expended" in that fiscal year, as reported by the Chief of Engineers, is $12,356,000. (Book of Estimates for 1897, pages 210-215.)

g This amount is approximated.

h The general deficiency appropriation bill, as agreed upon by the House and Senate, appropriating $10,719,503.19, was vetoed by the President, and failing to pass over the veto, another bill, being an exact copy of the bill vetoed, but omitting therefrom section 4, appropriating $1,761,996.66 for French spoliation claims and other claims, was enacted.

TABLE B.—*Chronological history of appropriation bills, first session of the Fifty-fourth Congress; estimates and appropriations, etc.*—Continued.

Amount of estimated postal revenues for fiscal year 1897	89,793,120.75
Total estimated revenues for fiscal year 1897	464,793,120.75

a One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1897 at $215,047.75), which are payable from the revenues of the water department.

b This amount includes $1,660,000 for payment of installment due the Cherokee Nation for the purchase of the Cherokee Outlet.

c Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

d In addition to this amount the sum of $3,284,597 is appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1897, and the sum of $300,000 is appropriated in the urgent deficiency act to carry out such contracts for 1896.

e No river and harbor bill was passed for 1896, but the sum of $11,287,115 was appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1896.

f This amount includes $3,284,597 to carry out contracts authorized by law for river and harbor improvements for 1897.

g This amount includes $11,287,115 to carry out contracts authorized by law for river and harbor improvements for 1896.

h The general deficiency appropriation bill, as agreed upon by the House and Senate, appropriating $10,719,503.19, was vetoed by the President, and failing to pass over the veto, another bill, being an exact copy of the bill vetoed, but omitting therefrom section 4, appropriating $1,761,996.66 for French spoliation claims and other claims, was enacted.

i This amount is approximated.

k This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1896, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year.

Mr. BOUTELLE. Mr. Speaker, if it were in order, I would move that when we adjourn we adjourn to meet at the polls. [Laughter and applause.]

Mr. GROUT. Mr. Speaker, it is only fair that we should hear from the Democracy, and I yield to my friend from Texas [Mr. SAYERS].

Mr. SAYERS. Mr. Speaker, the appropriations made during the present session of Congress, including the permanent annual appropriations as estimated, amount to $515,759,820.49.

This sum exceeds the appropriations made during the last session of the Fifty-third Congress by $18,751,299.83, and exceeds those of the first regular session of that Congress by $23,529,135.46. It is less than the appropriations made by the second session of the Fifty-second Congress by only $3,744,538.72, although at the latter session $39,352,494.85 more was appropriated for pensions than is appropriated at this session. It is more than the appropriations made by the first session of the Fifty-first Congress by $21,303,571.84, and $25,464,040.80 less than the appropriations made at the second session of the Fifty-first Congress.

THE RIVER AND HARBOR ACT.

The river and harbor act, in addition to appropriating $12,621,800 specifically, and the further estimated sum of $3,000,000 under an indefinite appropriation to purchase the Monongahela Navigation Company's property, authorizes contracts involving other expenditures to the amount of $59,616,404.91. The river and harbor act of the last Congress authorized no contracts beyond the amounts actually appropriated in said act.

THE NAVAL ACT.

The naval appropriation act authorizes the construction of 3 battle ships and 15 torpedo boats, at an authorized cost of $12,900,000, exclusive of armament, which will cost not less than half as much more or quite $20,000,000 in all for the ships complete; and yet that act appropriates for the increase of the Navy only $11,479,054, which is $6,515,575 less than will be required to complete the ships which have heretofore been authorized and are now being constructed. Since the construction of the new Navy was begun there have been constructed and authorized to be constructed, including the ships authorized in the naval act of this session, a total of 84 new ships, at an aggregate cost in appropriations up to date of $113,479,054; and consequent upon this large increase of the naval establishment there has been an addition of 3,250 men for the Navy and Marine Corps, including 1,500 men authorized in the act of this session. The expense for pay and allowances of these 3,250 additional men in the Navy is not less than $3,000,000 per annum.

THE FORTIFICATION ACT.

The fortification act, in addition to making specific appropriations amounting to $7,397,888, authorizes contracts involving the further expenditure of $4,195,076.

VETO OF THE GENERAL DEFICIENCY BILL.

The President, by his action in vetoing the general deficiency bill, has eliminated from the proposed appropriations of this session the sum of $1,761,996.66, as follows:

For payment of French spoliation claims	$1,027,314.09
For payment of war and other claims certified by the Court of Claims under the Bowman Act	548,922.54
For payment of the Chouteau claim	174,445.75
For payment of claims of D. N. Fish and others	11,214.28

The Senate, organized at the beginning of this session by a combination of Republican and Populist votes, placing the control of the committees of that body in the hands of the Republicans, by its amendments to the general appropriation bills as they passed the House proposed to increase the sum total of appropriations by $22,920,442.30. By conferences between the two Houses this aggregate increase was reduced to $12,283,818.24. So it will be seen that, if the Senate had been allowed its way in increasing appropriation bills, the sum total of appropriations at this session would have been raised $10,636,624.06 above the aggregate as it now appears.

By reference to the table (Table B) which I will incorporate as a part of my remarks, setting forth the appropriations made at each session of the Fifty-first, Fifty-second, and Fifty-third Congresses, together with the first (or now closing) session of the Fifty-fourth, it will be observed that the appropriations made at the second session of the Fifty-first Congress exceeded those made

at the first session of the same Congress by $46,767,612.64, or nearly 10 per cent. If the same proportionate increase should be made at the next session over the appropriations of this present session, then the appropriations of the next session will not be less than $565,000,000.

I submit herewith another table (Table A), showing by title of bills the appropriations made at this session and those made at the last session, together with the reduction or increase in each case:

TABLE A.

Title.	This session.	Last session.	Reduction.	Increase.
Agriculture	$3,255,532.00	$3,303,750.00	$48,218.00	
Army	23,278,402.73	23,252,608.09		$25,794.64
Diplomatic and consular	1,642,558.76	1,574,458.76		68,100.00
District of Columbia	5,905,082.48	5,745,443.25		159,639.23
Fortification	7,397,888.00	1,904,557.50		5,493,330.50
Indian	a 7,390,496.79	8,762,751.24	1,372,254.45	
Legislative, etc	21,518,834.71	21,891,718.08	372,883.37	
Military Academy	449,525.61	464,261.66	14,736.05	
Navy	30,562,739.95	29,416,245.31		1,146,494.64
Pension	141,328,580.00	141,381,570.00	52,990.00	
Post-Office	92,571,564.22	89,545,997.86		3,025,566.36
River and harbor	b 12,621,800.00	(c)		12,621,800.00
Sundry civil	33,031,152.19	d 46,568,460.40	13,537,008.21	
Total	380,954,157.44	373,811,522.15	15,398,090.08	22,540,725.37
Deficiencies	e 15,326,503.05	9,825,374.82		5,501,128.23
Total	396,280,660.49	383,636,896.97	15,398,090.08	28,041,853.60
Miscellaneous (estimated for this session)	425,000.00	297,667.37		127,332.63
Total, regular annual appropriations	396,705,660.49	383,934,564.34	15,398,090.08	28,169,186.23
Permanent annual appropriations	119,054,160.00	113,073,956.32		5,980,203.68
Grand total, regular and permanent annual appropriations	515,759,820.49	497,008,520.66	15,398,090.08	34,149,389.91

Net increase this session over last session, $18,751,299.83.

a This sum is exclusive of $1,660,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the last Congress.

b This does not include $3,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of this session to purchase property of Monongahela Navigation Company.

c No river and harbor act was passed during the last session, but the sundry civil act of that session carried $11,287,115 for river and harbor works under contract, while the sundry civil act of this session appropriates only $3,284,597 for such works.

d This sum includes $5,238,289.08 to pay sugar bounty under legislation enacted by the Fifty-first Congress.

e This sum includes $1,496,679.56 for objects that are in no sense deficiencies; $3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, $5,110,813.33.

It will be noticed by this table that reductions of any consequence are made in only three of the regular bills—the Indian, legislative, and sundry civil.

The reduction in the case of the Indian act is only apparent, and not actual. In the last Indian appropriation act the sum of $1,660,000 was appropriated to meet the first annual installment due on account of the purchase of the Cherokee Outlet, and an estimate was submitted to the present Congress in a like sum to meet the second installment on the same account. But subsequent to the submission of the estimate, and after the appropriation had been made by the House, it was held by the Secretary of the Treasury that, under the legislation ratifying the treaty whereby the purchase was made from the Indians and regulating the payments therefor, a permanent annual appropriation was made to meet the obligations arising thereunder; and upon this construction of the law the sum of $1,660,000 has already been paid this year from the Treasury on that account. If this amount were added, as it should be for purposes of comparison, to the sum total of the Indian appropriation act for this session, it would be seen that instead of a reduction the bill this session makes an actual increase of $287,745.55 over the act passed at the last session.

The apparent reduction of $372,883.37 in the case of the legislative act is more than accounted for in the omission of $475,190 which was carried in the last legislative act for the expense of collecting the income tax, which sum has been omitted for the next fiscal year, under the decision of the Supreme Court declaring the income tax to be unconstitutional.

The reduction of $13,537,008.21 which appears in the sum total of the sundry civil act this session, as compared with that passed at the last session, is almost offset by the sum of $5,238,289.08, appropriated in that act at the last session to pay the sugar bounty (under legislation enacted during the Fifty-first Congress), and by the excess of $8,002,518 to meet contracts for river and harbor works over the sum appropriated for river and harbor contract works in the bill of the present session.

In considering the sum total of appropriations made at this session, it may be noted that the river and harbor act, appropriating specifically, as stated above, $12,621,800, was passed, whereas no bill for river and harbor works was passed at the last session. But in this connection it must be borne in mind that in order to meet contract obligations authorized by previous Congresses for river and harbor works, the sundry civil act for the last session appropriated $11,287,115, while at this session the sundry civil act carries for such objects only $3,284,597.

In addition to the large aggregate of $515,769,820.49 of specific appropriations made at this session, contract liabilities, to be met at the next and succeeding sessions of Congress, are authorized as follows:

CONTRACTS AUTHORIZED.

River and harbor act, for rivers and harbors	$59,616,404.91
Sundry civil act, for public buildings, light-houses, and revenue cutters	1,406,000.00
Fortification act, for defenses and armament	4,195,076.00
Naval act, for new war ships	12,900,000.00
District of Columbia act	124,000.00
	78,241,480.91

The river and harbor act, in addition to specific appropriations made on its face, makes an indefinite appropriation for the purchase, under condemnation, of the property of the Monongahela Navigation Company, of Pennsylvania, estimated at not less than $3,000,000. As stated before, the sum of $1,660,000 has recently been paid out of the Treasury on account of the purchase of the Cherokee Outlet, which sum is not included either in any of the regular annual appropriation bills or in the estimates of permanent annual appropriations set out in the foregoing table. Add these sums on account of the purchase of the Cherokee Outlet, the purchase of the Monongahela Navigation Company's property, and the additional contract liabilities, amounting in all to $82,901,480.91, to the sum of the specific appropriations made in the bills and the permanent annual appropriations as estimated, and we have the enormous aggregate of $598,661,301.40 appropriated and authorized by contracts to be expended by the legislation of this session of Congress.

The total ordinary expenditures of the Government have never approached so large a sum in any one fiscal year during our whole history, except for the last three fiscal years of the civil war, as has been appropriated and authorized by the present session of Congress. The total assessed valuation of property in no one of the South Atlantic States is equal to this vast sum of expenditures authorized at this single session of Congress.

It is not unfair to charge the present session of Congress with this gigantic sum of contract liabilities and to characterize the same as appropriations in the light of the statute passed by Congress in 1870, providing that no Department of the Government should expend in any one fiscal year any sum in excess of appropriations made by Congress for the fiscal year or should involve the Government in any contract for the future payment of money in excess of appropriations. Except on the occasion in the Fiftieth Congress, when, under the advice of the late Gen. Thomas Lincoln Casey, in charge of the new Library building, Congress authorized him to make contracts for all of the granite necessary for the construction of the outer walls of that edifice, in order to secure uniformity of material therein, Congress sacredly observed both the spirit and letter of that statute until the advent of the Fifty-first Congress, which instituted the present system of authorizing large contracts for river and harbor works. Gradually since then the practice has been enlarged and extended, until now public buildings, light-houses, revenue cutters, fortifications and their armament, and certain municipal public works in the District of Columbia are embraced within the system.

In addition to the contracts authorized at this session, and which must be met by appropriations hereafter, there are other contract liabilities, made by previous Congresses and yet to be met, on account of river and harbor works, amounting to $4,800,436; on account of armament of fortifications, amounting to $2,730,131, and on account of public buildings, amounting to about $10,000,000; and also on account of the completion of war ships, beyond the amount of appropriations carried on the naval act this session, in the sum of $6,515,575; or in all, $24,046,142.

Referring to the apparent excess of $5,493,330.50 for deficiencies appropriated at this session over the deficiencies provided for at the last session, Mr. Speaker, I call attention to the fact that of the whole sum of $15,326,503.05 appropriated for deficiencies,

$1,496,679.56 stands for works and objects that are in nowise deficiencies, and $3,614,133.77 represents judgments and audited claims, which have no relation whatever to current or recent annual appropriations; the two sums making an aggregate of $5,110,813.33; which, deducted from the sum total of deficiencies, leaves but $10,215,689.72, or a sum equal to about the sum of normal deficiencies in the annual appropriations of Congress year by year. This explanation of the apparently large deficiencies provided for at this session I deem to be fitting and proper, in order to show that there was no undue reduction in the appropriations made at the last session, and no unusual lack of provision for the public service thereunder. As compared with deficiencies in previous years, the deficiencies at the former and present sessions appear as follows:

First session, Fifty-first Congress	$38,617,448.96
Second session, Fifty-first Congress	38,699,746.96
First session, Fifty-second Congress	15,906,191.50
Second session, Fifty-second Congress	22,277,086.36
First regular session, Fifty-third Congress	11,811,004.06
Second regular session, Fifty-third Congress	9,825,374.82
Present session, Fifty-fourth Congress	15,326,503.05

Mr. Speaker, the present Congress had a splendid opportunity for the future reduction of expenses, but it has completely failed in this particular. Upon all outstanding contracts authorized previous to the present Congress only the following sums had to be appropriated in order to complete them, to wit:

On river and harbor contracts	$7,925,033
On war vessels	18,094,629
On construction of guns for fortification purposes	3,380,131
On public buildings	12,622,000
Total	42,021,793

If the present Congress had rigidly refused authority for additional contracts, and had appropriated only to meet the immediate or fiscal year requirements under existing ones, the next Congress and Administration would have been in a position to largely reduce appropriations and expenditures, and the administration of the Government could easily have returned to an economical method of governmental expenditure. This, however, has not been done; and the majority in Congress must be held responsible for this grave dereliction in public duty. In conclusion, Mr. Speaker, it will be seen from the tables herewith that the appropriations made by the past three Congresses and at the present session have been as follows:

Fifty-first Congress, both sessions	$1,035,680,109.94
Fifty-second Congress, both sessions	1,027,104,547.92
Fifty-third Congress, three sessions	989,239,205.69
Fifty-fourth Congress, first session	515,759,820.49

TABLE B.—*Appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, and first session of the Fifty-fourth Congress, fiscal years 1891 to 1897, inclusive.*

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.		Fifty-fourth Congress.
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.	First session, 1897.
Agriculture	$1,799,100.00	$3,028,153.50	$3,232,995.50	$3,323,500.00	$3,223,623.06	$3,308,750.00	$3,255,532.00

Total	494,456,248.65	541,223,861.29	507,600,188.71	519,504,359.21	492,230,685.03	497,008,520.66	515,759,820.49
Total Fifty-first, Fifty-second, and Fifty-third Congresses	1,035,680,109.94		1,027,104,547.92		989,239,205.69		

a Deficiencies included as follows: 1891, on account of 1890, $25,321,907.25; 1892, on account of 1891, $29,335,598.34; 1893, on account of 1892, $7,674,332; 1894, on account of 1893, $14,149,724.85.

b This amount includes $1,362,059.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes $978,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes $15,227,000 for refund of direct taxes in addition to the specific sum of $500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, $101,623,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, $27,756.79; redemption national-bank notes, $23,553,298.50; expenses of Treasury notes, $218,362.60; coinage of silver bullion, $210,893.14; rebate tobacco tax, $770,082.39; and repayments to importers and for debentures and drawbacks, customs service, $4,915,235.23; in all, $29,695,878.70.

f This sum is exclusive of $1,630,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the last Congress.

g No river and harbor act was passed during the last session, but the sundry civil act of that session carried $11,287,115 for river and harbor works under contract, while the sundry civil act of this session appropriates only $3,234,597 for such works.

h This does not include $3,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of this session to purchase property of Monongahela Navigation Company.

i This sum includes $5,238,239.08 to pay sugar bounty under legislation enacted by the Fifty-first Congress.

j This sum includes $1,496,679.56 for objects that are in no sense deficiencies; $3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, $5,110,813.33.

k Estimated.

Mr. GROUT. Mr. Speaker, I yield to the gentleman from Missouri [Mr. DOCKERY].

Mr. DOCKERY. Mr. Speaker, this Congress is the most recklessly improvident and riotously extravagant Congress since the establishment of the Government. Assembled at a time when all the varied business interests of this great country were depressed by adverse conditions, it has wholly failed to meet the grave responsibilities imposed upon it by the peculiar situation. Confronted with revenues confessedly inadequate to meet current expenditures, and with a depleted gold reserve, the Republican leaders at the beginning of this session ostentatiously proclaimed a policy of rigid economy. They alleged that the outflow of our gold was due to insufficient income. This was their diagnosis of the Treasury ailment, and economy was the magic remedy they prescribed to replenish the gold reserve, to revive our drooping industries, and to restore prosperity to the people.

It is well to emphasize the fact that this was the policy suggested by the Republican leaders, and that an effort to enforce it was made by the distinguished Speaker of this House, Mr. REED—in my judgment, with entire respect to the other membership, the brainiest leader the Republican party has known on this floor for many years. [Loud applause on the Republican side.] I want you to keep that up, as I hope you will applaud some other things I expect to say.

Mr. PITNEY. If they are good, we will.

Mr. DOCKERY. The eminent Speaker announced the policy for the Republican party, and he had a right to announce it, because he was the accredited leader of that party in this House; he was the official head of that organization. But, alas, that policy was, nevertheless, assassinated, and in the house of its friends.

It seems impossible for the Republican party to maintain an economical administration. It has utterly failed to maintain the parity between profession and practice, and between its theory in

respect to the gold reserve and the remedy of rigid economy prescribed for its restoration.

The appropriation for the Fifty-first (Reed) Congress amounted to $1,035,680,109.94; the appropriations of the Fifty-second Congress aggregated $1,027,104,547.92; while the appropriations of the Fifty-third Congress (Democratic in both branches) amounted to but $989,239,205.69. The direct appropriations of this session of the present Congress reach the enormous total of $515,759,820.49, being $23,529,135.46 more than the appropriations of the first session of the last Congress. It is probable, therefore, that at the close of the next session the entire appropriations of this Congress will be found to exceed $1,080,000,000 if the same ratio of increase is made at the next session over the present that was made between the sessions of the Fifty-first Congress.

In addition to the direct appropriations for the support of the Government, this Congress has also imposed $82,901,480.91 of unusual liabilities for authorized contracts on account of rivers and harbors, increase of the Navy, fortifications, and various other public works. If, therefore, to the direct appropriations we add this sum, it appears that the total appropriations and liabilities of this session amount to $598,661,301.40.

This improvident assault upon the Treasury is the more reprehensible because at the beginning of this Congress the Secretary of the Treasury, in his annual report, showed the existence of a deficiency in current revenues for the last fiscal year amounting to $42,805,223.18, and at the same time estimated a deficiency for the present fiscal year of $17,000,000. This was an inadequate estimate, as it is now conceded that the deficiency at the close of this fiscal year will exceed $25,000,000.

INADEQUATE M'KINLEY REVENUES.

The Republican party have studiously sought to impress the people with the statement that the McKinley law furnished ample revenues to support the Government, and that the existing deficiency and the deficiencies which have preceded it are due to the repeal of that law and the enactment of the Wilson tariff bill.

Now, it happened that the current surplus revenues in the Treasury amounted to $85,040,271.97 at the close of the fiscal year ending June 30, 1890, the year immediately preceding the enactment of the McKinley law, which went into effect October 6, 1890, and I find upon examination of official reports that at the close of the fiscal year ending June 30, 1891, the McKinley law being in operation but eight months of that fiscal year, the current surplus had dropped to $26,838,541.96. The current surplus for the next fiscal year, ending June 30, 1892, was but $9,914,453.66, while the current surplus at the close of the fiscal year ending June 30, 1893, had dwindled to $2,341,674.29!

Indeed, Mr. Speaker, the so-called surplus at the close of the fiscal year 1893 was apparent rather than real. But for the fact that the outgoing Administration of Mr. Harrison "held up" the obligations of the Government, as far as practicable, this phantom surplus would have given place to an actual deficiency.

This policy of deferring payments obtained for some months prior to the close of the late Republican Administration, and the official reports show that at the end of the last fiscal year of that Administration—the fiscal year of 1893—while there was this apparent current surplus of $2,341,674.29, there were also unexpended balances of appropriations, exclusive of sinking fund and Indian trust funds, amounting to $104,074,092.07. These unexpended balances tell the story of deferred payments and insufficient income.

I have heretofore said, and now repeat, that during the last four months of Mr. Harrison's Administration the revenues were insufficient by $4,094,021.38 to meet the current obligations of the Government. It is obvious, therefore, Mr. Speaker, that the McKinley law DID NOT provide sufficient revenue to meet the obligations of the Government, and that fact is fully established by the testimony of ex-Secretary Foster, of date February 25, 1893, before the House Committee on Ways and Means. Upon that occasion he distinctly stated (and I quote his exact language):

I will only say this, that if I was to have the management of the Treasury, I should insist upon an increase of revenue to the extent of $50,000,000.

That was Republican testimony, and it was emphasized by an order to the Bureau of Engraving and Printing for the preparation of plates for an issue of bonds—an order which was subsequently revoked by the incoming Democratic Administration.

Hence it is obvious that under the operations of the McKinley law, while a very large profit inured to the benefit of the manufacturers, an insufficient amount found its way into the Treasury to meet the maturing liabilities of the Government. So much for the Republican statement.

CONTRACTION OF THE CIRCULATION.

In order that the people may fully realize the enormous liabilities imposed by the Republican party, it is only necessary to state that the direct appropriations of this session require for their payment more than one-third of the entire volume of money in circulation. On the 1st of July, 1890, prior to the enactment of the Sherman law, the total stock of money, coined or issued, amounted to $2,068,048,087, and the amount in circulation was $1,429,718,376; the surplus in the Treasury, including the gold reserve, being $245,612,464, and the circulation per capita being $22.82.

On July 1, 1891, the total volume of money was $2,100,130,092; amount in circulation, $1,500,067,555; surplus in the Treasury, including gold reserve, $153,893,809; circulation per capita, $23.41.

On July 1, 1892, the total volume of money was $2,219,719,198; amount in circulation $1,603,073,338; surplus in the Treasury, including gold reserve, $126,692,377; per capita circulation, $24.47.

On July 1, 1893, the entire volume of money was $2,120,281,093; amount in circulation, $1,593,726,411; surplus in the Treasury, including gold reserve, $122,462,290; circulation per capita, $23.80.

On July 1, 1894, the total volume of money was $2,249,325,276; amount in circulation, $1,664,061,232; surplus in the Treasury, including gold reserve, $117,584,437; per capita circulation, $24.33.

On July 1, 1895, the volume of money was $2,217,064,667; amount in circulation, $1,604,131,968; surplus in the Treasury, including gold reserve, $195,240,153; per capita circulation, $22.96.

On June 1, 1896, the volume of money was $2,208,420,613; amount in circulation, $1,521,584,283; surplus in the Treasury, including gold reserve, $267,193,210.70; per capita circulation, $21.35.

Mr. Speaker, the difference in the comparative statement I have just submitted between the total volume of money and the amount in circulation is represented by the amount in the Treasury at the respective dates mentioned. An examination of this exhibit discloses some startling conditions.

On the 1st of November, 1894, the Sherman law, against my protest, was unconditionally repealed, and since that date the only increase of the volume of circulation that has been possible under the existing monetary system must have come from the coinage of gold or the increase of the national-bank circulation.

The Treasury statements show that from July 1, 1894, to June 1, 1896, the actual decrease in the total volume of money coined or issued was $40,904,663; while the actual decrease in the volume of money in active circulation was $142,476,949; the per capita circulation being reduced from $24.33 to $21.35. The reduction of the amount of money in circulation during this period is explained by the increase in the borrowed surplus in the Treasury from $117,584,437 to $267,193,210.70.

This constantly augmenting Treasury surplus and decreasing volume of money in active circulation is due to the vicious monetary system under which bonds have been issued to secure gold to redeem greenbacks and Sherman notes. The bond issues are consequent upon the pernicious construction given the Sherman law on October 14, 1891, by Secretary Foster, and since maintained by the Treasury Department, under which the Secretary of the Treasury has abdicated his functions and given to the holders of greenbacks and Sherman notes the right to demand gold only for their redemption.

The demonetization of silver in 1873 and the surrender, by the Harrison Administration, of the option to redeem Sherman notes in either gold or silver, are the colossal criminal blunders of recent financial legislation.

BOND ISSUES AND SINGLE GOLD STANDARD.

In an interview in opposition to the Dingley bond bill and bond issues by the Treasury, published on January 4 last in some of the papers in this city and in Missouri, I suggested the evils which would follow the continuance of this system. I quote the views then expressed, as they have been fully vindicated by the events which have since transpired:

Indeed, should the present surplus be reenforced by the enactment of the Dingley bill or by the proceeds of additional bond sales, I fear this drain will severely tax the business interests of the country, already intimidated by a stringent money market.

A very large Treasury surplus will inevitably injuriously affect the business situation because the money in active circulation is already inadequate to meet the requirements of trade, and further withdrawals to restore the Treasury reserve will still further contract the volume of active money. It is a vexing problem to restore and maintain the Treasury reserve along the lines of a single gold standard and yet escape the perils of an unnecessary surplus of money other than gold. Reform is necessary in the existing monetary system under which the National Treasury may have a very large surplus available for current liabilities, while at the same time our gold resources may be depleted and exhausted by the "endless chain" of greenbacks and Sherman notes.

Mr. Speaker, since the unconditional repeal of the Sherman law, the single gold standard has had ample opportunity to demonstrate the beneficent results which at the time of the repeal it was claimed would follow that legislation. It was claimed then that prosperity would speedily return to the industrial and commercial interests of the country. That prophecy, like many others of similar import made by the single gold standard advocates, has altogether failed of accomplishment. Instead of prosperity returning, business disasters have multiplied and "followed fast and followed faster" each upon the other, so that the passage of a bankrupt bill has been thought necessary by some to remove the wrecks which hamper and retard commercial revival.

Bonds amounting to $262,315,400 have been issued, for which the Government realized $293,454,272.98, to restore the vanishing gold surplus, while the meager profits of the people have been scraped up and hoarded in the Treasury under a system which thus

mercilessly contracts the volume of our circulating medium. The withdrawal of $142,470,949 of money from the channels of active trade has thrown business into a state of distrust and doubt. On the 25th of August, 1893, in discussing the bill then pending to repeal the Sherman law without conditions, I declared in favor of a double standard and independent action by this country, and said, among other things—

That the adoption of a single gold standard by the United States will result in a lower wage for labor, the depreciation of farm values, farm products, and property of nearly all kinds, even if our population should remain as at present and there should be no expansion in the volume of trade and commerce. That industrial disturbances would follow the adoption of such a policy, becomes more apparent when it is remembered that the average annual increase of our population ranges from one million to one and a half million, and that the enterprise and tireless energy of our people are constantly exploring and discovering new fields for the investment of capital and the employment of labor. The addition to the volume of our circulating medium under the provisions of the Sherman law has been $150,669,459, or about $50,000,000 annually, being less than $1 per capita; and yet it is proposed by the Wilson bill (Sherman repeal bill) to strike down the law authorizing this annual increase, without offering any substitute therefor.

Mr. Speaker, I make no claim to gifts of prophecy, but I submit that the existing business situation completely vindicates that prediction. I have not, therefore, looked with favor upon the departure of the Republican party from its own announced policy of economy.

I will append to my remarks a tabular statement, giving in detail an exhibit of appropriations, and will pass to a succinct review of the river and harbor bill, first stating that the appropriation bills, when they left the House, amounted, together with the permanent appropriations, to $503,051,002.25; when they became laws, they aggregated $515,759,820.49, the Senate having increased them by $12,708,818.24. As I stated at the outset, you have piled up appropriations higher than they were ever piled at the first session of any Congress in the history of this country except during the war period. Our appropriations are now substantially on a war basis in a time of peace.

Mr. MILLIKEN. Did not the gentleman from Missouri, about an hour ago, vote against the policy which he is now declaiming in favor of?

Mr. DOCKERY. I did not. I have uniformly sustained the Republican party in this Congress whenever it has sought to maintain and uphold the policy of judicious economy. I have sustained that policy because I believed it to be the requirement of duty and of sound business judgment.

Mr. WILLIS. I congratulate my friend from Missouri. If he will just walk that path a little farther he will be perfectly safe. [Laughter.]

Mr. DOCKERY. Well, Mr. Speaker, if I should walk in the path of rigid economy a little farther, I should have to journey without the company of the gentleman from Delaware. [Laughter.] I have asked nothing for my State, but I happen to know what is contained in the river and harbor bill—against which I desired to "declaim" a few days ago, but was ruthlessly cut off in the very vigor of my efforts to denounce it—and I am not surprised that the gentleman from Delaware rises to interrupt me on this occasion, since he is doubtless smarting under the pangs of conscience, because that river and harbor bill, as shown by the Chief of Engineers, carries appropriations and authorized contracts to the amount of $5,000,000 for the little State of Delaware, with a territory not much larger than the county of Daviess, in the imperial State of Missouri, from which I hail. [Laughter and applause.] Five millions of dollars! No wonder that the eloquence and splendid ability of the gentleman from Delaware are invoked in behalf of the riotous appropriations made by this Congress. [Laughter.]

Mr. WILLIS. I think the gentleman overestimates materially the amount of the appropriations for my State. It is hardly $5,000,000. Where was it put?

Mr. DOCKERY. I do not know where it was put. I hope it will go to some worthy objects. In a few moments I will endeavor to identify, as far as I can from the official reports, the items of that magnificent total of seventy-five million dollars of the people's money appropriated for river and harbor improvement. Little Delaware gets her share of it, and I have no doubt but that my friend from Delaware [Mr. WILLIS] will come back with a reenforced majority, because it matters not if failure of crops, or drought with blighting effects, or pestilence which walketh at noonday, or sweeping cyclones afflict that little State, her people will still enjoy a handsome income from the river and harbor bill, at the expense of the taxpayers of the United States. [Great laughter and applause.]

Mr. PITNEY. My friend from Missouri and I have served together in framing six of the appropriation bills and the deficiency bills, and I will ask him whether there is a single bill framed by the Committee on Appropriations that has not received from him unqualified approval on this floor and elsewhere?

Mr. DOCKERY. Why, Mr. Speaker, it did afford me pleasure to commend the legislative bill and the District bill, because I believed that both were in the main economical measures; and I think the same can be substantially said of all the other bills reported by my able friend from Illinois [Mr. CANNON], the chairman of the Committee on Appropriations, except, possibly, the fortifications bill. I was not present when that bill was considered. Perhaps every item in it is just and proper. I do not say it is not. But possibly if I had had the framing of it I might have reduced it somewhat. I do not complain of bills reported by the Committee on Appropriations, but of the other measures which swell the mighty aggregate of appropriations to $515,759,820.49.

DIFFER WITH THE PRESIDENT.

Mr. Speaker, I do not agree with the President upon the financial issues involved in this campaign. I am opposed to the retirement of greenbacks. I am opposed to the issue of bonds. I am opposed to the redemption of greenbacks and Sherman notes in gold only, and to the Treasury construction which treats the coin obligations of the Government as gold obligations. I am opposed to the national-bank system. I believe that the mints of the United States should be open to the free and unlimited coinage of both gold and silver. I believe in restoring the equality which existed prior to the act of February 12, 1873, demonetizing silver. Wherever the word "gold" appears in the statutes I would add "and silver," so that both metals may enjoy equal privileges at the mints and perform like functions in our monetary system. This policy will prevent the undue appreciation of gold and the undue depreciation of silver, thus restoring the "parity" which should obtain under a correct bimetallic system. In other words, Mr. Speaker, I am in favor of a double standard and unalterably opposed to a single gold standard. My first vote in support of the free and unlimited coinage of silver was cast in 1884, since which time I have voted six times for the free and unlimited coinage of silver at 16 to 1. I differed with the President in respect to his course relative to the Wilson tariff bill. I thought then and think now that he should have given his approval to that measure, notwithstanding it failed to fully meet all the requirements of a tariff-reform bill. It represented, however, the best result that could be secured at the time, and made a long step in the direction of emancipating the people from the inordinate greed of the protective system. It is obviously preferable to the McKinley bill, which it replaced upon the statute book.

I also believe, Mr. Speaker, that any national Administration should be in the hands of its friends. I have not, therefore, concurred in the policy of the President which has permitted the retention of Republicans in, and their appointment to, political offices which have much to do with contributing to the success or failure of an Administration. I have always insisted that Democrats should be appointed to such offices under a Democratic Administration.

Mr. Speaker, I am not in harmony with the President upon these questions, but I do most cordially approve his position upon many other public questions, notably his vigorous American policy in maintaining the principles of the Monroe doctrine and in protecting the rights of our citizens in all quarters of the globe. His attitude in respect to our foreign policy should commend itself to all patriotic citizens. I also most heartily indorse the views he has recently expressed in respect to the expenditure of public money. The utterances of the President in opposition to the wanton expenditure of the people's money have at all times been consistent and in harmony with the position occupied by the illustrious leaders of the Democratic party since the days of Thomas Jefferson. I especially commend his superb courage in the recent veto of the river and harbor bill, the French spoliation claims, and other Treasury-spoliating schemes. I recall with pleasure that the first veto of a river and harbor bill was made by Andrew Jackson, an eminent Democrat of glorious memory. Old Hickory himself, on December 6, 1832, sent that veto to the House of Representatives, and President Cleveland can point to the precedent then established by a Democrat "fit to stand by the side" of the immortal founder of Democracy. I am advised that river and harbor bills have also been vetoed by Presidents Tyler, Polk, Pierce, Buchanan, and Arthur. The French spoliation claims also were vetoed by Presidents Polk and Pierce.

RIVER AND HARBOR BILL.

I now desire to invite the attention of the House to a cursory analysis of the river and harbor bill, the privilege of debate having been denied at the time the bill passed this body over the veto of the President. The river and harbor bill was reported to the House April 3, and passed under a suspension of the rules April 6. This summary method of consideration limited all debate to forty minutes and prohibited the right of amendment. When the bill left the House it carried $65,148,771.91 of appropriations and authorized contracts, including an indefinite appropriation of not less than $3,000,000 for the purchase of the Monongahela Navigation Company's property. It was considered by the Senate, and on its return to the House was sent to conference by the most expeditious parliamentary method. Debate was limited to less than one hour, wherein the conference report was considered, about thirty minutes being consumed in opposition to the report, which

was agreed to by a vote of 189 to 56. When finally agreed to by both Houses it carried $75,158,956.88 of obligations upon the Treasury. The opponents of the measure were allowed but fifty minutes' debate from the time the bill was reported until it was sent to the President, and at no time during its consideration was there any opportunity to offer amendments. When the bill was returned to the House by the President it was approved, upon reconsideration, by a vote of 219 to 61, debate being arbitrarily denied. I quote from the RECORD of June 2, which fully discloses the proceedings of the House in denying the privilege of debate:

Mr. HOOKER. Mr. Speaker, I move to pass the bill, the objections of the President to the contrary notwithstanding. I desire to say in behalf of the committee that we were of the opinion that the message of the President raised all the possible objections to the bill that could be raised. We have endeavord, in the report which has just been read, to cover every objection which he has raised to the pending measure.

There are a large number of members who have applied to me for time to discuss this measure, and had I yielded to them and allotted to them the time that they have asked, it would consume two, three, or four days. It has been thought best by the committee, under the circumstances, to submit to the House the question whether or not we desire to engage upon a long and exhaustive debate upon this measure, and for the purpose of testing the sense of the House, without in any manner expressing the views of the committee or myself on the subject, I demand the previous question. [Applause.]

Mr. DOCKERY. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. DOCKERY. I ask the gentleman to yield to me for a moment.

Mr. HOOKER. Regular order!

Mr. DOCKERY. The gentleman agreed with me yesterday that we should have debate upon this bill, and it is unfair, it is unjust, and it is unmanly to pursue this course. [Great confusion on the floor.]

The SPEAKER. The House will please be in order. Gentlemen will take their seats.

Mr. CATCHINGS. The gentleman from New York——

The SPEAKER. The gentleman from Mississippi is not in order. This is a matter for the House to determine. The gentleman from New York [Mr. HOOKER] asks for the previous question. If the previous question is ordered, the House will proceed immediately to vote on the question of reconsideration.

Mr. DOCKERY. Mr. Speaker, will the Chair allow me to ask the gentleman from New York a question?

The SPEAKER. The gentleman demands the regular order. [Cries of "Regular order!"]

Mr. DOCKERY. I desire to say—— [Cries of "Regular order!"] I desire to state that the gentleman had agreed that we should have debate. [Renewed cries of "Regular order!"]

The SPEAKER. The question is on ordering the previous question.

The question was taken; and the Speaker announced that the ayes seemed to have it.

Mr. RICHARDSON and Mr. DOCKERY. Division.

The House divided; and there were—ayes 178, noes 60.

Mr. DOCKERY. The yeas and nays.

The question was taken on ordering the yeas and nays.

The SPEAKER. Forty-six gentlemen have arisen—not a sufficient number [applause]; the yeas and nays are refused, and the previous question is ordered. The question now is, Will the House upon reconsideration agree to pass the bill; and on this question the yeas and nays, by the Constitution, are to be taken.

Mr. DOCKERY. I desire to know whether there will be any debate under the rules on this question of reconsideration?

The SPEAKER. There will not be.

Mr. DOCKERY. Then, on a proposition to reconsider, as required by the Constitution, no debate is permitted under the policy pursued by the gentleman from New York.

The SPEAKER. Provided the House of Representatives so vote.

Mr. DOCKERY. And they have so voted——

Mr. HENDERSON. Regular order!

Mr. DOCKERY (continuing). To stifle debate.

The SPEAKER. The Clerk will call the roll.

WHAT IT COSTS.

Mr. Speaker, I will now submit a fiscal exhibit relating to the appropriations and liabilities of the Government on account of river and harbor improvements carried in this bill or heretofore authorized.

On the 1st of May the balance of appropriations unexpended under continuing contracts and for works not under contract, together with the balances yet to be appropriated under contracts heretofore authorized, amounted to $16,207,708.16. There is a difference of opinion between the House conferees on the river and harbor bill and the Chief of Engineers as to the appropriations and contracts authorized. According to the analysis of the House conferees the total cash appropriations amount to $12,852,235 and the authorized contracts to $59,649,308.91, or a total, appropriations and contracts, of $72,501,543.91. The Chief of Engineers states the direct appropriations at $10,017,050 and the contracts authorized at $62,141,906.88, or a total of $72,158,956.88. It will be observed that the total is substantially the same, the difference being that in the one case a greater amount of cash and a less amount of contracts are estimated, and in the other a less amount of cash and more of contracts. I have not had the opportunity myself to analyze the bill and reach a judgment in respect to the controversy, but it is immaterial, since it is agreed that the liabilities of the bill exceed $72,000,000, exclusive of the indefinite appropriation, which it is estimated will not be less than $3,000,000, for the purchase of locks and dams on the Monongahela River. If, therefore, to the liabilities outstanding on the 1st of May on account of unexpended balances and authorized contracts we add the new contracts and the definite and indefinite appropriations contained in this bill, it is obvious that the liabilities of the Government on account of river and harbor improvements now reach the stupendous aggregate of $91,366,665.04.

Mr. Speaker, I have propounded to the Chief of Engineers this query:

"*Upon the basis that all contracts will be promptly made, what amounts can be expended under such contracts for the fiscal years—separately stated—ending June 30, 1897, 1898, 1899, 1900, etc.?*"

He answers by the following estimate:

PENDING RIVER AND HARBOR BILL APPROPRIATES—

1897	$13,792,550.00
1898	19,871,054.15
1899	16,854,262.24
1900	13,073,962.24
1901	5,735,878.25
1902	1,586,250.00
1903	745,000.00
1904	400,000.00
1905	100,000.00
	72,158,956.88

Mr. Speaker, in addition to the estimated expenditure of $13,792,550, for the ensuing fiscal year, the sundry civil bill carries $3,284,597.90 to meet outstanding contracts, so that the total river and harbor expenditures for the year may reach $17,077,147.00.

It will be remembered also, that there is in the Treasury $11,561,072.16 of unexpended appropriations for river and harbor improvements heretofore authorized, part of which will be expended during the coming year.

I regret, Mr. Speaker, that I have not had the time to make a thorough analysis of the provisions of this bill, and the criticisms I may offer are directed only to a limited number of those to which my attention has been called.

Including the river and harbor bill, there are 14 general appropriation bills which carry appropriations for the support of the Government. All these bills are usually based upon the estimates submitted by the heads of the various Departments, disclosing the estimated needs of the public service. The river and harbor bill is usually based upon the estimates of the Secretary of War. The local engineers, in the annual budget submitted at the beginning of this session, estimated that $52,252,027 could "be profitably expended" for the improvement of various public works of the country. This estimate was reduced by the Chief of Engineers to $21,016,197, and further limited by the Secretary of War in the final revision to $11,744,597. It is manifest, therefore, that this session's river and harbor bill exceeds the estimates of the engineers by more than twenty-three millions; that it exceeds the estimate of the Chief of Engineers by more than fifty-four millions, and exceeds the estimate of the Secretary of War by more than sixty-three millions. This estimate is peculiarly significant in view of the unfortunate Treasury situation, whereunder, as is known to the country, other appropriation bills for the support of the Government are usually reduced materially below the estimated needs of the various Departments.

HOW DISTRIBUTED.

The bill consists of 417 items of appropriation; 41 States and 2 Territories are direct beneficiaries. Wyoming and Colorado have a contingent interest in the provision authorizing surveys for the establishment of reservoirs, but Utah and Nevada alone are without direct recognition. In response to my request the Chief of Engineers has made a careful scrutiny of the bill and submits an exhibit showing the appropriations and contracts authorized, by States, as follows:

Appropriations and authorized contracts, by States.

State.	Appropriations.	Contracts authorized.	Total.
Maine	$206,000.00	$1,616,000.00	$1,822,000.00
New Hampshire	25,000.00		25,000.00
Vermont	15,000.00		15,000.00
Massachusetts	359,000.00	1,215,000.00	1,574,000.00
Rhode Island	114,300.00	732,000.00	846,300.00
Connecticut	267,000.00		267,000.00
New York	611,000.00	3,895,558.00	4,506,558.00
New Jersey	193,660.00		193,660.00
Pennsylvania	37,500.00	1,269,500.00	1,307,000.00
Delaware	109,160.00	4,890,846.00	5,000,006.00
Maryland	494,800.00		494,800.00
Virginia	334,000.00		334,000.00
West Virginia	7,500.00	1,230,000.00	1,237,500.00
Kentucky	96,000.00	1,399,000.00	1,495,000.00
North Carolina	241,000.00		241,000.00
South Carolina	79,500.00	2,016,250.00	2,095,750.00
Georgia	91,000.00	3,355,000.00	3,446,000.00
Florida	567,000.00		567,000.00
Alabama	110,000.00		110,000.00
Mississippi	119,400.00	860,000.00	979,400.00
Louisiana	249,000.00	1,193,250.00	1,442,250.00
Texas	147,000.00	1,125,000.00	1,272,000.00
Arkansas	153,000.00		153,000.00
Tennessee	87,000.00		87,000.00
Ohio	356,000.00	1,354,000.00	1,710,000.00
Indiana	82,500.00		82,500.00
Illinois	193,000.00	6,455,960.00	6,648,960.00
Michigan	522,150.00	1,115,000.00	1,637,150.00
Wisconsin	324,440.00	188,737.91	513,177.91
Minnesota	157,000.00		157,000.00
Missouri	55,000.00		55,000.00

Appropriations and authorized contracts, by States—Continued.

State.	Appropriations.	Contracts authorized.	Total.
California	$401,750.00	$4,028,000.00	$4,429,750.00
Oregon	205,390.00	2,025,000.00	2,230,390.00
Washington	308,000.00		308,000.00
Idaho	30,000.00		30,000.00
Montana	35,000.00		35,000.00
Alaska	5,000.00		5,000.00
IN TWO OR MORE STATES.			
Channel between Staten Island and New Jersey; New York and New Jersey	13,000.00		13,000.00
Pawcatuck River (Rhode Island and Connecticut)	15,000.00		15,000.00
Delaware River (Pennsylvania and New Jersey)	500,000.00		500,000.00

Total	10,017,050.00	62,141,906.88	72,158,956.88

THE COMMITTEE'S SHARE.

Mr. Speaker, a cursory examination of this exhibit furnishes the explanation of the extraordinary activity witnessed in its behalf. The "pork," as it is facetiously termed, is judiciously distributed. There are, however, manifest inequalities apparent in this table, and in the one which I shall submit a moment later; still the distribution is so widespread that the nearly three-fourths vote which the bill received in its favor, rather than a two-thirds vote, should not occasion comment. The appropriations and contracts for some of the States, as shown by the table, will furnish revenue sufficient to maintain a large part of their population.

Mr. Speaker, I now pass from an analysis of the bill by States to a review of the appropriations made to States represented on the House River and Harbor Committee, and to States touching States directly represented on that committee. The committee consists of 17 members, and the States of New York, Oregon, Michigan, Pennsylvania, Wisconsin, Ohio, Massachusetts, Illinois, Minnesota, West Virgina, Missouri, Virginia, Mississippi, Georgia, Alabama, Arkansas, and Kentucky were directly represented thereon. The members of the committee repel the intimation that the bill is improvident. It may be well, however, to suggest that possibly their judgment is unconsciously influenced by the fact that the appropriations and authorized contracts wholly within their States aggregate $31,094,135.91, or nearly one-half the entire bill. Those liabilities, including the indefinite appropriation for the Monongahela Navigation Company, are: New York, $4,506,558; Oregon, $2,230,390; Michigan, $1,637,150; Pennsylvania, $4,307,000; Wisconsin, $513,177.91; Ohio, $1,710,000; Massachusetts, $1,574,000; Illinois, $6,648,960; Minnesota, $157,000; West Virginia, $1,237,500; Missouri, $55,000; Virginia, $334,000; Mississippi, $979,400; Georgia, $3,446,000; Alabama, $110,000; Arkansas, $153,000, and Kentucky, $1,495,000.

Moreover, if to these liabilities we add the $25,176,819 for projects in "one or more States" contiguous to States represented on the committee, exclusive of the Ohio, Mississippi, and Missouri rivers, it is obvious that the States directly and indirectly represented on the committee are beneficiaries at the expense of the taxpayers of the country to the extent of $56,270,954.91. In the presence of this exhibit comment upon the judgment of the committee becomes unnecessary, and an explanation is found for the enormous pressure exerted by members at the beginning of each Congress for assignment to service upon that committee.

UNWORTHY ITEMS.

The Secretary of War, in response to my inquiry, submits a statement of the Chief of Engineers, citing works reported by that office as unworthy of improvement or in other respects not desirable objects of expenditures, as follows:

Great Salt Pond	$40,000
Cape Vincent Harbor	25,000
Yaquina Bay	1,025,000
Rancocas River, Lumberton branch	2,000
Nandua Creek	3,000
Yellowstone River	10,000
Nestuca River	6,000
Yamhill River[1]	150,000
Puget Sound and tributary waters[2]	
Cooper Creek, repairing dikes[3]	2,500
Delaware River, repairing dikes[3]	3,000
Goodyear, Outer Brunswick Bar[4]	150,000
Rock Hall Inner Harbor	7,000
Wolf Lake, Indiana	8,000
Cape Charles	10,000
Lemon Creek	5,000
Academy Creek	7,000
	$1,453,500

Mr. Speaker, in referring to this class of appropriations, the Chief Engineer states, in further response to my inquiry, that "the total for items in the act for works which have been reported by the War Department as unworthy, and for items appearing to be of a personal nature, is about $1,500,000, but in nearly all cases the reports and facts in relation to such items were before the committee when the items were acted on, and in their opinion the items are proper." It seems, therefore, that the Committee on Rivers and Harbors overruled the judgment of the War Department when they favorably reported this class of items to the House.

YAQUINA BAY.

Inasmuch as the committee have assumed this responsibility, I desire to invite especial attention to the largest item on the list, the appropriation for Yaquina Bay, Oregon, inserted by the House committee. I have been unable to locate this bay on the regular map of the United States. But it appears from an examination of the engineer reports that the Government expended upon the improvement of the entrance to this bay, up to and including the appropriation of August 17, 1894, the sum of $676,093.34. This expenditure has resulted in deepening the channel from 7 and 8 feet, at the beginning of the work, to 12 and 15 feet at this time. The Chief of Engineers, in his annual report for 1895, asked for $25,000, which he said would complete the then existing project. Gen. T. L. Casey, then the Chief of Engineers, in a report dated January 18, 1895, stated:

It is the opinion of Captain Symons and of Col. G. H. Mendell, Corps of Engineers, the division engineer, that this locality is not worthy of further improvement by the General Government, and in this opinion I concur.

But notwithstanding the adverse report of this distinguished engineer officer, a board was created by the sundry civil act of March 2, 1895, to consider further improvements of Yaquina Bay. This board, as I am advised, made no recommendation of the project, but, as required by the act, simply reported the estimated

[1] Locks and dams.
[2] Some of them reported not worthy, but others desirable.
[3] Personal.
[4] Excess to be paid Goodyear over what Captain Carter says he can do it for.

cost; and it is to carry out this new scheme that $1,025,000 of liabilities is now incurred.

Commercial statistics show that for the year ending June 30, 1893, the total exports and imports at that point amounted to only 24,482 tons, valued at $964,408. There were five small steamers on the river and bay at that time, and the total number of passengers arriving and departing for the year ending June 30, 1893, was only 955. Two years later, or for the fiscal year ending June 30, 1895, the total exports and imports were 31,872 tons, valued at $712,652, while the number of steamers on the river and bay were but four small craft, and the number of passengers arriving and departing by sea for that year were 851. That is to say, it appears from this statement that, despite the money spent by the Government at that point, the value of the exports and imports decreased in the interval between 1893 and 1895 by $251,756, while there was also a falling off of 104 passengers arriving and departing during the same period, and one less boat operating on the bay and the river. These statistics show the commerce of the place to be inconsiderable. Indeed, the estimates given by the local engineer are furnished by interested parties, and hence are probably greatly magnified.

Mr. Speaker, this large appropriation is notoriously unworthy. I unhesitatingly challenge its propriety. It can serve no public purpose, and if debate had been permitted upon the reconsideration of the bill my intention was to challenge the attention of the House and the country to it. This exhibit also discloses two small items of appropriation for work to be done in repairing dikes which I am advised should be done at the expense of the lessees of public property, who are obligated by existing leases to keep them in good condition at their own expense.

NOT RECOMMENDED.

I come now, Mr. Speaker, to submit a list of appropriations carried in the bill which were made without the customary preliminary examination, no opinion having been expressed by the War Department as to the worthiness of the proposed improvements in their relation to the interests of commerce. It should be said, however, as to many of these items, that the reports of surveys as made by local officers may be accepted as recommendations. The list submitted by the Chief of Engineers is as follows:

Rockland Harbor, Maine	$403,500
Portland Harbor, Maine	766,250
New Bedford Harbor, Massachusetts	10,000
Block Island Harbor, Rhode Island	5,000
Bridgeport Harbor, Connecticut	28,000
Cos Cob Harbor and Miamus River, Connecticut	8,000
Newtown Creek, New York	392,000
Oswego Harbor, New York	60,000
Raritan Bay, New Jersey	75,000
Wilmington Harbor and Christiana River, Delaware	225,846
Baltimore Harbor, Maryland	400,000
Savannah Harbor, Georgia	1,005,000
Brunswick Harbor, Georgia	15,000
Ashtabula Harbor, Ohio	50,000
Cleveland Harbor, Ohio	860,000
Fairport Harbor, Ohio	30,000
Conneaut Harbor, Ohio	40,000
Calumet Harbor, Illinois	75,000
Presque Ile, Michigan	20,000
South Milwaukee Harbor, Wisconsin	5,000
Grays Harbor and Bar, Oregon	1,000,000
Sasanoa River, Maine	19,000
Merrimac River, Massachusetts	5,000
Pawcatuck River, Rhode Island	15,000
Providence River and Narragansett Bay, Rhode Island	25,000
Manokin River, Maryland	4,000
Pocomoke River, Maryland	5,000
Nandua Creek, Virginia	3,000
Manatee River, Florida	4,000
St. Johns River, Florida	200,000
Bayou Courtableau, Louisiana	2,500
Fox River, Wisconsin	37,500
Menominee River, Michigan	15,000
St. Croix River, Wisconsin	15,000
Calumet River, Illinois	50,000
Chicago River, Illinois	700,000
Mississippi River above St. Paul	100,000
Missouri River at Great Falls	15,000
Sacramento and Feather rivers, California	250,000
Lakes Union and Washington, Washington	150,000
Indian River, Negro Cut, Florida	7,500
Brunswick Outer Bar (Goodyear) (first $30,000 not included)	215,000
Yellow Mill Pond	10,000
Santa Monica or San Pedro board	50,000
Brazos board	5,000
Santa Monica and San Pedro work	(?) 2,900,000
Jamestown Island, Virginia	15,000
Levee Flint Creek to Iowa River	75,000
Missouri River (special localities)	310,000
Presque Isle (Lake Superior)	20,000
	10,696,096

Now, Mr. Speaker, section 13 of the act of August 17, 1894, provides:

That no preliminary examination, survey, project, or estimate for new works other than those designated in this act shall be made; and provided further, that after the regular or formal report on any examination, survey, project, or work under way, or proposed, is submitted, no supplemental or additional report or estimate for the same fiscal year shall be made unless ordered by a resolution of Congress.

The Chief of Engineers says, in transmitting this list, that the law above quoted prohibits the presentation of recommendations, plans, or estimates unless called for by joint resolution of Congress. Nevertheless, during the present session a large number of such joint resolutions have been passed, and many plans and estimates have been presented in conformity with such resolutions. He also states that—

It will be noted that while in some cases the local officer may give facts upon which an opinion can be formed as to merit of improvement the Secretary of War in transmitting the reports expresses no opinion. The majority of works in the ten-and-a-half millions list have been reported on in accordance with special resolutions calling for plans and estimates for either new or extended projects.

He further states, in another communication, that—

It seems necessary to say in this connection that nearly one-third of this sum of ten and a half millions is in a single item, which may be expended at a point that has never been officially recommended to Congress.

This single item is the project for a deep-water harbor for commerce either at Santa Monica Bay, California, or at San Pedro. It is hardly necessary to comment upon this scheme, as its purpose and its promoter are both familiar to the country. I may say, however, that I believe the policy of appropriating for projects not recommended by the War Department is wholly vicious and indefensible. I desire to emphasize this suggestion by the following extract from a Washington dispatch to the Philadelphia Inquirer of June 5, which is self-explanatory:

Philadelphians will be surprised to learn that they have really secured much more than they sought. The river and harbor bill as it came from the President and was passed over his veto has not been printed, but the Inquirer correspondent saw proof sheets of the bill to-day. He found therein an amendment to the Philadelphia Harbor item that has not yet been published. On inquiry he found that Senator QUAY had quietly secured the insertion of this amendment by the conference committee, and, with his usual modesty, had never mentioned it to the newspaper men.

The Quay amendment provides for a survey of the Delaware River, with a view to making a channel 600 feet wide by 30 feet deep, extending from a point at or near Philadelphia to the deep water at Delaware Bay. Of course the survey is merely preliminary, but if the report of the engineers of the War Department who will make this survey is favorable there is little doubt that a future Congress will make an appropriation sufficient to make this splendid improvement.

This dispatch shows that by the courtesy of the conference committee another scheme laying the foundation for a large expenditure has found a place in the bill.

Mr. Speaker, it is impracticable for me, as I stated at the outset, to note all the objectionable features that are carried in this bill. I have no expert knowledge in connection with the measure, and could not, without great labor, pursue this inquiry further. I note, however, that the bill recognizes as worthy of Government aid such great navigable streams as Otter Creek, East Chester Creek, Goshen Creek, Cooper Creek, Acquia Creek, Occoquan Creek, Lower Machodoc Creek, and Nandua Creek. It may be that these creeks are worthy of recognition. I do not assert to the contrary, because I have no information upon the question. There are also, as I am advised, appropriations for other streams, some of which never float any steamers and others but rarely, their sole commerce being limited to the business of rafting logs. I am informed that Elk River, Guyandotte River, and Gauley River, West Virginia, and Levisa Fork and Tug Fork of the Big Sandy River, Kentucky, belong to this class. It might therefore be aptly remarked that even in its smallest features this is a "log-rolling" bill.

CAPE CHARLES HARBOR.

I will now refer to perhaps the most objectionable appropriation other than those mentioned by the Chief of Engineers as unworthy of improvement. I refer to the appropriation for Cape Charles Harbor. This is an artificial basin at the southern terminus of the New York, Philadelphia and Norfolk Railroad. Prior to the construction of the railroad, some ten or twelve years since, it was a shallow pond on the farm of the late William L. Scott. The railroad company deepened the pond and connected it with the waters of Chesapeake Bay by a narrow channel. The basin was used to accommodate the barges of the railroad which connected it with Norfolk City. The Fifty-first Congress appropriated $25,000 for the improvement of this private harbor, all of which, with the exception of a small balance, has been expended. When the item was considered by the River and Harbor Committee of the Fifty-second Congress, the fact was brought for the first time to the attention of that committee that this harbor was a private harbor; and it was therefore provided in the river and harbor bill of July 13, 1892, that, before any part of the $10,000 then appropriated should be available, the owners of the basin should execute an instrument in writing satisfactory to the Secretary of War, giving to any and all vessels, upon any and all occasions, for all time to come, the right to enter and remain in said harbor and transact business therein without charge, except legitimate, usual, and reasonable wharf charges, to be determined by the Secretary of War in the event of disagreement. It was also provided that the company should dedicate a public road to the wharves of said harbor.

These requirements have not been complied with by the harbor's

owners—now the heirs of the late William L. Scott and the railroad company—Mr. Scott having, before his death, conveyed one-half of the harbor to the railroad. And the present bill even contains a proviso, inserted by the House committee, repealing the conditions imposed by the act of July 13, 1892, requiring the dedication of a public road and the opening of the harbor to all vessels. This House proviso was very properly stricken out by the Senate Committee on Commerce, but was finally allowed to retain its place in the bill, notwithstanding the sound objections of the Senate thereto.

It is hardly necessary, Mr. Speaker, to comment upon this appropriation. It is the appropriation of public money to improve a private harbor. It is, therefore, indefensible, and I commend the Senate committee for their action in disapproving it.

It may be pertinent in this connection to submit a few comments of the leading newspapers of the country in respect to this bill. I accordingly append to my remarks a very few, which may be taken as fairly indicative of the almost unanimous views of the press in condemnation of this measure.

CONCLUSION.

I only desire to add that, so far as I am able to ascertain, a considerable number of the appropriations and contracts authorized by the river and harbor bill are for worthy objects. I do not deny this proposition. Neither do I desire to be understood as imputing improper motives to the membership of either committee connected with the preparation of the bill, or to any gentleman who has given the measure his support. But I do most earnestly protest against items classed as unworthy by the Chief of Engineers, and also against the policy which enters upon large expenditures for internal improvements without approval in the usual way by the Secretary of War and the Chief of Engineers. I object further to the abuse of the continuing-contract system, which is imposing large obligations upon the revenues of both the present and the future at a time when the Government's current expenses exceed its current income.

The policy of continuing river and harbor contracts was inaugurated by the Fifty-first Congress in 1890, with a liability of but $13,282,979. In 1892 additional contracts of this kind were authorized amounting to $31,760,521, and in the present bill they are increased to $62,141,906.88. At this rate of increase the outstanding obligations of the Government on this account, which are just as sacred as other obligations, will, in the next bill, probably reach $100,000,000. Indeed, in the debate upon the measure when it was first considered by the House, the gentleman from Oregon [Mr. HERMANN], a leading member of the River and Harbor Committee, insisted that this bill ought to have carried $100,000,000 of authorized contracts! In view, therefore, of inadequate revenues and the prostrate condition of business, this bill becomes a wanton, inexcusable, and indefensible assault upon the people's Treasury. It authorizes the largest expenditure of public money ever carried by a single river and harbor bill since the adoption of the Constitution.

REPUBLICANS INDORSE BOND ISSUES.

Mr. Speaker, I desire to say, in conclusion, that some time since I charged the Republican party on this floor with being a do-nothing party. I arraigned the do-nothing policy, announced by the distinguished Speaker of the House, and by his almost equally eminent colleague [Mr. DINGLEY]. The arraignment is subject, however, to limitation as to appropriations of public money. In this respect the Republican party has actively pursued the policy of squandering the borrowed Treasury surplus. In "the good time coming," to which the gentleman from Illinois [Mr. CANNON] referred—if it shall come—I know you will "legislate," and I know we shall have another McKinley bill, twice over. [Loud applause on the Republican side.] I am glad you applaud that idea, but I doubt whether the country will do so. It will be necessary to enact about two McKinley bills to pay the mortgages you are imposing upon the Treasury of the United States, to say nothing of the manufacturers, who, it is alleged by the Republican Senator from New Hampshire [Mr. CHANDLER], are to be reimbursed for contributions made in the interest of the Presidential candidacy of a distinguished citizen of Ohio.

Mr. GROUT. And we shall want another such bill to pay the Cleveland bonds.

Mr. DOCKERY. Oh, Mr. Speaker, it does not lie in the mouth of the gentleman from Vermont to make that suggestion. I could make that suggestive criticism, and make it consistently. But the gentleman belongs to the Republican party, which, in December last, in this House, indorsed the policy of bond issues, and endeavored to give the Administration "additional" authority under the resumption act. Therefore, I say it does not lie in his mouth to arraign the Democratic Administration.

Mr. GROUT. I did not indorse the policy which made the issue of bonds necessary.

Mr. SAYERS. The gentleman on the other side introduced a bill appropriating $100,000,000 for coast defenses; and he almost rent his garments because the Appropriations Committee would not agree to it.

Mr. GROUT. That was to give the gentleman something to talk about.

Mr. DOCKERY. I was for a time at a loss to understand the applause of the gentleman from Vermont when I said the Republican party would be obliged to enact two McKinley bills. I understand it now, because two such bills will be needed to pay the enormous liabilities which the gentleman and the Republican party contemplate by bills such as that to which the gentleman from Texas refers.

Mr. Speaker, whatever I may say as a Democrat against the policy of bond issues—and I do not favor it, I never have favored it, and I do not expect ever to favor it—still it does not become the Republican party, after having indorsed the action of the President under the resumption act, and having sought to give him "additional" authority to issue three per cent bonds—it does not become them to arraign the President for his action in that regard.

And let me say another thing. If you [addressing the Republican side of the House] do not indorse the policy of bond issues, tell me why it is that the distinguished chairman of the Committee on Ways and Means, after having reported adversely the bill recently passed by the Senate prohibiting the issue of bonds without Congressional authority, has made no effort (although it is a privileged question) to call up that bill? [Applause on the Democratic side.]

Let the gentleman from Maine [Mr. DINGLEY] answer to the American people. Why has he not called up the bill to prohibit the further issue of bonds without the consent of the legislative branch of the Government, if he and his party are opposed to the policy of the President?

Mr. MAGUIRE. Why does he not do it now? We have plenty of time; and there is a quorum here.

Mr. DOCKERY. Certainly. As my friend from California suggests, and as gentlemen suggest all around me, why not call up that bill before this Congress adjourns?

Mr. PITNEY. Will the Democrats vote for it?

Mr. DOCKERY. Every Democrat on this floor will remain here to-morrow——

Mr. PITNEY. Will you vote for it or against it?

Mr. DOCKERY. For it, of course.

Mr. PITNEY. And stop the issue of bonds?

Mr. DOCKERY. Certainly, without the consent of the law-making power. I believe that every Democrat, whether he favors the bill or not, will remain here to-morrow and assist in making a quorum, if you will consent to call up the bill for consideration.

Again I challenge the gentleman from Maine, the able Republican leader on this floor, to tell the people why no effort has been made to pass the bill. Did you say lack of time? You have had a surplus of time in the closing days of this session, and you have employed it in reducing the Democratic minority on this floor, which at the outset numbered but 104. You have reduced this meager minority by unseating 11 Representatives. With but limited debate in some cases, and in others by the aid of grossly partisan decisions by temporary occupants of the chair, the people of those districts have been deprived of their chosen Representatives, and yet you will go before the people and say you had not the time in which to call up and consider important matters of legislation affecting millions of people in this country! [Applause.] Why, Mr. Speaker, only yesterday the ironclad provisions of the Tucker rule were invoked to secure a quorum to unseat that distinguished and intrepid young Democrat from Alabama [Mr. Underwood].

Mr. GROUT. Because he was not elected.

Mr. DOCKERY. And only a few days ago a temporary occupant of the chair violated, as it is alleged, the Constitution, the rules of the House, and a long line of precedents, to accomplish the splendid feat of unseating two Democratic Representatives in a single day.

Mr. MAHON. And you unseated JOY in forty minutes.

Mr. DOCKERY. There can therefore be no excuse for lack of time; no excuse for the lack of a quorum, since you have so large a majority that you can easily maintain a quorum if you so desire. Tell the people, if you will, why you evade this responsibility. The facts are, as I stated on a former occasion—and the country knows it—that you did not intend to attempt any economic or financial legislation at this session of Congress, but were coerced by the menacing business situation to present the Dingley tariff and bond bills, which were disapproved by a Republican-Populist Senate. You sought to postpone the disclosure of your own differences until after the November election. That was the policy of the Speaker, declared at the beginning of the session, and you approved it, as also the action of the President in respect to bond issues. Indeed, so emphatic is your approval that you refuse to call up for consideration the Senate bill forbidding the further increase of the bonded debt without the consent of Congress. [Applause.]

COMMENTS OF THE PRESS ON RIVER AND HARBOR BILL.

[From the Chicago Times-Herald.]

RIVER AND HARBOR BILL VETOED.

President Cleveland has returned without his approval the river and harbor bill adding $80,000,000 to projected Government expenditure.

The President declares that many of the objects for which the bill appropriates public money are not related to the public welfare, that many others are for the benefit of limited localities or in aid of individual interests. The veto is made the more necessary, in the judgment of the President, by the fact that the public Treasury is likely to be confronted with other appropriations at the present session of Congress amounting to more than $500,000,000.

The President delivers a hot shot on Congress by pointing out that the contracts provided for in the bill would create obligations of the United States amounting to $62,000,000, no less binding than United States bonds for that sum, "at a time when the issue of bonds to maintain the credit and financial standing of the country is a subject of criticism."

While many of the items in the river and harbor bill are justified by public necessity, the bill is beyond defense as a whole. The Congress that has passed it has been impotent for beneficient legislation and potent only for agitation and extravagance. The receipts of the Government from all sources for nine months ending March, 1896, were $250,609,840.05. The expenditures for the same period were $269,360,542.26. With no help from Congress the gap between the Treasury outgo and income constantly widens.

—

[From the St. Louis Post-Dispatch.]

A PROPER VETO.

President Cleveland has vetoed the river and harbor bill. This is a veto which should meet with public commendation.

The river and harbor bill for years past has been a communism of pelf. One section has traded with all others, until these measures, instead of representing a legitimate public demand for necessary improvements, have come to be recognized as great pooling operations for the division of spoil.

The appropriations have been continually growing in size. The Fiftieth Congress appropriated $22,397,000, the Fifty-first $25,136,000. The bill which the President has just vetoed appropriates $76,773,610, and $64,211,760 of this is to be expended in "continuous-contract work," to be continued indefinitely and at increasing public expense. It is to this feature of the bill, more glaring in this bill than in any previous measure of the kind, that the President most strongly objects.

The veto should not be overridden, but there is no assurance that it will not be. The representatives of every section will insist upon having their share of the swag. Such bills become stronger the more objectionable features they contain.

—

[From the Kansas City Times.]

RIVERS AND HARBORS STEAL.

No man who is informed as to the inside facts can help acknowledging the justice and honesty of President Cleveland's veto of the rivers and harbors bill. While this section is deeply, vitally, interested in the matter, we are bound to admit that the few meritorious features of the bill have been for years covered over, hidden, and overshadowed by a stupendous superstructure of fraudulent and unworthy schemes.

The custom has grown up of allowing almost every Congressman a slice out of the Treasury to help him in his district, and the way it is done is to make an appropriation for his district—that is, if it can boast a brook or stream big enough to float a chip in a high dew—and put it in the rivers and harbors bill.

—

[From the St. Louis Globe-Democrat.]

The river and harbor bill, which authorizes contracts amounting to over $62,000,000, and which has been passed over the veto, is a pretty bad measure, as a whole, though, of course, it has some good provisions. River and harbor bills have caused more trouble to Congresses and Presidents than any three of the other regular money bills of the Government. Many of them have encountered the veto, and a few of them, like the present one, have secured enough votes to override that barrier. The experience with river and harbor bills shows the desirability of giving the President the power which some governors have to veto provisions in appropriation bills without affecting the other items in the measures.

—

[From the Kansas City Star.]

A COMMENDABLE VETO.

In vetoing the river and harbor bill President Cleveland performed a plain constitutional and patriotic duty. For this act, involving courage and intelligence, he probably deserves no special praise, for the consciousness of obligations fulfilled is ample recompense to a faithful public servant. But neither does he merit censure for the performance of an obvious duty, however much the consequence may disappoint this man interested or that section concerned. There will be plenty ready to blame, however, and the selfishness of personal interests will find pegs to hang objections on until the country is deluged with the plaints and complaints of log-rolling Congressmen and their friends, and disgusted with the sordidness of modern statesmanship.

—

[From the New York Herald.]

A VETO DESERVING OF ALL PRAISE.

For vetoing the river and harbor appropriation bill the President deserves the thanks of the country, not only for the act itself, but for the manner of doing it.

This bill is always the favorite picklock by which selfish and unscrupulous legislators get at the public funds for the benefit of themselves through their constituents. It has been a growing abuse, the bill just vetoed having involved an expenditure of about $80,000,000.

—

[From the Chicago Tribune.]

RIVER AND HARBOR BILL VETOED.

President Cleveland has vetoed the river and harbor bill because of its alleged extravagance. The immediate expenditure contemplated by this bill is, he says, nearly fourteen millions, while another bill appropriates over three millions for similar purposes. The one he vetoes also authorizes continuing contracts amounting to more than sixty-two millions.

There seems to be no doubt that the bill will be passed over his veto by both Houses. The heavier the amount a river and harbor bill carries the easier is it generally to force it through, regardless of the condition of the Treasury and the total lack of merit of half the items.

[From the New York World.]

THE RIVER AND HARBOR VETO.

It will be much easier for Congress to pass the river and harbor bill over the President's veto than it will be to controvert any one of the many good reasons he gave for the veto in yesterday's message.

The amount of money appropriated by the bill is unprecedented, and in addition to the expenditures it directly sanctions it provides for surveys and expenditures which contemplate new work and further contracts. It provides for continuing work on improvements where costly work in the past has proved a failure. It includes objects which are not related to the public welfare, and of which many are palpably for the benefit of limited localities or in aid of individual interests. It also includes work not approved by the examining engineers, and even work which private parties have agreed to do in consideration of their occupancy of public property.

—

[From the Chicago Record.]

Congress is especially to be criticised for extravagance in appropriations at a time when the Government revenues are small. Attention is called to this point by the President. It looks very much as if the way was being prepared by Congress and an excuse devised for the enactment of another high-tariff law as soon as there shall be a change of Administration.

It has been expected, even in Congress, that the President would veto this bill just as he has done. In anticipation of such action adjournment was delayed long enough to give an opportunity to pass the measure over the veto. The objections of the President are to be overridden, not because they are ill-taken, but simply because there may be votes enough to do so. This will be a sorry spectacle if the programme is carried out. The Presidential veto will receive the sanction of calm-minded men generally.

—

[From the Baltimore Sun.]

VETO OF THE RIVER AND HARBOR BILL.

The President gives some cogent reasons for his veto of the river and harbor bill. The amount appropriated for almost immediate expenditure is about $17,000,000, and in addition contracts are authorized for $62,000,000. The latter sum, as is aptly pointed out, would be as binding upon the Government as an issue of bonds, and the President shows that at this time of business depression and resulting disappointment in Government revenue, extravagant appropriations are altogether out of the question. "Individual economy and careful expenditure are sterling virtues," says the President. "Economy and the exaction of clear justification for the appropriation of public moneys by the servants of the people are not only virtues, but solemn obligations." Leaving out the appropriation for rivers and harbors, the present Congress has already authorized expenditures amounting to more than $500,000,000, and has shown a reckless disregard of existing conditions.

—

[From the St. Louis Republic.]

OVER THE VETO.

Many millions of dollars of the taxpayers' money are squandered in personal and political jobs by the passage over Mr. Cleveland's veto of the bill that was hatched in REED's Committee on Rivers and Harbors.

Collis P. Huntington's Santa Monica job, instead of being killed outright, as it ought to have been, by the advice of all engineers who have examined the harbors of Santa Monica and San Pedro, is hung up subject to the report of a commission to be appointed hereafter.

—

[From the Washington Post.]

THE RIVER AND HARBOR BILL.

We think that the judgment and the conscience of the country will sustain the President in his veto of the river and harbor bill. In a few terse and pregnant sentences he has drawn a vivid picture of the extravagant wastefulness contemplated by that measure, and has shown that not only is the Treasury at this time unable to meet so vast an addition to its liabilities, but that a very considerable proportion of these proposed liabilities can be traced to favoritism, to deliberate prodigality, and to reckless improvidence.

Of course we regard it as a great pity that works of really serious national importance are to be curtailed and in some cases suspended altogether. We fully realize the harm that would be done to our domestic commerce by the neglect of such great highways as the Ohio and the Mississippi rivers, and of various harbors which require constant attention in order to preserve their usefulness as outlets of American trade. We regret very much that the President could not have ordained the continued prosecution of such enterprises and at the same time cut off the objectionable items which everybody knows are inserted for no public end, but simply for the promotion of private aspirations. This, unfortunately, he could not do, and so, as we believe righteously and wisely, he has condemned the whole measure rather than consent to what he regards as an iniquity. As we say, it seems to us Mr. Cleveland has done well. This river and harbor business has long been regarded with suspicion and discontent. In many respects it has become scandalous. Within the past twenty years millions and millions have been wasted upon unknown duck ponds, remote hog wallows, utterly useless and irreparable no-thoroughfares. Appropriations have been made for rivers not down upon any map, and in some cases unknown to the member for the district in which the river was supposed to be located. Everybody knows that the thing has become disreputable. Everybody knows that the legitimate works of the Government, such as we have referred to above, have been made the pretext upon which to draw untold millions from the Treasury for enterprises wholly illegitimate and notoriously futile. Men have kept themselves in Congress by virtue of their supposed success in securing these ridiculous appropriations. The public service and the public conscience have been debauched by these untoward practices.

Now the thing has attained proportions which the President can not bring himself to countenance. He has vetoed the bill, and, in our opinion, the intelligence and the patriotism of the country will sustain him.

—

[From the St. Louis Republic.]

NOT CLEVELAND'S VETO.

President Cleveland vetoed the river and harbor bill, but the real authors of the veto were the greedy jobbers who rushed in to get personal and political grabs out of a useful and necessary public measure.

It is disgraceful that the Government can not give money for the ease of commerce and navigation without giving $5 to blackmailing schemes for every dollar legitimately expended.

—

[From the Chicago Times-Herald.]

The New York Evening Post says: "Only one President before Cleveland ever vetoed a river and harbor bill. On the 1st of August, 1882, Mr. Arthur

sent back with his objections a measure calling for an appropriation of $18,743,875, because many of its provisions were 'entirely for the benefit of particular localities,' and not for the promotion of commerce among the States. Congress made short work of the veto, the House repassing the bill by a vote of 122 to 59 and the Senate by 41 to 16, although the Republicans were in control of Congress and the President was Republican."

As this is the second time a prominent newspaper has made this quite erroneous statement, it may be as well to correct it before it spreads any further.

December 6, 1832, President Jackson vetoed a river and harbor bill on the ground

That there is a class of appropriations in the bill for the improvement of streams that are not navigable, that are not channels of commerce, and that do not pertain to the harbors or ports of entry designated by any law, or have any ascertained connection with the usual establishments for the security of commerce, external or internal.

June 11, 1844, President Tyler vetoed "An act making appropriations for the improvement of certain harbors and rivers."

August 3, 1846, President Polk vetoed a river and harbor bill, his reasons being substantially the same as those of President Tyler, that such appropriations are unconstitutional.

December 30, 1854, President Pierce vetoed a river and harbor bill, going into the question of the constitutionality of the measure at great length, and holding that appropriations by the General Government should be confined to works necessary to the execution of its undoubted powers, and of leaving all others to individual enterprise or to the separate States.

President Buchanan also vetoed bills for the improvement of the St. Clair Flats and of the Mississippi River on constitutional grounds.

President Grant in August, 1876, signed a river and harbor bill, but sent to Congress a most extraordinary protest against it, in which he said:

"Many appropriations are made for works of purely private or local interest, in no sense national. I can not give my sanction to these, and will take care that during my term of office no public money shall be expended upon them. * * * Under no circumstances will I allow expenditures upon works not clearly national."

The veto by President Arthur, above mentioned, was the next in order, and was the only one that was overruled by Congress.

TABLE B.—*Appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, and first session of the Fifty-fourth Congress, fiscal years 1891 to 1897, inclusive.*

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.		Fifty-fourth Congress.

Total Fifty-first, Fifty-second, and Fifty-third Congresses	1,035,680,109.94		1,027,104,547.92		989,239,205.69		

a Deficiencies included as follows: 1891, on account of 1890, $25,321,907.25; 1892, on account of 1891, $29,335,598.34; 1893, on account of 1892, $7,674,332; 1894, on account of 1893, $14,149,724.85.

b This amount includes $1,362,059.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes $978,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes $15,227,000 for refund of direct taxes in addition to the specific sum of $500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, $101,628,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, $27,756.79; redemption national-bank notes, $23,553,298.50; expenses of Treasury notes, $218,362.60; coinage of silver bullion, $210,893.14; rebate tobacco tax, $770,082.39; and repayments to importers and for debentures and drawbacks, customs service, $4,915,285.28; in all, $29,695,678.70.

f This sum is exclusive of $1,660,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the last Congress.

g No river and harbor act was passed during the last session, but the sundry civil act of that session carried $11,287,115 for river and harbor works under contract, while the sundry civil act of this session appropriates only $3,284,597 for such works.

h This does not include $3,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of this session to purchase property of Monongahela Navigation Company.

i This sum includes $5,238,289.08 to pay sugar bounty under legislation enacted by the Fifty-first Congress.

j This sum includes $1,496,679.56 for objects that are in no sense deficiencies; $3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, $5,110,813.33.

k Estimated.

Mr. DINGLEY. Mr. Speaker, as I listened to the remarks of my friend the gentleman from Missouri [Mr. DOCKERY] in his assault on this Republican House and the Republican party, I was reminded of the quaint saying of Josh Billings, that "it is better to not know so many things, than it is to know so many things that ain't so." [Applause and laughter.]

I have been wondering for some time what the gentlemen who are standing up here to-day to defend the condition of things which we have had during the past three years under complete Democratic control would say on the stump in the coming campaign; and we have just been having some little anticipation of the lame defense they propose to make.

In November, 1892, there was a national election which decreed a revolution from the economic policy which had prevailed in this country for more than thirty years, and that the Democratic party should try its hand in running the Government. In that year, 1892, culminated this period of a protective policy of thirty years. This country was enjoying then such prosperity as even it, with all the prosperity that it had before, had never previously enjoyed. [Applause on the Republican side.] We found at that time every mill in operation, every spindle running in this country, every man, woman, and child that needed work obtaining it at good wages; we found prosperity everywhere. Although in revising the tariff in 1890 on the protective lines which had been maintained since 1861, we had reduced the revenues by removing the duty on sugar, surrendering some sixty millions of revenue on an article as necessary to every family as flour, yet in the fiscal years 1891 and also in 1892 and the first half of 1893 we had revenue enough to meet every dollar of the current expenditures of the Government, to pay the interest on the war debt, and to meet the payment of pensions to the boys in blue, with a surplus each year. [Applause on the Republican side.]

Mr. MAHON. And to pay for a number of bonds at the same time.

Mr. DINGLEY (continuing). And at the same time we were able to reduce the interest-bearing indebtedness of the country.

The reduction of the interest-bearing debt from March 1, 1865, to March 1, 1893, under the Republican policy which prevailed during these twenty-eight years (for even in President Cleveland's first term he was simply executing Republican policy), was over $1,900,000,000—an annual debt reduction of $68,000,000—the reduction in four-year periods having been as follows:

March 1, 1865, to March 1, 1869	$280,430,492
March 1, 1869, to March 1, 1873	403,948,484
March 1, 1873, to March 1, 1877	65,204,017
March 1, 1877, to March 1, 1881	73,646,781
March 1, 1881, to March 1, 1885	480,161,982
March 1, 1885, to March 1, 1889	341,448,449
March 1, 1889, to March 1, 1893	259,071,960
Total reduction in twenty-eight years	1,903,961,167
Average annual reduction	68,000,000

INCREASE OF INTEREST-BEARING DEBT.

March 1, 1893, to March 1, 1896	$262,602,245
Average annual increase	87,534,081

In 1892, after the census statistics of 1890 had exhibited the progress of the United States between 1880 and 1890, Mr. Mulhall, the celebrated English statistician, in his work entitled The Balance Sheet of the World, stated in a single paragraph his conclusions as to the wonderful prosperity of this country. This was just before the election of 1892, an election that decreed that the Democratic party should be given the complete control of this country. Let me read what Mr. Mulhall said:

It would be impossible—

Said he—

to find in history a parallel to the progress of the United States in the last ten years.

[Prolonged applause on the Republican side.]

Every day that the sun rises upon the American people—

He added—

it sees the addition of two and one-half millions of dollars to the accumulation of wealth in the Republic, which is one-third of the daily accumulation of all mankind outside of the United States.

[Applause on the Republican side.]

For thirty years this unparalleled prosperity in this land under Republican rule and a protective policy had been going on, and in the ten years from 1880 to 1890, according to Mr. Mulhall, this prosperity had reached a magnitude unparalleled in the history of the world.

And yet there are those who are trying to make the people believe that some legislation respecting the unlimited coinage of silver in 1873—legislation which operated from 1879 to 1892, during this period of unparalleled prosperity, precisely as it has since 1892—is the cause of the woes of the past three years. But the people will not be deluded by such transparent deception.

Mr. Speaker, there need not be any doubt as to what caused the sudden change from this great prosperity which had continued for so many years up to the close of 1892 and that deep adversity into which the country has been plunged since the beginning of 1893. The elections of 1892 decreed the advent of the Democratic party to power, with the anticipated revolutionary change in the tariff policy. When it became known that that change would take place, the tariff of 1890, which had given us up to that time abundant revenue, began to yield less, because of the fact that business men began to anticipate the revolution that was to come and to prepare for it. The distinguished Senator from Missouri [Mr. VEST] in 1894 said in the Senate that of course every business man in the country began at the opening of 1893 to prepare for the economic change that was coming. Mills began to restrict their output and jobbers their orders, and workingmen were discharged in January and February, 1893. Why? Because the elections had decreed a revolutionary change in our economic system that bade business men prepare for the new basis of competition created by reduced duties on foreign competing goods. So from that time the revenue under the tariff, that had been previously abundant, began to decline, for revenue always rises and falls with business conditions. Revenue under the tariff of 1890 that would have been abundant if it had been understood that the protective economic system was to continue, began to decline. The impending change began to bear its fruits at once.

Early in the autumn of 1892, when it was supposed that there would be no change in our protective system, Secretary of the Treasury Foster, in making his estimates, said that the revenue for the fiscal year 1894, under the tariff then in force, judging from the fact that there had been a continuous increase of revenue up to that time under the tariff of 1890, would be sufficient to meet all expenditures and leave $20,000,000 of surplus. In the latter part of January, 1893, just before the present Democratic Administration came in, Secretary Foster came by request before the Committee on Ways and Means and stated at that time that in view of the threatened change in our economic system he must revise his estimate of the early autumn of 1892; and that was when he said that $50,000,000 more would be necessary, after it had been voted to place the Democratic party in complete power. [Applause on the Republican side.]

And yet the gentleman from Missouri is quoting the statement of Secretary Foster in the winter of 1893, in correction of his estimate made in the autumn of 1892, as if he had asked for an increase of revenue before it was definitely known that the Democratic party had secured all branches of the Government instead of after. He made this change in his estimates because of the result of that election and because of his belief that the advent of the Democratic party to full power with its announced policy of overthrowing protection would impair industries and business and result in a falling off of revenue.

And Secretary Foster was right. In the early part of 1893, as I have said, in anticipation of the overthrow of the economic system of protection, the transfer of industries to Europe, and the near advent of a lower wage basis of competition, mills began to reduce their output, employees were discharged, wages in many cases were reduced, and the demand for goods began to diminish in consequence of the diminished purchasing power of the people. And that is what has been going on ever since that time. What is the trouble in this country? The trouble is that under this new economic system, demanding an adjustment of our industries to a lower wage basis—for wages have been necessarily reduced in consequence of this new adjustment—we have had diminished consumption, and diminished consumption has made gorged markets and diminished prices, as it always does. You would suppose that the consumption of wheat would be substantially the same from year to year per head, yet we find that even the consumption of wheat in the United States last year was 25 per cent less per head than in 1892. Why was that? Because of the diminished purchasing power of the people, and that was caused by the fact that this first anticipated and then partially realized revolution in the tariff act of 1894 resulted not only in diminished opportunities for labor and reduced wages, but caused at the same time an increase of importation of goods which we had formerly made ourselves. This has been going on during the past three years, and the end is not yet.

In 1892, for example, we imported only $36,000,000 of woolen goods, from which the Treasury received $34,000,000 revenue. Under the new tariff, in the calendar year 1895, we imported nearly $60,000,000 of woolen goods (notwithstanding our people were using less of such goods in 1895 than in 1892), from which we received a revenue of only $27,000,000. From wool and woolens together we obtained a revenue of nearly $44,000,000 in 1892, while we received only $27,000,000 from both in 1895. Thus we lost $17,000,000 in revenue from these two articles, and at the same time the manufacture of $30,000,000 of woolen goods was transferred to Europe, and thousands of American workingmen deprived of employment.

And the distrust caused by this paralysis of our industries and business, and the conversion of a surplus into a deficiency, has not only affected the resources and credit of the Government, but also every department of trade. It caused a falling off in the revenue, and the falling off in the revenue produced a deficiency and increased the distrust which economic paralysis had at first produced, and that distrust has gone on strengthening all the time. And the agitation for 16 to 1 free silver (which means a depreciation of the currency) has greatly aided in making the distrust chronic. The inevitable result was a run upon our coin-redemption fund, which has been increased and been made chronic by the failure of the Treasury to promptly replenish the reserve in April, 1893, and the use of the redeemed greenbacks to meet current expenses because of a failure of revenue.

From 1879 to 1893, with a surplus of revenues to replenish the gold reserve, with the coin-redemption fund perfectly maintained, and the knowledge that the Treasury had the power to borrow to maintain this fund in an exigency, with industries flourishing and everyone at work, confidence reigned supreme, and during the fourteen years from 1879 to 1893 less than forty millions of United States legal-tender demand notes—less than three and one-half millions per annum—were presented for redemption, while since the beginning of 1893 over three hundred and seventy millions of greenbacks have been presented for redemption. Confidence was maintained during all that period from 1879 to 1893, and so long as this confidence existed greenbacks were preferred to gold.

Thus from the breaking down of our industries, because of first the anticipated and then the partially realized overthrow of our protective policy, there came all throughout this country a paralysis of business, a lack of revenue, a run upon our coin-redemption fund, and then from lack of revenue the necessity of using the redeemed greenbacks to meet the deficiency; and the moment that the redeemed greenbacks were used for that purpose they were placed in a position to be immediately returned for another redemption, making the endless chain of which Secretary Carlisle complains, but which the Administration declines to break by aiding in securing sufficient revenue to make it unnecessary to use the redeemed greenbacks to meet a deficiency.

Mr. SAYERS. Does not the law require that just as soon as a greenback is redeemed it shall be reissued?

Mr. DINGLEY. It does not. The law prohibits the cancellation and retirement of the greenback, but how long the greenbacks may be held in the Treasury is a matter left to the discretion of the Secretary of the Treasury; and all through these years, from 1878 to 1896, there has not been a year but what there have been constantly in the Treasury of the United States from $30,000,000 to $100,000,000 of greenbacks, notwithstanding the law of 1878.

Mr. SAYERS. Will my friend allow me? Because I am asking him a question in good faith.

Mr. DINGLEY. Certainly.

Mr. SAYERS. Was it not the spirit of the law to require the

reissuance of the greenbacks when presented for redemption? Was not the spirit of that law that the greenbacks should immediately go back to the country?

Mr. DINGLEY. They did not from 1878.

Mr. SAYERS. I am not asking what they did.

Mr. DINGLEY. It was not the spirit of the law, either. The law of 1878 prohibited the retirement and cancellation of the greenbacks—nothing more.

Mr. MARSH. At the time that law was passed the Treasury Department, under the operation of the law, was burning the greenbacks.

Mr. DINGLEY. They were redeemed and canceled as they came into the Treasury from 1875 to 1878——

Mr. MARSH. That law was passed for the purpose of preventing the Treasury from burning and destroying the greenbacks.

Mr. DINGLEY. Certainly, and for no other purpose; and it has never been construed by any Secretary of the Treasury as a prohibition of a temporary holding of greenbacks in the Treasury.

I want to say, in reference to what has already been said, that this distrust in the country will never be stopped until the revenue shall be more than the expenditures and all doubts as to the stability of our currency removed. [Loud applause on the Republican side.]

There are two sources from which the coin redemption fund can be replenished under the resumption act of 1875. It may be replenished from the surplus revenue; and from 1879 to 1893, under Republican management, the surplus revenue was sufficient to keep up the coin redemption fund without issuing a single bond, and pay off a large portion of the public debt [loud applause on the Republican side], and that is the condition to which we propose to return if the people give us a Republican Senate and President to cooperate with a Republican House. [Renewed applause.]

Let me repeat: The remedy is to furnish revenue enough to meet every dollar of the current expenditures and leave a surplus to be added for the use of the coin redemption fund, as a first step; an emphatic verdict of the people against the efforts to degrade our currency; and then, in view of the fact that the present distrust has become chronic, such further measures as will make our currency system responsive to the demands of business. We complain, Mr. Speaker, that as soon as it became known that the tariff act of 1894 would not produce revenue enough, a year and a half ago, with the Democratic party in control of both Houses of Congress and having the President, they have been continually singing the song, "Revenue enough, or will be next week," and refusing to increase the revenue to meet the current expenses of the Government. So when we came here last December, with a Republican House and a Democratic and Populist Senate, what confronted us? The fact that up to the 1st of January last there had been a deficiency of revenue amounting to nearly $130,000,000.

Now, what was our duty in these premises? What did we have to face? To be sure we could not proceed—in view of the fact that there was a Democratic and Populistic Senate and a Democratic President—to revise the tariff on our lines, because we knew it would do no good, it would be a loss of time, and that while valuable time was being lost there would continue to be an increase in the deficiency.

When the Speaker of the House, at the beginning of the session of Congress, spoke of the fact that we should not be able to revise the tariff on our lines, he spoke what everyone knew was true in the matter. But he did not intend—neither did any of his friends understand that he did—to have it inferred that it was not our duty to take hold of the matter and endeavor to provide more revenue; and while there was no possibility of passing a general tariff bill, it was our duty to offer revenue for the purpose of meeting this deficiency. Hence, what did we do? Within five days after the committees of this House were organized we passed through the House, not a bill framed on Republican protective lines, but a bill to continue only two years and a half, so modified that every patriot who wanted to serve his country and furnish forty millions of revenue and stop this deficiency and distrust in the country could support it. [Loud applause on the Republican side.]

Mr. GROUT. And every Democrat voted against it.

Mr. DINGLEY. We supposed we should have the support of all patriots and not a following of party lines; but we saw every Democrat and every Populist in this House vote against that bill, thus practically saying they would not have more revenue. That bill was sent to the Senate; and what was done with it by a combination of Democrats and Populists having a majority of 1 in that body? Having 1 majority of the Senate entirely outside of any other members of that body, they deliberately voted not even to consider that revenue bill, and up to this hour it has not been taken up, either to act on the proposition of the House or to propose something in the nature of a substitute that would furnish revenue. Not a thing has been done with it. Every Democrat and every Populist in this House and in the Senate has been opposing every step that could be taken in that direction.

Mr. SAYERS. Does the gentleman call the Senators from Montana Populists?

Mr. DINGLEY. I say, without any reference to the five so-called silver Republicans, who abandoned their party on that question and cooperated with the opposition, that the Democrats and Populists, known distinctly as such, had control of the Senate by a majority of 1. Gentlemen on the other side understand that very well, and they must not endeavor to shirk their responsibility by seeking to put some of it on the shoulders of other persons. The responsibility belongs with them, and they will have to take it before the people of this country. [Applause on the Republican side.]

What was said on the other side? Gentlemen told us that "next week" or "next month" we should have revenue enough; but, in fact, there has been a deficiency of $10,000,000 in current expenses since the 1st of January last, and a further deficiency of $11,000,000 caused by the necessary payment of maturing Pacific Railroad bonds: making a deficiency of $21,000,000 since the House passed a bill offering $40,000,000 increase of revenue to stop this deficiency.

Mr. HAINER of Nebraska. To that must be added $6,000,000 for the sugar bounties.

Mr. DINGLEY. Yes; and the deficiency is still going on; and our complaint is that they have persisted in refusing to raise more revenue, and thus made necessary the issuance of so many bonds. That is the complaint against them, that their policy has produced the conditions which have brought about this situation, and they refuse to correct those conditions. In the absence of revenue there is nothing to do, unless the Government is to be stopped, but to use the greenbacks redeemed by the proceeds of bond sales to pay so much of the expenditures of the Government as are not met by revenue, and thus place these redeemed greenbacks in a position to be presented again for redemption. But those who refuse to provide revenue are responsible for maintaining conditions that make such use necessary. And the majority of the Senate sent to the House a substitute bill proposing to allow private owners of silver to take their silver in unlimited quantities to our mints and have each 50 cents' worth of that silver coined into a standard dollar and returned to such private owners—a measure of great temporary profit to the private holders of silver, and in the end one which would inevitably drive out gold and leave us nothing but silver as metallic money, and would place this country on the silver basis of Mexico.

The decided vote by which the House refused to concur in this Senate proposition to debase our currency—only 90 members (58 Democrats, 7 Populists, and 25 Republicans) favoring, while 183 Republicans and 32 Democrats opposed it—affords a most instructive object lesson to the people of this country, which will not be lost sight of in the campaign before us.

Mr. Speaker, I need not point out other important and beneficial measures which the House has passed and sent to the Senate—such as the bill requiring that in the future immigrants coming here to become a part of our body politic shall be able to read and write their own language; the bankruptcy bill; the bill abolishing the fee system in paying United States district attorneys and United States marshals; the "filled cheese" bill, so called, to protect the dairy interests of the country; the bill to amend the administrative customs laws so as to prevent, so far as possible, undervaluations; the bill to establish a labor commission to investigate labor questions, etc.; and other bills of importance; but the Senate took up and passed only two of these bills.

Mr. Speaker, the gentleman from Missouri has endeavored to give the impression that the appropriations of this Congress exceed those of other Congresses, particularly those of recent years; but there is not the slightest foundation for this representation. The total appropriations made by this Congress, including the permanent appropriations, will reach not far from $515,000,000. But it should be borne in mind that nearly $15,000,000 of this is simply the increased interest arising from the issue of $262,000,000 of bonds by the present Democratic Administration and the increase of estimate for sinking fund due to the issue of these bonds. This leaves the appropriations at the first session of the Fifty-fourth Congress, compared on the basis of former appropriations, about $500,000,000; and this is substantially the appropriations heretofore.

It should be borne in mind that this appropriation includes an estimate of about $50,000,000 for the sinking fund, which is simply an estimate for a reduction of the interest-bearing debt, and not an item of current expenditure. This leaves the aggregate appropriations for carrying on the Government about $450,000,000, which includes the postal expenditures, more than $80,000,000 of which will be paid by postal revenue, leaving the annual appropriations for carrying on the Government about $370,000,000 to be paid by taxation, which is the average for several years. Indeed, the appropriations always exceed the actual expenditures, because of the fact that balances frequently are left after completing the work appropriated for, which are subsequently covered into the Treasury.

The statement of the annual expenditures of the Government paid by various imposts and duties since 1890 is as follows:

Fiscal year.	Receipts.	Expenditures.
1890	$403,080,982	$297,735,486
1891	392,612,447	355,372,685
1892	354,937,784	345,023,330
1893	385,819,628	383,477,954
	1,536,450,841	1,381,609,455

Surplus under four years of Harrison, $154,841,386.

Fiscal year.	Receipts.	Expenditures.
1894	$297,722,019	$367,525,279
1895	313,390,075	356,195,298
	611,112,094	723,720,577

Deficiency under two years of Cleveland, $112,608,483.

I desire to call attention to the fact that the— Cash in the Treasury March 1, 1893, when the present Administration came into power, was	$124,128,087
Cash borrowed by sale of bonds	293,454,272
Total cash received to June 1, 1896	417,582,359
Cash in Treasury June 1, 1896	267,193,210
Expenditures since March 1, 1893, in excess of receipts	150,389,149

Mr. Speaker, it is such a showing as this in time of peace that can not be justified—a deficiency of $150,389,149 in three years in time of peace, and that deficiency met by borrowing money instead of by increasing the revenue.

The interest-bearing debt has been increased about $262,000,000 and the annual interest over $11,500,000 in time of peace.

And gentlemen now excuse themselves from raising revenue because we have $167,000,000 in the Treasury outside of the coin redemption fund, which ought to consist of redeemed United States notes, and which, if used in meeting deficiencies, will be presented for a second redemption in coin, necessitating an additional issue of bonds to obtain means for such redemption.

Mr. Speaker, recognizing the absolute necessity of maintaining the redemption fund, in order to prevent the depreciation of the greenback notes issued by the Government as currency, as provided by the resumption act of 1875—a measure which in 1879 placed the country on a sound specie basis—and knowing that the authority to issue bonds provided by that act is vital to the maintenance of this resumption fund and business confidence, this Republican House sent to the Senate in December last another bill, which reduced the rate of interest and length of term on such bonds, and which provided that when issued and sold they should be made a popular loan and be offered first to the American people instead of being sold to syndicates. [Applause on the Republican side.]

We went further than this and provided that the proceeds of such bonds should be devoted exclusively to redemption purposes. And then, to make it unnecessary and impossible to use the redeemed greenbacks to meet a deficiency, and thus make it necessary to issue bonds in order to again redeem the greenbacks thus used, our bill authorized the issue of currency certificates of indebtedness to meet any temporary deficiencies.

We sent that measure to the Senate, and the majority of the Senate refused to concur in a single one of these propositions, thus practically sharing in the responsibility of the Executive for the continuation of all these practices of which we and the country complain.

In the face of such a constant deficiency of revenue for three years, in the face of the encroachments on the redemption fund, and the distrust caused by the paralysis of business, the people of the United States determined at the elections of 1894 that they had had enough of it, and elected this Republican House.

The people of this country know a great deal more now than they did in November, 1892. [Applause.]

Mr. GROUT. They have found out the Democratic party.

Mr. DINGLEY. We have had a kindergarten on a large scale. [Laughter.] The tuition came high, but no people ever learned so much in so short a time. [Applause.]

I am aware that here in this House, with our large Republican majority, elected in 1894, we have been powerless to place legislation on the statute book, because of a Democratic and Populistic Senate and a Democratic President. But I warn you, gentlemen of the Democratic party, notwithstanding the attempt to divert attention from the real difficulties in this country—I warn you that in November next the people will complete the work which they set out to accomplish in 1894; and they will give us a Senate and a President that will cooperate with a Republican House. [Applause.] Then we shall reestablish that policy of protection to American industries which for thirty years (four years of which were in the midst of a most destructive war) gave the United States such prosperity and elevated the wages of the people of this country as was never before known in the history of any country in the world. [Loud applause.]

Mr. RICHARDSON. I move that the House adjourn.

Mr. GROUT. Mr. Speaker, many gentlemen desire that I shall yield them time on this subject——

Mr. RICHARDSON. Unless we can have a vote on this conference report, I insist on my motion to adjourn.

Mr. GROUT. I move the previous question upon agreeing to the report.

Mr. WILLIS. I rise to a question of personal privilege. I want to correct a mistake that has been made——

The SPEAKER. That is not a question of personal privilege except under very peculiar circumstances. [Laughter.]

Mr. RICHARDSON. If we can have a vote on the conference report I withdraw the motion to adjourn.

The SPEAKER. The motion to adjourn is withdrawn. The gentleman from Vermont calls for the previous question on agreeing to the conference report.

The previous question was ordered; and under the operation thereof the conference report was agreed to.

On motion of Mr. GROUT, a motion to reconsider the last vote was laid on the table.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed the bill (S. 2984) in relation to contempts of court; in which the concurrence of the House was requested.

The message also announced that the Senate had passed with amendment the following resolution; in which the concurrence of the House was requested:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on Monday, the 18th day of May, at 2 o'clock p. m.

The message also announced that the Senate had passed without amendment joint resolution (H. Res. 201) extending the time of payments due from settlers and purchasers on all ceded Indian reservations.

MESSAGE FROM THE PRESIDENT.

A message in writing from the President of the United States was communicated to the House by Mr. PRUDEN, one of his secretaries, who also announced that the President had approved and signed bills of the following titles:

On June 9, 1896:

An act (H. R. 6614) making appropriations for the services of the Post-Office Department for the fiscal year ending June 30, 1897;

An act (H. R. 956) for the relief of Sophia Sparks and Julia C. Sparks, of Annapolis, Md.;

An act (H. R. 1826) granting a pension to Henry Prince;

An act (H. R. 6603) to pension the minor children of Patrick F. Reynolds;

An act (H. R. 6826) granting a pension to Rhoda Augusta Thompson, daughter of the late Thaddeus Thompson, a private in the Revolutionary war; and

Joint resolution (H. Res. 195) to pay the officers and employees of the Senate and House of Representatives on the day following adjournment.

On June 10, 1896:

An act (H. R. 8383) to establish a site for the erection of a penitentiary on the military reservation at Fort Leavenworth, Kans., and for other purposes;

An act (H. R. 9253) to amend an act approved August 19, 1890, entitled "An act to adopt regulations for preventing collisions at sea";

An act (H. R. 2) disposing of two condemned cannon;

An act (H. R. 6249) making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1897, and for other purposes;

An act (H. R. 7542) making appropriations for the naval service for the fiscal year ending June 30, 1897, and for other purposes; and

An act (H. R. 2947) increasing the pension of Daniel D. Jennings, late of Company C, Sixty-fifth Ohio Volunteers.

NOTE.—The following bills having been presented to the President on May 27, 1896, and not having been returned by him to the House of Congress in which they originated within the time

prescribed by the Constitution, have become laws without his approval:

An act (H. R. 5711) granting a pension to Richard P. Pilkington;

An act (H. R. 8184) granting a pension to Jesse McMillan;

An act (H. R. 4910) granting a pension to Cyrus Thomas;

An act (H. R. 138) granting an increase of pension to Mary E. Hazlip; and

An act (H. R. 4753) granting an increase of pension to Lambert L. Mulford.

FINAL ADJOURNMENT.

Mr. CANNON. Let us now dispose of the resolution with reference to final adjournment.

The SPEAKER laid before the House the following resolution of the House, returned from the Senate with an amendment:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on Monday, the 18th day of May, at 2 o'clock p. m.

The amendment of the Senate was read, as follows:

In lines 5 and 6, strike out "Monday, the 18th day of May, at 2 o'clock p. m." and insert "Thursday, the 11th of June, at 4 o'clock p. m."

Mr. DINGLEY. I move that the House concur in the Senate amendment, and on that I move the previous question.

Mr. WHEELER. Will the gentleman allow me——

Mr. DINGLEY. It is now so late——

Mr. WHEELER. This is a most important resolution coming from the Committee on Ways and Means, and there ought to be a few minutes given to the minority for debate. [Cries of "Vote!" "Vote!"]

The SPEAKER. The Chair will submit the question on the demand of the gentleman from Maine for the previous question.

Mr. WHEELER. Mr Speaker, this is a motion to adjourn the House to-morrow at 4 o'clock, and I think the motion is one that certainly ought to have some consideration at the hands of the minority. We ought to have some few moments for debate on this question—the minority of the Committee on Ways and Means.

Mr. CANNON. But the gentleman has unlimited leave to print now.

Mr. WHEELER. I know that, but I ask just five minutes on the part of the minority to discuss this question.

The SPEAKER. The Chair desires to be perfectly fair with the gentleman from Alabama, but this is a matter for the House to decide.

Mr. WHEELER. I understand that, Mr. Speaker; but if the chairman of the Committee on Ways and Means would grant a few minutes' debate for me, I am sure that the House will yield its consent. This is the first time in the history of Congress that this resolution has been presented and acted upon without any discussion.

Mr. DINGLEY. But the gentleman has leave to print now.

Mr. WHEELER. I want five minutes to speak on this question. I only ask five minutes.

Mr. DINGLEY. Well, I will yield to the gentleman for five minutes.

Mr. WHEELER. Mr. Speaker, on the 6th day of last month, just five weeks ago to-day, the distinguished chairman of the Committee on Ways and Means presented a resolution to the House fixing May 18 as the day for final adjournment.

I opposed the resolution with all the power I possessed, insisting that we should enact legislation to relieve the people from the distress which prevails throughout the rural portions of our land, or, rather, that we should repeal laws which all will concede are largely the cause of the present unfortunate condition of our country.

UNIVERSAL DEMAND FOR SILVER LEGISLATION.

During these few weeks the wishes and demands of the people of the United States have been expressed with a force and earnestness very seldom manifested. The people have become convinced that the legislation by Congress which confines the money of ultimate redemption to one metal has enabled a few to so control the gold of the United States as to paralyze industries, depress the value of farm products, cause stagnation in legitimate business, and rapidly divide the people into a few millionaires and multimillionaires on the one side, the struggling masses of the people on the other.

In more than three-fourths of the States the people in convention assembled have in the most emphatic and decided manner denounced the single gold standard as destructive to the best interests of the country and absolutely ruinous to the farmers or producing classes.

In the debate which has taken place this afternoon prominent Republicans have sought to excuse their neglect to legislate for the people by minimizing the achievements of the Democratic party in the last House in relieving the people of the burdens which were imposed on them by what was called the war legislation. These burdens were imposed when the Republican party had full control of all branches of the Government.

THE DEMOCRATS OF THE LAST CONGRESS LEGISLATED FOR THE PEOPLE.

The last Congress was the first in thirty-five years in which the Democratic party had the President and both Houses of Congress. It is true we did not accomplish all that we desired, nor all that we attempted, but I have in my mind some laws that we enacted which have met the approval of all right-thinking people.

1. We repealed the Federal election laws, which will forever prevent any interference in elections by Federal officials.

2. We enacted a law providing for taxing greenback and national-bank money.

3. The House passed the voluntary bankrupt act.

4. We passed a beneficent law restricting and placing safeguards upon immigration.

5. The House passed a law to amend the Constitution, so that Senators might be elected by the people.

6. We passed a law reclaiming 48,000,000 acres of land, worth $1,000,000,000, then illegally held by corporations.

7. We enacted a law admitting Utah to the sisterhood of States.

8. The House passed a law admitting New Mexico and Arizona.

9. We enacted a law extending mail facilities, reducing postal expenditures, and reducing postage upon periodical publications.

10. We enacted laws which removed all tax from the following articles used by farmers, by placing them on the free list, viz:

Agricultural implements.
Iron cotton ties.
Bagging for cotton.
Bags for grain.
Salt.
Many agricultural seeds.
Cotton gins.
Binding twine.

11. We also enacted laws which have reduced the tax on nearly everything bought by farmers from one-half to one-fifth the tax which was imposed by Republicans.

12. We enacted a law reorganizing the Departments by which we were enabled to abolish thousands of offices, so as to reduce the expenses of the Government many million dollars.

13. We enacted a law to place a tax upon incomes which would require the people of wealth to pay their part of the burdens of government, and all this legislation will remove hardships and lift burdens from men who work.

14. In fine, the general provisions of the tariff law which we enacted were such as to accomplish much toward breaking down monopolies and trusts, and is opening foreign markets to the products of American labor. Only last March the London Iron and Trade Review announced the arrival of Alabama pig iron in that market, and said:

England is threatened with an invasion of American pig iron. This is one of the most serious blows to the supremacy of Great Britain as a manufacturing nation.

And about the same time the Cleveland World, published by that eminent protectionist, Mr. Robert P. Porter, announced that an immense order for iron cotton ties for cotton had been received by the iron mills of Youngstown, Ohio. The paper said:

The order is from Bombay, India. An immense amount of cotton ties have already been shipped, but this will form but a small part of the order.

This is a part of the work done by a Democratic Congress, but we enacted much other beneficent legislation which I can not recall at this moment.

The SPEAKER. The gentleman from Alabama should confine himself to the question before the House, which is whether the House and Senate shall adjourn at 4 o'clock to-morrow. [Laughter.]

Mr. WHEELER. Yes, Mr. Speaker, that is the question we are now considering, and I hope that my statements of what the Democratic House did during the last session will induce our Republican friends to vote against adjournment and proceed to enact laws which have been introduced and are now pending, which if enacted would restore the country to prosperity. I want to ask in all seriousness, if you adjourn with your present record, how will you go before the country in November——

A MEMBER. Give it up. [Laughter.]

Mr. WHEELER (continuing). The Republican party will have to give it up unless they pass at least one law for the relief of the people. On what will they base their claims for further support? I appeal to them to stay here and enact laws, which they can enact, to help the producing classes of this country. What have they done?

Mr. OGDEN. They passed the filled-cheese bill. [Laughter.]

Mr. TALBERT. And they stopped prize fighting in the Territories. [Renewed laughter.]

Mr. WHEELER. Yes, they passed the filled-cheese bill, which is an unconstitutional exercise of the taxing power, and they wasted several days in talking about the proposed prize fight between Corbett and Fitzsimmons.

You will also remember that they turned away from their duty and spent several days in making speeches condemnatory of Mr.

Bayard, because he made a speech against the Republican policy of prohibitory protection; and then this immense Republican majority proceeded to cast a vote of censure against the American ambassador, Mr. Bayard. [Laughter and applause.] And every sensible, educated man in the world has cast a vote of censure in his own mind against those who inaugurated this proceeding. This is the record which you have made and upon which you are to ask for votes in November. [Applause.]

The SPEAKER. The time of the gentleman from Alabama has expired. [Laughter.]

Mr. DINGLEY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The amendment of the Senate was concurred in.

ENROLLED BILLS SIGNED.

Mr. HAGER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolutions of the following titles; when the Speaker signed the same:

A bill (S. 2928) to extend the routes of the Eckington and Soldiers' Home Railway Company and of the Belt Railway Company of the District of Columbia, and for other purposes;

A bill (S. 2859) changing the time for holding circuit court of the United States at Hartford, in the district of Connecticut;

A bill (S. 2978) to provide an American register for the steamer *Menemsha;*

A bill (H. R. 9253) to amend an act approved August 19, 1890, entitled "An act to adopt regulations for preventing collisions at sea";

A bill (S. 1306) to authorize and encourage the holding of a transmississippi and international exposition at the city of Omaha, in the State of Nebraska, in the year 1898;

A bill (S. 2412) to make the city of Santa Barbara, county of Santa Barbara, State of California, a subport of entry;

A bill (H. R. 180) to make the city of Erie, Pa., a port of immediate transportation;

A bill (S. 1767) to provide subports of entry and delivery in the State of Florida;

A bill (S. 3206) to grant a right of way through the new Fort Bliss Military Reservation to the El Paso and Northeastern Railroad Company;

Joint resolution (S. R. 161) authorizing the Secretary of the Treasury to place a bronze tablet or inscription on the Government building erected in Detroit, Mich.;

A bill (S. 768) for the relief of James A. Moore;

A bill (S. 2783) to establish a life-saving station on the coast of New Hampshire or Massachusetts, between the Hampton and Merrimac rivers;

Joint resolution (S. R. 27) granting permission for the erection of a monument in Washington, D. C., for the ornamentation of the national capital and in honor of Samuel Hahnemann;

A bill (S. 2490) to authorize the Secretary of War to improve and maintain the public roads within the limits of the national park at Gettysburg, Pa.;

Joint resolution (S. R. 138) for the relief of James P. Veach;

A bill (S. 3170) to authorize the Butler and Pittsburg Railroad Company to construct and maintain a bridge across the Allegheny River;

A bill (S. 2943) to authorize the construction of a bridge across the Warrior River by the Mobile and Ohio Railroad Company;

A bill (S. 261) for the relief of Arthur P. Selby;

A bill (S. 2945) to authorize the construction of a bridge across the Alabama River by the Mobile and Ohio Railroad Company;

Joint resolution (S. R. 149) extending the benefits of sections 1426 and 1573 of the Revised Statutes to all enlisted persons of the Navy;

A bill (S. 1011) for the relief of Capt. James Reagan, United States Army;

A bill (S. 2944) to authorize the construction of a bridge across the Cahaba River, in Bibb County, Ala., by the Mobile and Ohio Railroad Company;

A bill (H. R. 9409) making appropriations to supply deficiencies in the appropriations for expenses of the House of Representatives, and for other purposes, for the fiscal year 1896;

A bill (H. R. 7338) for the relief of William H. Scofield, Jacob Brady, James Ketcham, Annie Booth, as administratrix of the goods, chattels, and credits of George W. Booth, deceased; Wilson P. Billar, Ezra L. Waterhouse, Moses C. Bell, George W. Byles, and George A. Scofield;

A bill (H. R. 9226) to change the time and places for the district and circuit courts of the northern district of Texas; and

A bill (S. 1853) for the relief of Edward Rice.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, the following Senate bills and resolutions were taken from the Speaker's table and referred by the Speaker as follows:

A bill (S. 2984) in relation to contempts of court—to the Committee on the Judiciary.

A bill (S. 2555) to authorize the Secretary of the Treasury to issue leases of certain islands in Alaska for the breeding of foxes—to the Committee on the Territories.

A bill (S. 3058) to increase the pay of letter carriers—to the Committee on the Post-Office and Post-Roads.

Concurrent resolution—

Resolved by the Senate (the House of Representatives concurring), That there be printed 5,000 copies of Senate Miscellaneous Document No. 274, Fifty-third Congress, second session, Proceedings of the Berlin Silver Commission of 1894, with index, 3,000 to be for the use of the House of Representatives and 2,000 for the use of the Senate—

To the Committee on Printing.

Concurrent resolution—

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound 60,000 extra copies of the report of the joint Committee on the Dedication of the Chickamauga and Chattanooga National Park; 18,000 copies shall be for the use of the House of Representatives, 6,000 copies for the Senate, 1,000 copies for the National Park Commission to supply the twenty-eight State commissions, and 500 copies for the Secretary of War to supply the governors of the States, and 100 copies for each speaker at the dedication—

To the Committee on Printing.

A bill (S. 525) for the relief of Thomas Guinean, of Oregon—to the Committee on Claims.

A bill (S. 205) for the relief of Rinaldo P. Smith, of Baltimore, Md.—to the Committee on Claims.

A bill (S. 2054) to incorporate the East Washington Heights Traction Railway Company of the District of Columbia—to the Committee on the District of Columbia.

A bill (S. 2840) to incorporate the East Washington Heights Traction Railway Company of the District of Columbia—to the Committee on the District of Columbia.

ORDER OF BUSINESS.

The SPEAKER. The Chair is informed that at half past 9 the important bills will be ready to be signed. The Chair thinks that, after laying before the House a message from the President of the United States, the House should take a recess until half past 9 o'clock this evening, in order that the enrolled bills may be signed.

VETO MESSAGE—FORT OMAHA MILITARY RESERVATION.

The SPEAKER laid before the House the following message from the President of the United States:

To the House of Representatives:

I herewith return without my approval House bill numbered 225, entitled "An act to provide for the lease of Fort Omaha Military Reservation to the State of Nebraska."

This bill authorizes and directs the Secretary of War, when Fort Crook, near the city of Omaha, is ready for occupancy, to lease for a nominal rent to the State of Nebraska the possession of Fort Omaha Military Reservation, containing about 80 acres, with all the buildings, appurtenances, and improvements thereof. It is declared that the lease shall be conditional upon the use of said reservation by the State of Nebraska as a place of rendezvous and school of instruction for the National Guard of said State; that the State of Nebraska shall, while it is in possession of said reservation, keep the buildings and improvements thereon in as good condition and repair as at the date it shall enter into possession thereof, and that at any time when in the judgment of the Secretary of War the interests of the United States shall require such action, he shall take possession of said military reservation for the use of the Government, together with all the buildings, appurtenances, and improvements thereon.

On the 23d day of July, 1888, an act was passed authorizing the Secretary of War to purchase suitable grounds of not less than 640 acres in extent, to be situate within 10 miles of the city of Omaha, and to construct the necessary buildings thereon for a ten-company military post, to be known as Fort Omaha, and a necessary sum not exceeding $200,000 was appropriated to enable the Secretary of War to carry out the provisions of said act.

The said act also authorized the Secretary of War, when the purchase of the new site should be effected, to sell the military reservation known as Fort Omaha, and such of the buildings and improvements thereon as could not be economically removed to the new site, and to cause the said reservation, for the purposes of said sale, to be platted in blocks, streets, and alleys, if in his judgment it would inure to the benefit of the Government in making a sale of such site.

The new site provided for by this act has been purchased, a large sum of money has been spent by the Government in preparing it for use, and I understand it will soon be ready for occupancy. The authority to sell the old site has not been exercised. This may be accounted for by the fact that the Government has not thus far been able to dispense with its use or because the depression in land values at Omaha has rendered it unadvisable.

The authority to sell and to remove any of the buildings from the old reservation to the new site still remains, however, unimpaired. In this condition of affairs it is now proposed to lease this land and these buildings to the State of Nebraska at a nominal rent, allowing the Government to repossess it only "when the interests of the United States shall require such action."

Of course it would be claimed that this language, in view of the statute of 1888, should not be construed as permitting the Government to retake the property for the purpose of selling it, because that is not stipulated in the bill. For that reason it would be plausibly urged that the lease was paramount to the power of sale contained in the law of 1888, and that the omission of any provision that possession might be resumed for the purpose of sale plainly indicated that "the interests of the United States" which allows such resumption contemplates some other and different emergency.

As a practical question we all know that transactions of this character relating to Government property amount to a permanent alienation or certainly pave the way for an absolute grant.

I do not think there should be anything done with this valuable property which will in the least embarrass the Government in its sale, and to that extent reimbursing itself for the cost of the new military post which was plainly contemplated in the law of 1888.

GROVER CLEVELAND.

EXECUTIVE MANSION, *June 10, 1896.*

Mr. MERCER. Mr. Speaker, I move that the message and the bill be referred to the Committee on Military Affairs.

There was no objection, and it was so ordered.

Mr. DINGLEY. Mr. Speaker, I move that the House take a recess until half past 9 this evening.

Mr. BAILEY. Will the gentleman from Maine agree now to move that when the House adjourns to-day it adjourn to meet to-morrow at 12 o'clock?

Mr. DINGLEY. I can not say now, until we see whether the bills can be engrossed to-night. It is necessary to have this session this evening in order that the enrolled bills be signed.

The motion was agreed to.

Accordingly (at 7.30 o'clock p. m.) the House took a recess until 9.30 o'clock p. m.

The recess having expired, the House, at 9 o'clock and 30 minutes p. m., was called to order by the Speaker.

Mr. DALZELL. Mr. Speaker, I move that the House take a recess till half past 10 o'clock.

The motion was agreed to.

Accordingly the House was in recess until 10 o'clock and 30 minutes p. m.

The recess having expired, the House, at 10 o'clock and 30 minutes p. m., was called to order by the Speaker.

ENROLLED BILLS SIGNED.

Mr. CROWTHER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills and joint resolution of the following titles; when the Speaker signed the same:

A joint resolution (H. Res. 201) extending the time of payments due from settlers and purchasers on all ceded Indian reservations;

A bill (H. R. 9447) to amend section 1 of the act to amend an act entitled "An act authorizing the Postmaster-General to adjust certain claims of postmasters for loss by burglary, fire, or other unavoidable casualty," approved May 9, 1888;

A bill (H. R. 3990) granting a pension to Mrs. Eliza G. Payne; and

A bill (H. R. 4580) to amend section 3449 of the Revised Statutes.

ORDER OF BUSINESS.

Mr. LITTLE. Mr. Speaker, I desire to complete the unfinished business. There was a second on a motion to suspend the rules and pass the bill for the relief of Albert Augustine. I desire now to complete the passage of that bill, if I can.

Mr. DINGLEY. Mr. Speaker, it was understood that no business would be done to-night except to receive the report of the Committee on Enrolled Bills, because the bills must go to the President and be signed. Because of that understanding many members are not present who would have been here if they had expected any other business would be transacted.

Mr. LITTLE. My friend remembers that a motion was made to suspend the rules, with a second.

Mr. DINGLEY. I am aware of that.

Mr. TERRY. I suggest to the gentleman from Maine that that bill is the unfinished business, and it was actually being passed when it was interrupted by a conference report.

Mr. RICHARDSON. And the gentleman kindly yielded.

Mr. TERRY. Yes.

Mr. LITTLE. I think we ought to have a vote on the bill, but I yield again.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed bills and joint resolution of the following titles; in which the concurrence of the House was requested:

A bill (S. 2775) to authorize the Herndon and Aldie Railroad to construct a bridge over the Potomac River at or near the Great Falls;

A bill (S. 2630) authorizing and directing the Secretary of the Navy to donate condemned cannon to the Londonderry Soldiers' Monument Association, of Londonderry, N. H.;

A bill (S. 2483) donating condemned cannon and cannon balls to the New Hampshire Soldiers' Home;

A bill (S. 810) to amend the act entitled "An act granting pensions to the soldiers and sailors of the Mexican war, and for other purposes," approved January 29, 1887; and

Joint resolution (S. R. 89) authorizing and directing the Secretary of the Navy to appoint a board of three officers of the Navy to proceed to Navassa Island and Swamm Island, in the West Indies, and examine and report upon the practicability and advisability of establishing a coaling station for the United States Government on either of said islands.

ENROLLED BILLS SIGNED.

Mr. CROWTHER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles; when the Speaker signed the same:

A bill (H. R. 8321) to authorize the county of St. Louis, in the State of Minnesota, to build or authorize the building of a foot and wagon bridge across the St. Louis River, between Minnesota and Wisconsin, at a point near Fond du Lac, in said State of Minnesota; and

A bill (H. R. 7664) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes.

And then, on motion of Mr. DINGLEY (at 10 o'clock and 50 minutes p. m.), the House adjourned until to-morrow at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, Mr. LACEY, from the Committee on the Public Lands, to which was referred the veto message of the President of the United States on the bill of the House (H. R. 4804) entitled "An act to amend subdivision 10 of section 2238 of the Revised Statutes of the United States," reported the same with the recommendation that said bill do pass, the objection of the President to the contrary notwithstanding, accompanied by a report (No. 2287); which said veto message, bill, and report were referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS.

Under clause 2 of Rule XIII, Mr. GRAFF, from the Committee on Claims, to which was referred the bill (S. 3269) entitled "An act to pay the Richmond Locomotive and Machine Works its claim for damages and losses incurred in the construction of the armored battle ship *Texas*," reported the same (Report No. 2286); which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, MEMORIALS, AND RESOLUTIONS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials of the following titles were introduced and severally referred as follows:

By Mr. OWENS: A bill (H. R. 9444) to establish a cavalry post in Fayette County, Ky.—to the Committee on Military Affairs.

By Mr. JOY: A bill (H. R. 9445) amending an act to authorize construction of certain bridges—to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 9446) amending "An act authorizing the construction of a bridge over the Mississippi River at St. Louis, Mo."—to the Committee on Interstate and Foreign Commerce.

By Mr. KIEFER (by request): A bill (H. R. 9448) to reform the currency of the United States and insure its integrity—to the Committee on Ways and Means.

By Mr. PAYNE (by request): A resolution (House Res. No. 423) to pay James S. Cotton for hauling Congressional seeds from railroad station to House post-office and residences of members—to the Committee on Accounts.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 9440) for the relief of Cyrus Allen; and the same was referred to the Committee on Pensions.

PRIVATE BILLS, ETC.

Under clause 1 of Rule XXII, private bills of the following titles were presented and referred as follows:

By Mr. APSLEY: A bill (H. R. 9449) for the relief of Egbert Stricksma—to the Committee on Claims.

By Mr. BARTLETT of New York: A bill (H. R. 9450) removing the charge of desertion from the naval record of Philip Treacy, or Tracy—to the Committee on Naval Affairs.

By Mr. BERRY: A bill (H. R. 9451) for the relief of R. F. Harrison—to the Committee on Claims.

By Mr. BRODERICK: A bill (H. R. 9452) granting a pension to Mary C. Williams—to the Committee on Invalid Pensions.

By Mr. CATCHINGS: A bill (H. R. 9453) for the relief of Alice Jordan, of Vicksburg, Miss.—to the Committee on War Claims.

Also, a bill (H. R. 9454) for the relief of N. B. and Mrs. E. A. Lanier, of Warren County, Miss.—to the Committee on War Claims.

By Mr. COX: A bill (H. R. 9455) to carry out the findings of the Court of Claims in the case of Lucius Hough—to the Committee on War Claims.

By Mr. CUMMINGS: A bill (H. R. 9456) for the relief of John Fox—to the Committee on Naval Affairs.

By Mr. HURLEY: A bill (H. R. 9457) for the relief of Mrs. Annie F. Wilson—to the Committee on Claims.

By Mr. MAGUIRE: A bill (H. R. 9458) granting a pension to Daniel Connors—to the Committee on Invalid Pensions.

By Mr. McCREARY of Kentucky: A bill (H. R. 9459) for the relief of W. G. Anderson—to the Committee on War Claims.

By Mr. SORG: A bill (H. R. 9460) to remove the charge of desertion from the record of Dennis Cain, Company I, Forty-fourth Ohio Infantry—to the Committee on Military Affairs.

By Mr. SOUTHWICK: A bill (H. R. 9461) to pension Roxanna Early Macfarlane and Robert Macfarlane—to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. APSLEY: Petition of Egbert Stricksma, to accompany House bill for his relief—to the Committee on Claims.

By Mr. BARTLETT of New York: Petition of Mary Treacy, to accompany House bill for the removal of the charge of desertion from the naval record of her late husband, Philip Treacy, late landsman, United States Navy, and granting him an honorable discharge—to the Committee on Naval Affairs.

By Mr. CUMMINGS: Paper to accompany House bill for the relief of John Fox—to the Committee on Naval Affairs.

By Mr. FARIS: Affidavits and papers to accompany House bill No. 2368, to correct the military record of John H. Stearns—to the Committee on Military Affairs.

By Mr. KNOX: Papers to accompany House bill No. 2228, to correct the military record of Lawrence Kennedy—to the Committee on Military Affairs.

By Mr. McCREARY of Kentucky: Petition of J. J. McKinney for increase of pension—to the Committee on Invalid Pensions.

By Mr. OVERSTREET: Petition of R. R. Shiel & Co. and 70 other citizens of Indianapolis, Ind., favoring the passage of House bill No. 260, to increase the pay of letter carriers—to the Committee on the Post-Office and Post-Roads.

By Mr. SCRANTON: Petition of Electric City Lodge, No. 230, International Association of Machinists, of Scranton, Pa., asking investigation of grievances of workmen at United States navy-yards and arsenals—to the Committee on Naval Affairs.

By Mr. SORG: Paper to accompany House bill to remove the charge of desertion from the record of Dennis Cain—to the Committee on Military Affairs.

SENATE.

THURSDAY, *June 11, 1896.*

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

On motion of Mr. MITCHELL of Wisconsin, and by unanimous consent, the reading of the Journal of yesterday's proceedings was dispensed with.

PAY OF LETTER CARRIERS.

Mr. HALE. I wish to withdraw a motion which I entered last night to reconsider the vote by which the bill (S. 3058) to increase the pay of letter carriers was passed.

The VICE-PRESIDENT. The motion is withdrawn.

EMPLOYMENT OF ALIENS IN EXECUTIVE DEPARTMENTS.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, in response to a resolution of the 9th ultimo, a statement as to the aliens employed in the Department of the Interior; which was ordered to lie on the table and to be printed.

MRS. MARTHA M. GIBSON.

The bill (H. R. 8159) to pension Mrs. Martha M. Gibson was read twice by its title.

Mr. SHERMAN. I ask that the bill be put upon its passage.

Mr. HAWLEY. May I suggest to the Senator from Ohio that this is a House bill, and——

Mr. SHERMAN. It is a House bill, proposing to pension General Gibson's widow.

Mr. HAWLEY. I know; it is all right. It is rather presuming in me to venture a suggestion to a Senator so much more experienced, but the passage of this bill has been secured through the other House, and now does the Senator think there is a good chance to get it signed at this late hour?

Mr. SHERMAN. I think so. No one, I think, was better known than General Gibson. He was a very distinguished officer and a very distinguished lawyer. He left his family dependent. I ask for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill. It proposes to place on the pension roll the name of Martha M. Gibson, widow of William H. Gibson, late colonel of the Forty-ninth Regiment Ohio Volunteer Infantry and brevet brigadier-general United States Volunteers, and to pay her a pension at the rate of $50 per month.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The VICE-PRESIDENT (after having called through the order of routine business). The morning business is closed. The Calendar under Rule 8 is in order.

Mr. COCKRELL. I suggest that the Senate take a recess, subject to the call of the Vice-President.

Mr. PLATT. I do not think that on the last day of the session, with very few Senators in the Chamber, it is worth while to go to the Calendar.

Mr. FAULKNER. I think it was contemplated that nothing should be done this morning, and therefore very few are present.

Mr. COCKRELL. Let the Senate be in recess, subject to the call of the Vice-President, so that he can come in and sign enrolled bills at any time.

Mr. ALLISON. I suggest that we postpone taking a recess for a few minutes. I think the District of Columbia appropriation bill will be here very soon.

Mr. COCKRELL. A recess could be taken with the Senate constructively in session, so as to enable the presiding officer to come in and sign the bill.

Mr. PLATT. Here it is.

The VICE-PRESIDENT. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the Speaker of the House had signed the enrolled bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes; and it was thereupon signed by the Vice-President.

EXECUTIVE SESSION.

Mr. HAWLEY. There is a little executive business to be transacted. It will take only a few minutes, perhaps. I move that the Senate proceed to the consideration of executive business.

Mr. ALLISON. That is a wise motion.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After ten minutes spent in executive session the doors were reopened.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles, and referred to the Committee on Forest Reservations and the Protection of Game:

A bill (H. R. 119) to protect and administer public forest reservations; and

A bill (H. R. 4058) to set apart a portion of certain lands in the State of Washington, now known as the Pacific Forest Reserve, as a public park, to be known as the Washington National Park.

The following bills were severally read twice by their titles, and referred to the Committee on Commerce:

A bill (H. R. 2663) to amend the laws relating to navigation; and

A bill (H. R. 5482) authorizing the Cleveland Bridge Company to construct a bridge across the Arkansas River between Pawnee County, Okla., and the Osage Indian Reservation.

The following bills were severally read twice by their titles, and referred to the Committee on Claims:

A bill (H. R. 4538) for the relief of John Keefe; and

A bill (H. R. 8250) for the relief of William Gemmill.

The following bills were severally read twice by their titles, and referred to the Committee on Public Lands:

A bill (H. R. 9123) to prevent forest fires on the public domain; and

A bill (H. R. 9345) to enable certain persons in the State of Mississippi to procure title to public lands.

The bill (H. R. 1256) for the relief of Henry A. Webb was read twice by its title, and referred to the Committee on Finance.

The bill (H. R. 7500) to grant a pension to Mrs. Keturah Wilson, widow of James Wilson, deceased, was read twice by its title, and referred to the Committee on Pensions.

The bill (H. R. 8443) to amend section 4878 of the Revised Statutes relating to burials in national cemeteries was read twice by its title, and referred to the Committee on Military Affairs.

The bill (H. R. 8886) for the relief of Hiram T. Corum and Silas W. Davis, of Oregon, was read twice by its title, and referred to the Committee on Indian Affairs.

The bill (H. R. 9149) to regulate the establishment of submarine telegraphic cable lines or systems in the United States was read twice by its title, and referred to the Committee on Foreign Relations.

PROPOSED RESTRICTION OF IMMIGRATION.

Mr. PLATT. Mr. President, the bill (H. R. 7864) to amend the immigration laws of the United States was the unfinished business until the day before yesterday, when it was displaced by a motion to take up the bill to regulate procedure in the matter of contempts of court. I do not think it was the intention of the Senator from Massachusetts [Mr. LODGE], who had the immigration bill in charge, that it should be displaced except temporarily, and therefore I ask unanimous consent that it may be placed on the Calendar to go over until the next session as the unfinished business.

The VICE-PRESIDENT. The Senator from Connecticut asks unanimous consent that the immigration bill be placed on the Calendar as the unfinished business for consideration at the next session. Is there objection? The Chair hears none, and it is so ordered.

ENROLLED BILL SIGNED.

At 12 o'clock and 25 minutes p. m. a message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the Speaker of the House had signed the enrolled bill (H. R. 8159) to pension Mrs. Martha M. Gibson; and it was thereupon signed by the Vice-President.

DISTRICT CHARITIES AND REFORMATORY INSTITUTIONS.

The VICE-PRESIDENT appointed (in pursuance of authority granted and duly imposed upon the presiding officer of the Senate by the provisions of the act making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes) Mr. HARRIS, Mr. FAULKNER, and Mr. MCMILLAN members on the part of the Senate of the Joint Select Committee to make Investigations of the Charities and Reformatory Institutions of the District of Columbia.

PETITION.

Mr. COCKRELL presented a petition of the board of directors of the Free Public Library of St. Louis, Mo., praying for the passage of the so-called supplementary document bill; which was referred to the Committee on Printing.

PROPOSED RECESS.

Mr. CANNON (at 12 o'clock and 47 minutes p. m.). I move that the Senate take a recess until 2 o'clock.

Mr. HAWLEY. I would rather have the advice of the chairman of the Committee on Appropriations upon the subject. We are perfecting messages and transacting business of that sort all the while.

Mr. SHERMAN. I think we had better stay here.

Mr. HAWLEY. If the Senator will permit me, I suggest that he withdraw his motion, for the present at any rate.

Mr. CANNON. I will withdraw the motion until the appearance of the chairman of the Committee on Appropriations.

The VICE-PRESIDENT. The motion is withdrawn.

At 12 o'clock and 49 minutes p. m. Mr. ALLISON entered the Chamber.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had passed the bill (S. 2415) for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased; in which it requested the concurrence of the Senate.

NOTIFICATION TO THE PRESIDENT.

Mr. SHERMAN submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That a committee of two Senators be appointed by the Chair, to join a similar committee appointed by the House of Representatives, to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn, unless the President has some other communication to make to them.

The VICE-PRESIDENT appointed Mr. SHERMAN and Mr. SMITH as the committee.

MESSAGE FROM THE HOUSE.

At 1 o'clock and 7 minutes p. m., a message from the House of Representatives, by Mr. W. J. BROWNING, its Chief Clerk, announced that the House had appointed Mr. DINGLEY, Mr. CANNON, and Mr. SAYERS a committee on the part of the House to join such committee as had been appointed by the Senate to wait upon the President of the United States and to inform him that Congress, having finished its business, was ready to adjourn.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (S. 2415) for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased; and it was thereupon signed by the Vice-President.

RECESS.

Mr. ALLISON (at 1 o'clock and 20 minutes p. m.). I move that the Senate take a recess until 3 o'clock.

The motion was agreed to; and at the expiration of the recess the Senate reassembled.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. PRUDEN, one of his secretaries, announced that the President had on the 10th instant approved and signed the following acts and joint resolutions:

An act (S. 2490) to authorize the Secretary of War to improve and maintain the public roads within the limits of the national park at Gettysburg, Pa.;

An act (S. 1306) to authorize and encourage the holding of a transmississippi and international exposition at the city of Omaha, in the State of Nebraska, in the year 1898;

An act (S. 2412) to make the city of Santa Barbara, county of Santa Barbara, State of California, a subport of entry;

An act (S. 2783) to establish a life-saving station on the coast of New Hampshire or Massachusetts between the Hampton and the Merrimac rivers;

An act (S. 1767) to provide subports of entry and delivery in the State of Florida;

An act (S. 3206) to grant a right of way through the new Fort Bliss Military Reservation to the El Paso and Northeastern Railroad Company;

An act (S. 768) for the relief of James A. Moore;

A joint resolution (S. R. 138) for the relief of James P. Veach; and

A joint resolution (S. R. 161) authorizing the Secretary of the Treasury to place a bronze tablet or inscription on the Government building now being erected in Detroit, Mich.

The message also announced that the President of the United States had on this day approved and signed the following bills and joint resolution:

An act (S. 2943) to authorize the construction of a bridge across the Warrior River by the Mobile and Ohio Railroad Company;

An act (S. 2944) to authorize the construction of a bridge across the Cahaba River, in Bibb County, Ala., by the Mobile and Ohio Railroad Company;

An act (S. 2945) to authorize the construction of a bridge across the Alabama River by the Mobile and Ohio Railroad Company;

An act (S. 3170) to authorize the Butler and Pittsburg Railroad Company to construct a bridge across the Allegheny River;

An act (S. 1011) for the relief of Capt. James Regan, United States Army;

An act (S. 1853) for the relief of Edward Rice; and

A joint resolution (S. R. 149) extending the benefits of sections 1426 and 1573 of the Revised Statutes to all enlisted persons in the Navy.

EXECUTIVE SESSION.

Mr. HARRIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After three minutes spent in executive session the doors were reopened.

NOTIFICATION TO THE PRESIDENT.

Mr. SHERMAN, from the committee appointed to wait upon the President of the United States and inform him that unless he may have some further communication to make Congress is ready to adjourn, reported that they had performed the duty assigned them, and that the President had replied that he had nothing further to communicate.

THANKS TO THE PRESIDENT PRO TEMPORE.

Mr. HARRIS. Mr. President, I offer the resolution which I send to the desk, and I ask the unanimous consent of the Senate that it be now considered.

The VICE-PRESIDENT. The resolution submitted by the Senator from Tennessee will be read.

The Secretary read as follows:

Resolved, That the thanks of the Senate are hereby tendered to Hon. WILLIAM P. FRYE, President pro tempore of the Senate, for the courteous, dignified, and able manner with which he has presided over its deliberations during the present session.

The VICE-PRESIDENT. The question is upon agreeing to the resolution.

The resolution was unanimously agreed to.

THE LEWIS RANGE AND POSITION FINDER.

The PRESIDING OFFICER (Mr. MITCHELL of Oregon in the chair) laid before the Senate a communication from the Secretary of War, transmitting, in response to a resolution of the 10th instant, a statement of the record of the action of the range-finder board and the Board of Ordnance and Fortification in relation to the Lewis range and position finder, etc.; which, on motion of Mr.

DUBOIS, was, with the accompanying papers, referred to the Committee on Coast Defenses, and ordered to be printed.

THANKS TO THE VICE-PRESIDENT.

Mr. ALLISON. Mr. President, I offer the resolution which I send to the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be read.

The Secretary read the resolution, as follows:

Resolved, That the thanks of the Senate are hereby tendered to Hon. ADLAI E. STEVENSON, Vice-President, for the dignified, impartial, and courteous manner with which he has presided over its deliberations during the present session.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was unanimously agreed to.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. CHAPELL, one of its clerks, announced that the House had passed a bill (H. R. 5782) granting an increase of pension to Mrs. Anna Wedel; in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED.

The bill (H. R. 5782) granting an increase of pension to Mrs. Anna Wedel was read twice by its title, and referred to the Committee on Pensions.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. CHAPELL, one of its clerks, announced that the House had passed the following bills; in which it requested the concurrence of the Senate:

A bill (H. R. 94) increasing the pension of Melancthon McCoy, of Company K, One hundred and forty-eighth Illinois Infantry; and

A bill (H. R. 7740) granting an increase of pension to Lewis Keiser.

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (H. R. 94) increasing the pension of Melancthon McCoy, of Company K, One hundred and forty-eighth Illinois Infantry; and

A bill (H. R. 7740) granting an increase of pension to Lewis Keiser.

FINAL ADJOURNMENT.

The hour of 4 o'clock having arrived,

The VICE-PRESIDENT said:

SENATORS: I am deeply touched by the resolutions personal to myself adopted by the Senate. It has been my earnest endeavor impartially to execute the rules prescribed for the guidance of this body. For the aid you have so generously given me in the discharge of the duties that pertain to this office, as well as for the courtesy uniformly shown me, I am profoundly grateful.

And now, wishing each of you a safe return to home and constituents, it only remains for me to declare the first session of the Fifty-fourth Congress adjourned without day.

NOMINATIONS.

Executive nominations received by the Senate June 11, 1896.

PROMOTIONS IN THE ARMY.

Subsistence Department.

Lieut. Col. William Hemphill Bell, assistant commissary-general of subsistence, to be assistant commissary-general of subsistence with the rank of colonel, June 10, 1896, vice Wilsow, retired from active service.

Maj. William Hoit Nash, commissary of subsistence, to be assistant commissary-general of subsistence with the rank of lieutenant-colonel, June 10, 1896, vice Bell, promoted.

Capt. William Leidy Alexander, commissary of subsistence, to be commissary of subsistence with the rank of major, June 10, 1896, vice Nash, promoted.

PROMOTIONS IN THE NAVY.

Capt. George Dewey, to be a commodore in the Navy from the 28th of February, 1896, vice Commodore Thomas O. Selfridge, promoted.

Commander Francis A. Cook, to be a captain in the Navy from the 28th of February, 1896, vice Capt. George Dewey, promoted.

Lieut. Commander Charles T. Hutchins, to be a commander in the Navy from the 28th of February, 1896, vice Commander Francis A. Cook, promoted.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 11, 1896.

CONSUL.

Richard M. Bartleman, of Massachusetts, to be consul of the United States at Malaga, Spain.

PROMOTIONS IN THE ARMY.

Lieut. Col. William Hemphill Bell, assistant commissary-general of subsistence, to be assistant commissary-general of subsistence with the rank of colonel.

Maj. William Hoit Nash, commissary of subsistence, to be assistant commissary-general of subsistence with the rank of lieutenant-colonel.

Capt. William Leidy Alexander, commissary of subsistence, to be commissary of subsistence with the rank of major.

PROMOTIONS IN THE NAVY.

Capt. George Dewey, to be a commodore in the Navy, from the 28th of February, 1896, vice Commodore Thomas O. Selfridge, promoted.

Commander Francis A. Cook, to be a captain in the Navy, from the 28th of February, 1896, vice Capt. George Dewey, promoted.

Lieut. Commander Charles T. Hutchins, to be a commander in the Navy, from the 28th of February, 1896, vice Commander Francis A. Cook, promoted.

HOUSE OF REPRESENTATIVES.

THURSDAY, *June 11, 1896.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. HENRY N. COUDEN, offered the following prayer:

O Thou, who hast ever been our refuge and strength, and a very present help in trouble, we approach Thee with renewed confidence and faith, and devoutly pray for the continuation of Thy favors upon us as individuals and as a nation.

And now, O Lord, as the first session of the Fifty-fourth Congress is about to pass into history, let Thy blessing, we beseech Thee, be upon each member of this House, its officers and employees; and bring us together again at the appointed time without the loss of any, and in health and strength. Shed abroad Thy love in our hearts, and enable us to do Thy will, now and evermore, in the spirit of the Lord.

And now, may that peace which passeth understanding keep your hearts and minds; through Jesus Christ. Amen.

The Journal of the proceedings of the last session was read and approved.

ENROLLED BILL SIGNED.

Mr. CROWTHER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled the bill of the following title; when the Speaker signed the same:

A bill (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment the bill (H. R. 8159) to pension Mrs. Martha M. Gibson.

SENATE BILLS AND JOINT RESOLUTIONS REFERRED.

Under clause 2 of Rule XXIV, the following Senate bills and joint resolutions were taken from the Speaker's table and referred by the Speaker as follows:

A bill (S. 2775) to authorize the Herndon and Aldie Railroad to construct a bridge over the Potomac River at or near the Great Falls—to the Committee on Interstate and Foreign Commerce.

A bill (S. 810) to amend the act entitled "An act granting pensions to the soldiers and sailors of the Mexican war, and for other purposes," approved January 29, 1887—to the Committee on Pensions.

A bill (S. 2483) donating condemned cannon and cannon balls to the New Hampshire Soldiers' Home—to the Committee on Naval Affairs.

A bill (S. 2630) authorizing and directing the Secretary of the Navy to donate condemned cannon to the Londonderry Soldiers' Monument Association of Londonderry, N. H.—to the Committee on Naval Affairs.

Joint resolution (S. R. 89) directing and authorizing the Secretary of the Navy to appoint a board of three officers of the Navy to proceed to Navassa Island, in the West Indies, and examine and report upon the cost of establishing a coaling station for the United States Government on said island—to the Committee on Naval Affairs.

Joint resolution (S. R. 158) to amend an act to authorize the reassessment of water-main taxes in the District of Columbia, and for other purposes—to the Committee on the District of Columbia.

CONTESTED ELECTION CASE—HOPKINS VS. KENDALL, TENTH DISTRICT OF KENTUCKY.

Mr. LEONARD. Mr. Speaker, I ask consideration of the privileged resolution which I send to the Clerk's desk.

The Clerk read as follows:

Resolved, That the time heretofore granted to the parties in the contested election case of Hopkins *vs.* Kendall in which to take additional testimony be extended from August 1 to November 1, 1896.

Mr. RICHARDSON. Mr. Speaker, I should like to ask the gentleman if that is like the resolution that was adopted yesterday?

Mr. LEONARD. The resolution adopted yesterday gave until August 1. Both parties agree that that is too short a time, and this is for an extension of the time.

Mr. RICHARDSON. Is that agreeable to Mr. Kendall?

Mr. LEONARD. I think so.

Mr. RICHARDSON. He does not seem to be on the floor, but I am informed that it is acceptable to the gentleman from Kentucky [Mr. KENDALL]. There will be no objection.

The resolution was agreed to.

NAVASSA AND SWAN ISLANDS.

Mr. HULICK. Mr. Speaker, I wish to present for consideration of the House Senate joint resolution No. 89, that passed the Senate yesterday, and I ask unanimous consent that it be considered at this time. It is necessary to have it amended in the House and sent back to the Senate for passage as amended.

The SPEAKER. The Chair understands it is a matter of investigation.

Mr. HULICK. Yes, sir; it is for the appointment of a commission on the part of the Secretary of the Navy to determine the practicability of establishing a coaling station on the island of Navassa and the island of Swan in the West Indies. The amendment as adopted by the Senate is printed "Swamm," when it ought to be "Swan." I ask now for the present consideration of the resolution.

The SPEAKER. The gentleman will send it up, so that it can be reported to the House.

Mr. HULICK. I have a copy of it here. It is not yet sent from the Senate to the House; but it can be read from the RECORD.

The SPEAKER. It will have to be obtained from the committee.

Mr. DINGLEY. I would suggest that it is hardly possible to pass a Senate resolution unless we have the engrossed copy here.

The SPEAKER. We will have to have the engrossed copy of the joint resolution.

Mr. HULICK. Very well. I will wait until the resolution as engrossed is handed to the Clerk.

COMMITTEE TO NOTIFY THE PRESIDENT.

Mr. DINGLEY. Mr. Speaker, I send to the Clerk a resolution and move its adoption.

The Clerk read as follows:

Resolved, That a committee of three members of the House be appointed, to join a similar committee on the part of the Senate, to wait on the President and inform him that the two Houses of Congress are ready to adjourn, and respectfully to inquire if he has any further communication to make.

Mr. DINGLEY. I ask for a vote on agreeing to the resolution.

The question was taken; and the resolution was agreed to.

The SPEAKER. The Chair will appoint the gentleman from Maine, Mr. DINGLEY, the gentleman from Illinois, Mr. CANNON, and the gentleman from Texas, Mr. SAYERS, as the committee under the resolution just passed.

The Clerk has now the joint resolution presented by the gentleman from Ohio.

NAVASSA AND SWAN ISLANDS.

The Clerk read as follows:

A joint resolution (S. R. 89) directing and authorizing the Secretary of the Navy to appoint a board of three officers of the Navy to proceed to Navassa Island, in the West Indies, and examine and report upon the cost of establishing a coaling station for the United States Government on said island.

Resolved, etc., That the Secretary of the Navy be, and he is hereby, authorized and directed to appoint a board of three officers of the Navy and instruct said board to proceed to Navassa Island and Swamm Island, in the West Indies, and examine and report upon the practicability and advisability of establishing a coaling station for the United States Government on either of said islands.

Mr. HULICK. Mr. Speaker, I ask to have the joint resolution just read considered at this time.

Mr. RICHARDSON. Unanimous consent has not been given for its consideration.

The SPEAKER pro tempore (Mr. DINGLEY). The question is on giving uuanimous consent for the consideration of the joint resolution which has just been read. Is there objection?

Mr. RICHARDSON. Before unanimous consent is given I would be glad to have some explanation of what this resolution means.

Mr. HULICK. Mr. Speaker, the resolution has just been put in my hands this moment and I have not had time to give it much consideration, but the object of it is stated in the joint resolution itself. It is to authorize the Secretary of the Navy to appoint a board of three officers of the Navy, with instructions to proceed to the two islands of Navassa and Swan, in the West Indies, for the purpose of determining the practicability of establishing a coaling station on one or the other of those islands, and they are to report to Congress on that subject. The original resolution took into consideration the establishment of a coaling station on the island of Navassa, but an amendment was adopted by the Senate to include the island of Swan, and in the original resolution as it came from the Senate, instead of the words "Swan Island" being used, the word "Swamm" was used. Now, the amendment that I desire to offer is to strike out the word "Swamm" and insert the word "Swan" before the word "Island." I ask for the adoption of the resolution as it would thus be amended.

Mr. RICHARDSON. I would like to ask the gentleman if this measure is indorsed or recommended by the Secretary of the Navy or the Navy Department?

Mr. HULICK. Well, it has not been submitted to the committee for consideration. It was brought over here, and in view of the time being so short for the adoption of the resolution, it was not presented to our committee.

Mr. RICHARDSON. I did not ask if it had been referred to the Committee on Naval Affairs, but whether it had been recommended by the Navy Department or the Secretary of the Navy.

Mr. HULICK. I am not advised as to that. It has passed the Senate. It was favorably reported by the Naval Affairs Committee of the Senate.

Mr. McCREARY of Kentucky. Will the gentleman allow me to ask him a question?

Mr. HULICK. Certainly.

Mr. McCREARY of Kentucky. I desire to ask if any committee has reported this resolution?

Mr. HULICK. It was reported by the Committee on Naval Affairs of the Senate and adopted yesterday by the Senate.

Mr. McCREARY of Kentucky. It has not been considered by the House committee?

Mr. HULICK. It has not been considered by the Naval Committee of this House.

Mr. McCREARY of Kentucky. This Navassa Island is an island where a Baltimore company is operating. Both islands referred to in the bill are owned by private individuals, possibly by corporations.

Mr. HULICK. I am not advised as to that.

Mr. McCREARY of Kentucky. What is the area of the islands?

Mr. HULICK. Here is a map of the islands, if any gentleman wishes to see it. There is Navassa Island—about 3 miles in length.

Mr. McCREARY of Kentucky. I understand there are commercial interests on these islands. But what real necessity is there for a coaling station?

Mr. HULICK. Well, I can only reply in the remarks of the Senator who spoke on the resolution when it was adopted.

Mr. GIBSON stated, while this resolution was under consideration on yesterday:

The joint resolution has been carefully considered by the Committee on Naval Affairs, and it was decided to report it favorably. There was added, however, an amendment which increases the propriety of appointing the commission. The scope and advisability of the joint resolution are greatly enlarged by the amendment to the original joint resolution, including another island besides Navassa. The sole purpose of the inquiry is to determine which one of these two islands it is the more advisable should be selected as a coaling station for the United States.

Both of these islands are the property of citizens of the United States. The absolute necessity of establishing such a coaling station has been passed upon by the Navy Department. The object of the joint resolution is to enable a committee of three naval officers to visit the two islands and later on to report to the Secretary of the Navy their judgment with reference to the advisability of the enterprise.

It seems, therefore, to have been submitted to the Navy Department.

Mr. McCREARY of Kentucky. I desire to ask the gentleman this further question: As these islands are both owned by gentlemen living in Baltimore——

The SPEAKER pro tempore. Is there objection to the present consideration of the Senate joint resolution?

Mr. McCREARY of Kentucky. Mr. Speaker, I was asking a question in order to see whether I would object or not. As these islands are owned by gentlemen residing in Baltimore, and as they are honorable, well-informed gentlemen, one of whom I have known a good many years, we can get all the information we desire about these islands from those gentlemen who own the islands or from their agents, who are passing back and forth every few months, without incurring the expense authorized by the bill.

Mr. HULICK. I suggest to the gentleman that it would certainly be better to have a commission appointed who would not have any personal interest in making a report which, although it might be honest and impartial, nevertheless it would not be accepted by the public or by the Navy Department as coming from a disinterested source. The object of this joint resolution is simply to gain information in regard to the practicability and the

desirableness of establishing a coaling station on one or the other of the two islands named.

Mr. OWENS. May I ask the gentleman whether there is any allegation coming from any respectable source that there is any necessity for a coaling station at those islands?

Mr. HULICK. There seems to be.

Mr. OWENS. What is it? Where does it come from?

Mr. HULICK. The Navy Department has information that the location of a coaling station at these islands is advisable in the interests of our commerce; and the object of the resolution is, before taking any steps to establish such a station, to send out this commission of Government naval officers to make an examination and to report the result to the Department. It will not be an expensive matter, and the commission will undoubtedly be able to advise the Department as to the desirableness and practicability of establishing such a station.

Mr. OWENS. Do I understand the gentleman to state that he has information from the Navy Department that the establishment of such a station is desirable, or that the appointment of this commission is desired by the Department?

Mr. HULICK. Yes, sir. The proposition has been approved by the Navy Department, as I am advised.

Mr. DOCKERY. Has the gentleman a letter from the Secretary of the Navy approving this joint resolution?

Mr. HULICK. There is none appearing in the record. It is stated, however, that the joint resolution comes recommended by the Department.

Mr. DOCKERY. It seems to me that it comes in "questionable shape."

Mr. BOUTELLE. Mr. Speaker, I would like to inquire what is the proposition before the House?

Mr. WELLINGTON. If the gentleman will allow me, I will state that there has come from the Senate a report on this subject which I think gives the information that the House desires.

Mr. HULICK. Yes; there is a report here favoring the adoption of the joint resolution, with a map showing the location of the islands.

The SPEAKER pro tempore. Is there objection to the present consideration of the joint resolution?

Mr. BOUTELLE. I should like to know what the proposition before the House is.

Mr. HULICK. It is due to the honorable chairman of our Committee on Naval Affairs to state that my attention was called this morning to this joint resolution having been adopted on yesterday by the Senate and to the fact that an amendment was necessary. The chairman of the committee being absent at the moment, and the close of the session being so near, and fearing that he might not return to the Hall in time, I thought proper to bring the matter before the House, as requested.

Mr. BOUTELLE. What is the matter?

Mr. HULICK. It is a Senate joint resolution authorizing the Secretary of the Navy to appoint a board of three officers of the Navy to proceed to Navassa Island (there is an amendment including Swan Island) to examine and report upon the practicability of establishing a coaling station for the United States Government on the island. The urgency of the matter is that it is necessary to have the joint resolution amended so as to go back to the Senate and have the amendment acted upon there before adjournment.

Mr. BOUTELLE. Has the matter ever been considered by the House Naval Committee?

Mr. HULICK. It has not. The joint resolution came over here this morning, with the request that it be brought before the House at this time, and in the absence of the chairman I was asked to present it.

Mr. DOCKERY. Do I understand that the Committee on Naval Affairs of the House has not considered this subject?

Mr. HULICK. It has not.

Mr. BOUTELLE. Mr. Speaker, I know nothing about this measure and I do not know that any of my colleagues know anything about it. It seems to me that it is a matter that ought to be considered by the Committee on Naval Affairs, and I hope my colleague will not press it at this time.

Mr. HULICK. I knew nothing about it until it was presented to me this morning.

The SPEAKER pro tempore. Does the gentleman withdraw the resolution?

Mr. HULICK. If there is objection to it I will not press it.

Mr. BOUTELLE. I think it is due to the committee and to the House that the matter should be examined by the Committee on Naval Affairs before any action is taken.

Mr. WELLINGTON. In the Senate the Committee on Commerce considered the matter. The Naval Committee does not appear to have had anything to do with it.

Mr. HULICK. No, sir; the Committee on Commerce did not consider this resolution. That report was concerning the establishment of a light-house and not for a coaling station. However, I withdraw the request for the consideration of the joint resolution at this time.

THANKS TO THE SPEAKER.

Mr. TURNER of Georgia. Mr. Speaker, I offer the resolution which I send to the desk.

The resolution was read, as follows:

Resolved, That the thanks of this House are due, and are hereby tendered, to Hon. THOMAS B. REED, Speaker of the House of Representatives, for the ability, efficiency, and strict impartiality with which he has discharged the arduous duties of his office during the present session of Congress.

[Applause.]

Mr. DOCKERY. Let us have a rising vote, Mr. Speaker.

The SPEAKER pro tempore (Mr. DINGLEY). The question is on the adoption of the resolution presented by the gentleman from Georgia [Mr. TURNER] and just read by the Clerk. Those in favor of the adoption of the resolution will please rise.

All the members present rose.

The SPEAKER pro tempore. The resolution is agreed to by a unanimous vote. [Applause.]

ENROLLED BILL SIGNED.

Mr. CROWTHER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled a bill of the following title; when the Speaker signed the same:

A bill (H. R. 8159) to pension Mrs. Martha M. Gibson.

B. J. VAN VLECK.

Mr. JENKINS. Mr. Speaker, I ask unanimous consent for the immediate consideration of Senate bill No. 2415, for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased.

The bill was read, as follows:

Be it enacted, etc., That the Treasurer of the United States shall pay, out of any money in his hands not otherwise appropriated, to B. J. Van Vleck, administrator of Henry Van Vleck, deceased, or to his duly authorized attorneys in fact, the sum of $4,520.20, being the amount due said Henry Van Vleck at the time of his death as a balance on account of extra work done on the locks of the St. Marys Falls Canal, Michigan, with interest thereon from October 2, 1882, the date of approval of said claim by the Secretary of War.

The SPEAKER pro tempore. Is there objection to the present consideration of this bill?

Mr. BLUE. Reserving the right to object, I should like to hear something about this case.

The SPEAKER pro tempore. The gentleman from Kansas [Mr. BLUE] reserves, until an explanation has been made, the right to object.

Mr. JENKINS. I wish to say to my friend from Kansas [Mr. BLUE] and any other gentlemen who may feel interested in this case that the bill provides for the payment of the sum mentioned to the administrator of Henry Van Vleck, deceased, on account of a contract that was made between Van Vleck and the United States for some work upon the Soo Canal. Mr. Van Vleck, when his accounts were presented, insisted that there was due him some $24,000; but finally it was arranged between him and the Government that only $4,500—the sum mentioned in the bill—should be paid. Before payment was made, however, Mr. Van Vleck died; and the Government held that payment could not be made to any other person than the administrator of the estate. As appears in the report, the War Department has declared that in law and equity this amount is due and should be paid. The claim has met the unanimous approval of the Committee on Claims of this House, as well as of the similar committee in the Senate; and the bill has been passed by the Senate unanimously. The beneficiary, the widow of the man to whom this money was originally due, is now 70 years of age. The amount has been due since 1876. I hope this statement will satisfy my friend from Kansas.

Mr. LINNEY. Has there been any final settlement of the estate between the administrator and the distributees?

Mr. JENKINS. Yes, sir.

Mr. DOCKERY. Let us hear the report.

Mr. BLUE. Under what Department of the Government was this work done?

Mr. JENKINS. The War Department.

Mr. BLUE. What does that Department say about the claim?

Mr. JENKINS. The Department says that in law and equity it should be paid.

Mr. BLUE. I should like to hear the statement of the War Department.

Mr. JENKINS. It is a part of the report.

The report (by Mr. MINOR of Wisconsin) was read, as follows:

The Committee on Claims, to whom was referred the bill (H. R. 2687) for the relief of B. J. Van Vleck, administrator, having had the same under consideration, beg leave to submit the following report, which was made to the Fifty-first, Fifty-second, and Fifty-third Congresses, which we adopt:

[House Report No. 790, Fifty-second Congress, first session.]

The Committee on Claims, to whom was referred the bill (H. R. 4311) for the relief of B. J. Van Vleck, administrator, having had the same under consideration, beg leave to submit the following report:

This claim was before the Committee on Claims of the Fifty-first Congress and was favorably reported by said committee in said Congress, which report so fully covers the facts in the case that your committee reproduce it entire and adopt it as their report.

[House Report No. 1330, Fifty-first Congress, first session.]

The object of the bill is to pay the claimant the sum of $4,520.20, being a balance alleged to be due for extra work on the locks of the St. Marys Falls Canal, in Michigan. The committee addressed the War Department for information and received in reply information as follows:

"WAR DEPARTMENT, *Washington, March 22, 1890.*

"SIR: I return herewith House bill 4983, for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased, referred to this Department on the 4th instant, and invite your attention to the inclosed letter from the Chief of Engineers, dated the 20th instant, and a report on this subject from Col. O. M. Poe, Corps of Engineers, dated the 17th instant, which contains all the information of record in his office in this claim.

"Very respectfully,

"REDFIELD PROCTOR,
"Secretary of War.

"Hon. W. G. LAIDLAW,
"Chairman Committee on Claims, House of Representatives."

"OFFICE OF THE CHIEF OF ENGINEERS,
"UNITED STATES ARMY,
"Washington, D. C., March 20, 1890.

"SIR: I have the honor to return herewith letter of the 4th instant, from the chairman of the Committee on Claims of the House of Representatives, requesting information touching propriety of passage of House bill 4983, Fifty-first Congress, first session, 'A bill for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased,' and beg to say that the papers were referred to Col. O. M. Poe, Corps of Engineers, the officer at present in charge of the St. Marys Falls Canal. Colonel Poe's report is submitted herewith and contains all the information in his office concerning the matter.

"Very respectfully, your obedient servant,

"THOS. LINCOLN CASEY,
"Brigadier-General, Chief of Engineers.

"Hon. REDFIELD PROCTOR,
"Secretary of War."

"UNITED STATES ENGINEER OFFICE,
"24 West Congress street, Detroit, Mich., March 17, 1890.

"SIR: Concerning House bill 4983, current session, entitled 'A bill for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased,' transmitted to me by indorsement, dated Office Chief of Engineers, March 10, 1890, for report, I have to submit the following, viz:

"From the records of this office it appears that under date of October 2, 1880, Major Weitzel, the representative of the Government in the Van Vleck contract of May 11, 1876, reported to the Chief of Engineers upon a claim for extra compensation for work done and materials furnished for the improvement to which that contract relates. The amount of the claim as presented was $23,280.05, and after a full investigation and consideration of the several items of the claim Major Weitzel expressed the opinion that the claimant was entitled to the sum of $4,520.20.

"Under date of November 23, 1880, the Chief of Engineers transmitted to Major Weitzel, for his information and guidance, a copy of an opinion of the Judge-Advocate-General of the Army on the case, in which this officer stated as his conclusion 'that the amount approved may legally be paid the contractor as a payment within the terms and equity of the contract.' In this conclusion the War Department concurred. Based upon this action of the Judge-Advocate-General and of the Secretary of War the Chief of Engineers instructed Major Weitzel that the sum of $4,520.20 is authorized to be paid to Mr. Van Vleck, and you will please settle with him on the basis of your report. While the claim was still under consideration by Major Weitzel—that is to say, prior to his report of October 2, 1880—certain persons who asserted an interest in the matter appealed to him for information in regard to the progress being made in the settlement of the claim. Among these were Mr. James Bellows and Mr. J. Lord.

"This came to the knowledge of Van Vleck, who, under date of May 24, 1880, informed Major Weitzel that he had not given Mr. Bellows any authority to go to Detroit and settle the matter. At the same time he formally notified Major Weitzel that he would not recognize any settlement or payment of moneys on the claim to anyone but 'myself,' and revoked all powers of attorney theretofore given by him to any person whatsoever to act for or represent him in any manner, or to receive any moneys due him arising out of the execution of his contract for furnishing cut stone for St. Marys Falls Canal improvement. From this and other similar records I infer that there was some controversy as to the person or persons who were to be ultimately benefited by the payment of whatever sum should be found due the contractor on final settlement.

"The immediate effect of this controversy was, doubtless, to put Major Weitzel on his guard, and when the amount which was equitably due upon the claim had been determined, and its payment authorized by the War Department, he sought to obtain Mr. Van Vleck's own signature to proper vouchers. I am informed—but with what degree of accuracy I do not know—that when the matter had reached this stage Mr. Van Vleck was absent from the United States, and it was impracticable to complete the vouchers. Under date of March 25, 1881, Mr. J. Lord, of Pittsford, N. Y., wrote Major Weitzel as follows:

"'I learn there is a balance due on the Van Vleck contract for furnishing the cut stone for St. Marys Falls Canal lock amounting to about $4,520.20. Will you pay the balance to me on the Van Vleck power of attorney which is filed in the War Department?'

"To this question Major Weitzel made reply under March 28, 1881, as follows:

"'I have received your letter of March 25, 1881. I am authorized by a letter from the Chief of Engineers, dated November 23, 1880, to pay Mr. Henry Van Vleck the sum of $4,520.20 for extra work on his contract. You have filed a power of attorney, which I have. He has filed a letter denying that he ever authorized anyone to draw money for him. He has not called for his balance. I do not know how I could safely pay it to you.

"'If the accounting officers of the Treasury will pass the account, and I have an order from the Secretary of War to pay it to you, I suppose I would be safe.'

"I find upon the records here a copy of a communication dated June 4, 1881, from Major Weitzel to the Chief of Engineers, in which he gives a short but clear account of the case, incloses copies of papers (some of which are not on the records of this office), and asks instructions.

"While there is nothing of record to show directly that the matter was then referred to the accounting officers of the Treasury, yet there is found a copy of a decision dated July 21, 1881, by the Third Auditor of the Treasury, in which he expresses the opinion that the work done was not authorized as required by contract, and the claim, therefore, is outside its provisions and for unliquidated damages, and can not be entertained by the accounting officers of the Treasury.

"The claim was therefore disallowed by him, and the papers were referred to the Second Comptroller for his official action. The Second Comptroller concurred with the Third Auditor in disallowing the claim. The foregoing embodies all the information in this office bearing upon the claim and its present status. The whole may be summed up in a few words, viz:

"The War Department has recognized as both legal and equitable a claim to the extent of $4,520.20. The Treasury Department has held that the claim is neither legal nor equitable.

"The papers referred to me are herewith returned.

"All of which is respectfully submitted.

"O. M. POE,
"Colonel of Engineers, Brevet Brigadier-General, U. S. A.

"The CHIEF OF ENGINEERS, U. S. A., *Washington, D. C.*"

The foregoing are substantially the reports submitted to the Fifty-first, Fifty-second, and Fifty-third Congresses, and your Committee on Claims, after a careful and conscientious examination of a complete set of documents and papers in the case, find the facts as above set forth to be clearly established.

A summary of documents filed with the claim shows the following state of facts:

(1) Henry Van Vleck was the Government contractor for finishing stone used in the construction of the locks at St. Marys Falls Canal.

(2) That Major Weitzel was in charge of said work, and was the authorized agent of the United States Government for the prosecution and completion of said work.

(3) That it was found necessary during the progress of the work to change the plans and specifications for work and material.

(4) That Major Weitzel, as the legally constituted agent of the United States Government for the prosecution and completion of said work, did direct the said Henry Van Vleck to do additional and extra work from that contemplated in the original contract, and for such extra and additional work so directed to be done by the said Major Weitzel the said Henry Van Vleck was promised full and fair compensation, with 10 per cent added for superintendence.

(5) Compensation was promised by Major Weitzel, engineer in charge, who was by law and by direction of the War Department authorized to contract for this extra labor and material.

(6) That the said Henry Van Vleck did do and perform all work required of him by Major Weitzel, and to his entire satisfaction, as shown by a personal letter from that officer to the Chief of Engineers of the United States Army.

(7) That said work amounted to $4,520.20, which amount was allowed and by the War Department ordered paid to Henry Van Vleck.

(8) But before said Van Vleck could report to receive his check the auditing officers of the Treasury Department refused to pass the accounts, for the reason that the supplementary contract was not in writing, but was an oral contract made by Major Weitzel, who alone, as engineer in charge, was authorized to incur this additional expense of $4,520.20. The committee recommend the passage of the bill after being amended as follows:

Strike out all after the word "Michigan" in the tenth line of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of this bill?

Mr. WHEELER. Mr. Speaker, in my remarks the other day I called attention to the fact that our appropriations this year run up to $515,984,820.49, and if the Republicans succeed, as they seem to hope, in the election next November, they will control the Government during the last four months of the fiscal year, and in that event they will most probably spend the full amount appropriated and very probably in the next Congress will be asking for large deficiencies. The census of 1890 tells us that the expenditures of our State, county, district, and municipal organizations amounted that year to $569,252,634.

This sum added to the appropriations of this Congress would make the enormous aggregate of $1,085,237,454.49, a sum far exceeding the expenditures of any other Government on earth.

I will read some figures which I have prepared upon this subject:

The greatest amount of Government expenditures, next to those of the United States, are those of Russia, which amounted last year to $885,005,996. The expenses of France during the year 1893 were $690,184,119; of Great Britain in 1895, $469,592,105. Next comes Italy, whose governmental expenses in the year 1895–96 were $337,868,552. Then comes the German Empire, whose expenses in 1895–96 were $297,240,240; Spain, in 1894–95, $154,727,145.20; the Netherlands, 1894. 131,491,882 guilders; Belgium, 1893, $78,905,800; Portugal, 1892–93, $51,854,191; Sweden, 1896, $27,144,180; Denmark, 1895, $16,576,741; Switzerland, $15,918,000.

Mr. OWENS. What does the gentleman say our annual expenses are?

Mr. WHEELER. The annual expenses of our Government, Federal, State, county, and municipal, are now about $1,100,000,000.

Mr. OWENS. Then if this bill should be passed they would amount to $1,100,004,520. [Laughter.]

Mr. JENKINS. And 20 cents! [Renewed laughter.]

Mr. WHEELER. I regret that some of my friends do not seem to appreciate the gravity of the situation.

They do not seem to realize that to maintain our Government, Federal, State, municipal, etc., we are spending nearly $4,000,000 a day, and that the monarchical and imperial nations of Europe, which we have been accustomed to regard as very extravagant, are in fact expending much less than we do. It is true that those governments have some other expenses which do not appear in the figures I have given, in their various local organizations, such as counties, departments, cantons, etc., but with the exception of Germany none of the minor or subordinate governments incur expenditures which have any approximation or similitude to the expenses of the States, cities, and counties of our country. The kingdom of Prussia and other governments included in the German Empire of course expend considerable amounts of money, but every expenditure of the German Empire and all the governments of any character connected with it are very much less than the gross expenditures which are borne by the people of the United States.

In Russia and other governments I have named, the expenditures other than those I have mentioned are comparatively little,

and the figures I have read are substantially the cost of maintaining those governments. My friend, Mr. DINGLEY, the distinguished chairman of the Committee on Ways and Means, made a speech yesterday in which he insisted that the evils under which we are suffering could all be remedied by enacting laws to increase the revenues. That, of course, means an increase of taxation. In other words, the distinguished chairman of the Committee on Ways and Means would relieve the sufferings of an already overtaxed people by immediately proceeding to legislate so as to increase their burdens.

I desire to say with all the emphasis in my power that the evil is not that our revenues are not great enough, but the crushing evil under which we are suffering is the enormous expenditures of our Government. We expend to-day, in our Federal, State, city, and other governmental organizations, a sum greater than the entire value of the cotton crop, and the entire value of the wheat crop, and the entire value of the corn crop, and the entire value of the oat crop, and the entire value of the tobacco crop, all put together.

Bear in mind, this is not the profit on these crops which we spend, but the entire gross value which the farmers of the United States receive for all the cotton, wheat, corn, oats, and tobacco which they produce. If such enormous expenditures continue, bankruptcy and ruin must be the final result.

The SPEAKER pro tempore. The Chair suggests that the gentleman from Alabama [Mr. WHEELER] is proceeding by unanimous consent. There is nothing before the House.

Mr. WHEELER. I do not wish to detain the House longer. I desired before adjourning to admonish my fellow-members upon the matter, which is worthy of the most serious consideration. It is a matter of the most serious importance to all the laboring people of our land.

Mr. JENKINS. I wish to say to my friend from Alabama [Mr. WHEELER] that this is a just claim and is admitted to be such by the Department of the Government having knowledge of the facts. The War Department has said in the report just read that this claim ought to be paid. It does not make any difference what other amounts the Government may be expending or what other amounts it may owe. This Government is big enough to pay its just debts. If any further statement is deemed necessary in support of this bill, I yield to my colleague from Wisconsin [Mr. MINOR] who is a member of the Committee on Claims.

The SPEAKER pro tempore. Is there objection to the consideration of this bill?

Mr. BLUE. It appears that the gentleman from Wisconsin [Mr. MINOR] has given special attention to this case; I hope he will state the matter briefly.

Mr. MINOR of Wisconsin. Mr. Speaker, I made the report on this bill after a very careful examination of all the papers in the case; and I can assure the House they were quite voluminous. The facts, simply stated, are these: Mr. Van Vleck took a contract from the Government in 1876 to prepare and place in position the stone necessary for the locks at the St. Marys Falls Canal. The plans had been prepared by the Government, and the specifications submitted and, for the time being, approved by the engineer in charge of the work. But when they began the work of constructing the locks it was at once seen that the specifications and plans were insufficient, and that it would be advisable to change them and adopt another system. By changing the plans, increasing the size of the stone to be used, and adopting a different method of dressing it, it was ascertained that they could make the work much more satisfactory, more durable, and in every way more desirable to the Government. Major Weitzel, who was the officer in charge of the work, reported to General Poe, whose headquarters were at Detroit, being in charge of that division, as to the necessity for some change in the plans, and General Poe communicated with the Department at Washington, who approved of the change. Major Weitzel made a trip to the St. Marys Falls Canal, and while on board the steamboat stated in a conversation with Mr. Van Vleck that the Government had decided to change the plans of the work, and submitted to him the new plans and specifications. He said to him, "Now, if you will proceed with the work you shall have all that belongs to you as extra pay, and 10 per cent additional for the superintending of the work."

Now, let me say to the members of the House, what I presume most of them are aware of, that the Government reserves the right in such contracts to change the plans and specifications as the work progresses. The only difficulty about this matter was that the contract or change of contract was not in writing, and the law requires that such provision shall be in writing. But, being on a steamboat and no writing material convenient or at hand, it was necessarily a mere verbal contract, but was carried out faithfully and to the letter by the contractor. Major Weitzel recognized the fact that the contract, so far as its moral provisions are concerned, was absolutely binding upon him and binding upon the War Department, which recognized him as its representative.

The work was completed under the new contract, with the approval of General Poe and the Secretary of War, and when it was completed it was conceded by the officers in charge that the contractor had done the work well, that he had done it honestly, and had earned the money to which he was entitled by reason of the changed plans. The check was made out by General Weitzel and sent to him for the full amount of the work done. But in the meantime, Mr. Van Vleck, being a contractor by occupation, had gone down into Mexico to take a contract for the construction of a railroad, and as a consequence did not get possession of the check for several months. Before his return the account had been passed into the Treasury Department, and the Auditor refused to pay it for the reason that the supplemental contract was not in writing, and hence was technically contrary to the law.

Mr. BLUE. Is that all?

Mr. MINOR of Wisconsin. That is the exact condition of the case. [Cries of "Vote!" "Vote!"]

Mr. BLUE. I desired, Mr. Speaker, to understand this matter thoroughly before interposing objection or assenting to its consideration at this time. It seems, so far as the claim is concerned, that all the objection that exists against the payment depends solely upon the technical objection to this supplemental contract, which increased the work, that it was not reduced to writing.

Mr. MINOR of Wisconsin. That is all.

Mr. BLUE. But it is conceded that the Government gained the full benefit of the services of this man, his labor, and the material; and it is also apparent that this bill has come from the Senate, and if it is to be made available as an appropriation at this session of Congress it will have to be passed promptly.

Mr. MINOR of Wisconsin. Let me suggest to the gentleman that in the Fifty-first, Fifty-second, and Fifty-third Congresses this same bill was passed.

Mr. BLUE. So the bill, in the shape in which it is, is presented to Congress now for a final settlement of this claim. This supplemental contract was not in writing, which is alleged to be the only irregularity about it; but that has been condoned by the action of the Government itself, and has been taken out of the statutes of fraud, so to speak, and it appears to me that on the explanation of the gentleman from Wisconsin the claim is a fair one, and I do not care to interpose an objection to its consideration.

But, Mr. Speaker, I wish to say at the same time, as a member of the Appropriations Committee, that I must insist on making objections where bills are sought to be passed at this late hour in the session that carry large appropriations, with nearly all of the members absent. And I refer especially to bills which appear before the House for the first time and which have had no previous consideration in this body, appropriating considerable sums of money. It is not fair to the members who are here, and while withdrawing the objection to this particular bill, which seems to be meritorious on the statement made, I do not want it to be taken as a precedent for what I shall do with reference to other matters of a similar character.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

Mr. DOCKERY. It seems to me, Mr. Speaker, that at this late hour bills carrying large demands on the Treasury ought not to be offered, especially with the meager membership of the House that is now present. Although a strong sense of public duty may make it incumbent upon some member to object, under such circumstances it seems "ungracious" to do so. I hope, therefore, while I do not object in the present instance, that no other bills involving appropriations will be presented for consideration.

Mr. DALZELL. I think I can assure the gentleman from Missouri that none others will be presented.

There being no objection, the bill was considered, and ordered to a third reading; and being read the third time, it was passed.

ORDER OF BUSINESS.

Mr. OWENS. Mr. Speaker——

Mr. DALZELL. Mr. Speaker, I move that the House take a recess until 2 o'clock.

The question was submitted; and the Speaker pro tempore announced that the ayes seemed to have it.

Mr. OWENS and Mr. WHEELER demanded a division.

Mr. DALZELL. I hope the gentlemen will not insist upon that.

Mr. OWENS. I simply want recognition for the consideration of a small bill. I have troubled the House but very little.

Mr. DALZELL. With the present membership of the House, I do not think the gentlemen ought to insist upon that.

Mr. OWENS. I have tried but once during this session to get recognition, and I would like to have it on a very small matter. This is a bill which passed through our Pension Committee for the benefit of a bedridden Mexican soldier, helpless, with no estate——

Mr. DOCKERY. I hope the motion for a recess will be withdrawn to allow the gentleman to be recognized. This side of the House has had no recognition. The bill carries no appropriation, as I understand it.

Mr. DALZELL. I want to say to my friend from Kentucky that there are at least half a dozen gentlemen, to my knowledge, who are in precisely the same situation as he is, and who make the same appeal, but in the interest of wise legislation, which is no legislation at all at this time, there ought to be no hesitation about taking the recess.

Mr. McCREARY of Kentucky. I distinctly heard my colleague [Mr. OWENS] address the Chair twice before the gentleman from Pennsylvania was recognized.

The SPEAKER pro tempore. The Chair desires to say that the gentleman from Pennsylvania had notified him, long before the completion of the preceding matter, that he desired to make that motion.

Mr. McCREARY of Kentucky. But still my colleague [Mr. OWENS] had addressed the Speaker twice at the time that the gentleman from Pennsylvania made the motion.

Mr. WILLIS. I have a bill here myself, but I am willing to hold it in abeyance, for the reason stated.

Mr. WHEELER. I also have a bill.

Mr. DALZELL. I appeal to the gentleman from Kentucky to consider the fact that if he is recognized there ought to be half a dozen others recognized in the same way.

Mr. OWENS. There are very few members who have not passed bills. I have not passed one, nor had recognition for a single bill, and I have never objected to any bills being considered.

Mr. DALZELL. I hope the House will sustain this motion, under the circumstances.

The motion was agreed to.

Accordingly (at 12 o'clock and 40 minutes p. m.) the House took a recess until 2 o'clock p. m.

The recess having expired, the House, at 2 o'clock p. m., resumed its session.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced, in pursuance of the authority granted and duty imposed upon the presiding officer of the Senate by the provisions of the act making appropriations for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes, the presiding officer of the Senate had appointed Senators HARRIS, FAULKNER, and MCMILLAN members of the Joint Select Committee to make Investigations of the Charities and Reformatory Institutions of the District of Columbia.

The message also announced that the Senate had passed the following resolution:

Resolved, That a committee of two Senators be appointed by the Chair, to join a similar committee appointed by the House of Representatives, to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn unless the President has some other communication to make to them.

In compliance with the foregoing the Chair appointed Mr. SHERMAN and Mr. SMITH as said committee.

ENROLLED BILL SIGNED.

Mr. CROWTHER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled the bill (S. 2415) for the relief of B. J. Van Vleck, administrator of Henry Van Vleck, deceased; when the Speaker signed the same.

LEAVE TO WITHDRAW PAPERS.

By unanimous consent, on motion of Mr. KERR, leave was granted to withdraw from the files of the House, without leaving copies, the papers in the case of Andrew B. Keith, Fifty-fourth Congress, no adverse report having been made thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. STRAIT, indefinitely, on account of sickness.

To Mr. STEPHENSON, indefinitely, on account of sickness in his family.

To Mr. WARNER, indefinitely, on account of sickness.

To Mr. MCCORMICK, for four days, to attend a funeral.

To Mr. STRODE of Nebraska, for ten days, on account of sickness in his family.

To Mr. AVERY, for the remainder of this session, on account of sickness in his family.

MRS. ANNA WEDEL.

Mr. TAWNEY. Mr. Speaker, I ask unanimous consent for the consideration of the bill (H. R. 5782) granting an increase of pension to Mrs. Anna Wedel.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, directed to place upon the pension roll the name of Mrs. Anna Wedel, widow of the late Dr. Henry R. Wedel, assistant surgeon of the Fourth Minnesota Volunteer Infantry, at the rate of $50 a month, and to pay her a pension at that rate, in lieu of the pension she is now receiving, from and after the passage of this act.

The Committee on Invalid Pensions recommended the following amendments:

In line 7 strike out the word "fifty" and insert the word "twenty"; and in line 9 strike out the words "from and after the passage of this act."

Mr. TAWNEY. Mr. Speaker, I ask that the report of the committee, which is very brief, be read to the House.

The SPEAKER. The Clerk will read the report.

The report (by Mr. THOMAS) was read, as follows:

The Committee on Invalid Pensions, to whom was referred the bill (H. R. 5782) granting an increase of pension to $50 per month to Anna Wedel, widow of Dr. Henry R. Wedel, late assistant surgeon, Fourth Minnesota Volunteer Infantry, having carefully examined and considered the facts presented, respectfully report:

Dr. Henry R. Wedel served as assistant surgeon, Fourth Minnesota Volunteer Infantry, from September 11, 1862, to February 9, 1865, when he was mustered in as surgeon of said regiment, and served as such until June 15, 1865, when his resignation was accepted on account of family and business affairs, and he was honorably discharged. He filed a claim for pension April 8, 1887, but died April 24, 1887, before action was taken thereon.

The applicant was married to soldier October 30, 1865, and filed claim for pension June 24, 1887, which was rejected February 9, 1895, on the ground of no record and failure, after special examination, to show that soldier's alleged injury to spine or back was due to military service, or that death cause was due to service.

She filed claim under act of June 27, 1890, which was allowed from October 20, 1890, at $8 per month, and she is pensioned at that rate.

The testimony of six reputable citizens and neighbors filed with the committee shows that she is possessed of no property, real or personal, except her wearing apparel and household furniture and about $300 left her by her husband; that she is sick and requires the constant attendance of some other person, being unable to help herself, and that she has no income except her pension of $8 per month, and will soon be dependent upon public charity, as her means are fast being exhausted.

Dr. Franklin C. Staples and Dr. J. B. McGaughey also testify that Anna Wedel has been an invalid for more than twenty years, and that for more than two years last past, owing to anæmia, nerve exhaustion, dilatation of the stomach, and pulmonary hemorrhage, she has been almost constantly confined to her room—a great portion of the time to her bed—being unable to perform any manual labor and requiring the almost constant care and assistance of another person.

She is now well advanced in her fifty-fifth year, and has no income but her pension, the small sum received from life insurance being almost exhausted, thus rendering her nearly destitute. No reasonable hope of her recovery or improvement in health.

In view of these facts, your committee recommend the passage of the bill with the following amendments:

Strike out the word "fifty," in line 7, and insert "twenty" in place thereof.

Strike out all the printed bill after the word "receiving," in line 8.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The amendments of the committee were agreed to.

The bill as amended was ordered to be engrossed and read a third time; and it was accordingly read the third time, and passed.

HENRY F. THORNTON.

Mr. OWENS. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 1064) for the relief of Henry F. Thornton.

The bill was read, as follows:

Be it enacted, etc., That the Commissioner of Pensions be, and is hereby, directed to issue to Henry F. Thornton, late of First Virginia Volunteers in Mexican war, a certificate of pension at the rate of $25 per month, in lieu of certificate No. 9623 now held by said Thornton as a survivor of said war.

SEC. 2. That this act take effect from December 25, 1895.

The Committee on Pensions recommended the following amendments:

In line 6 strike out the words "twenty-five" and insert in lieu thereof the word "fifteen."

Strike out all of section 2.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. CROWTHER. I should like to have the report read.

The report (by Mr. COLSON) was read, as follows:

The Committee on Pensions, to whom was referred the bill (H. R. 1064) entitled "A bill for the relief of Henry F. Thornton," beg leave to submit the following report, and recommend that said bill do pass with amendments:

The claimant was a member of the First Virginia Volunteers, and served from December 2, 1847, to February 29, 1848, in the war with Mexico. He was granted the pension of $8 per month provided by the act of January 29, 1887, and this was subsequently increased to $12 per month under the act of January 5, 1893, upon his proving dependence and total disability.

The papers on file at the Pension Bureau show that Mr. Thornton is 71 years old, a sufferer from rheumatism and paralysis agitans, and generally in such a condition physically as to be wholly incapacitated for earning a support by manual labor. It is further shown that he has absolutely no property or source of income aside from his pension.

There are several precedents for the allowance of an increased rating to the wholly disabled and dependent pensioners of the Mexican war, and your committee believe that such precedents may be followed with propriety and justice in this case.

The following amendments are recommended: Strike out the word "twenty-five," in line 6, and substitute therefor the word "fifteen." Strike out the second section of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

Mr. OWENS. Mr. Speaker, I want to call attention to the bill and to the amendment. The bill, as I stated this morning, is for the relief of an old, bedridden Mexican soldier. As the report shows, he is a victim of paralysis and rheumatism, and utterly unable to do any physical labor. He is utterly without means of support, and in addition to himself there is his aged wife, who is also in no condition to perform any labor. He is now drawing a

pension of $12 per month. I introduced this bill, asking for $25 per month. The committee returned the bill with a report showing that he was utterly incapacitated from labor and that he is without means of support for himself or wife, but recommended an increase to $15 instead of $25. Of course I should not have thought of introducing a bill for an increase like that, and I ask the House to pass the bill as it was originally introduced, providing for an allowance of $25 per month. I ask the House to vote down the amendment.

Mr. COOKE of Illinois. What is the age of the soldier?

Mr. OWENS. He is over 70 years old—I think 72 years now. He is on a bed of sickness, from which he will probably never rise. The physicians think so.

Mr. DINGLEY. I hope the gentleman will not ask to raise the amount reported by the committee, but that he will let it stand as reported.

Mr. OWENS. That is only an increase of $3 a month.

Mr. DINGLEY. I think we had better not increase the amount over that reported by the committee. That would be a very unusual thing to do.

Mr. OWENS. The committee, as I understand, just took up the proposition that he was utterly unable to labor, and that he had no means of support for either himself or wife, and yet only increased the amount $3 per month!

Mr. DINGLEY. I presume the committee has reported the amount in accordance with a certain rule that they have established in other cases.

Mr. OWENS. All that there was before the committee were the facts of his service and the fact of his physical condition.

Mr. DINGLEY. While the amount is of no consequence, I dislike to increase it over the amount reported by the committee.

Mr. OWENS. The increase is of no consequence.

Mr. DINGLEY. The principle is one that I think we had better not undertake to modify. We had better simply do what the committee have recommended in the matter, since that is the increased amount they recommend. I hope the gentleman will not press his amendment to increase the amount, unless some reason be given beyond what has been stated.

Mr. THOMAS. Mr. Speaker, I will state that this bill was considered very carefully by the committee, and it was thought that $15 a month was adequate in consideration of the evidence that was presented to the committee, and I hope that the gentleman will not insist on increasing the amount over that reported by the committee.

Mr. OWENS. What rule was followed by the committee, I do not know. I do not think they took evidence as to whether that was enough.

Mr. THOMAS. I did not say that any particular rule was followed. That was the statement made by the gentleman from Maine. But the committee considered the case and came to this conclusion, and I shall be obliged to stand by the action of the committee.

Mr. OWENS. This is an increase of only $3 a month. In view of the peculiar condition in which this old man finds himself—on a bed of sickness from which, according to his physician, he will never rise again, and the condition of his wife—I do not think this House ought to stand on that amount and increase his pension only $3. Better not raise it at all.

The SPEAKER. The question is on agreeing to the amendments of the committee.

The question was taken; and the Speaker announced that the ayes seemed to have it.

Mr. OWENS. Division!

Mr. CROWTHER. That is on the amendments proposed by the committee.

Mr. THOMAS. I withdraw my objection.

Mr. OWENS. Mr. Speaker, I would as soon the House killed the bill as to pass it with an increase of $3.

The House divided on the question of agreeing to the committee amendments.

Mr. OWENS (pending the announcement). Mr. Speaker, I ask consent to withdraw the bill.

The SPEAKER. Without objection, the bill will be withdrawn.

There was no objection, and it was so ordered.

MELANCTHON M'COY.

Mr. HERMANN. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 94) increasing the pension of Melancthon McCoy, of Company K, One hundred and forty-eighth Illinois Infantry.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, directed to place on the pension roll the name of Melancthon McCoy, late of Company K, One hundred and forty-eighth Illinois Volunteer Infantry, and pay him at the rate of $25 per month, in lieu of the pension he is now receiving.

Mr. HERMANN. Mr. Speaker, let the report also be read for the information of the House.

The report (by Mr. PICKLER) was read, as follows:

The Committee on Invalid Pensions, to whom was referred the bill (H. R. 94) granting an increase of pension to Melancthon McCoy, having carefully considered the facts in the case, respectfully report:

Claimant enlisted February 11, 1865, and was honorably discharged September 5, 1865.

It appears that on July 4, 1868, he was seriously injured by the premature explosion of a cannon, one of his eyes being blown out and the sight of the other greatly impaired, since which time he has become blind to such an extent as to require some one to lead him. In addition to this, he lost several fingers and otherwise crippled his hands, one arm being entirely useless.

July 9, 1890, he made application under the act of June 27 of that year, and was allowed the maximum rate thereunder. He has a wife and child depending upon him, and absolutely no property or income except this pension of $12 per month.

The question is, Will the Government allow this soldier to become a public charge and end his days in the poorhouse? There seems to be no alternative for him.

Your committee believe that such an evil should not come to pass, and therefore respectfully recommend the passage of the bill with the following amendments:

In line 3, after the word "hereby," insert "authorized and."

In line 6 strike out the words "at the rate" and insert in lieu thereof the words "a pension."

Mr. HERMANN. Mr. Speaker, I know the old veteran for whose relief the pending bill is intended. He resides in my home county. I meet him frequently on the streets when I return home. He is a moral and temperate man, and a good, responsible citizen. He served his country in its trying hours, and was faithful in his devotion to the cause of freedom and Union. By the accident mentioned in the report just read he has lost the use of his eyesight. This has impaired and destroyed his ability to earn a livelihood, and to this may be added his present reduced condition financially. In fact, it may be said he is really penniless, but with the aid of an industrious, devoted wife and the services of affectionate children he is able to keep the wolf from the door. I ask that the bill may pass in the closing hours.

The SPEAKER. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none.

The amendments recommended by the committee were agreed to.

The bill as amended was ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time, and passed.

LEWIS KEISER.

Mr. HAINER of Nebraska. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 7740) granting an increase of pension to Lewis Keiser, of Hubbell, Nebr.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place upon the pension roll, subject to the provisions and limitations of the pension laws, the name of Lewis Keiser, of Hubbell, Nebr., late a member of Company B, Ninety-third Regiment Illinois Infantry Volunteers, at the rate of $72 per month, in lieu of the pension he is now receiving.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. BLUE. Let us hear why this man is to be given $72 a month.

Mr. HAINER of Nebraska. Mr. Speaker, this is the case of a private soldier who served honorably for three years. He received a sunstroke and injury to the back while in the service. He is now 74 years of age, without means to support himself otherwise than a small house, and dependent upon those who are not legally bound for his support. He is a helpless paralytic. His condition is utterly pitiable. He can not even sit up without being propped. He needs assistance for every possible movement of his body. He can say yes and no sometimes in a way that those about him can understand. A stranger could not even understand that. If he had the power of speech he might make good his case before the Pension Office. As it is, his case had several special examinations, and the examiners have made various reports. More than half of the special examiners have reported that in their judgment his disability is due to service origin—part of them that it is due to the sunstroke and part of them to the injury of the back. Yet in spite of these reports the Pension Office has turned him down.

Mr. OWENS. What do you ask for him?

Mr. HAINER of Nebraska. Seventy-two dollars a month.

Mr. RICHARDSON. What is he getting now?

Mr. HAINER of Nebraska. He is now pensioned at the rate of $12 a month, under the act of 1890. The report shows that a special medical examiner sent out by the Pension Office says:

This claimant is afflicted the worst, with paralysis agitans, of any person I have ever seen, * * * requires the constant care and attention of another all of the time, night and day, as much as a babe less than a month old.

A more pitiable case was never presented to the Congress of the United States.

Mr. HERMANN. It should pass.

Mr. HAINER of Nebraska. I ask for a vote, Mr. Speaker, on the amendments recommended by the committee.

The amendments recommended by the committee were agreed to.

Mr. OWENS. I want to say to the gentleman, that just shows the difference between living in Nebraska and living in Kentucky.

In this case $72 is given to the man, while $25 is refused to a man who lives in Kentucky who is suffering just as much.

Mr. ANDREWS. I would like to ask the gentleman from Kentucky a question. Is the disability of the soldier to whom you refer traceable to service origin?

Mr. OWENS. That is what the Pension Department allowed him a pension for.

Mr. ANDREWS. He was pensioned on a service disability contracted in the Mexican war.

The bill as amended was ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time, and passed.

Mr. HAINER of Nebraska. I ask that the title be amended to conform to the recommendation of the committee.

The SPEAKER. Without objection, the amendment to the title will be considered as agreed to.

There was no objection, and it was so ordered.

REPORT OF BERLIN SILVER COMMISSION.

Mr. RICHARDSON. Mr. Speaker, I desire to present a report from the Committee on Printing, a Senate concurrent resolution, which would be privileged if properly reported, but which, as it stands, requires unanimous consent. It passed the Senate yesterday, and I have been requested to ask for its consideration by the House.

The concurrent resolution was read, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed 5,000 copies of Senate Document No. 274, Fifty-third Congress, second session, Proceedings of the Berlin Silver Commission of 1894, with index, 3,000 copies to be for the use of the House of Representatives and 2,000 for the use of the Senate.

Mr. BAILEY. Mr. Speaker, upon that I desire to submit some observations, and if I am recognized I will yield ten minutes to the gentleman from California [Mr. MAGUIRE].

Mr. RICHARDSON. I have the floor, Mr. Speaker. I did not know that the gentleman desired to debate this question at all, and having asked for unanimous consent, I feel that I ought not to yield the floor if the gentleman wants to make any protracted observations, but I hope he will have consent for a few minutes.

Mr. BAILEY. I understood that this was a privileged report.

Mr. RICHARDSON. It is.

Mr. BAILEY. Then it did not require unanimous consent.

Mr. RICHARDSON. Not at all.

Mr. BAILEY. My understanding was that the gentleman from Tennessee submitted a privileged report and resumed his seat, whereupon I took the floor. Of course I have no disposition to take the gentleman off the floor, but seeing that he had resumed his seat and that the Speaker was about to submit the question on the adoption of the privileged report, I took the floor.

Mr. RICHARDSON. I have no objection in the world, except that I did not know the gentleman was about to ask recognition.

Mr. BAILEY. Then I did not make myself understood, because I intended to tell the gentleman a few moments ago that I desired to take the floor, and I believe I did ask him to take the floor and yield to the gentleman from California.

Mr. RICHARDSON. I ask unanimous consent, Mr. Speaker, that the gentleman have five minutes.

Mr. DALZELL. Is this a privileged report?

Mr. RICHARDSON. It is. It provides for printing for the two Houses of Congress.

Mr. DALZELL. How much will it cost?

Mr. RICHARDSON. I do not know. It is a report that was submitted in the Senate by the Senator from Maine [Mr. HALE], the chairman of the Committee on Printing, and I do not find any printed report upon it in the RECORD, so that I can not state the cost.

Mr. DALZELL. Has it been considered by the Printing Committee of this House?

Mr. RICHARDSON. Only by myself. That is why I asked unanimous consent for its consideration. I stated that it was a privileged report because it provides for printing for the two Houses.

Mr. McCREARY of Kentucky. What would be the probable cost of this printing?

Mr. RICHARDSON. I do not know. I am not familiar with the document. It is a miscellaneous document which was printed in the last Congress, and this resolution provides for a reprint.

Mr. McCREARY of Kentucky. Is it a lengthy document?

Mr. RICHARDSON. I think not.

Mr. WALKER of Massachusetts. I will ask the gentleman from Tennessee whether this is not an exceedingly bulky document, containing the whole proceedings of that conference? Does the gentleman know whether it has to be set up again or not?

Mr. RICHARDSON. No; it does not. The Printing Office has the plates. I now yield to the gentleman from California.

Mr. DALZELL. Mr. Speaker, has unanimous consent of the House been given for the consideration of this resolution?

The SPEAKER. Unanimous consent has not yet been granted. The Chair has indulged gentlemen in some preliminary remarks.

Mr. RICHARDSON. I wish to say, Mr. Speaker, that the reason I have presented the resolution at this time is that a special messenger came to me from the Senate with a request from several Senators that unanimous consent be asked to have this document reprinted.

Mr. McCREARY of Kentucky. I would like to ask the gentleman who represented the United States in the Berlin conference?

Mr. RICHARDSON. I can not answer that question. I have not seen the document.

Mr. McCREARY of Kentucky. There was no representation of the United States at the Berlin conference. There was at the Brussels conference, but not at the Berlin conference.

Mr. RICHARDSON. The document was printed, as I understand, in the last Congress, and this is simply to reprint a certain number of copies for the use of the Senate and the House.

Mr. DALZELL. Mr. Speaker, I understand that the statement of the gentleman from Kentucky [Mr. McCREARY] is correct, and that we had no representation at this conference.

Mr. McCREARY of Kentucky. It was a local conference, and the United States were not represented.

Mr. DALZELL. Not at all, as I am informed. I think, Mr. Speaker, that under the circumstances I shall have to object.

CHRISTOPHER C. CUMMINS.

Mr. MARSH. Mr. Speaker, I ask unanimous consent for the present consideration of the bill which I send to the Clerk's desk, H. R. 8888, to grant an honorable discharge to Christopher C. Cummins.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized and directed to correct the military record of Christopher C. Cummins, late a private in Company C of the Eighty-second Regiment of Ohio Volunteer Infantry, and grant him an honorable discharge to date as of the 24th day of July, 1865.

Mr. MARSH. I ask that the report be read.

The SPEAKER. Is there objection to the present consideration of this bill? The Chair hears none.

Mr. BAILEY. Mr. Speaker, I yield five minutes to the gentleman from California, and reserve the remainder of my time.

Mr. MARSH. I believe I have the floor, Mr. Speaker. I have not yielded.

Mr. BAILEY. The gentleman could not retain the floor when the Chair was about to put the question.

Mr. MARSH. The Chair recognized me.

Mr. BAILEY. If the gentleman from Illinois will say that he wanted to address the House on the bill I will yield.

The SPEAKER. The Chair wants to understand this matter. It is true that the gentleman who proposes a bill does not hold the floor while unanimous consent is being asked, but at the same time it is the custom of the House that a gentleman in charge of a bill, if he desires recognition, should first be recognized.

Mr. BAILEY. I recognize that as a proper custom, and if the gentleman from Illinois will say that he intended to address the House on the bill I will yield the point.

Mr. MARSH. I will say that I rose, the Speaker recognized me, and I asked unanimous consent to call up and pass the bill which I sent to the Clerk's desk.

Mr. BAILEY. Which was granted.

Mr. MARSH. Which was granted, as I understood, and the bill was read; and then I called for the reading of the report for the information of the House.

Mr. BAILEY. Was the report read?

The SPEAKER. The report has not yet been read.

Mr. MARSH. I have still been holding the floor.

Mr. BAILEY. I did not hear the demand for the reading of the report.

The SPEAKER. The Clerk will read the report.

Mr. BAILEY. I will say to the House now that I am going to have this time to yield to the gentleman from California, and the gentleman from Illinois will make no progress by trying to keep the floor.

The report (by Mr. MARSH) was read, as follows:

The Committee on Military Affairs, to whom was referred the bill (H. R. 8888) entitled "An act to grant an honorable discharge to Christopher C. Cummins," report the same to the House and recommend its passage.

Said Cummins was enrolled February 15, 1865, and mustered into the service February 18, 1865, to serve one year. He was assigned to service in the Sixty-first Ohio Infantry.

The Sixty-first Ohio Infantry was consolidated with the Eighty-second Ohio Infantry March 31, 1865, and said Cummins served faithfully with Company I, Eighty-second Ohio Infantry, to July 11, 1865, at which date he is reported as a deserter.

After the grand review at Washington City he, with his regiment, was ordered to Louisville, Ky. The soldier remained with his regiment at Louisville, Ky., until the 11th day of July, 1865, when large numbers of his regiment were daily going to their respective homes without leave to visit their families; this soldier, knowing that the war was over and desiring to see his family, and without any thought or intention of deserting, went to his home, intending to return to his regiment in a few days. After being at home about

eight days he started on his way to rejoin his regiment at Louisville, and on arriving at Cincinnati, Ohio, where he met some of his comrades, he was told by them that his regiment had been ordered to Columbus, Ohio, and mustered out of the service, and he therefore returned to his home.

From the evidence before your committee it appears that this soldier had performed honorable and faithful service during his whole enlistment, up to the 11th day of July, 1865, only a few days prior to the muster out of his regiment, and that in going home on the 11th day of July, 1865, to see his family, he did not intend to desert.

The evidence further shows that he is a good citizen, respected by all his neighbors.

Mr. MEREDITH. The ultimate purpose of this bill, as I understand, is to give this man a pension, I believe.

Mr. MARSH. No, sir.

Mr. MEREDITH. That will follow as a matter of course; and I object.

Mr. MARSH. Unanimous consent has already been granted.

Mr. MEREDITH (after a pause). I withdraw my objection.

Mr. MARSH. Mr. Speaker, the objection is withdrawn.

The SPEAKER. What motion does the gentleman from Illinois make?

Mr. MARSH. I move the passage of the bill——

The SPEAKER. The question is——

Mr. BAILEY. Now, Mr. Speaker——

Mr. MARSH. And upon that I demand the previous question.

The SPEAKER. The gentleman from Illinois demands the previous question.

The SPEAKER (having put the question). The ayes seem to have it.

Mr. BAILEY. Division.

INVESTIGATION OF DISTRICT CHARITIES.

The SPEAKER (before announcing the result of the vote). If there be no objection, the Chair will announce the appointment of Mr. PITNEY of New Jersey, Mr. BLUE of Kansas, and Mr. DOCKERY of Missouri as members on the part of the House of the Joint Select Committee to make Investigations of the Charities and Reformatory Institutions of the District of Columbia, notice having been received from the Senate of its concurrence in the proposition.

ORDER OF BUSINESS.

The SPEAKER. On this question the ayes are 60, the noes 6.

Mr. BAILEY. No quorum, Mr. Speaker.

Mr. MEYER addressed the Chair.

The SPEAKER. For what purpose does the gentleman from Louisiana rise?

Mr. MEYER. To ask unanimous consent for the consideration of House bill No. 6634.

The SPEAKER. There is a proposition already before the House.

Mr. OWENS. I move a call of the House.

The SPEAKER (having put the question on ordering a call of the House). The noes seem to have it.

Mr. OWENS. Have I not a right to demand a call of the House without a motion?

The SPEAKER. A motion may be made for a call of the House.

Mr. BAILEY. I submit that when any vote discloses the absence of a quorum the rule is that there shall be a call of the House——

Mr. BARTLETT of Georgia. Or an adjournment.

Mr. OWENS. That rule was followed, I know, the other day, when we had a call of the House simply on the demand of a member.

The SPEAKER. Under clause 4 of Rule XV, applying to a case like the present, a call of the House does not require a motion or suggestion of a member, but arises by force of the rule which declares:

Whenever a quorum fails to vote on any question, and a quorum is not present and objection is made for that cause, unless the House shall adjourn, there shall be a call of the House, and the Sergeant-at-Arms shall forthwith proceed to bring in absent members, and the yeas and nays on the pending question shall at the same time be considered as ordered.

Mr. OWENS. Then the Clerk must call the roll.

The SPEAKER. The Clerk will call the roll; and gentlemen will vote upon the question of ordering the previous question.

The call of the roll was begun and completed, and the Clerk read the list of pairs.

Mr. DALZELL. Mr. Speaker, I ask unanimous consent to dispense with further proceedings under this call.

The SPEAKER. By unanimous consent all further proceedings under the call can be dispensed with. Is there objection?

There was no objection.

Mr. MARSH. Now, Mr. Speaker, I believe my bill is pending before the House.

Mr. BAILEY. I withdraw the point of no quorum on the demand for the previous question, and I understand the gentleman from Illinois will withdraw the demand for the previous question.

Mr. MARSH. I have entered into no such understanding. [Laughter.] But I withdraw the demand for the previous question.

The SPEAKER. The point of no quorum is withdrawn, the demand for the previous question is withdrawn, and the bill is now pending before the House for consideration.

Mr. MARSH. Mr. Speaker, upon that bill, before proceeding, it will afford me a great deal of pleasure to render a kindness to the gentleman from the Lone Star State, and I yield to him for five minutes.

Mr. BAILEY. Mr. Speaker, that will not be sufficient.

Mr. MARSH. How much time does the gentleman want?

Mr. BAILEY. It is now within forty minutes of the hour when the House must adjourn. The gentleman from Illinois is entitled or would be entitled to an hour if the session continued that long. I think an equal division of the time would be fair.

Mr. MARSH. How much time does the gentleman want?

Mr. BAILEY. Twenty minutes.

Mr. MARSH. I yield to the gentleman twenty minutes, and at the conclusion of that time I will resume the floor. But I want him to understand that he is under no obligation. [Laughter.]

REPORT OF COMMITTEE TO WAIT UPON THE PRESIDENT.

The SPEAKER. Before the gentleman from Texas proceeds the gentleman from Maine will submit a privileged report from the committee to wait upon the President.

Mr. DINGLEY. Mr. Speaker, the committee appointed by the House to join the committee appointed by the Senate to wait upon the President of the United States and inform him that the two Houses had completed their labors and await any further communication he may be pleased to make, have attended to the duty assigned to them, and the President was pleased to say that he has no further communication to make to the two Houses, and that he congratulated Congress on the early completion of its labors. [Applause.]

CHRISTOPHER CUMMINS.

The SPEAKER. The House resumes consideration of the bill called up by the gentleman from Illinois [Mr. MARSH].

Mr. BAILEY. Mr. Speaker, I yield ten minutes of the time allotted to me to the gentleman from California [Mr. MAGUIRE], reserving the remainder of my time.

Mr. MAGUIRE. Mr. Speaker, my real purpose in rising is not to discuss the pending bill, but, with the general consent of the House, to reply to certain statements made last evening by the distinguished gentleman from Maine [Mr. DINGLEY], in the course of his very ingenious speech on the causes of the industrial depression through which our country has recently passed. I shall take occasion also to comment upon statements made by other gentlemen on the Republican side during the present session of this Congress, attributing the depression to the ascendency of the Democratic party and the legislation of the Fifty-third Congress. I am forced to the opinion that these gentlemen are sincere in declaring their belief that the election of a Democratic President and the legislation of a Democratic House and Senate did indeed cause the industrial depression, because, while that opinion is justified only by the concession that they are ignorant of a whole series of the most important facts of modern history, yet a contrary opinion would imply an intellectual dishonesty of which they are incapable.

The gentleman from Maine [Mr. DINGLEY] on yesterday declared that the success of the Democratic party in the election of 1892 and the subsequent legislation of that Congress had caused the depression, and upon that false premise he based a very earnest protest against the Democratic party, its principles, and its policy. He illustrated the ease with which a superstructure of denunciation and invective can be reared upon a foundation of falsehood. My purpose is to show again how readily such a superstructure can be shattered by puncturing the falsehood that serves for its foundation. When I have finished I will take pleasure in returning to him the admonition of Artemus Ward, which he quoted yesterday, that "It is better not to know many things than to know so many things that ain't so."

The gentleman told us, with all the assurance of a schoolmaster who knew what he was talking about, that for thirty-two years, from 1861 to 1893, under the Republican economic system of high-tariff taxation, this country had enjoyed uninterrupted prosperity. That is another piece of his knowledge "that ain't so." He told us also, with equal positiveness, that under the beneficent influence of the Republican tariff the wages of labor had steadily increased in this country during that period. That is another piece of his knowledge "that ain't so." These three statements constituted the substance of his speech. All the rest was glorification of the Republican party on account of the good that it had done in these matters and denunciation of the Democratic party because of the assumption that its policy and principles had led to the industrial depression.

What are the facts of authentic history on these three propositions? Let us see.

Until recently little was known of the causes of industrial depressions. Each depression in its turn came like a cyclone, almost

without warning. It produced disaster and intense misery during its prevalence, and after a saturnalia of ruin departed, with no more apparent cause for its going than there was for its coming. Some attributed it to local and temporary causes, some to the evil influence of malignant stars, while others regarded it as a manifestation of divine wrath. It was as mysterious to most people as an eclipse of the sun was to the people who lived before the laws governing the movements of the heavenly bodies had been discovered. All of these conjectures and superstitions were as natural to them as the judgments of our Republican leaders probably are to those who are equally ignorant of the causes of industrial eclipses. I should not be surprised to find such opinions and superstitions prevailing among people who have little time for study, and to whom knowledge is not a duty, but I am surprised to find such opinions and superstitions prevailing among leaders of the American Congress, when I know that a clearer and fuller knowledge of economic laws prevails not only among the leaders but among the rank and-file of organized labor in this country.

A few years ago the laboring people, in their unions and assemblies, commenced the study of political economy. They knew that they were the victims of some mysterious but resistless social pressure which, under high tariffs and under low tariffs, stripped them of the surplus products of their labor for the benefit of a privileged few and subjected them to the horrors of an industrial depression every ten years while the evil system under which they struggled and suffered was being readjusted for another period of activity. They found themselves in that study hampered and handicapped by the absence of reliable official statistics of industry and of the phenomena of its changing conditions. They made a concerted effort in nearly all of the leading States of the Union to secure the establishment of bureaus of labor statistics for the purpose of collecting and classifying such information. They have succeeded in securing the establishment of such bureaus in many of the States, and have also succeeded in establishing a national bureau for that purpose. The very first work of that National Bureau, under the direction of Hon. Carroll D. Wright, the National Commissioner, was to gather statistics concerning industrial depression. These statistics were published in the First Annual Report of the Commissioner of Labor of the United States in 1886, the work being entitled "Industrial depressions." The people who petitioned and urged and clamored for the establishment of that National Bureau and of the State bureaus have been reading and studying their reports, while, unfortunately, it seems that the politicians have been relying upon the old methods of campaign work for rallying the masses of the people to their several standards.

Now, let me tell you what the people, particularly the members of labor organizations, know about industrial depressions. They know that such depressions as that through which we have been passing are never produced by either local or temporary causes; they know that such depressions occur periodically at regular intervals of about ten years; they know that such depressions have occurred for more than one hundred years at intervals of ten years, and have occurred so regularly that they are known to political economists (though not to politicians) as decennial depressions; they know that neither the present depression nor any of the others of which we have historical record was confined to this country or to countries having conditions identical with those of this country with respect to tariff laws or tariff taxes; they know that the severest industrial depression through which this country ever passed—1875 to 1879—occurred during the period of the highest and most exclusive protection ever maintained in this or any other country up to that time. A still higher protective tariff was adopted in 1890, which is popularly known as the McKinley tariff, under the operation of which the present industrial depression commenced.

One of the great sources of the knowledge of which I have spoken among the intelligent and studious laborers of this country is Mr. Wright's report on "Industrial depressions," to which I will now call the attention of the House.

The part of the report to which I refer particularly commences on page 15 and ends on page 79, and should be read by every legislator who would attempt to fathom the causes of industrial depressions. That report shows that not only in the United States of America but throughout the leading nations of the world these industrial depressions have appeared and run their courses and departed in the same manner and with the same symptoms at regular intervals of about ten years. It deals first (with respect to the United States) with the depression of 1837 (page 55); the next (page 56) occurring in 1847; the next (page 56) in 1857; the next (page 60) in 1867; the next (page 60) 1873 to 1878; the next (page 65) 1882 to 1886.

Our country has, as he shows, never been free from an industrial depression for more than ten years consecutively since 1837. From other sources we learn that there were industrial depressions in 1827 and 1817, when changes were advocated in the existing tariff laws for the purpose of meeting the conditions produced by the depressions, but I will not, at this time, go back of the period covered by Mr. Wright's very able report. I repeat, that according to that showing, which is indisputable, our country has never been free from an industrial depression for more than ten years consecutively since 1837. The depression of 1884, which was the immediate occasion of Mr. Wright's investigation of the subject as National Commissioner, commenced in 1882 and passed away in 1886. Guided by the light of experience placed before us in the recorded facts of history, when would you say that another industrial depression would be likely to commence after the one beginning in 1882? Why, considering the regularity of the recurrence of these decennial depressions, you would say that another depression would commence not later than 1892, and it did commence not later than 1892—not later than the beginning of 1892. It commenced, not after the election of that year, as the gentleman from Maine would have us believe, but long before the election, long before it was supposed that the Democratic party had any real chance of succeeding in the election. It was the principal cause of the remarkable and sweeping triumph of the Democratic party in that year. I do not say that the McKinley tariff law then in force caused the depression. I know from the facts of history and from the laws of industry and commerce that it did not cause the depression, but it did not prevent the depression, and it did not retard the depression an hour. My opinion is that it tended to hasten rather than to retard the collapse.

But you charge that Democratic ascendency in 1892 caused the depression. Did Democratic ascendency cause the similar depression in 1867? Did Democratic ascendency produce the similar and more severe depression of 1877? Did Democratic ascendency produce the depression from 1882 to 1886? Did it produce any of these three depressions occurring under the high-tariff régime of the Republican party? No! You can not charge the Democratic party or its tariff policy with the slightest responsibility for any of these regularly occurring depressions. The depression culminating in 1877, already far advanced in 1876, caused the people of the United States by an overwhelming popular vote to condemn the Republican party and by a majority of the electoral vote to select a Democratic President in the person of Samuel J. Tilden, who will go down to history as the de jure President of the United States for the four years commencing March 4, 1877.

The next industrial depression, commencing in 1882 and reaching its greatest severity in 1884, caused the people of the United States again to overwhelm the Republican party with its protective-tariff policy and to install a Democratic President and a Democratic House of Representatives. Again it was the present industrial depression, already far advanced in the summer of 1892, that caused the people of the United States by a most overwhelming and decisive vote to drive the Republican party again from power and to reinstall the Democratic President under whose former Administration good times had been restored after the depression of 1884.

The gentleman from Maine [Mr. DINGLEY] on yesterday made a very lucid explanation of the course of the industrial depression after the Democratic triumph at the election of 1892. The mistake that he makes in that matter is a mistake as to the date at which this course of depression which he so vividly depicted commenced. It did not commence after the election of that year. It commenced before any nominations were made by either of the great national parties. The Homestead strike was a part of that industrial depression. When did that occur? Those strikes and strike riots occurred in May and June, 1892. The Cœur d'Alene labor strikes and strike riots occurred in the summer of 1892. The Knoxville labor riots occurred during the same period and long before the election. The Buffalo strikes also occurred before that election. The depression in the iron trade from northern Ohio to Alabama had thrown tens of thousands of men out of employment long before the election of 1892. In the coal regions of Pennsylvania the protected coal miners had, even as early as August, 1891, been reduced to such a deplorable condition that the Philadelphia Press, a Republican newspaper, had an investigation conducted by expert representatives and published a statement showing the wretched condition of labor at that time in the coal regions of Pennsylvania, concluding its two-column article on the subject with this significant statement:

He who years ago made $3 and $5 a day now works for $1 and $1.50 side by side with men who would be satisfied with half of that.

In view of all these facts, in view of the great central fact of the regular recurrence of industrial depressions at intervals of ten years, in view of the still broader fact that all of these decennial depressions have extended with equal virulence to all the leading countries of the world, that they have occurred where tariffs were high and where tariffs were low, where democracies ruled and where empires swayed, how absurd, how puerile, how unworthy, is the charge that this particular depression was caused by Democratic ascendency or by Democratic changes in the tariff laws! The gentleman from Maine further says that for the thirty-odd years during which the Republican economic policy prevailed

this country enjoyed uninterrupted prosperity. I have shown from the very best and most reliable authority that that is not true. Passing over the depression of 1867, which Mr. Wright calls "a period of hard times," although he thinks it can hardly be called an industrial depression by comparison with that of the period from 1873 to 1878, let us go to the second period of depression under the Republican high-tariff régime. I think it is the general opinion of political economists that Mr. Wright has failed to distinguish between the financial panic running through the years 1873 and 1874 and the industrial depression proper which commenced in 1875 and lasted until 1879. However, we are not concerned about that, nor about Mr. Wright's opinions as to the causes of that or of any of the other depressions. He has furnished us with the facts and they are the important things. Of this depression, after reviewing the financial crisis of 1873, he says (page 60):

The result was an industrial depression lasting until the latter part of 1878, and this industrial depression was far more severe than any that preceded it or that which has followed it. This depression was so great and the disturbances resulting from it of such varied and distressing ramifications that it stimulated the study of panics and depressions to a greater extent than any preceding period.

He tells us that that industrial depression, on account of its severity and long continuance, was made the subject of two Congressional investigations (page 60), one under the chairmanship of the Hon. Hendrick B. Wright, and the other under the chairmanship of the Hon. Abram S. Hewitt, of New York. Later on he tells us that a third investigation was made by the Senate Committee on Education and Labor under the chairmanship of Hon. Henry W. Blair. Yet the gentleman from Maine [Mr. DINGLEY], chairman of the Committee on Ways and Means, the Republican leader on the floor of this House, combining assurance with forgetfulness, ignores that period of depression occurring under the very highest and most oppressive so-called protective tariff that the world ever knew, until the prospective candidate of the Republican party for President of the United States, in combination with the representatives of protected interests who had secured the right to dictate in the matter by enormous contributions previously made to Republican campaign funds, invented a higher and a worse scheme of tariff taxation. Let us turn from that long, dark period in the industrial history of our country to the Republican high tariff depression of 1884, commencing in 1882 and ending in 1886. Carroll D. Wright, in his report (page 66), after making all possible allowances for exaggeration as to the number of persons thrown out of employment by that depression, estimates that in round numbers there were 1,000,000 laborers thrown and kept out of employment by reason of that depression. Then, on the same page, commenting upon that situation, he says:

A million of people out of employment, crippling all depending upon them, means a loss to the consumptive power of the country of at least $1,000,000 per day, or a crippling of the trade of the country of over $300,000,000 per year. The earnings of the people involved in the classes named above would not be far from $600 each per annum, representing total earnings of $7,999,716,600.

This dark and wretched high-tariff period in our country's history is also ignored by the gentleman from Maine when he triumphantly makes the sweeping statement that for thirty-odd years, under the economic system of the Republican party, this country enjoyed uninterrupted prosperity.

Again, the gentleman from Maine tells us that the protective policy of the Republican party had, throughout that period, continued to raise wages in this country. Need I cite more than the case of the laborers employed in the great coal-mining industries, highly protected for the enrichment of the mine owners, wherein it appears that at the beginning of the proud era of protection the laborers engaged in that industry were receiving from $3 to $5 per day, and that in August, 1892, their wages had fallen to from $1 to $1.50 per day, and the laborers had been reduced to conditions of degradation such as were not known in this country prior to the inauguration of the Republican economic policy by which the rich are to be taken care of by the Government at the expense of the masses of the people, in order that the rich, being further enriched by the Government's favor, may take care of the poor. Let me read again the statement of the Philadelphia Press, a Republican paper, bear in mind, which, as early as 1891, speaking of the deplorable condition to which the laborers engaged in the industry of mining the coal of Pennsylvania had been reduced, said:

He who years ago made $3 and $5 a day now works for $1 and $1.50, side by side with men who would be satisfied with half of that.

The gentleman from Maine said that wages had increased under the influence of the protective tariff.

Mr. HURLEY. Will the gentleman allow me to ask him a question?

Mr. MAGUIRE. Yes.

Mr. HURLEY. What was the duty on coal?

Mr. MAGUIRE. Seventy-five cents a ton.

Mr. HURLEY. Pennsylvania anthracite coal was free.

Mr. DALZELL. This has reference to the anthracite regions of Pennsylvania, and there is no duty on anthracite coal.

Mr. MAGUIRE. Do you mean to tell me that the conditions were different in the bituminous regions?

Mr. DALZELL. I do.

Mr. MAGUIRE. Not at all.

The investigation made by the Philadelphia Press may have been confined to the anthracite districts. I do not say that they were and I do not know that they were not. I know that the serious and bloody labor troubles occurring in 1888, shortly before that time, and which were investigated by a committee of Congress, occurred in the anthracite regions. But it is perfectly absurd to say that in two sections of the same State, the same classes of laborers being free to go from one place to another at will, received high wages in the mining of bituminous coal and low wages in the mining of anthracite coal. If the wages were higher and the conditions better in the bituminous regions, the miners would naturally drift to those sections and the competition among the coal miners would speedily equalize the conditions of both classes of coal miners. It would require proof strong as Holy Writ to satisfy any reasonable man that the protected owners of bituminous coal mines paid better wages and maintained better conditions for their coal miners than were enjoyed by the equally expert coal miners who were engaged in mining anthracite coal. The fact is that the laborers in the Pennsylvania coal mines, who were promised protection by tariff taxes thirty years ago, have found that the tariff system enriched the mine owners without helping them and that the inexorable law of supply and demand cut their wages down to the lowest point at which laborers imported under a system of semislavery by the protected coal barons could be employed for, and the whole American and other English-speaking population of the coal mining regions, who at the beginning of the protective era received wages ranging from $3 to $5 per day, have during that era of protection been driven out of the coal regions entirely and scattered throughout the country, the sport and prey of the hundred monopolies created and fostered by the Republican protective-tariff system.

Now, I do not say that wages have fallen in all departments of industry during the protective-tariff era, but what I do say is that where wages have risen or have been maintained at a high standard the tariff has had nothing to do with that happy condition. Wages have risen and fallen in the various departments of industry during that period, wholly regardless of the protection of such industries.

Wages in all industries, protected and unprotected, have been fixed by the relation of supply and demand in the labor market, and not by the increased prices which the tariff has enabled the controllers of industry to get from the people for their commodities. The tendency of the wages of labor during the whole protective period has been downward, not only in the coal fields of Pennsylvania but in all departments of industry. That downward tendency of wages has been partially overcome by two forces, namely, our diversified and unlimited natural resources (notwithstanding the infamous system of monopoly under which they are held) and the mighty and unremitting struggles of trades and labor organizations. The protective tariff had nothing to do with it. Protection was not made for labor, but for the classes that exploit labor, and it has served its real beneficiaries well.

A few days ago the distinguished gentleman from Ohio [Mr. GROSVENOR], in the course of a discussion which was in no way related to industrial depressions, was tempted to stoop from the high plane of statesmanship which he generally occupies in the discussion of public affairs to reiterate the stereotyped political slander which I have been discussing. I thought it not merely fair but even merciful to him to call his attention to the indisputable statistics of industry by which the charge is absolutely disproved. Instead of taking my suggestion in the kindly spirit in which it was offered, and with his accustomed frankness either answering the suggestion or correcting his own statement, he abandoned his own higher moral plane for the unhallowed motto of his party and sought still to favor his party's cause by denying the facts of history. "Claim everything, deny everything" is one of the great mottoes of the Republican party, and denying facts is one of the great faculties of those who speak for it.

But I had expected better things from the distinguished gentleman from Ohio. That I may do him no injustice let me quote the colloquy which occurred between us on this subject. It is to be found on page 5148 of the CONGRESSIONAL RECORD of May 2, 1896, and is as follows:

Mr. GROSVENOR. * * * Periods, cycles, of business depression sweep over the country. I might say, if I wanted to, though I am indisposed to go into that subject, that these cycles are generally an incident to the introduction into power of the Democratic party in this country; and it has been said by one of the wisest financiers of this country that it was necessary, indispensably necessary, to the success of the business of the country that following every Democratic Administration there should be a system of bankruptcy. [Laughter.]

Mr. MAGUIRE. The gentleman certainly knows that one of these cycles

swept over the country in 1866, another in 1877, and another in 1884. Will the gentleman explain if these happened after Democratic ascendency?

Mr. GROSVENOR. There is no such thing. In 1866—going back to that, as it is the first fixed on by the gentleman, unfortunately for his recollection of history—we emerged from the greater depression of 1857, when the property of this country went down 80 per cent in value all through the West. We emerged from that to enter a war. At the end of that war we had not re-established our credit, and the transition from irredeemable paper money and the battle that we had to fight with the Democratic party to restore specie payments did bring upon us the trouble of 1877. What was the trouble of 1875-1877? Does the gentleman know? It was the existence of that upas tree, bad credit, in this country. In 1874 the Democratic party carried State after State in favor of practical repudiation of the obligations of the Government, and undertook to demand that the bonds of the Government should be paid in greenbacks, and that the greenbacks should not be redeemed; and until we turned aside and fought the Democratic party to its death for the time being we could not have any credit in this country. That was the trouble, and that was all the trouble there was; and when the time had come, and victory had perched upon the banner of the Republican party, and a Republican Administration came into power in 1877, and the resumption act was passed in the teeth of the opposition of the Democratic party, and the 1st day of January, 1879, came, and under a Republican Administration every dollar of our promises to pay came up to the level of every dollar in gold—then it was that prosperity came as the victory of honest money and the overthrow of the Democratic party. [Applause on the Republican side.] But, Mr. Chairman, I did not intend to make any such speech as this.

Mr. MAGUIRE. Will the gentleman permit another suggestion?

Mr. GROSVENOR. Yes, sir.

Mr. MAGUIRE. I wish to say to the gentleman that all of those depressions are recorded by the Hon. Carroll D. Wright, Commissioner of Labor, in his report on "Industrial depressions," published in 1886, and he says that they all extended to the seven leading nations of the world.

Mr. GROSVENOR. Well, Mr. Chairman, if the gentleman wants to take his politics from Carroll D. Wright I bid him godspeed, but I do not want him to bother me with them. [Laughter.] I will take some political ideas from a Democrat; I will take a great many from a Republican; but from a Mugwump, God forbid! [Laughter and applause.] A man who has to trim his politics, to pare his common sense, and to engineer his figures so that he can retain office under Administration after Administration shall not be a professor in the political school which I attend. [Laughter and applause.]

What a weak and floundering reply from a great man, from an experienced statesman, from a great statistician, from a man whose national reputation has been made principally as a statistician in furnishing the only accurate and reliable figures available to the American people concerning the relative strength of candidates for the Republican nomination for the Presidency. Finding the facts of history to be destructive of the principal stock in trade of his party for the approaching campaign, he takes refuge in the denial of the facts and in calumniation of the historian. In this matter it is unfortunate for the gentleman from Ohio that the facts are indisputably established by evidences other than the report of our national Commissioner of Labor Statistics, although his report is the only generally accessible compendium of the facts. It is equally unfortunate for the distinguished gentleman from Ohio in this matter that no public officer in this nation is more highly esteemed for the fidelity and veracity of all his public work than Hon. Carroll D. Wright, the author of the report which, in the interest of the Republican party, the distinguished gentleman from Ohio seeks to belittle and deny.

The gentleman derides the National Commissioner of Labor Statistics, who is, I believe, a Republican in politics, as a "Mugwump," basing his charge upon the fact that Mr. Wright has so conducted his office as to be retained in his place under several Administrations, Republican and Democratic. The gentleman forgets that the true statistician is nonpartisan in his work, that the true statistician hews to the line and furnishes the facts of history as they exist concerning the subject which he is considering without for a moment thinking or caring what partisan effect the facts may have. A statistician who basely stoops to serve his party or any party instantly destroys both his usefulness and his influence. Carroll D. Wright, with a clear conception of the true function of a statistician, and a grand, unswerving purpose to perform that function regardless of all collateral considerations, has won the esteem and confidence of honest men of all parties. The masses of the people, who know more about his work than do the time-serving politicians, have recognized his honesty and his fidelity to duty. They would resent and rebuke his removal from office for partisan reasons by any Administration more sternly and severely than they would resent or rebuke any other single partisan act that could be committed. It is by reason of his sterling integrity and fidelity to duty that he has retained his place and not by any cowardly trimming of his work to suit any party.

The gentleman from Ohio [Mr. GROSVENOR] can not go into any community in which labor organizations exist and make the statement concerning Carroll D. Wright's work which he made upon this floor without arousing the indignation of scores of men who know more about the statistics of industry than he does.

The gentleman from Ohio [Mr. GROSVENOR] readily and clearly perceived that if three distinct industrial depressions of the same kind as the one from which we are now emerging occurred and ran their course under the high-tariff régime of the Republican party—one reaching its climax in 1866, another in 1877, and a third in 1884—his charge that the present depression, of the same kind in all respects, and occurring after an interval of comparative prosperity precisely the same as the intervals of comparative prosperity which separated those three industrial depressions, is due to Democratic ascendency, or to Democratic legislation, is shown incontestably to be without foundation and false. Yet these are the facts of history, not made by Carroll D. Wright, but compiled by him from the authentic sources of historical knowledge, through the most perfect and complete system of historical investigation to be found on earth. Mr. Wright's report concerning these industrial depressions is absolutely nonpartisan. It does not attempt to show, nor does it tend to show, that the depressions occurring under and during the Republican régime were caused by Republican legislation, but it does show conclusively that such depressions are not caused by anything that the Democratic party has ever done or proposed to do, nor by anything that the people have ever expected or believed that the Democratic party would do.

Mr. Wright, in the investigation of industrial depressions, went back to the year 1836, as I have stated, and reported the depressions occurring between that time and 1886. Mark the regularity with which these depressions have occurred during the last sixty years—1837, 1847, 1857, 1866, 1877, 1884, 1893. They have all come to us, including the last one, with almost the regularity of changes in the moon's phases. They have come to us as scourges of our civilization under high tariffs and under low tariffs. They have come to us bearing ruin and desolation to the masses of our people when all natural conditions seemed retained with a promise of prosperity and plenty; they have come to us like thunderstorms from clear skies when harvests were bountiful, when the consumption of wealth was making the greatest demands upon the wealth producers, when in the relations between capital and labor there seemed to be no threat or cause of diminishing activity. Suddenly thriving commercial enterprises become unprofitable; the capitalists who conduct them find that when their rents and wages have been paid out of their production they are not getting interest upon the capital which they have invested. They call a halt. They economize. They demand that labor shall share the loss which they are suffering.

A conflict between capital and labor ensues, with its incidents of strikes, boycotts, and lockouts, unhappily sometimes attended with bloodshed and destruction of property. Compromises are from time to time reached, which are in turn broken as new conditions offer advantages to either of the contending parties.

The waste of the conflict takes away whatever return might otherwise come to business. Production is checked in that quarter and the producing laborers are thrown out of employment. The purchasing power of the laborers thrown out of employment is destroyed. Their demand for other commodities is checked by the destruction of their purchasing power, and the production of such other commodities is likewise checked. These effects of the great primary cause speedily communicate their influence through the whole network of the world's productive agencies, diminishing profit by checking demand for productive effort. With the cessation of production in one quarter or in one line comes a corresponding suspension of demand for commodities of other kinds. The merchant can not sell his wares, because his customers have lost their purchasing power. He can not collect the obligations due him for the same reason, and he can not pay his debts to the wholesale merchant because he can not collect his dues from his customers.

The wholesalers have arranged for commercial credit on a basis perfectly safe so long as sales continue and payments are made within the periods of ordinary trade credit, but wholly unsafe when collections from retail merchants fail. The wholesaler is pressed for the payment of his obligations. He in turn presses the retail merchant. The retail merchant presses his customers, but his customers are out of employment, not only unable to make further purchases according to their necessities, but unable to pay their comparatively small debts for past purchases.

Universal stagnation ensues. Merchants and manufacturers continue nominally to carry on business, although profits are gone. They pay rent out of their capital for the sole purpose of saving their locations, which have become an important part of their business. The glimmering taper of hope allures them even to the vortex of general bankruptcy. Financiers become alarmed for the safety of their investments and for the sufficiency of securities. They insist upon the sacrifice of securities for the satisfaction of their claims. The millions of small depositors in savings banks are forced to draw upon their bank savings to meet their obligations and to pay the expense of living, which in good times are paid out of their daily wages.

Those who do not need their deposits for such immediate use begin to feel that the risk of the bank's stability is too great for the interest which the deposits yield. They attempt to withdraw their deposits, panic seizes upon the minds of depositors generally, and run after run is precipitated upon such banks, which, having the bulk of the deposits loaned upon securities on which they can not immediately realize, are forced to the wall. Their suspension

of payment increases the panic and adds to the general distrust. Credit, upon which nine-tenths of our business is done in good times, is entirely withdrawn.

Every firm, corporation, and individual is employed in gathering and hoarding such money as can be obtained to meet the exigencies of his or its own business, for in the best of times our industrial and commercial systems are honeycombed with debt, and a capital of $10,000 floats a credit of at least $30,000. This enormous contraction of the instrument of exchange is fatal to what remains of business. The business of the whole country finally collapes under the strain. Then a new adjustment of rent, interest, and wages is made, and the wheels of industry and commerce revolve again, bringing the blessings of prosperity and peace. This is the history of every industrial depression, and the present depression is not in any respect exceptional.

Russell Sage, a distinguished financier, is reported as saying recently that this depression is exceptional because it has "touched bottom," as he expresses it; that is to say, it has touched the land-owning class, the last class to be affected by such visitations. But every industrial depression of which I speak has "touched bottom." Every industrial depression has ultimately reached the land-owning class and has compelled that class to largely reduce its ground rent in order to give business a chance to pick up again. Then by some process, as mysterious to the general observer as the beginning of the depression, times improve, business gets better, credit grows stronger, and an era of prosperity ensues which gives promise of perpetuity. For four or five years it continues to rise, then the change comes again, and the history of the former depression, through the course of another three or four years, repeats itself with marvelous exactness.

It is idle to attribute these depressions to local or temporary causes. Their cause must be as general as its results. A cause affecting this country alone will not explain an industrial depression existing at the same time in England, France, Germany, Belgium, and in all of the English colonies that girdle the world. Neither is it reasonable to attribute one of these depressions to a cause which manifestly did not contribute to any of the other precisely similar depressions occurring before it.

The great controlling cause of industrial depressions must necessarily involve a disturbance of the fundamental relation between mankind and the superabundant natural resources provided by the Creator as a common heritage for the subsistence and comfort of all, and that disturbance must be the same, or similar, in all of the countries affected.

This is the seventh industrial depression through which we have passed in this country within sixty years, and Mr. Wright, in the report which I have quoted, shows that each of these depressions extended to all of the leading civilized nations of the earth. On page 16 of his "Industrial depressions" Mr. Wright deals with the industrial depression of 1837 in Great Britain; on page 18 with the industrial depression of 1847 in Great Britain; on page 20 with the industrial depression of 1857 in Great Britain; on page 21 with the industrial depression of 1866 in Great Britain; on page 26 with the depression culminating in 1877 in Great Britain; on page 28 with the industrial depression of 1884 in Great Britain.

On page 35 he deals with the depression of 1837 in France; on the same page, and following, with the depression of 1847 in France; on page 36 with the depression of 1856–57 in France; on page 37 with the depression of 1866–67 in France; on page 38 with the depression of 1877 in France; on page 39 with the depression of 1882 to 1886 in France.

On page 44, and following, he deals with the depressions of 1837, 1848, 1856, 1864, 1873 in Belgium; on page 47 he deals with the industrial depression commencing in 1882 in Belgium.

On page 49, and following, he deals with the industrial depressions of 1837, 1847, 1856, 1873 to 1879 in Germany, and on page 51 he deals with the industrial depression of 1882 to 1886 in Germany.

Need I tell you that the present depression commenced in foreign countries before it commenced in this? Need I tell you that its blight had fallen upon the English colonies in Australia before we felt any of its symptoms? These are facts, whether you know them or not.

Now, Mr. Wright has shown, not by argument or deduction, but by the conclusive evidences of history, that the cause of industrial depressions is at least as old as the depression of 1837 and that it has been constantly operating to produce and to reproduce at regular intervals the same results in all the leading countries of the world to which his investigation extended. It shows that all of the industrial depressions were substantially of the same kind, coming in the same way, manifesting the same symptoms, producing the same effects, and going away in the same manner, as mysteriously as they came, and that they all extended to all of the countries named.

Now, in view of these facts it is simply childish to assert that one of these depressions was produced by a cause which manifestly could have had no part in producing any of the other depressions. It is equally childish to attribute any of these depressions to a cause existing in this country and not existing in any of the other countries affected by the depression. It is childish to attribute any one of these depressions to any local or temporary cause which would not in any way account for the existence of any of the preceding or succeeding depressions in this country nor for any of the depressions occurring in the other countries referred to in Mr. Wright's report.

Laying all partisan considerations aside for the time being, it appears that according to the malignant course of industrial depressions the time had come for another decennial depression in 1893. Here let me say that the term "decennial depression" is not mine nor did it originate with Mr. Wright. Long before Mr. Wright had published his work on "Industrial depressions" the political economists of the world had come to recognize these cycles of prosperity and depression in industry as decennial, and had given them the name "decennial depressions" because of the regularity of their recurrence within every decade. The history of industrial depressions not only during the time covered by Mr. Wright's report, but throughout the whole of the present century, shows that the longest period between the culminating points of such depressions has been eleven years and the shortest time between such culminating periods eight years, making the average period about ten years.

The industrial depression of 1893 did not occur at an unusual time, but in the order in which it might have been expected by all who had given thought to the subject. Indeed, it came at the time when it was expected by every thinking man who had closely studied the scientific explanation of industrial depressions published by Mr. Henry George in 1879 and who had read the confirmatory historical evidence presented by Hon. Carroll D. Wright in his report seven years later.

No, gentlemen, the Democratic Administration did not cause nor contribute to produce the industrial depression. The charge that it caused or contributed to the depression is refuted by the facts of history and by the irrefutable logic of the events of a century. The cause of industrial depressions lies deeper than any recent legislation accomplished or proposed by either the Republican or the Democratic party. The masses of the people know this, and know it better than the party leaders, upon whom the masses once relied for political light and for political principles, but upon whom they rely no longer as they did of yore.

But gentlemen may say the overwhelming Republican victories of 1894 show that the people are influenced by the Republican assertion that the industrial depression was caused by the Democratic party. This, again, is a grave mistake concerning the real state of public opinion on this question, and I may add that the oracle hath spoken differently in the more recent Oregon election.

The Democratic party was rebuked in 1894 by the masses of the people, and the Republican party got the benefit of the popular dissatisfaction with the Democratic party; but that popular act was not an indorsement of the monopoly-breeding legislation of the Republican party against which the popular verdict was so unmistakably and overwhelmingly rendered in 1892.

The people condemned the Democratic party, not because it produced the industrial depression, but for failing to discern the causes of the depression and for failing to remove those causes.

The people, too, had understood certain pledges given by the Democratic party in its national platform differently from the way in which they were construed by Democratic officials elected on that platform, and they condemned what they conceived to be an evasion, by construction, of promises made in the platform. Whether popular dissatisfaction with the course of the Democratic party in these matters will carry the people again to repudiate it at the polls, when the result of their action will be the restoration of the party of hypocrisy and monopoly to control all of the departments of this Government, remains to be seen. I do not believe that they will carry their indignation against the party which stands for "equal rights to all, special privileges to none," to the extent of clothing with absolute control of the Government the party whose fundamental principle—if it may be called principle—is to create special privileges for the enrichment of the few upon the false pretense that the best way to promote the interests of the masses is to take care of the rich by legislation so that the rich may be better able to take care of the poor.

I do not believe that the masses of the people are prepared to surrender themselves again to the domination of the tariff barons, under whose régime dummy legislators may be expected to permit the beneficiaries of protective-tariff privileges to draft the schedules of a new protective-tariff law for their enrichment, as they drafted the schedules of the bill of 1890 which bears the name of Mr. McKinley, but with the framing of which Mr. McKinley had so little to do that the distinguished Republican leader, Senator WILLIAM E. CHANDLER, feels called upon to tell the country that it is unjust to give Mr. McKinley credit for drafting the so-called McKinley tariff bill, with the framing of which he had practically nothing to do. But it is well known that Senator CHANDLER gives too much credit to other statesmen for the drafting of that

bill. It is well known throughout the country that the Republican statesmen of the time were relieved of all trouble and responsibility in the matter of drafting the schedules of that bill by the protected monopolists by way of return for their liberal contributions to the Republican campaign fund of 1888, under the fat-frying process, to which Senator CHANDLER so eloquently refers in describing the means by which Mr. McKinley's nomination for the Presidency is now being forced upon the Republican party.

For my part, I have more faith in the intelligence and honesty of the masses of the people of this country than to believe that any sentiment among them in favor of rebuking the Democratic party for its failure to make the best use of its official power will lead them to deliver our country into the hands of the tariff barons and the political brigands who do their bidding for the profit which the unholy and unpatriotic service brings.

Of course I expect the Democratic party through its national convention to place itself squarely and unquestionably upon the fundamental principles of Democracy, and to nominate candidates whose very names are synonymous with those principles. In the platform of 1892 the Democratic national convention declared that never in the history of the Republic was it more necessary to assert and maintain the principles of Democracy promulgated by Thomas Jefferson and defended by Madison than at that time. The platform of 1896 should go further than that. It should set forth in terms and reassert the fundamental principles of Democracy as laid down by Thomas Jefferson, and pledge the Democratic party and its nominees to support and carry out those principles. Such a platform, with candidates whose lives have been devoted to those principles, will sweep the country from Maine to California and from Oregon to Texas. The people will rally to those principles to-day as universally as they always did when the Democratic party unflinchingly proclaimed and upheld them. [Loud applause on the Democratic side.]

Mr. BAILEY. Mr. Speaker, even if the time permitted it would serve no useful purpose to review the work of this Congress, because neither the little which it has done nor the much which it has left undone will greatly influence the decision which the American people are now maturing and which they will pronounce through the ballot box on the 3d of next November. Whether wisely or unwisely I will not undertake to say, but every man who has observed the drift of events must know that many questions which vitally concern the public welfare are for the time to be held in abeyance, and that it is a well-nigh universal determination that during the canvass upon which we are about to enter the discussion of all questions except one shall be pretermitted.

It is not, however, so fully agreed as to what this exceptional question shall be. Everybody outside of the Republican party and many of the most thoughtful men in that party are determined that it shall be the financial question; but the Republican leaders are striving to prevent this, and they have determined that if it is within their power to do so, the tariff shall be the paramount and the only issue in the Presidential election of this year. The courage with which only a short while ago they proclaimed themselves ready to meet and solve the important but perplexing financial problem has, like the courage of Bob Acres, been gradually oozing out at their fingers' ends; and they are now strenuously exerting themselves to avoid even the consideration of a question which three months ago they professed themselves anxious and willing to settle at once and for all time.

If I had entertained any doubt as to the policy of the Republican leaders, all doubt would have been dispelled by the speech which was delivered by the distinguished chairman of the Ways and Means Committee on yesterday. From the beginning to the end of that speech he sought to emphasize the importance of the tariff question and to minify the importance of all other questions, going so far as to contend that the difficulties of the Treasury Department are fiscal and not financial. He asserted, and he repeated the assertion, that the Treasury's embarrassment will immediately disappear whenever the Secretary is provided with sufficient revenue to defray the current expenses of the Government. My great confidence in the integrity of the gentleman from Maine [Mr. DINGLEY] forbids me to think that he would say anything which he does not believe; and yet my respect for his ability renders it difficult for me to understand how he could believe what he said. He knows that there has not been an hour in the last two years when it was inconvenient for the Government to promptly meet its current obligations; for notwithstanding the fact that our disbursements have exceeded our receipts, there has always been a comfortable surplus in the Treasury. The very day on which the majority passed their bill to raise additional revenue there was a surplus in the Treasury, over and above the gold reserve, of more than $100,000,000; and there is to-day a surplus of more than $150,000,000.

I desire to be perfectly frank in this matter, and I do not deny that if the Government had not been called upon to redeem its notes, which, when redeemed, passed into the general fund of the Treasury, and thus became available in the payment of appropriations, Congress would have been compelled to supply a deficiency. But the gentleman from Maine knows, or if he does not he is the only man of like intelligence in this country who does not know, that the demand upon the Treasury for the redemption of the Government's notes in gold had no connection whatever with the question of revenue. Those notes were not presented for redemption because the holders wanted to enable the Treasury to escape a default, nor because their holders doubted the solvency of the Government, but they were presented for redemption in gold simply because the gold was needed in the settlement of trade balances and paying the expenses of those American travelers who spend so much of their time and money in foreign countries.

It is perhaps true that some gold has been withdrawn from the Treasury which was not intended for exportation; but, so far from it being true that such gold was withdrawn on account of any fear of the credit of the Government, the truth is that the real object in withdrawing it was to create an opportunity to buy the credit of the Government in the shape of bonds. The men who have been most clamorous about impairing the credit of the United States are the same men who have been most eager to buy our bonds; and it will not be an easy task to persuade the thinking people of this land that the men who were so anxious to become the creditors of the Government were in the least distrustful of either its honesty or its solvency.

The gentleman from Maine would lead his party into a serious error, and an error, too, fraught with serious consequences to it and to the country, if he could induce his associates to act upon the theory that the depletion of the gold reserve is purely a matter of revenue; for whenever it becomes necessary to export gold, either to pay balances or to meet traveling expenses, no tariff law can prevent a drain upon the Treasury as long as you keep the notes of your Government in circulation and redeem them in gold. It makes no difference how abundant your revenues may be; you may collect an annual surplus of $50,000,000, but in the present state of the gold market but a fraction of your collections would be in gold, and when your notes were presented for redemption you could only obtain the gold to redeem them by selling bonds. Mr. Speaker, we may as well be candid with each other and with the country. All of us realize that we must either increase our revenues or reduce our expenses; but whether we do the one or the other, we will not escape the ever-present and important question of maintaining a gold reserve.

Does the Republican party intend in its national convention to face this question fairly, or will it resort to a cowardly and disgraceful evasion of it? As the time approaches when the question ought to be decided, the Republican leaders manifest a disposition to shrink from its decision; but, sir, unless I mistake the present temper of the American people, it would be better for your party to decide it boldly, although you decide it wrong, than it will be for you to trifle with it. Millions of American voters believe in the single gold standard and will cheerfully support a party which avows its intention to maintain it. Millions of other American voters believe in the bimetallic standard and will enthusiastically support a party which promises to restore it; but there is nowhere a handful of self-respecting American citizens who will cordially sustain any party which fears to tell the world on which side of this great question it stands. A straddle or a makeshift will deceive no intelligent man and will disgust millions of honest men. Parties, like individuals, sometimes find themselves in a situation where it is safer to fight than to run, and this is the situation which confronts the Republican party to-day. The country knows that you believe in the single gold standard, and it expects you to have the courage and the candor to say so. If you fail, you will suffer in comparison with your great adversary, for when the Democratic party assembles in convention at Chicago, whatever else it may do, it will adopt a platform so plain and so unequivocal that no two honest men can construe it in different ways. [Applause.]

Mr. MARSH. Mr. Speaker, after the two very able and patriotic speeches we have heard by the gentleman from California and the gentleman from Texas in favor of the old soldier, I think we ought now to take a vote on this bill. [Laughter.]

Mr. MAGUIRE. I forgot to say, Mr. Speaker, that I am heartily in favor of the gentleman's bill. [Laughter.]

Mr. MARSH. I judged so from the gentleman's remarks. [Laughter.]

The bill was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

On motion of Mr. MARSH, a motion to reconsider the vote by which the bill was passed was laid on the table.

FRANCES M. ROBERTS.

Mr. OTJEN. Mr. Speaker, I ask unanimous consent for the present consideration of the bill which I send to the desk.

The bill was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he hereby is, authorized and directed to place the name of said Frances M. Roberts upon the pension roll, and pay to her the sum of $15 per month.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. RICHARDSON. Mr. Speaker, reserving the right to object, I ask to have the report read.

The report (by Mr. COLSON) was read, as follows:

The Committee on Pensions, to whom was referred the bill (H. R. 3494) entitled "A bill granting a pension to Frances M. Roberts, beg leave to submit the following report, and recommend that said bill do pass with an amendment:

The claimant, Frances M. Roberts, is the unmarried daughter of Levi M. Roberts, who served as an express rider in the United States Army during the war of 1812, and who, while so serving, received injuries necessitating amputation of a leg. The soldier was a pensioner on account of above-named service and injuries at the time of his death, which occurred April 2, 1874. His wife, the mother of the claimant, died in 1858, and the claimant lived with and cared for him until he died. She is his only surviving child, and is dependent upon friends and acquaintances for support, she having no property or income. She is about 54 years old and in such delicate health as to be too feeble and infirm to earn a maintenance by daily labor.

The above facts are shown by the papers on file at the Pension Bureau and by the testimony of Susan Gale, Elizabeth H. Ingersoll, John F. Burnham, C. M. Towne, and others, who have been intimately acquainted with the claimant for many years and personally know her relationship to the soldier and all the circumstances of her case.

The following amendment is recommended:

In lines 5 and 6 strike out the word "fifteen" and substitute therefor the word "eight"; so as to fix the rate of pension at $8 per month.

The amendment recommended in the last paragraph of the report was agreed to.

The bill as amended was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

MESSAGE FROM THE PRESIDENT.

A message from the President of the United States, by Mr. PRUDEN, one of his secretaries, announced the action of the President on bills of the following titles:

On June 11, 1896:

An act (H. R. 7664) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes;

An act (H. R. 9409) making appropriations to supply deficiencies in appropriations for expenses of the House of Representatives, and for other purposes, for the fiscal year 1896;

An act (H. R. 9447) to amend section 1 of the act to amend an act entitled "An act authorizing the Postmaster-General to adjust certain claims of postmasters for loss by burglary," etc., approved May 9, 1888;

An act (H. R. 7338) for the relief of William H. Scofield, Jacob Brady, James Ketcham, Annie Booth, as administratrix of the goods, chattels, and credits of George W. Booth, deceased; Wilson P. Billar, Ezra L. Waterhouse, Moses C. Bell, George W. Byles, and George A. Scofield;

An act (H. R. 9226) to change the time and places for the district and circuit courts of the northern district of Texas;

An act (H. R. 180) to make the city of Erie, Pa., a port of immediate transportation;

An act (H. R. 5210) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1897, and for other purposes; and

An act (H. R. 8321) to authorize the county of St. Louis, in the State of Minnesota, to build or authorize the building of a foot and wagon bridge across the St. Louis River, between Minnesota and Wisconsin, at a point near Fond du Lac, in said State of Minnesota.

NOTE.—The following bills having been presented to the President on May 29, 1896, and not having been returned by him to the House of Congress in which they originated within the time prescribed by the Constitution, have become laws without his approval:

An act (H. R. 2054) to correct the military record of Charles W. Rinehardt and to grant him an honorable discharge;

An act (H. R. 6256) authorizing and directing the Secretary of the Navy to furnish to George F. Fuller Post, Grand Army of the Republic, of Manistique, Mich., a condemned cannon; and

An act (H. R. 2777) authorizing and directing the Secretary of the Navy to donate condemned cannon and condemned cannon balls to certain posts of the Grand Army of the Republic.

SARAH M. SPYKER.

Mr. MEYER. Mr. Speaker, I ask unanimous consent for the present consideration of the bill which I send to the desk.

The bill (H. R. 6634) was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws, the name of Sarah M. Spyker, widow of L. P. Spyker, ensign, Capt. W. A. Goodwin's company of Alabama Volunteers, Indian war, 1836.

An amendment recommended by the Committee on Pensions was adopted, as follows:

In lines 4 and 5 strike out the words "subject to the provisions and limitations of the pension laws" and insert "at $8 per month."

The bill as amended was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

On motion of Mr. MEYER, a motion to reconsider the vote by which the bill was passed was laid on the table.

STEAM LAUNCH FOR NEW LONDON COLLECTION DISTRICT.

Mr. RUSSELL of Connecticut. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 8415) to authorize the purchase of a steam launch for use in the customs collection district, New London, Conn.

The bill was read.

Mr. RUSSELL of Connecticut. Mr. Speaker, if I may be allowed a word, this bill was prepared by the Treasury Department and sent to me, as representing the district in which the New London customs district is situated, for introduction some three weeks ago——

Mr. DOCKERY (interposing). Does the bill carry an appropriation?

Mr. RUSSELL of Connecticut. It does. It was sent to me by the Department for introduction. It was introduced and it has been reported unanimously by the committee, and now I call it up for consideration.

Mr. BLUE. Is this a House bill?

Mr. RUSSELL of Connecticut. It is.

Mr. BLUE. Then it has not been to the Senate at all?

Mr. RUSSELL of Connecticut. It has not.

Mr. BLUE. Well, there is no necessity for a bill of that kind, carrying an appropriation of $3,000, being passed at this time, because it can not pass the Senate.

Mr. RUSSELL of Connecticut. I simply desire to fulfill my duty to the Treasury Department in the matter.

Mr. BLUE. Has it been considered by any committee?

Mr. RUSSELL of Connecticut. Yes, sir; it has been unanimously reported by the Committee on Interstate and Foreign Commerce.

Mr. DOCKERY. I suggest to the gentleman that both sides have made up their statements of appropriations for this session and they do not wish to have to add this extra item. [Laughter.]

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. BLUE. I object.

CAPT. HENRY A. F. WORTH.

Mr. STEWART of New Jersey. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 5787) for the relief of Capt. Henry A. F. Worth.

The bill was read, as follows:

Be it enacted, etc., That the pension heretofore granted to Capt. Henry A. F. Worth, late of the United States Army, be increased so that he shall receive a pension of $72 a month.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. WHEELER. I trust that no one will object to the consideration of this bill for this poor invalid soldier. He was a classmate of mine at West Point forty years ago. He is now a feeble man, whose wife has to wait on him at every moment. I love him, and I trust that this bill will be considered without objection.

Mr. BLUE. How much pension does it carry?

Mr. WHEELER. Seventy-two dollars per month.

Mr. BLUE. Is he helpless?

Mr. WHEELER. Absolutely so. As I have said, he was my classmate. He graduated at West Point and I have known him for forty years. He served bravely in battle. He was wounded at Gaines Mill and again at Malvern Hill. I trust no gentleman will object to the bill. I appeal for a brave, disabled soldier.

The SPEAKER. Is there objection to the consideration of the bill? The Chair hears none.

The amendment was agreed to.

The bill as amended was ordered to be engrossed for a third reading, was accordingly read the third time, and passed.

VALEDICTORY OF THE SPEAKER.

The SPEAKER (at 4 o'clock p. m.). GENTLEMEN OF THE HOUSE OF REPRESENTATIVES: Before pronouncing those words which close the session I desire to offer to the House my grateful recognition of its kindness. It is always a high honor to receive the thanks of the House of Representatives, but especially so at the end of a session where the Speaker has been forced to say "no" more times, perhaps, than in the history of any other Congress.

While thanking you for your kindness to me, I must congratulate the House on its conduct of the public business. Ordinarily a majority of 2½ to 1, a majority of 150, means disorganization, faction, and discord. In this House a hundred and fifty new men of both parties have behaved with the steadiness of veterans, and if our connection with other branches of Government with different ideas has prevented us from serving the country as we might have done, we at least have behaved with dignity, fairness, and credit.

With the kindest personal wishes to you all, I again return thanks. By virtue of the concurrent resolution of both branches I declare this House adjourned without day. [Loud and long-continued applause.]

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, the following executive communications were taken from the Speaker's table and referred as follows:

A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings filed by the court in the cases of James H. Jenkins, Mary H. Bush, Rebecca B. Williams, and John Morrison against The United States—to the Committee on War Claims, and ordered to be printed.

A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings filed by the court in the case of Catharine B. Brown, Samuel Schoppert, deceased, Mary E. Wood, executrix, H. M. Waugh, and John H. Woodford against The United States—to the Committee on War Claims, and ordered to be printed.

A message from the President of the United States, returning without his approval House bill No. 225, to provide for the transfer of Fort Omaha Military Reservation to the State of Nebraska—to the Committee on Military Affairs, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS.

Under clause 2 of Rule XIII, Mr. TERRY, from the Committee on the Judiciary, to which was referred the bill of the House (H. R. 4057) in relation to cigarettes, and to limit the effect of the regulation of commerce between the several States and with foreign countries in certain cases, submitted a minority report (No. 2289) recommending that said bill do pass; which said bill and minority report were referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS.

Under clause 2 of Rule XIII, Mr. KIRKPATRICK, from the Committee on Invalid Pensions, to which was referred the bill (H. R. 9260) to increase the pension of Adam Johnson, reported the same (Report No. 2288); which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, MEMORIALS, AND RESOLUTIONS.

Under clause 3 of Rule XXII, Mr. RICHARDSON (by request) introduced a bill (H. R. 9462) requiring the use of safety fenders on cars operated by cable or electric power within the District of Columbia; which was referred to the Committee on the District of Columbia.

PRIVATE BILLS, ETC.

Under clause 1 of Rule XXII, private bills of the following titles were presented and referred as follows:

By Mr. PRICE: A bill (H. R. 9463) for the relief of Lemuel Tanner, of Lafourche Parish, La.—to the Committee on War Claims.

Also, a bill (H. R. 9464) for the relief of the estate of J. W. Tucker, late of Lafourche Parish, La.—to the Committee on War Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. GROUT: Resolution adopted by Ransom Post, No. 7, Grand Army of the Republic, Department of Vermont, in favor of a service pension of not less than $8 per month to Union soldiers of the late war—to the Committee on Invalid Pensions.

Also, testimony in the matter of granting a pension to Mrs. Mary Chamberlain, of Chelsea, Vt.—to the Committee on Invalid Pensions.

Also, testimony in the matter of granting a pension to Hannah M. Cheney, widow of Josiah M. Greene, late of Company C, Sixth Regiment Vermont Volunteers—to the Committee on Invalid Pensions.

By Mr. PHILLIPS: Petition of citizens of Butler, Pa., opposing the selling of beer on Ellis Island—to the Committee on Immigration and Naturalization.

Also, resolution of the Union Veteran Legion of Rochester, Pa., favoring House bill No. 3727, known as the per diem pension bill—to the Committee on Invalid Pensions.

By Mr. RICHARDSON (by request): Paper to accompany House bill No. 9462, favoring some effective appliance attached to cable and electric cars for the protection of human life in the District of Columbia—to the Committee on the District of Columbia.

By Mr. SOUTHARD: Petition of J. M. Ashley and others, in behalf of House bill No. 6851, in aid of Wilberforce University—to the Committee on Military Affairs.

Also, resolutions of the American Federation Glass Workers' Union, No. 28, of Toledo, Ohio, in favor of Government ownership of telegraph lines—to the Committee on Interstate and Foreign Commerce.

By Mr. CHARLES W. STONE: Resolutions of a public meeting at Bradford, Pa., denouncing the outrages and murders in Armenia, and asking that the United States insist on action by the treaty nations to stop the same—to the Committee on Foreign Affairs.

By Mr. JOHNSON of California: Petition of citizens of Sacramento County, Cal., in favor of the passage of House bill No. 2626, for the protection of agricultural staples by an export bounty—to the Committee on Ways and Means.

APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

The Coin Redemption Fund.

REMARKS

OF

HON. LORENZO DANFORD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. DANFORD said:

Mr. SPEAKER: While there are some good features about the bill under consideration, especially the one requiring the Secretary of the Treasury to advertise the bonds offered for sale, yet I can not support the measure for reasons that to me should control the votes of members on this side of the House. As a party we stand pledged against increasing the interest-bearing debt of the Government in time of peace. We have insisted in the two last political campaigns that we should raise by tariff taxation a sufficient amount of revenue that, added to the internal taxes, would be sufficient to support the Government. On Thursday last we passed in this House a bill that the Ways and Means Committee tell us, if carried into the legislation of the country, will be sufficient for that purpose. Indeed, the Secretary of the Treasury, who ought to know, claimed in his annual report to Congress that we will soon have sufficient revenue to carry on the Government without additional taxation of any character.

This Administration has been in financial straits ever since it took charge of the Government two and a half years ago. Congress was convened in extra session for the purpose of repealing what is known as the Sherman silver-purchasing act, the President claiming that all of the financial troubles of the country grew out of the menace to our credit contained in that act. The law was repealed and there was no preceptible relief. The Republican party then claimed that our financial and business distress grew out of the vicious revenue legislation threatened by the Democratic party, and that relief could be had only by assuring the country that when we were reinstated in power the country would settle down to the policy of protection.

This House meets and we are confronted with a demand from the Executive and his chief financial officer that the country must have relief by retiring from circulation $346,800,000 of legal-tender currency now in use by the people. This is insisted upon by both the President and the Secretary of the Treasury; and while as a direct proposition put to this side of the House, the policy of the Administration could not command one-third of the votes of the Republicans, yet it seems to me that the bill under consideration, if it should become a law, and should be executed in the spirit of the message and the report of the Secretary of the Treasury, hostile as they are to the greenback circulation, it would have the effect of retiring them entirely from circulation.

The bonds authorized by this act are for the redemption of United States legal-tender notes, and for no other purpose. These bonds bear 3 per cent interest, and with the proceeds the legal tenders are to be taken up—redeemed—and with an administration of the Treasury Department hostile to the greenbacks we would substitute by this plan, in a very short time, $346,000,000 of 3 per cent interest-bearing bonds for noninterest-bearing debt, and the greenbacks once redeemed would be held in the Treasury and no longer constitute a part of our monetary circulation.

As I have already said, the Secretary of the Treasury claims that under existing laws he will soon be able to meet all current demands upon the Treasury. We have already, as we are told by the Committee on Ways and Means, by the bill passed on last Thursday, added another forty millions or thereabouts to the revenue, so that there would be no necessity for again putting the greenbacks into circulation and they would be held in the Treasury. But suppose that the Treasurer should redeem them by the sale of the bonds provided for in this act, and again pay them out to meet current demands, or in any way put them in circulation, there would be just as much likelihood of these legal-tender notes being bought up again and again by speculators and the Secretary forced from time to time to sell more bonds in order to redeem them over and over again.

I do not believe, however, that unless some exigency should occur that they would be paid out, but would remain in the Treasury, and we would soon have substituted for this noninterest-bearing debt an interest-bearing bond of the Government. The people do not want to see the greenbacks retired in any way, much less in the covert manner provided for in this bill. I was in Congress in 1875 and 1878, when the discussion about the greenbacks was going on in the country, and there was then no matter about which the plain people of this country were more sensitive than about this same legal-tender paper currency. Our legislation at that time upon this subject gave the Republican party great trouble. It is the favorite money of the people; they are familiar with it; they prefer it to gold; it is convenient, and, as they believe, costs nothing; and if the Republican party in this Congress should be a party to any measure that either directly or indirectly retires this currency and substitutes for it an interest bearing debt we will have to answer for it at the polls.

It is said that even now fifty millions of these legal tenders are in the Treasury awaiting presumably for some legislation that will enable the Secretary of the Treasury to permanently retire them. It seems to me that in this bill we are providing the means by which he can retire in a few months the great bulk of these legal tenders, and I for one will not aid him or this Administration in this purpose.

But we are told that this bill substitutes a 3 per cent for a 4 or 5 per cent bond. My observation is that in the purchase of bonds those who are able to make purchases are able to dictate terms, and that a 3 per cent bond will be in the long run as expensive to the Government as a 4 per cent bond. But be that as it may, I will not be a party to this legislation. The Secretary of the Treasury and the President, after having blundered through almost three years of disastrous financial legislation, undertake to dictate to a Republican Congress the relief that they desire. We said in our platforms in 1894 and 1895, that the trouble with the country was not so much in its finances as in the disastrous revenue legislation of the Fifty-third Congress. Relief will come to this country when we quit buying wool and woolens from abroad with our gold; when we quit buying tin plate and pottery and other articles from abroad that we might as well manufacture at home. Relief will come when the balance is on the right side of the great business ledger, and not until then. We are in a position in this House to say to the other end of the Avenue that we present to them the relief of more revenue, of steadier business, and the financial policy that will save the country from the panics that almost daily affect this Administration.

The people are not demanding the legislation contained in this bill, and in my judgment they will resent it as not in keeping with our pledges and with the policy that they indorsed in our election to this House.

The President's Two Special Messages to Congress on the Venezuelan Boundary and the Condition of the Treasury.

SPEECH

OF

HON. ELIJAH A. MORSE,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency—

Mr. MORSE said:

Mr. SPEAKER: I can hardly hope to add anything to the exhaustive argument in support of this bill offered by the distinguished gentleman from Maine [Mr. DINGLEY], chairman of the Committee on Ways and Means, or to the eloquent presentation of the same matter by the distinguished gentleman from Pennsylvania [Mr. DALZELL], or the unanswerable argument of the gentleman from Iowa, my friend, General HENDERSON.

These gentlemen have left nothing to be said in defense or support of this measure. Of course there are a great many amendments to this bill that I would like to offer in the interests of my constituents.

The duty on woolen goods, as proposed, is far too low. The country has been, and I fear will continue to be under the increased duty contemplated by this bill, flooded with cheap European shoddy goods, to the great injury of the woolen manufacturers of my district and the country.

In my district are located the "tack" manufactories of the world; millions are invested in the business. The ad valorem duties of the Gorman-Wilson bill as amended by this bill work a great hardship to these manufacturers. They are crying out for a specific duty that will prevent undervaluation. The fire-brick interest of Taunton, in my district, is greatly injured by the low duty of the Gorman-Wilson tariff bill, which the horizontal increase will not materially assist.

There are numerous other industries which need increased protection, and were opportunity offered I would offer amendments at these points; but it has been explained to us by the gentlemen who have preceded me that this is not a revision of the tariff, but is purely a revenue bill, to meet the existing deficiency in the receipts of the Government and make them equal to its expenses, in response to the message of the President of the United States.

A general revision of the tariff is now impossible on Republican and protection lines. Such a revision of the tariff would pass neither the Senate nor the Democratic President. Such a revision will have to be postponed for 433 days more, when the Republicans will again be in control of every department of this Government.

Then and not until then can we hope to return to the wise economic and financial policy of the Republican party and that universal prosperity which has always attended the Administration of the Republican party, and which has always forsaken the country when the Democrats have been in power.

Under a Republican Administration, from the time of the resumption of specie payment until the Democratic party again came into power, on the 4th of March, 1893, the Government had no trouble in keeping up its gold reserve, and the one hundred millions in gold was never trenched upon.

No amount of juggling with figures or miscalculations and misstatements by the Secretary of the Treasury will deceive the American people in regard to the true cause of the shrinkage of our gold reserve and this constant menace to the financial soundness of the Treasury.

Dissemble or cloak it as the Secretary of the Treasury may, the naked truth is that the gold reserve has been used directly and indirectly to make good the deficiencies in our revenue and to pay the running expenses of the Government. And that condition of things will continue until this deficit in our revenue is corrected by the bill now under consideration or some other bill to increase our revenue.

Incompetency, imbecility, and inefficiency mark this Democratic Administration in every department of the Government. Under the Administration of President Harrison the country not only enjoyed unbounded prosperity, but labor and capital were everywhere employed, times were good, wages were good, and the country was enjoying a development and prosperity beyond any ever known in our history. And besides all this, during the four years of Harrison's Administration we paid off over $200,000,000 of the public debt.

All this has been reversed under the Administration of Grover Cleveland. Property has decreased in value, factories have been closed, labor has been employed at reduced wages or no wages at all; our career of prosperity has been checked, the hand on the dial of progress has been turned backward, and the national debt has been increased more than $163,000,000. And as the result of the two messages recently sent to Congress, a second panic and universal prostration of business was narrowly averted.

But I desire to address myself also, briefly, to the Venezuela message and to explain to my constituents and the country my attitude toward that matter.

Mr. Speaker, when the bill was introduced into this House, December 18, creating a commission for the investigation of the Venezuela boundary dispute, in harmony with the recommendation of the President of the United States—I say, when this resolution was introduced by the distinguished gentleman from Illinois [Mr. HITT], the House was taken by surprise. A single objection by a single member would have prevented its consideration.

I did not offer that objection, but I very much desired then and desire now to explain my vote in favor of the bill The bill simply provides for a commission of inquiry, with a view to learn what are the bottom facts in regard to this boundary dispute between Great Britain and the State or Republic, if it can be called such, of Venezuela.

The controversy over the boundary line is of long standing, extending over a period, I think, of fifty years. This commission, while to some extent an ex parte tribunal, would be an entirely disinterested commission, and would undoubtedly give exhaustive examination to all sides of the question.

And most undoubtedly their finding in the premises would be accepted by the nations of the earth as an equitable and just decision regarding the boundary between the two countries so long in dispute. This commission might discover, what many people believes they would, that there is no violation of the Monroe doctrine in the boundary-line controversy in Venezuela, or after hearing all sides they might decide in favor of the English contention, but be that as it may, if it is proposed to make the finding of the commission, if not consented to by Great Britain, the ground for declaring war against that country, you can count me out. Why, the civilized world revolts with horror from the bare possibility of such a conflict between the two great Anglo-Saxon English-speaking and Christian nations of the earth.

It is not to be entertained or thought of for a single moment; it would be the calamity of the nineteenth century. Ourselves and the English-speaking people have ten thousand thousand interests in common of vastly more moment than the Monroe doctrine. They are bone of our bone and flesh of our flesh. No sane person can contemplate war between these countries.

The destruction of commerce, the bombardment of defenseless cities by modern war vessels that can throw dynamite bombs into a city with the vessel out of sight. Such consequences are too horrible for contemplation and would not be sanctioned by the people of either country, and certainly could find no justification in the Venezuela quarrel.

Three hundred years ago Spaniards conquered these South and Central American countries. They found them docile, peaceable, unwarlike heathen. After having had their civilization for three hundred years some of these countries are peopled by some of the most bloodthirsty people on the face of the earth.

It is not my purpose here to locate the responsibility or explain the causes for the deplorable condition of things existing in many of these Republics, whose normal condition is revolution and anarchy and whose people are superstitious, ignorant, and without sufficient intelligence for a republican form of government.

In confirmation of what I have said, witness the recent war between Chile and Peru, in which every rule of civilized warfare was outraged. Old men, women, and children, noncombatants, were butchered and murdered on both sides.

What, a war between the United States and England over the Venezuela boundary? Why, Mr. Speaker, the whole State isn't worth a week's fighting between these two great nations.

Why, Mr. Speaker and gentlemen of the House of Representatives, what is the Monroe doctrine? Is it understood to mean that we are to establish a protectorate over all these miserable revolutionary governments and countries, and make their quarrels our quarrels, and allow them to say to themselves and each other, no matter what the merit of our case is the great Government of the United States, with its sixty-five millions of people, stands behind us.

I say that a war over such a matter as this would not be sanctioned by the people of either country. At the beginning of this very year I had the honor to present in this House a memorial, borne across the sea by W. Randall Cremer, a member of the English House of Parliament, signed by no less than 354 members of the British House of Commons, praying this Government to join with the Government of Great Britain in a treaty to refer all questions of international dispute to arbitration. That petition, with the signatures printed in full, will be found in the

CONGRESSIONAL RECORD of the Fifty-third Congress, third session, page 2408, of February 19, 1895.

You ask me what would I do in the premises with reference to this and other questions now in dispute between this Government and that of Great Britain. I would do exactly with this as we did in the case of the *Alabama* claims.

We didn't go to war or threaten war over those claims, involving the destruction of American commerce and the loss of untold millions to our countrymen, in which the English Government was clearly at fault.

What did we do? We placed our claim on file and bided our time, and finally adjusted the matter by arbitration and received $15,000,000 from Great Britain for damages to our commerce.

What would I do now? I would not abate one jot or tittle of our demand at present. I would place our demand in regard to the boundary line of Alaska on file. With reference to Nicaragua and Venezuela, I would insist upon our demands, and demand that the questions in controversy be left to arbitration by some international impartial tribunal.

And in time we would accomplish our object and have a peaceable and just settlement of these great international questions, honorable and just to both countries, and without bloodshed and war.

What, war with Great Britain over the boundary of Venezuela or the seals of Alaska? Why, Mr. Speaker, all the seals that ever swam in Bering Sea, all the fish that ever swam in Canadian waters, are not worth a day's war.

Such a war would turn back the hands on the dial of progress and peace, good will, and comity between nations a thousand years. No, Mr. Speaker, I am not in favor of a protectorate over the South and Central American republics.

I would assert the Monroe doctrine, if anybody knows what that is, and continue to assert it. I would say to Great Britain that we looked upon her interference in the affairs of Nicaragua or the Sandwich Islands or of Venezuela as a wrong, as an act unfriendly to this Government, and I would bide our time for a settlement of these disputed questions by arbitration.

I supported the bill authorizing a commission of inquiry solely and entirely that we may give to ourselves and the world accurate and correct information in regard to the pending boundary dispute between Venezuela and Great Britain.

It must be a source of great pleasure and satisfaction to every lover of his race to read the expressions, not only of this country but of prominent Englishmen as well, deprecating and denouncing any resort to arms as a method of settling disputes between these two great Christian and English-speaking peoples.

On Sunday last the clergy of Boston in their pulpits denounced an appeal to war in the most unmeasured terms, and these learned and reverend gentlemen most undoubtedly voiced the well-nigh unanimous sentiment of Massachusetts and New England, and, I believe, the sober second thought of the entire country.

Surely, at this Christmas season, when we are celebrating the birth of Him who left His home in glory, who was rich and for our sakes became poor, that we through His poverty might be made rich; surely while we are celebrating the birth of the lowly Nazarene, who walked beneath the palm trees of Judea nineteen centuries ago, whose birth was heralded by angels with a song of peace on earth and good will toward men; surely this is a fit and proper time for these great Christian nations to dismiss all thought of submitting to the arbitrament of the sword such a comparatively trivial and unimportant matter as a boundary line in Venezuela, 2,500 miles removed from our country.

The following letters from eminent citizens of Massachusetts are specimens of a large number of letters that I have received on the subject of the President's Venezuela message. The first is from Dr. Henry B. Blackwell, a patriotic gentleman, widely and favorably known throughout New England:

BOSTON, MASS., *December 23, 1895.*

DEAR FRIEND: Oblige me by reading my brief inclosed letters cut from Saturday's Herald, also that of Edward Atkinson. President Cleveland is making a most audacious move to compel his renomination and to give the Democratic party four years more of Democratic rule.

He will plunge us into a fratricidal war with the only Protestant nation in Europe allied to us in race, language, and institutions, unless the Republicans refuse to follow his lead. Don't let them fall into his trap.

British Guiana is the only Anglo-Saxon foothold in South America. It is the only free State where elections are anything but nominal. It is governed by a legislature of its own, and is a Republic in all but name, like the provinces of Canada.

Venezuela is a Republic only in name. It is a chaotic, semibarbarous Spanish-Indian military despotism, where neither life nor property is safe, no more to be compared with Guiana than is a Mexican "greaser" to a civilized white man.

This is not a case where the Monroe doctrine applies. Guiana is a part of the status quo of the American Continent, the only country where you and I could enjoy life under a government of law.

Don't let the Republicans be fooled. Cleveland means mischief.

Yours, truly,

HENRY B. BLACKWELL.

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following quotation is taken from a letter received from a distinguished New York lawyer, whose name I have not permission to use:

NEW YORK CITY, *December 21, 1895.*

MY DEAR MORSE: * * * Regarding the Venezuelan matter, one thing surprises me, which is that Congress, both the Senate and House of Representatives, should have voted unanimously for the appropriation for the commission in accordance with the suggestion contained in the President's message, and that so many of the leading ministers of the country should seem to take a view very different from that taken by Congress. In this city, and especially in Brooklyn, much earnest talk was had upon this subject last Sunday from the pulpits, and the sentiments in favor of peace and the criticisms on the Monroe doctrine, especially its application to the present controversy, were in many cases loudly applauded. * * *

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following letter is from Henry Wood, esq., a gentleman whose opinion on economic, diplomatic, and moral questions certainly commands the respect of all who know him:

"THE WARREN," *Roxbury, Mass., December 21, 1895.*

MY DEAR MR. MORSE: Since the recent hasty action of the House in the Cleveland commission matter, among the scores of solid Republicans, citizens, business men, and Christian men that I have met there was not one who does not deplore it and regard it as a mistake of the greatest importance.

The sensational jingo press entirely misrepresents the sentiment of the thoughtful people. The Boston Journal has largely lost its influence by its unseemly and unpatriotic frothiness.

Though I have not the honor of your personal acquaintance, I have always been a warm admirer of your patriotism and general uprightness in public and private life. You will therefore pardon me if I make a criticism, for it is done in a friendly spirit. It is that whether, from the standpoint of party, country, economics, morality, or Christianity, you and the other Republicans in Congress have made the gravest mistake of your lives. I can truthfully assure you that nineteen-twentieths of the rank and file of the party would agree with me.

The moral sense of the nation will never sustain any war, especially with England, on any issue less important than that of actual self-defense. In this episode human progress has received a terrible shock and setback.

Very respectfully, yours,

HENRY WOOD.

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following is from the pen of Edward Atkinson, a gentleman who needs no introduction to the people of New England or of the country:

In this time of distrust and danger it is fit that anyone who has the ear of the public in any way should speak plainly. Little time has yet been given to review President Cleveland's message and the accompanying documents, yet having met in the last two days a great number of prominent and influential men, notably many of the President's most earnest supporters in all that he has previously done, I find but one universal feeling—all are shocked, all are grieved, all concur in condemning utterly the recent action by which such terrible support has been given to the jingo spirit, heretofore arrayed against the President.

If an act of the Executive of this country should be committed which would precipitate war with Great Britain on a petty boundary question in South America, it is held that it would be a crime against humanity. If a position is taken, such as appears to have been taken, promoting violence without the expectation of a resort to war, it is held to be a stupendous and humiliating blunder. If the object should prove to be merely to cater for success in a party sense to the jingo element, then the verdict must be to the degredation and disgrace of everyone sharing in such a base purpose.

So far as men of intelligence who have tried to master the details of this case are concerned, many in number with whom I have conversed in the last two days, men of highest position and influence in this community, without respect to party, notably, as I have said, those who have gone to the fullest extent in the support which they have heretofore given to President Cleveland, all concur in the following summary of the conditions:

First. The admission by the President and Secretary of State that Great Britain and Venezuela may settle this case for the cession of territory, one to the other, either for money consideration or otherwise, proves conclusively that the Monroe doctrine has no application to the existing dispute about the title to the territory which is claimed by both parties.

Second. The suggestion of the President that a commission shall be appointed, by whom the facts in the case shall be established, is a complete admission that the facts are not now established. Therefore, any threat of violence or forceful interference is a threat based upon ignorance of the facts and not upon knowledge of the facts.

Third. The controversy about the title to a certain area of territory is of two parts. Lot No. 1, which Venezuela claims from Great Britain, has been occupied by English subjects for a longer time than the existence of the present State of Venezuela. Lord Salisbury asserts the right and the duty of the British Government to protect British citizens of this lot No. 1 in their rights of property and possession pending an adjudication of the case. Venezuela threatens to occupy this territory by force. An analogous case may be found in the recent demand of this country for the protection of the citizens of the United States in Turkish territory and for indemnity from the Turkish Government for losses incurred by them. If our Government has the right to support such claims on behalf of its own citizens dwelling in a territory over which we claim no jurisdiction whatever, how much greater may be the justification of the English Government in extending the same protection to British citizens occupying territory to the ownership of which the British Government possesses a claim, and to give them all protection of force necessary to repel the proposed forceful occupation of that disputed lot No. 1 by the authorities of Venezuela.

The other parcel of this territory, lot No. 2, has not been occupied by English citizens to any extent calling for the interposition of force. It is claimed by Venezuela, and on that parcel, No. 2, Lord Salisbury expresses entire willingness to submit to arbitration. Under these circumstances a threat of violent interference on the part of this country bears the aspect of a crime committed upon the English-speaking people, both of this country and of the British Islands.

The suggestion has been made by a prominent citizen of this city, whose influence would be very great, which I hope he will urge to the utmost, namely, in view of the fact that the Monroe doctrine, so called, was established either at the instance or with the assent of the British foreign minister, George Canning, and in view of the fact that the proposed application of

this Monroe doctrine by the President is, in the judgment of the highest constitutional lawyers and students, like Professor von Holst, utterly unwarranted in fact, being a perversion of the true Monroe doctrine, therefore it is suggested that the Monroe doctrine itself be submitted to arbitration, in order that its original purpose, shared in by all English-speaking people—by Great Britain and the United States as well—shall be fully defined and carried into effect, and that its perversion to unrighteous ends at the danger of war shall be finally stopped.

EDWARD ATKINSON.

The history of this Administration has been a history of colossal blunders, especially with reference to our foreign relations, from the date the President attempted to reinstate a profligate, bloodthirsty heathen queen on the throne of the Sandwich Islands, after she had threatened to behead all the white men, banish their families, and confiscate their property. Had the President used a message to Congress to threaten the blood-thirsty Turkish Government with the military power of this Government instead of our brethren across the sea, it might have violated precedent and the Farewell Address of George Washington, but it would have met the applause of the civilized world. The following letter is pertinent to this observation. I regret that I am not at liberty to use the writer's name:

NEWTONVILLE, MASS., *December 23, 1895.*

DEAR SIR: Excuse me for the draft upon your time in sending the present communication, but as a Christian and an American citizen, as one who holds dear to heart the principles of Christian civilization, I write to ask if nothing can be done to stem the tide of infatuation which seems to have taken possession of so many of our public men within the last few days, threatening to embroil the two leading nations of the globe in a petty fight. Here we have been watching and praying for weeks past that in the name of humanity and of a higher civilization, something might be done by the Christian nations of the world to put a summary stop to the wholesale slaughter of the thousands of our Christian brethren in Armenia; waiting the slow processes of international courtesy and usage, hampered as they were by mutual jealousies, while the murderous work and pillage kept right on, when, lo, and behold, instead of joining hands in the name of Christ to demand relief for their persecuted brethren of another wing of the Christian family, the two most powerful representatives of Christ's kingdom upon earth start up a quarrel with each other, over a matter of not one hundredth the importance to either of them, and with which one of them has not directly any concern whatever. The religious and financial interests of this country will not recover from the shock if this matter goes on to its culmination for the next ten years.

What nuts this must be to His Majesty the Sultan, and his whole infamous court.

In haste, yours, sincerely,

———.

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following telegram, which is from an important and influential business man of Boston, is germane to a discussion of the Venezuelan boundary question, and I am sure voices the sober second thought of many true and sincere Americans:

BOSTON, MASS., *December 20, 1895.*

Am satisfied that New England's representative men irrespective of party affiliations emphatically condemn President's course, and the prospect of endorsement by Congress causes grave apprehension here. We urge you to use every effort to kill the bill for Commission.

(Signed) WILLIAM WHITMAN.

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following letter is from Hon. William H. Osborne, a gentleman of high character and standing in Massachusetts, a member of the Plymouth and Suffolk bar, and was New England pension agent for four years under President Harrison. Mr. Osborne's opinion will carry great weight with all who know that gentleman:

BOSTON, MASS., *December 19, 1895.*

MY DEAR SIR AND COMRADE: I saw you quoted this morning in relation to the present war talk. It may be of no earthly consequence to you or anybody else, but I agree with you fully and I agree with Congressman BOUTELLE of Maine, although the Boston Journal takes exception to his remarks.

I have no patience with this whole business, and I think the Republican Congressmen and the Republican press have made a mistake in their gushing indorsement of the President. I am opposed to war unless it is absolutely necessary to protect the honor or integrity of the nation. I have seen war enough, and am still suffering from its consequences. If Cleveland had entered the Army during the late war, instead of sending a substitute, perhaps he would not be so bloodthirsty as he now is. If we must have a war, let us have a President that knows something about it, and who has not been fighting the old soldiers, cutting off their pensions, etc.

It is all politics, and is resorted to to distract public attention from the errors and shortcomings of the Administration, and, if possible to secure, for him (Cleveland) another term as President. He has been continually giving away American interests ever since he was President, and now he assumes a most war-like attitude over a matter of very little consequence. I do not think the American people upon sober second thought want to go to war over a boundary line between two countries in South America, neither one of which are more than half civilized. I have an idea that this war cry will react upon the President when the people have thought it over carefully, and as much as we effect to despise the opinions of English newspapers touching American affairs, the recent comments of some of these papers will strike the average intelligence as about right. It is a game of politics, as much so as the juggling that is going on over the national finances. I hope the Republicans will brace up and clear the air of its present pollutions.

I am, your sincere friend,

W. H. OSBORNE.

Hon. ELIJAH A. MORSE, M. C.,
House of Representatives.

The following letter is from my distinguished predecessor, ex-Governor John D. Long, who represented for six years the district I have the honor to represent, and was six years governor and lieutenant-governor of Massachusetts prior to that time. It must have great weight with all who know that distinguished gentleman:

BOSTON, *December 27, 1895.*

DEAR MORSE: I am sorry somebody did not stand by BOUTELLE in resisting such sheep-flocking obedience to the crack of the President's whip. Of course, it is easier to think after the opportunity is gone, but if the President could take two weeks' duck shooting while considering the Venezuela business, certainly Congress might have taken twenty-four hours. I take it you would like to know the sentiment of the people here. I have not met a human being who has expressed sympathy with the President's intimation of war. The Monroe doctrine no more applies to the location of the board fence between Venezuela and Great Britain than it does to your division lines in Canton, Mass. When the President suggests that possibly Venezuela and Great Britain may settle the whole thing between themselves, and thus admits that they may do so without our participation in the settlement, he gives away the whole case, for if a voluntary settlement between the parties can be made without us, then it is a matter in which we have no concern, and if we have no concern in it, then what business have we to interfere at all, for instance, to insist on arbitration? The Republicans in Congress, it seems to me, have thrown away the best chance that could have come to them to show up the blundering of the Administration.

Yours, very truly, JOHN D. LONG.

And now comes the joyous tidings from across the ocean, that the Queen of England, Scotland, Ireland, and Wales, and the Empress of India, Queen Victoria herself, has frowned upon the attitude of her ministers, and has expressed her desire that this and other disputes shall be settled with her kinsfolk on this side the sea by arbitration instead of by cruel bloodshed and war; and the same attitude is taken by leading publications of the United Kingdom.

The Coin Redemption Fund.

REMARKS

OF

HON. GEORGE W. PRINCE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. PRINCE said:

Mr. SPEAKER: As a Republican I am opposed to this pending bill. I do not believe that it is in accordance with the views of the people who sent me here.

It is an indorsement of the President's policy of selling bonds, and it increases the interest-bearing indebtedness of a people now overburdened by debt.

It is in effect only saying, "Mr. President, we favor your policy of debt making, but would suggest that you try and make a little better bargain on the question of interest."

But aside from our fully indorsing Democratic maladministration, which for over two years we have every one of us been condemning on every stump and which every one of our newspapers has also condemned, there are other and higher reasons why I am opposed to this measure.

It retires the greenbacks, and absolutely and unqualifiedly thereby contracts our currency and makes the power of a dollar greater and the value of human toil lower. We were sent here as Republicans (not Cleveland approvers) to inaugurate measures on Republican lines, to raise revenue with which to meet the current expenses of our Government, to pension liberally our soldiers, their widows and orphans, to build public buildings, make internal improvements, and to pay off (not add to) the public debt. This is our mission, and on December 26 this House passed a law which the Committee on Ways and Means said would meet these requirements.

Our revenue bill has gone to the Senate and we have done our duty for the present as best we could under the rules of the House, which forced us to vote for a revenue bill not in accordance with our views, but which the exigencies of the case required.

Mr. Speaker, we went far, very far, on December 26 to approve of Democratic tariff legislation, and we did so at the behest of the party leaders of this House. Are we now to be compelled to fully approve of all the acts of a Democratic President?

While I am loath to go against the wishes of the Ways and Means Committee, I must do so, because I believe the interests of the people are higher and more sacred than mere alleged party expediency.

Therefore, Mr. Speaker, when my name is called I shall vote against the bill.

The Coin Redemption Fund.

REMARKS
OF
HON. GEORGE W. WILSON,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. WILSON of Ohio said:

Mr. SPEAKER: As much as I should like to vote with the Committee on Ways and Means upon this bill, I am nevertheless disposed to vote against it. Although gentlemen urge upon us a necessity for its passage, I am unable to see any necessity therefor. The existing law authorizes the Secretary of the Treasury to issue bonds to replenish the gold reserve whenever the amount is less than $100,000,000. It is true that the bonds bear a higher rate of interest than 3 per cent, payable semiannually, as provided in this bill.

The law allows the Secretary to issue bonds bearing 5 per cent interest and payable after ten years, and bonds bearing 4 per cent interest, payable after thirty years. There have been sold already under the existing law bonds of the face value of about $162,000,000, upon which there were premiums amounting to $20,000,000, the total aggregating $182,000,000. If all of these bonds had been sold in the open market it is very generally believed the premiums would have been much larger.

It is not very material what the rate of interest in the bond is, because whoever has the capital to invest in bonds will calculate the lowest rate of interest at which he is willing to invest his money and pay as much more than the face of the bonds as the specified rate of interest exceeds what he is willing to receive for the use of his money. If a capitalist is willing to loan his money at 3 per cent, then he would, under existing law, compute the difference between a 4 or 5 per cent bond and a 3 per cent bond, and the difference would represent the premium which he would pay for the bonds bearing the higher rate of interest. The result is that while the rate specified in the bond is higher, the bonds are actually sold at as low a rate of interest as purchasers are willing to take for their investments.

We are now informed by the Secretary of the Treasury that such bonds as are provided for in this bill can not be sold at all. He desires that the bill should provide for payment of principal and interest in gold, in order that he may the better dispose of them. The Secretary also wants to retire the United States Treasury notes (commonly called greenbacks) from circulation, because they are a constant menace to the gold reserve.

GREENBACK.

I am unwilling to give my vote for either gold bonds or the retirement of the Treasury notes. We have no more currency than our business demands. If the greenbacks are taken out of circulation without other paper currency being substituted we shall have a large contraction of the currency, and I believe the result would be damaging and disastrous to the business of the country. The present paper currency is popular with all classes, and to retire it by substituting interest-bearing bonds would not be well received by the people.

THE GOLD RESERVE.

There is much complaint about the greenbacks being used to draw money from the gold reserve. But what use is the gold reserve if not to give the greenbacks a credit which they would not otherwise have? It may be urged that the gold reserve would be exhausted if bonds are not constantly sold to replenish the reserve. There is some ground for this claim under existing affairs. But if the revenues were daily or monthly as large as the expenditures of the Government, this condition might not and probably would not exist. I think that the first duty of Congress is to raise more revenue and make less expenses, and thereby do away with the necessity of borrowing money by the sale of bonds. Whenever we export more than we import the balance of trade will be in our favor, and gold will begin to come our way instead of going from us to pay the balance against us.

EFFECT OF BOND SALES.

The sale of bonds to procure money to redeem greenbacks turns them into the United States Treasury, where they remain until the exigencies of the Government require their reissue. If the revenues are, as Democrats here assert, sufficient to meet the current demands of the Treasury, then the greenbacks will be retained in the Treasury and withdrawn from circulation. This result should be avoided, at least until some other currency is provided to take the place of greenbacks. There are only two ways to avoid it that I can think of—one is to have such a revival of business on this side of the Atlantic as will stop the raids upon the gold reserve, or pay the holders of greenbacks upon presentation in such coin as the law authorizes and the Treasury possesses at the time of presentation.

The Republican party have everywhere denounced the present Democratic Administration for the sale of bonds in time of peace. We have urged that there ought to have been no necessity for it, and that bonds should not be issued in time of peace. By the passage of this bill it is clearly implied that we intend that additional bonds shall be issued to replenish the diminished gold reserve and to redeem United States Treasury notes.

Why should the Republicans assist the Administration to do the very thing which we have opposed and condemned with so much vehemence? With the same authority, under the same laws, the Secretary can sell other bonds if he chooses, and I am unwilling to provide other means.

REPUBLICAN POLICY.

While it is true that there is much cause of complaint and dissatisfaction with Mr. Cleveland's Administration, I do not regard it as wise for the Republicans to surrender their convictions of duty for the sake of temporary relief. If it is a fact that there have been great shrinkages in railroad bonds and other holdings, it is to be much regretted. But at the same time I do not consider it the duty of Congress to attempt to take care of speculators in stocks or grain. Those who deserve our care and protection are they who toil and spin, and those who deal honestly and contribute to the welfare of mankind.

If we shall adhere to our landmarks and steadily advance on the lines of protection—good money and enough of it, maintenance of sufficient revenues to meet the demands of the Government without issuing bonds to raise money in time of peace, the liberal payment of pensions to deserving Union soldiers and their widows and orphans, the maintenance of our national honor at home and abroad, and a determination to resist unjust encroachments of foreign countries upon the soil of the Western Hemisphere—I have no doubt of the approval of our constituents and of the perpetuation of Republican ideas and the preservation of the American Republic so long as time shall last. [Applause.]

The Coin Redemption Fund.

REMARKS
OF
HON. ROBERT W. TAYLER,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, any to authorize the issue of certificates of indebtedness to meet temporard deficiencies of revenue.

Mr. TAYLER said:

Mr. SPEAKER: The members on this side of the House who oppose the pending measure for the issue of bonds seem to misapprehend the question and their responsibility in connection with it. Their fear that the Republican party will suffer is ungrounded. The record of that party against the issue of bonds in time of peace is too well known to be misapprehended now. Never, except in time of war or for resumption purposes, has the Republican party authorized the issue of bonds for any other than refunding purposes. But to all practical intents and purposes this is a time of war. This great nation is going about with a sword in one hand and a contribution box in the other. For this the Republican party is not responsible. It is one of the fruits of Democratic incompetency, and it is our duty as Republicans to make the best of a situation which exists, but for which we are not responsible. The constituency which I represent is a patriotic constituency. It will go as far as I possibly can go to uphold the credit of the country, even though that credit has been impaired by Democratic folly, and though it be a Democratic Administration which calls for assistance.

If the tariff measure which was passed last Thursday becomes a law, and the estimated revenue from it is realized, I think there will be little need for the issue of bonds under the pending measure. But, none the less, the present emergency points out the way where duty leads, and that way I propose to follow.

No one pretends that either the tariff bill or this measure is drawn on Republican lines. Neither of them is intended to meet a Republican situation. Neither of them is to be presented to a Republican President for signature. They are both emergency measures, and whether history approves or disapproves them, the patriotism of a Republican Congress in passing them will stand out as a shining example of what a great party can do when the sense of a high public duty is upon it.

The Coin Redemption Fund.

REMARKS
OF
HON. STEPHEN R. HARRIS,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. HARRIS said:

Mr. SPEAKER: I can not conscientiously support this bill.

The Thirteenth Ohio Congressional district in 1892 sent a Democratic member to this House by a plurality of over 7,000.

The voters of my district were injured and dissatisfied by the failure of the Democratic Administration to follow the successful and prosperous method of filling the Treasury with revenues arising under the former tariff law; they were further dissatisfied because under the Democratic Administration the expenditures of the Government were largely exceeding its receipts, and especially were they dissatisfied that the President was selling bonds by millions to defray the running expenses of the Government.

The people of my district were so dissatisfied and indignant that, discarding their former political affiliations, they sent me here as their agent to use my influence for the restoration of the tariff law of 1890, which would fill the Treasury to overflowing once more, as it had done the few years it was in force, and to stop the reckless issue and sale of bonds.

Now, Mr. Speaker, I can not conscientiously support a measure that empowers the President to do the very thing for which he was condemned in my own district. It is said the proposed bonds have shorter time to run and bear a lower rate of interest. That does not change the principle, besides it is not certain that the President would sell the bonds now proposed if they were issued. If he prefers to sell bonds, sua sponte, as he did before, the fact that his favorite bonds have longer time to run and bear a larger rate of interest will command a larger premium, and the same equivalent in money will be realized by their sale.

Be that as it may, Mr. Speaker, I can not consistently vote to authorize and empower the President to do what one year ago my constituents so emphatically condemned.

Bonds.

REMARKS
OF
HON. O. M. KEM,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 28, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. KEM said:

Mr. SPEAKER: In availing myself of the opportunity given members to print their views relative to the above subject in the RECORD, I desire to say that I do it only because I was denied the privilege of being heard on the floor.

It is indeed humiliating to me to be compelled to resort to the silent medium of the pen to express my views respecting a matter of so great importance as the above bill.

It was my earnest desire to be heard on the floor of the House, and I endeavored to secure time for that purpose, but failed utterly, as did every other Populist member. Before entering upon a discussion of the merits or demerits of the above iniquitous proposition I desire to call attention to the true position of the Populist members in the House, by relating some of the difficulties confronting us. The public generally believes that the lower House of Congress is the representative body of the people, the arena where the representative of every political faith may be heard, and the wrongs of the great common people righted.

These were my views also when I entered this body four years ago, but after an experience of five sessions I am compelled to revise and amend those views to some extent. Candor compels me to say, especially after the experience of the last three days, that it is neither a representative body nor an arena where the rights of the great common people can be defended, especially if their defenders are in the minority.

Under a mighty majority, like that which controls it now, it becomes rather an arbitrary machine for smothering free speech and representing a part of the people only.

I have advocated abolishing the Senate as a useless, nonrepresentative Government appendage that would be better clipped off; but I am led to believe, in the light of experience and observation, that the Senate more nearly represents all of the people than the House, for they will at least give you a hearing before they make you walk the plank.

It is a body where the Senators from each State and of all parties and beliefs may be heard and every citizen's rights defended.

Not so in the House. After four years' experience as a Populist in this body I am compelled to say that at no time during that period has a Populist been recognized to control any time in his own right. Republicans are always recognized in their own right; Democrats are always recognized in their own right, but Populists never. We have never secured any time in the past, as meager as it has been, except as we humiliated ourselves by going and begging it of one or the other of our political enemies, who were sometimes kind enough to grant us a little time in which to oppose them. Their answer to our protest is that there are but two sides to a question, therefore the time must be controlled by the affirmative and the negative.

Not so; there are frequently many sides to a legislative question, and the Populists frequently oppose or support a measure on entirely different grounds from either of their political opponents.

The Populist party is peculiar to itself, possessed of individuality and characteristics as marked and strong as either of the old parties, and differing radically with both in its views on national questions. Therefore we hold that of right we are entitled to control a proportionate part of the time given to all questions on which we desire to be heard.

On yesterday a bill was reported to the House from the Committee on Ways and Means that strikes at one of the vital principles of the Populist party, a question in which the Populists of the entire country are deeply interested; yet they had no voice in its consideration, and these 1,300,000 voters, representing more than 6,000,000 citizens, were unheard.

I asked the Speaker for a little time that I might represent them in the discussion to the best of my ability. He magnanimously promised me ten minutes, but the afternoon wore away without recognition; a recess was taken till 7 o'clock p. m.; three hours of night discussion dragged by and no recognition. This morning I went to him and asked if I was down for a speech. He said no. I called his attention to the fact that he had promised me ten minutes the day before. He said he did not know why I had not been recognized. I then insisted on being recognized this morning. He replied that he would try and do so, but the time was so short he did not think he could do it. It is useless to say I was not recognized

It does not avail for the majority controlling the House to plead short time, for when they fixed the time of discussion at about nine hours they were absolute masters of all the time there was, and could have set apart one week just as well as nine hours, and given all sides an opportunity to be heard, instead of rushing it through under whip and spur as if it was a case of life or death, when in fact it was only a case of the Republicans endeavoring to carry out their do-nothing policy as announced by the Speaker when he assumed his duties as presiding officer.

There is a determination upon the part of the Republicans of the House to prevent all discussion of the money question if possible, and as announced by Chairman Dingley, of the Committee on Ways and Means, that question is shelved for this Congress.

The honorable Mr. SKINNER of North Carolina had a similar experience with the Speaker to that of my own just recited, and it has been the experience of every Populist on the floor, to a greater or less degree.

It is time the Populists of this country were made aware of the fact that, as a great organization, holding views of vital importance to all the people, they have no rights on this floor in the discussion of the same which the powers that be are bound to respect.

I desire that Populists throughout the land, who have been wondering, and are still wondering why the little Populist contingent here have not and do not inaugurate some measures of reform, should know that we not only do not have the power to inaugurate any measure, but we do not even have the power to be heard on measures others inaugurate, except by the grace of some individual member; and it is well to understand once for all that no Populist measures of relief can possibly become law till the people cease to be governed by their prejudices, and elect a Populist Congress, together with a Populist Executive. Then you can have relief, and not till then.

As a further and more elaborate exposition of the manner of doing business in the House of Representatives, I here insert the remarks of Hon. JOHN C. BELL, of Colorado, relative thereto, made

in a ten-minute speech on the floor, by the courtesy of ex-Speaker CRISP, December 26, 1895, as follows:

Because of the fact that the rules of the House only allowed a fraction of a minute for each member to express himself on this all-important question, if each one could have obtained the floor, and I being awarded only ten minutes for the whole Populist party, and received this through the kindness of Judge CRISP, I feel inclined to take advantage of the leave to print and give some reasons why an individual Representative can do so little for his constituents as against the great majority.

The rules of the House by long usage give the Committee on Rules and the chairmen of the different committees practical control of the measures in the House and of the time for debate. This autocratic rule is fully exposed upon a casual examination of the committees.

It will be seen that the little State of Maine, the State of Massachusetts, and the State of Iowa have more power in directing the business of the House of the American Congress than practically all of the other States in the Union. This is an offspring of the rule that members must be advanced according to their seniority on the committees, and the people of these favored States have seen fit to return theirs for a great many years. Under this unrepresentative rule the little State of Maine, with less than 700,000 inhabitants, has Mr. DINGLEY, chairman of the Committee on Ways and Means; Mr. BOUTELLE, chairman of the Committee on Naval Affairs; Mr. MILLIKEN, chairman of the Committee on Public Buildings and Grounds, and the Speaker, who also has the first place on the Committee on Rules. This little State has four Representatives in the House and four chairmanships and the Speakership, being far more than have all of the States from Colorado to California, inclusive, and yet California has nearly twice the population and about four times the area and wealth.

The population of Iowa is about 2,000,000, and she has eleven Representatives. There are seven good places to the credit of the State, as follows: HENDERSON, chairman of the Committee on the Judiciary, who also has the second place on the Committee on Rules, next to the Speaker; HEPBURN, chairman of the Committee on Interstate and Foreign Commerce; HULL, chairman of the Committee on Military Affairs; LACEY, chairman of the Committee on the Public Lands; PERKINS, chairman of the Committee on Printing, and HAGER, chairman of the Committee on Enrolled Bills. New York has ten, Pennsylvania has nine, and Massachusetts has six, and so it runs, while thirty of the States have no chairmanships at all.

Those favorite States not only have the chairmanship of the Ways and Means Committee, but they have the Judiciary, the Banking and Currency, Coinage, Weights, and Measures, and Rivers and Harbors, which control everything of substantial benefit to the people at large. The rule also prevails in the House that the Speaker selects whom he will recognize as entitled to the floor, not according to the person who first rises to his feet and addresses the Speaker, but according to his simple desire. If the member desires to present a measure to the House, he goes and sees the Speaker and has to tell him or show him his proposition, and then the Speaker will inform him as to the probability of recognition for such a measure.

While the House was meeting and adjourning simply, the Populist members agreed in their conference to introduce a resolution in the House and Senate inviting the Finance Committee in the Senate and the Committee on Coinage, Weights, and Measures in the House to investigate and report what effect on the industrial condition of the country, if any, the divergence between gold and silver had. Senator ALLEN promptly introduced the resolution in the Senate, and it passed by a good majority. I was appointed to secure recognition from the Speaker and have him ask the House for unanimous consent for its consideration there. Upon approaching the Speaker, he very thoroughly examined my resolution, and firmly but kindly replied, "I should not care to recognize you for this resolution," though the House was then in idleness. Had it been some little local measure, or something that the Speaker approved of, he doubtless would have extended the courtesy.

I mention this simply to show the complete dependency of individual members on the will of the Speaker and the committees.

All of the committeemen in the House first have the right to the floor, and those holding different chairmanships also rank high with the important committees of which they are not chairmen and get the additional right to the floor, so the individual who is not on an important committee must, by the courtesy of someone else, beg the opportunity to address the House, and can get recognition in no other way. New members or members of a new party are practically ostracised in the House and have no power under the rules to promulgate any of their principles.

Thus it will be seen by the foregoing that the 6,000,000 people of this country who believe as we do respecting principles of government are denied the right of free speech by rules and practices more fitting for a monarchy than a republic.

Now, as to the merits of this bill. In the discussion of the last three days, both on the bond bill and on the bill changing the revenue laws of the land, the Republicans tried to lay the entire responsibility for the distressed condition of the people and Government upon the Democratic party, and the Democrats, with equal zeal, tried to shift it all onto the Republicans. One said, "You did it." The other replied, "It isn't so; you did it." Democrats said it was the result of the McKinley tariff. The Republicans replied, "It is the result of the Wilson bill." Thus the sham battle on the tariff goes on.

Gentlemen, you are both right and both wrong. You are both wrong when you say the tariff law of either sort had anything to do with bringing about the present miserable condition of affairs. You are both right when you say the other is responsible, for you are both equally guilty and equally responsible.

No relief will come to the people of this country until the Republican party is placed by the side of the Democratic party, viz, in a hopeless minority, and the reins of government placed in the hands of the people themselves through their only medium, the Populist party, for both of the dominant parties are owned and controlled soul and body by the gold-gambling money power of Europe and America, as every legislative step they have taken for years confirms.

The effort to throw the responsibility of the present terrible condition of the country upon tariff legislation of any sort will not succeed if we will only look at the facts for a moment.

Under long years of Republican rule we had high tariffs that steadily kept climbing higher and higher till they culminated under the McKinley bill in the highest tariffs the world ever saw; yet all these years the general sea level of prices kept steadily falling and falling till it culminated under the McKinley bill in the greatest distress a civilized government ever experienced. Then the Democrats said to the people, "Behold the work of the McKinley bill! Give us the reins of government that we may show you how quickly we will restore prosperity to your impoverished homes by proper tariff laws."

The people took them at their word and in 1893 the Republicans went out of power, scraping the bottom of the Treasury to get money enough to pay current expenses and with the plates prepared for an issue of interest-bearing bonds.

The Democrats took full control of all branches of the Government, with Mr. Cleveland in the chair. They continued to talk tariff reduction and followed the Republican financial policy to the letter. The only result that such a policy can lead to was reached soon after Mr. Cleveland's inauguration. The crisis to the verge of which the Republican party and policy had led burst upon us in all of its fury—a condition in which gaunt hunger and misery stalked specter like through the land unbridled, from ocean to ocean, and from the Lakes to the Gulf. All this time the Democrats continued to talk reduction of tariffs and the President continued to issue bonds and pile up burdens for the poor. More than a year ago tariffs were lowered and the McKinley bill knocked out, but the general sea level of prices steadily continues to decline, notwithstanding there is a general shortage of crops; the bond issues still go on, the debts of the people are piling up higher and higher, while their ability to pay is continually growing less and less, and the Democrats and Republicans continue to talk tariff.

The Republicans now say to the people: "Ah! what did we tell you? We told you what would happen if you elected the Democrats; now you see what you have done." Sure enough, nothing like saying I told you so. The above cry looks plausible on the surface; many believe the Democrats wholly responsible, and the people seem to be rushing to the other extreme, and have returned the Republicans to power in the House with an overwhelming majority.

True, the Democratic party is terribly, wickedly, to blame, and ought to be wiped off of the political map, but while they are thus guilty the, Republican party is equally guilty, and I insist that the present Administration must be held responsible for that of which it is guilty, and have nothing but condemnation for it; but I want to prevent, if possible, the Republican party, its copartner in this miserable business, from shifting its own sins onto the shoulders of Democracy, which already has more than it can ever atone for.

Before the electors of this country again hand the Government back into the keeping of the Republicans I want them to become acquainted with a few facts that seemingly have escaped the notice of the masses.

We see how we were brought to the verge of disaster with an empty Treasury under high tariff and Republican rule. We see how that disaster overtook us under change of party rule and lower tariffs; how it continues in constantly lowering prices and expanding indebtedness—private, municipal, and corporate—coupled with repeated issues of interest-bearing bonds; therefore we must see at once that the tariff is not responsible, for our condition continues to grow worse and worse under all sorts of tariffs.

With a sufficient amount of full legal-tender money in circulation under Government control to meet the business demands of the country, which will enable every man, woman, and child to secure employment at remunerative wages who desires it, we will have a happy, prosperous, patriotic, and loyal people with a Government free from debt under almost any sort of tariff laws; but without the above monetary system we can not as a people be prosperous under any sort of tariff laws, or, for that matter, under any or all of the many other reforms advocated, many of which I believe in, but I say we may have them all and leave our money system as it now is, and it is only a question of time when this Government will be bankrupt and the people impoverished, therefore we should subordinate everything else to financial reform, concentrate all of our energies upon that; when this is accomplished then we will be able to establish other reforms; but let us take first that upon which all others rest.

All history, all experience of the past, proves the truth of these statements, yet both Republicans and Democrats in the face of this truth, so plain that he who runs may read, are still quarreling over the tariff, and both perpetuating a finance system that is fast sapping the lifeblood of the nation. Nero fiddled while Rome burned, and the Democrats and Republicans are fiddling at cross-purposes on the tariff string, while the people are plundered and the Government robbed.

On Thursday last the Republicans introduced in the House a tariff bill changing the general revenue laws of the country, and with their overwhelming majority passed a gag rule limiting de-

bate to three and one-half hours, at the close of which time the bill was passed under whip and spur, with no member but a favored few having been heard.

They seem to learn nothing by experience. None are so blind as those who will not see, and truth has no foe like prejudice. The title of this bill is (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

This bill, in order to provide more revenue and meet a supposed deficiency, increases the present tariff taxes and reaches out strongly in the direction of the McKinley bill. In the light of past events this seems like an insult to reason and an outrage on common sense.

Let us throw the search light of truth for a moment upon some facts of very recent history and then see where these gentlemen stand with their proposition to increase revenues by climbing back toward the high tariffs of the McKinley bill.

When the control of this Government passed into the hands of the Republicans under Mr. Harrison there was a surplus in the Treasury over and above the gold reserve of $230,348,916.12. The Republican machine started; the McKinley bill became the law; the surplus began to dwindle and continued to dwindle till the close of the Administration, on the 4th of March, 1893. At that time the $230,348,916.12 had disappeared. Mr. Foster, Secretary of the Treasury, figuratively speaking, was hanging on by the eyebrows and scraping the bottom of the Treasury to get money enough to meet current expenses, and was even driven to the verge of issuing bonds, as Mr. Cleveland has since done, and as Mr. Harrison would have been compelled to do, under the highest tariffs the world ever saw, if he had been reelected.

While it was well known at the time by a few that in the last days of the Administration Secretary of the Treasury Foster had given orders for the preparation of designs for a new issue of bonds, and was so stated by myself in the last campaign, it was denied by some Republicans in my State and disbelieved by many. In order to remove all possibility of dispute in the future, I here insert the above-mentioned official order, as given by Mr. DOCKERY of Missouri in a recent speech on the floor of the House, as follows:

Now, in answer to the challenge of the gentleman from Ohio, I have obtained by special messenger from the Secretary of the Treasury the official order of Secretary Foster, under date of February 20, 1893, in these words:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., February 20, 1893.

SIR: You are hereby authorized and directed to prepare designs for the 3 per cent bonds provided in a Senate amendment to the sundry civil bill now pending. The denominations which should first receive attention are $100 and $1,000 of the coupon bonds and $100, $1,000, and $10,000 of the registered bonds.

This authority is given in advance of the enactment, in view of pressing contingencies, and you are directed to hasten the preparation of the designs and plates in every possible manner.

I inclose a memorandum for your guidance in preparing the script for the body of the bond.

Respectfully, yours, CHARLES FOSTER, *Secretary.*

The CHIEF OF THE BUREAU OF ENGRAVING AND PRINTING.

Not only this, Mr. Speaker, but on page 70 of the Special Report No. 2621, made to the House of Representatives by Mr. Springer, then chairman of the Ways and Means Committee, is this statement by Secretary Foster, of date February 25, 1893, in answer to questions by the gentleman from Georgia, Mr. TURNER. It discloses an unsatisfactory Treasury situation:

"Mr. TURNER. Taking into consideration all these conditions which you anticipate, what in your judgment would be a fair conjecture of the condition of the Treasury at the end of the next fiscal year?

"Secretary FOSTER. I should say the next fiscal year would show a deficit.

"Mr. TURNER. Can you give an approximate estimate according to all the data accessible to you?

"Secretary FOSTER. I will only say this, that if I was to have the management of the Treasury I should insist upon an increase of revenue to the extent of $50,000,000.

"Mr. TURNER. In order to meet those conditions which you anticipate?

"Secretary FOSTER. Not only those conditions, but the gold conditions as well."

This ought to remove all doubt of the proposed issue of bonds under the last Republican Administration, also as to the empty condition of the Treasury, and convince every man who is not a bigot that the McKinley bill as a revenue raiser was a miserable failure; also that the Republicans, in their zeal to protect the great trusts and combines called manufacturers and assure them by arbitrary law a profit on their business, they killed the goose that laid the golden egg by placing a tariff so high upon imported goods they could not enter our ports and compete with prevailing prices. Thus this source of revenue, which is our greatest, was greatly curtailed and a deficiency resulted. A prohibitory tariff is wrong at any time; but when coupled, as this was, with a shrinking volume of currency it becomes a crime against the rights and liberties of man.

This combination of high tariff and shrinking money creates a machine of destruction that cuts both ways:

First. High tariff tends to keep up prices of finished goods to consumer.

Second. Shrinking volume of money lowers prices of raw material to producer of finished goods. Thus as the combined and concentrated wisdom of the Republican and Democratic sages we have a system of Government that raises the price of everything the great majority of the people buy, and lowers the price of everything the great majority have to sell. Is it any wonder revenues fall off and we are now issuing interest-bearing bonds after thirty years of profound peace with all the world?

I desire to say that just here lies the kernel of this whole matter. The people have become so impoverished through currency contraction they are compelled to economize to the greatest extreme, hence can not buy the articles upon which revenue is collected; the citizen is compelled to do without that which he greatly needs, and the Government is compelled to add to his burdens an interest debt, under a miserable policy of robbing Peter to pay Paul.

As an example of the effect the contraction of our currency by the demonetization of silver is having upon our manufacturers and its relation to home markets and foreign trade, I submit an article I sent to the Silver Knight touching this matter; and when it is known that it was published days before the bond action in the House, it will be seen that it is very pertinent along different lines.

DIFFERENCE OF EXCHANGE—WHAT EFFECT HAS IT ON AGRICULTURE BETWEEN GOLD-STANDARD AND SILVER-STANDARD COUNTRIES?

Editor Silver Knight:

The following resolution, as clipped from the Knight of recent issue, together with your very able remarks thereon, remind me of two or three very pertinent facts, to which, with your permission, I desire to call the attention of the Knight readers.

Senator STEWART on the 12th instant introduced the following resolution:

"*Resolved*, That the Committee on Finance be directed to inquire what effect the difference of exchange between gold-standard countries and silver-standard countries has upon the agricultural and manufacturing industries of the United States, and report by bill or otherwise."

He asked that the resolution might lay over until Monday, the 16th instant, at which time he addressed the Senate upon the above resolution.

The above resolution refers to a very grave problem, which has been flashed upon us like a gleam of lightning from a clear sky. It is a phase of the money question which strikes directly at the purse of the manufacturers in a way they can not dodge. The law which destroyed one-half of the money of this country is proving a double back-acting machine, which is cutting both ways. This contraction has had the effect of steadily reducing the price of all farm products till they will scarcely pay cost of production. One result of this is it compels the producer, first, to buy nothing except that which he is absolutely compelled to have; second, this must be purchased at the lowest possible figure, regardless of where or how it is made. It has become a question of self-preservation, and an appeal to patriotic protection to home industries will have no effect, because it will be overshadowed by the more pressing and vital question of how to procure the necessaries of life for the least money possible. When the farmer sells his wheat for 30 cents per bushel, and other things in proportion, he is compelled to buy his manufactured goods from Japan or China if those countries can furnish them cheaper than this country.

So we see the law first strikes the American manufacturer by destroying the ability of his home customer to buy; it again strikes him because of the fact that the Japanese, being on a silver basis, can no longer afford to buy American goods at gold prices; therefore Japan is forced to do its own manufacturing, which not only destroys the foreign market of the American manufacturer but makes Japan a successful competitor in our home market. The Republican party, which is equally responsible with the Democratic party for this state of affairs, will undoubtedly undertake to fool the people and meet the question by advocating a higher protective tariff, but they will surely have an uphill job, for it seems to me that the most superficial must see that no tariff can avail so long as Japan has 50 per cent the advantage in cost of manufacture, as she has now. It would be interesting to know how the gold Democrats propose to meet this question. They can not advocate a tariff, neither can they favor the remonetization of silver.

The signs of the times, Mr. Editor, seem to indicate very strongly that the Republicans in the House do not intend to allow the money question to be discussed if they can prevent it, and as they have absolute control I guess they can do that; and especially do they intend that the Populists shall have nothing to say in the matter.

An effort by the Populists, through Mr. BELL, was made to get a hearing in the House on a similar resolution to the one above quoted, but failed. The Speaker was asked for recognition, but, after looking the resolution over, we were informed that he would not recognize us on a measure of that sort.

Thus you see, Mr. Editor, business in the House is not conducted as it is in the Senate, and this shows clearly how difficult it is for the little contingent of Populists in the House to accomplish anything along reform lines.

O. M. KEM.

The above feature of the situation may be our salvation, by arraying the manufacturers on the side of more money. They will get there quick when it touches their pockets. It is having its effect—they are already beginning to face about.

The root of the evil does not start in tariff laws, but in bad financial laws and policies, for which both parties are responsible. The Republicans are responsible for all of the bad financial laws placed upon the statute books for the last thirty years.

The Democrats are responsible for maintaining these laws and allowing their administration to continue and put into effect the miserable Republican policy of paying coin obligations in gold alone, in direct violation of the spirit and intent of the act under which it is done.

Mr. PAYNE of New York, in his speech on the above bond bill, arraigned the President for past and coming bond sales—as all Republicans have arraigned him, either privately or publicly—and used the following language (RECORD, December 28, page 388):

The President and the Secretary of the Treasury, according to the same report, are now engaged in negotiating a loan with a syndicate representing foreign capitalists to add $100,000,000 to the bonded indebtedness of this country. The only authority of law with which they are invested now to make this loan is contained in the act of 1875, under which they can issue no bonds at a lower rate of interest than 4 per cent, and these 4 per cent bonds to run for thirty years.

What right has Mr. PAYNE, a life-long Republican, to criticise the President for issuing these bonds? Does not Mr. PAYNE know

that the law of 1875 is a Republican law, and that Mr. Cleveland is simply carrying out this law as interpreted by the Republicans—while SHERMAN was Secretary of the Treasury—to the effect that it was the policy of this Government to redeem all of its coin obligations in gold alone? These are facts so plain that every man with intelligence enough to vote knows them to be true, yet Mr. PAYNE and his colleagues on the floor and throughout the country are bellowing like the bulls of Bashan about the President issuing bonds. If he is doing it by law, it is the Republican law which is at fault.

If Mr. PAYNE and his associates are statesmen instead of politicians they ought to condemn the law, bring in a bill repealing the same, and make it impossible for the President to issue bonds of any sort without a special act of Congress. If they will do this, I assure him they will have the hearty support of every Populist on the floor and the patriotic plaudits of every Populist in the country. If Mr. Cleveland is doing this without law, then let Mr. PAYNE'S party institute impeachment proceedings, and he will have our hearty support in this, also. Nay, nay; the blame rests with the terribly faulty, unjust, cruel, and wicked Republican law which allows one man to issue interest-bearing bonds at any time, in unlimited quantities, and play into the hands of the gold gambler and monopolist. The remedy lies in the amendment of the law of 1875, and so long as the Republicans make no effort to amend it they are equally guilty with the present Administration in committing and perpetuating one of the greatest crimes of the nineteenth century.

The sort of jingo legislation the party has been engaged in for the last two or three days will not avail, for sooner or later the people will understand the true situation, and when they do the G. O. P. with the D. M. O. C. will be relegated to where the whangdoodle mourns. The pendulum (public opinion) will cease to swing from one extreme to the other. The Government will be placed in the hands of the Populist party, and a reign of prosperity for all the people will begin.

The Republican party not only committed a great wrong in framing and passing a law so weak as to be susceptible of interpretation to the effect that all coin obligations are redeemable in gold alone, but they are perpetuating that wrong deliberately, as is shown by the following language of Mr. PAYNE, used in the same speech above referred to:

Mr. PAYNE. We propose to see that every legal-tender note issued by the Government of the United States shall be redeemed in gold whenever it is presented to the United States to redeem. [Applause on the Republican side.] And after we get through with that we will take up the other questions as they come along.

By what authority does Mr. PAYNE and his associates propose to see that every legal-tender note shall be redeemed in gold alone? The only authority they have for this declaration is the law declaring them redeemable in coin, passed at a time when no one thought of coin in any other sense than both gold and silver, and when, under the law, it took both gold and silver to constitute the coin of this country.

Since the earliest history of man no government or people has looked upon coin in any other sense than that it meant gold, silver, copper, and all of the coins of the realm of whatsoever metal they were made, but it remained for the astute SHERMAN alone to discover that coin means gold only and declare it to be the policy of this Government to redeem all of its obligations in gold alone.

He did this in defiance of the intent and spirit of the law and usurped the prerogative of the Congress when he did it, and this is the authority upon which Mr. PAYNE makes his declaration. Does anyone suppose for a moment that the people of this country, or even a majority of those voting for the bill, thought for an instant that the word "coin" would be tortured into meaning gold only, and that the time would come when the right to pay these coin obligations in any coin of the realm most convenient would be denied? No; not one. Does anyone suppose for a moment that if that bill had said in plain terms, "redeemable in gold alone"—as it ought to have said if that is what it meant—that it could have passed or would have been sustained by the people? No, it could not possibly have passed at that time, and if it could the people would have destroyed the party guilty of its passage.

The manipulators of the bill were too shrewd to make any breaks like that; they accomplished covertly what they could not accomplish openly by framing a bill which was susceptible of the interpretation placed upon it by Mr. SHERMAN and acquiesced in by Mr. Cleveland.

It looks very much like this had been done in the same manner in which silver was demonetized in 1873, viz, in a manner in which the people would not realize just what had been done until years after.

The fact that the Republicans of to-day are standing by this law and defending the interpretation thereof by Mr. SHERMAN is evidence to my mind that they intended it should read one way and operate in an entirely different manner.

In the light of the financial history of the past, the present bond bill has some very ugly features about it, to which I shall call attention.

One object of the bill as disclosed by its title is to meet temporary deficiencies of revenue. Now, the last report of the Secretary of the Treasury shows there is no deficiency, but, on the contrary, there is a surplus of $70,000,000 of borrowed money secured by the last bond sale. Then, why this unseemly haste of Republicans to increase this surplus by other bond sales? There is but one explanation, and that is to pile up a surplus large enough so the greenbacks can be held in reserve and thus as effectually take them out of circulation as though they were burned. The Secretary is not compelled to pay these notes out now under the present law if he has other money with which to meet current expenses; hence the desire to pile up this great surplus of borrowed money upon which the bondholder draws interest, while the greenbacks, which draw no interest, are held out of circulation.

These notes are in the way of the money mongers, and their object is to get them out of the way in some manner. They have been a hindrance and a menace to the coupon clipper for years, and they are resorting now to the same sort of tactics they have followed all along the line, viz, working under cover. Let us see. The 5-20 bonds were made payable in legal tenders in 1869. By the infamous credit-strengthening act the terms of payment were changed to coin payments. No one supposed this meant gold payments, but the Republican party afterwards so declared. In 1873 a bill passed the House and Senate, under the title of a bill to regulate the mints, and was signed by President Grant. Years after it was too late the people learned for the first time that this bill had demonetized silver, and that we, as a Government, were on a gold basis with the declared policy of the Government to pay all of its obligations in gold alone, and this was all accomplished without the knowledge of the people.

It would seem that this ought to satisfy the greed of monopoly, but not so; there is yet somewhere in existence about $300,000,000 of greenbacks upon which Shylock can not draw interest. Therefore they must be gotten out of the way and something substituted upon which he can draw interest.

These notes are the most troublesome feature of the financial question the money power now has to deal with. They have been racking their brains for some time trying to devise ways and means to retire them, but the people are too wide awake to permit them to be retired openly.

When the Committee on Ways and Means first drafted the present bill they undertook to do this openly by providing for their redemption without reissue, but this raised such a storm about the ears of the committee upon the part of Western members that they were compelled to claim that the original bill was an oversight and to report one seemingly covering the defect of the first; but does it do this? We think not; and after careful consideration of the bill as it passed the House we are led to believe they are at their old tricks again; and for reasons already stated, if the bill becomes law, the Secretary can practically retire the greenbacks and Sherman notes also. In support of this view I submit here the remarks of Hon. Mr. TURNER of Georgia, which is a very clear statement of the facts as they may develop:

I now venture to suggest to my friends on the other side that either they have not been entirely candid or they themselves do not understand this measure. It is said that out of abundant caution a proviso was added to the first section to prevent the retirement of the legal-tender notes. Gentlemen who are the friends of all these notes may find themselves unwittingly entrapped. There is in the first section of the bill a proviso to this effect:

"And the Treasury shall use the proceeds thereof"—

That is, of these bond sales—

"for the redemption of United States legal-tender notes, and for no other purpose."

And to that is added this morning a proviso, which I will now read:

"*Provided*, That nothing in this act shall be construed to repeal or modify the act approved May 31, 1878, entitled 'An act to forbid the further retirement of United States legal-tender notes.'"

Now, in the first place, Mr. Speaker, what is to become of the United States legal-tender notes into which this gold reserve may glide by the process of redemption?

My friend from Maine [Mr. DINGLEY] in the outset of his remarks, which I failed to hear distinctly, seemed to hold that by the operation of this bill the Treasury will have to open two accounts and segregate the proceeds of this redemption into a separate fund and a separate account. I deny it. There is nothing, absolutely nothing, in this bill which would have this effect. It would in no way change the Treasury policy in this respect. The proceeds of these bonds when they reach the Treasury in the form of gold or coin and are converted into legal-tender notes by redemptions will take their place side by side with such legal-tender notes as are already there for any lawful purposes to which the Treasury can devote them. This provision, therefore, is not even a suggestion to the Treasury, as the gentleman has said. "The proceeds thereof" are the gold procured on the bonds, and not the legal-tender notes that may be redeemed with the gold.

But I take a step further. The proviso just quoted, out of abundance of caution, to save the power to reissue legal-tender notes thus accumulated, takes care of that class of these notes which are specified in the act of May 31, 1878, commonly called United States notes, or greenbacks. Let me read it again:

"*Provided*, That nothing in this act shall be construed to repeal or modify the act approved May 31, 1878, entitled 'An act to forbid the further retirement of United States legal-tender notes.'"

What, then, becomes of the Sherman notes under the act of 1890, the power to reissue which depends, not on the act of 1878, but on the provisions of the Sherman Act of 1890? There is no reference whatever to this latter act.

Hence this bill may be construed by the Secretary of the Treasury in accordance with strict law to authorize the retirement of the Sherman notes.

Mr. QUIGG. May I ask the gentleman whether, if the proviso were not in the bill, it would not have the same effect on the United States notes as if the proviso were there?

Mr. TURNER of Georgia. Now, my friend from New York asks me a pertinent question. I am not sure that the proviso was necessary for the professed object. I think that the Treasury without this proviso would have had to reissue all these notes received under the process of redemption under this bill, because both the act of 1878 and the Sherman Act of 1890 would then apply; but when Congress puts in a proviso which saves the reissue of greenbacks and says nothing about the others, the Secretary and the courts would probably enforce the maxim, "The expression of one is the exclusion of the other." Now, what are you gentlemen on the other side going to do with the explanation of my friend, the chairman of the Committee on Ways and Means [Mr. DINGLEY], who has endeavored so adroitly to avoid the factious differences in his party? The pretext of "abundant caution" in this proviso seems to have been inspired by no caution at all. I endeavored to show yesterday that there was a fatal lapsus or omission in the bill then pending. I show to-day that the gentlemen who are railroading this bill through are doing so regardless of the fatal effect it will have on the Sherman notes. Now, I am not in favor of the Sherman notes. I voted against the act authorizing them. I believe that they contributed greatly to our present difficulties. I have shown you that I deeply regret the perpetuation of the greenback notes; but I am in favor of letting every member of this House and every man throughout the country know what is contained in this crude bill which none of us are permitted to touch.

The foregoing shows us one thing very clearly if no other; it shows us that it is a very dangerous measure by giving the Secretary power to place constructions upon the bill the people never intended the law to mean. These decisions of Treasury officials in the past have cost us millions and caused untold misery. That the bill, if it becomes the law, will result in further contraction of the currency there can be no doubt, thus making money still harder to get by every individual who must earn it.

This, too, in face of the fact that the volume of money in circulation among the people in the last year has been contracted to the extent of about $77,700,000. Bradstreet's report, I think, of the date of the 14th instant, an authority which will not be disputed, makes the statement that a contraction of $1.11 per capita has taken place in the last year. This means $1.11 less for every man, woman, and child in the country. Based upon a population of 70,000,000 of people, it makes a grand total of about $77,700,000 less money to meet the constantly growing necessity for currency to supply the increasing demands of a rapidly multiplying population than there was one year ago.

This work has been going on for years, a fact the Populists have earnestly endeavored to show the people, while the Republicans are vehemently denying it. At the same time they are fostering measures to further contract our medium of exchange, increase our indebtedness, and make them payable (under cover) in gold.

If the Republicans mean that all obligations shall be redeemed in gold, why were they not honest enough to bring in a bill here providing for gold bonds instead of coin bonds? Why this subterfuge? Why this juggling with words? If coin means gold alone, why not say so outright? Oh, what perfidy! Still trying to fool the people by fighting Grover Cleveland, who has become unpopular because he, in an open and bold way, carried out the law you enacted even to your own interpretation thereof. The only difference between you and the Administration is, you have been doing and are still seeking to do in a covert manner what Mr. Cleveland has done open and aboveboard.

The above bill gives the President unlimited power to issue bonds at his own sweet will, and authorizes two kinds of bonds. One is a coin bond which, under the interpretation of its fathers, means gold. Worse than Shylock, they mean to take the pound of flesh, but were not honest enough to put it in the bond. These coin (gold) bonds are long-time bonds and are intended for the English capitalist, who will not take them without his pound of flesh. The other bonds are short-time bonds and limited to fifty millions, and are made payable in the lawful money of the United States. These are intended for home consumption. Any sort of money is good enough for our own people, but the Britisher must have that which is worth more on the markets of the world, viz, gold bullion. The pertinent question now is, Why these bonds at all? The issue of bonds of any sort or size at this time is wholly uncalled for, and the act, either with or without the sanction of Congress, is a blow to the best interests of the American people and an insult to their intelligence.

As one reason given for the passage of the above bill, I insert the following further quotation from the remarks of Mr. PAYNE:

Mr. PAYNE. I can not yield to a question now.

Some gentlemen think the bill introduced by Mr. BAKER of New Hampshire, requiring certain importers to pay duties in gold, would cure the difficulty. But this bill is an idle and empty delusion. Suppose this bill were a law, and I owed the Government $1,000 in duties. I provide myself with $1,000 in greenbacks, as now, go to the subtreasury and demand gold for my greenbacks, and then pay the duties with the same gold. The Treasury would then have the same gold and also the $1,000 in greenbacks, precisely as it would have under the present law.

What he says of Mr. BAKER'S proposition is true, but it is equally true of the bill he favors. Suppose this bill becomes the law and $200,000,000 of bonds are sold and the money placed in the Treasury to redeem greenbacks. What is to prevent a syndicate from taking these Treasury notes as fast as they are paid out in current expenses, presenting them at the Treasury at one time, or from time to time, as they may deem best, and depleting the Treasury of its gold, just as they have been doing? Nothing whatever; not only one time, but they can do it continually just as long as they can make money by the operation.

Just so long as this Government maintains the insane policy of redeeming these coin obligations in gold alone, it has got to keep up the equally insane policy of perpetually issuing bonds. President Cleveland insists on the retirement of the greenbacks as the only effectual way in which to protect the gold reserve, and I submit that if this fool's policy of hoarding a hundred million of gold in the Treasury to redeem outstanding Treasury notes is to be kept up the President is right, and the only sensible thing to do is to put them where they can not continually be presented to take gold out. But neither of these propositions is reasonable, honorable, or just. The only sensible thing to do is for Congress to pass a free-coinage bill, and another bill compelling the President to use his prerogative under the present law of paying out either gold or silver, or both. This would stop all bond issues, keep the gold in the Treasury, do exact justice to all, and cost no one a cent.

In order to justify the Republican party advocating an issue of bonds in time of peace, Mr. PAYNE, replying in part to Mr. JOHNSON of California, a Republican who had the courage of his convictions, and, in defiance of machine power and party lash, was honest enough and brave enough to stand in his place and denounce the iniquitous proposition of his own party, used the following language:

My friend from California [Mr. JOHNSON] yesterday, in that speech of his which seemed to evoke so much applause and laughter from our enemy on the other side of the Chamber, says this bill is "un-Republican"; and why? Because he says he stumped his district a year ago last fall and said the Republican party were forever opposed to issuing bonds in time of peace. Did he forget, or did his people forget, that in 1875 the Republican party enacted this law to issue bonds in time of peace; that in 1878 the Republican Administration borrowed $95,000,000, yes, $100,000,000, to create this reserve fund in time of peace, and that we have preserved on the statute book all the time this law of 1875 for the express purpose of borrowing money to make good this gold reserve, whether it is needed in time of peace or in time of war?

Mr. PAYNE seems to forget that one uncalled-for and infamous act of the Republican party does not justify another. The act of 1875 referred to is perhaps the most iniquitous act upon the statute books, because of the long train of evils following in its wake and its not being justified at the time.

I am very glad Mr. PAYNE referred to that act, for it condemns them out of their own mouths and verifies the claim we have made for years, that the Republican party is not a friend of the people, but is continually playing into the hands of the usurer and monopolist.

As further evidence of the perfidy of the Republican party, and that it is a unit with the Democratic Administration on finance, though hiding behind subterfuge and continually condemning Mr. Cleveland, I call attention to the vote on the seigniorage bill in the last Congress. This was a proposition to coin into silver dollars about $55,000,000 of free silver bullion that was then, and is yet, lying idle in the Treasury, covered with dust and cobwebs, while we borrow money of foreigners to pay our debts. When the proposition came up in the House to coin this money and pay our debts the Administration, of course, was against it, but a majority of the Democratic members were for it, and without the help of the Republicans Mr. Cleveland would have been defeated by his own party, but, as is shown by the RECORD, the Republican party came promptly to his rescue and in almost an unbroken line voted against allowing the people to have any money except that for which they pay interest, not even allowing them to use that which they have bought and paid for.

When under the seigniorage bill they were demanding this money through their representatives the present Speaker of the House marshaled his clans on the floor, stood alongside of Mr. Cleveland, and said to the people (figuratively speaking like a parent to children who were wanting cake), "Oh, no, my children; you must not have it; it will hurt you; you must go borrow some money and buy some nice yellow corn bread"; and as the result of this sort of fatherly policy upon the part of the rulers of the nation there are thousands who would be glad to have even plenty of corn bread.

I say boldly and without fear of successful contradiction that the financial policy of this Government has been such that if pursued in the same manner by an individual in the conduct of his private business he would be examined by the board of physicians for the insane.

Suppose, for instance, I owed a debt of $1,000, and I had earned the money and laid it away to pay this debt with when it should fall due, if I, when that note came due, were to deliberately destroy it, or keep it locked up where it could not possibly benefit me or anyone; absolutely refuse to use it; but go and borrow money to pay the debt, my friends would conclude I had lost my reason and would have a guardian appointed over me, and perhaps send me to an insane asylum, and they would be entirely justified in so

doing, because such a policy upon my part could have but one result, that of bankruptcy and ruin.

This is precisely the sort of policy this Government is following to-day, and has followed for years, destroying its own money in the past, and refusing to use that which it now has, while it borrows millions to meet its obligations. In this case, as in the other, but one result can follow, viz, that of disaster and ruin. Under this system it is only a question of time when the people of this country will be divided into the two classes of landlord and tenant, serf and plutocrat. When that time comes let it be recorded in history, "Behold the fruits of blind party prejudice."

There are enough people in this country who see these evils, if united in one body, to secure control of both branches of Congress and the Executive. Then, without fear or favor, we could proceed to wipe out this accursed gold-standard, gold-bond, bank-currency policy of government, which has caused more poverty, crime, and misery than war, pestilence, and famine, and establish in its stead a policy of the bimetallic standard—no bonds and Government currency—a policy of justice, equity, prosperity, and happiness for all the people.

Revenue.

REMARKS
OF
HON. GEORGE W. WILSON,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

Mr. WILSON of Ohio said:

Mr. SPEAKER: Why this unseemly haste? What is there in the affairs of the American Republic so threatening as to call for an abandonment of principles on the part of a Republican House of Representatives? Is it because the Democratic Administration has been so disastrous to the industries and prosperity of the country? Or is it because the Republicans charged with framing bills providing ways and means for our common welfare have imbibed too much of the "tariff-for-revenue-only" heresy of the Democratic party? Whatever may be the answer, I am firmly of the opinion that the two bills are calculated to place the Republican party in false positions.

THE TARIFF BILL.

The bill for revenue only which we have passed is not in accord with Republican principles or Republican promises; and, although I voted for the bill very reluctantly, I do not expect any great good to result from it. Why did the bill only provide 60 per cent of the duties established by the McKinley bill? Was it because Mr. Cleveland would veto a bill very nearly corresponding with the McKinley bill? If so, pass such a bill as meets the Republican idea of tariff and protection, and leave the matter with the President to either approve or disapprove the measure. I do not believe it is wise for Republicans to abandon principles for what may be conceived by some to be an emergency brought about by Democratic incompetency and failure.

SHORT PROTECTION.

Pretended protection, which falls short of real protection, is worse than no protection. It does not foster industries but increases the cost to consumers. The benefits which the people derive from a protective tariff are: First, it enables our own people to successfully develop the natural resources of this country and put upon the markets of the world products wrought by the hand of American labor; second, it stimulates all kinds of manufacturing to such an extent that competition reduces the prices of manufactured articles to within the reach of all; third, it so revives and sustains our various industries that employment is furnished for all common laborers and skilled workingmen. These are the principal benefits derived from a protective tariff. Whatever of tariff legislation falls short of this is not deserving of the name of protection.

SHEEP AND WOOL.

Under the McKinley law our sheep raisers and woolgrowers were beginning to prosper, and all farmers were deriving benefits from their industries. If all agriculturists were not actually engaged in raising sheep, nevertheless sheep raising diversifies stock raising and leaves a larger field for farmers engaged in raising other kinds of stock. The consumption of grain by sheep increases the demand for farm products, and the labor required in raising sheep and shearing and handling their wool furnishes employment for a large number of men. But notwithstanding all of these great benefits which our people would derive from adequate protection to sheep and wool, the Democratic party struck wool from the dutiable list and placed it upon the free list. And they did this under the pretense that the greater number of our people are benefited thereby.

What a fallacy! Does the importation of foreign goods, manufactured from foreign wool and by foreign capital and labor, benefit the great majority of our people? Does the closing of our mines and shops and factories benefit our people? If it were true, which I do not admit, that foreign goods would be imported and sold cheaper than our home products of the loom, how would the working people be benefited? Would the laborer, who lost his employment because the goods which he ought to manufacture at home are bought in a foreign country and sold here be benefited? What would he have to buy with at any price? Would the sewing woman in the upper story of a tenement house be benefited by having shirts brought from abroad and sold cheaper then she can make them, and thereby deprive her of employment and consequently of the ability to purchase at any price? No, Mr. Speaker, the one great thing to be desired is that our own people shall perform the labor and furnish the materials necessary for the production of articles required for home consumption, besides furnishing what we can to foreign countries. We should be self-sustaining in all that can be advantageously produced and manufactured by American enterprise.

FARM PRODUCTS.

The United States is the greatest grain-raising country in the world. There is no other place where corn can be so abundantly grown.

But there are some special crops produced abroad, especially in Canada, which distinctly compete with the products of the farmers of the United States and for which there are no compensatory benefits.

Probably the most damaging are hay, poultry, and eggs. I think the farmers and housewives of this country ought to be protected against the invasion of our markets by Canadian products.

The people of this country pay the taxes which support their civil institutions, and they fight the battles which protect their liberties and make their flag honored on land and sea to the limits of civilization. Therefore, upon principle and policy, I maintain that it is our duty to protect our own people in all their material interests against the encroachments of foreign products and foreign labor.

Revenue.

REMARKS
OF
HON. STEPHEN R. HARRIS,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency—

Mr. HARRIS said:

Mr. SPEAKER: I expect to give my vote to the measure reported by the committee, although it does not come up to what my constituents expect.

The bill I introduced (H. R. 265), and which was referred to the committee, proposed to put a duty on wool which would exceed by about 4 cents per pound that contained in the bill under consideration.

Under the present bill the proposed duty on wool will be nearly 7 cents per pound. I would rather it had been not less than 11 cents.

I support the bill, however, in order to secure immediately sufficient funds that the income of the Government may defray its expenses, and secondly, to get all we can now, and trust to the future to secure for the American farmers and woolgrowers the protection to which, in my opinion, they are entitled.

Mr. Speaker, I represent an agricultural district and I rise to advocate the cause of the farmer. We have no large cities, but the small cities and towns in my district, as elsewhere the country over, depend on the farmers for their prosperity, and too often have the farmers themselves looked in vain to Congress for protection.

It is said that over 90 per cent of the wealth of this nation is in the hands of her farmers. The proportion may be overstated, but much the greater portion of the property of this country is owned by American farmers.

Agriculture is the foundation of our nation's wealth and prosperity. All other pursuits are dependent on the farmers. If the farmer thrives, they prosper; if the business of the farmer languishes, they suffer. That is emphatically shown when there is a general failure of crops in our country. Merchants, mechanics, factories, jobbers, railroad companies, and banks all feel the shock. Business is deranged, laborers can not get employment, and general depression prevails. On the contrary, when crops are abundant and prices of agricultural products good, the farmer thrives, and all classes of business partake of his prosperity. Yet I regret to say that no class of people of the country has been neglected by the nation's legislation as have been the farmers of the United States. Corporations, combinations of capital, and trusts were fostered and protected in the Fifty-third Congress, when the new tariff schedules were adopted, but who raised his voice in favor of the farmer when his interests were stricken down?

Our wool industry was vast. In my own Congressional district nearly every farmer had his flock of sheep, some numbering thousands and others but few. Under the tariff law as it formerly existed they made woolgrowing profitable. The heavy woolgrowers gave employment to numerous laborers, and the small ones did their own work and depended on the market of their wool as much as on their other crops to pay their taxes, meet their liabilities, make their improvements, and add to their well-earned accumulations.

The wool product of the Thirteenth Congressional district of Ohio in 1893 was 1,316,064 pounds. Under free wool the fall in price has been 15 cents. This makes a loss to the district of $197,544 every year, or an average loss of $32,926 every year to each county, the heaviest loser being Wyandot, $51,996, and the least being Sandusky, $12,635, the loss to Crawford County being $34,600 every year. The annual loss by free wool to the State of Ohio is over $2,600,000 by the fall in the price of wool alone under free trade.

It seemed cruel to suddenly repeal the protective duty on wool and destroy an industry that brought prosperity to the farmer and through him to the country at large.

Under the McKinley tariff the duties on wool were producing a revenue of $42,000,000 per annum, and at the same time the property and business of the woolgrower were protected against the competition of cheap wool from Australia, Cape Colony, and China. It is claimed by the author of our present tariff law that a protective tariff is unjust on principle. The science of political economy, he claims, teaches free trade. He forgot that great and sacred principle, however, when he came to the schedules of sugar, rice, and collars and cuffs, while he had it distinctly in view when he struck down the wool markets and so reduced the duty on shoddy as to invite its importation and thus supplant to a great extent the use of American wool.

Let me for a moment discuss the point as to the alleged equity of free trade and the iniquity of protection. It is true that the text-books of political economy used in our colleges teach the students the doctrine of free trade.

That doctrine in theory appears to the reason to be correct. It came down from British authors and has been adopted in the literary institutions of our own country, and many young men leave their alma mater imbued with a firm belief in free trade. Now, while that is true in theory, it will not bear the test of practice. The strides of commerce require new rules that the old text-books will not fit. Don Quixote had profound theories for the various measures he pursued, but they produced ludicrous results when put in practice.

As late as the time when Sir William Blackstone codified the laws of England and produced his matchless Commentaries, which is the first book ordinarily put in the hands of a law student, there was a law against witchcraft, and that eminent writer gravely commented on it. But the modern lawyer does not take much more stock in it than he does in the free trade of those older books which are fading away before the progress of modern business experience.

The experience and judgment of mankind will bear me out when I assert that the first duty of a man is to protect his own business and his own household.

The duty of a municipal corporation is to protect its own traders, and the duty of a nation is to protect the industries of its own people. When wholesome duties will yield revenues to the Treasury and protect the interests of our own people it is hard to say they are wrong in principle.

I will venture to say that the ordinances of Professor Wilson's own city provide, as do other towns and cities, that transient traders and peddlers shall pay license to sell their goods in Charlestown; and why? Because in one sense they are foreigners to that municipality. They are nomads. They pay no taxes to support the city, they pay no rents, they are not identified with the city and its interests, and hence they are required to pay into the city treasury enough to even up with home traders, after which they can not afford to undersell them.

The principle is the same when applied to a nation, and no specious reasoning in the text-books of political economy can gainsay it.

All parties united in the exclusion of the Chinese from the United States. Why? Because the American laborer could not compete with them. They lived on wages that meant starvation to the American laborer and his family.

What is the difference if the Cheap John be sent to his foreign home and afterwards permitted to send the products of his cheap labor into our country free of duty and thus destroy factories that give employment to thousands of American workmen? It strikes a blow at both capital and labor, and especially at labor, because capital can shift its investments, but the laborer is left out in the cold.

Our country is in a bad financial condition. We are good for our debts, it is true, but it is a matter of regret to see its revenues cut off, its gold reserve sinking, its resort to the sale of bonds to raise means to pay the current expenses of its administration, when a wholesome tariff would again put us on the road to prosperity. The chief source of our revenues is duties on imported articles of commerce. Propose direct taxation and the American people would jump to their feet in battle array like the men of Roderick Dhu.

It is a question not of theory, but of practical business judgment. Tariff for revenue, judiciously adjusted to afford incidental protection to American industries, is destined to become the permanent policy of our nation.

The Coin Redemption Fund.

REMARKS
OF
HON. JOHN W. LEWIS,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. LEWIS said:

Mr. SPEAKER: Opponents of the pending measure seem to regard it as an act authorizing the issuance and sale of bonds, but such is not the fact. That authority exists under the act of 1875, and we are informed already by the Executive that bonds will be issued and sold pursuant to the authority of that law as has been done heretofore. This Congress as constituted will not be able to pass a repeal of that law over the veto of the Executive. Then it is the duty of Congress to use the opportunity and power it has in a practicable manner by enacting the wisest and best measures now obtainable in the interest of the people.

The bonds already sold by this Administration under the authority of the act of 1875 in one issue of $100,000,000 and in another issue of $62,000,000, running for thirty years, at the pleasure of the holder, have added to the obligations of the people $162,000,000 and an interest charge of over $100,000,000. Had the pending act been law and said bonds been negotiated and sold under it the interest charge would only have been something over $24,000,000. It therefore appears plain to my mind that as the issue of bonds and the increase of the public debt is unavoidable in the present emergency it is for the best interest of the people that future issues and sales of bonds should be made and negotiated as provided in the pending bill, thus preventing their negotiation and sale by private contract as heretofore at high rates of interest to domestic or foreign bankers, but affording an opportunity to our own people to purchase them and reducing at the same time the rate of interest.

I believe that sufficient revenue to prevent a deficit in the Treasury will restore confidence and relieve the trouble arising from continual runs on the gold reserve. We have already passed a measure which, it is claimed, will produce the needed revenue, but the gold reserve is already reduced to a point that endangers the credit of the country and its currency and menaces all credits and renders a destructive panic imminent. Delay is impossible; the good effects of the revenue law can not be realized in time; hence the necessity of the enactment of the bill under consideration.

The same conditions confronted the country when the Fifty-third Congress was convened in extraordinary session, the same appeal was made by the President to them as to this Congress in the recent special message. They wasted eighteen months in useless contentions and abortive confusion, winding up by the enactment of a law that has only added to the embarrassment of the

Treasury, the reduction of revenues and increase of deficits, creation of raids on the gold reserve, perpetual alarm as to all business, and great injury to all the vast interests and enterprises of the country, and which was denounced by the President as party perfidy and dishonor.

In what remarkable contrast is the conduct of this House! Responding to the instincts of patriotism and granting his request, it foregoes the usual holiday recess and before the holiday season is over enacts a law that will relieve the Treasury from the dishonor of daily, weekly, monthly, and yearly deficits, and before the close of this day will pass another law to replenish the depleted gold reserve, to preserve the credit and financial integrity of the country upon the best terms for the people. In the two measures immediate relief is offered the people, and a cessation of the consuming and destroying doubt and suspense that has preyed so relentlessly upon all public interests since the advent of this ill-omened Administration. Mr. Speaker, it is not voting authority to issue bonds; if it were, I should vote against it; but as a bond issue is inevitable and unavoidable, I vote to reduce the interest charge and place the loan within the reach of the American people. For these reasons, and to afford prompt relief to the Treasury and the business of the country, I shall vote for the bill.

The Coin Redemption Fund.

REMARKS
OF
HON. WINFIELD S. KERR,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. KERR said:

Mr. SPEAKER: My conception of duty impelling me to vote against this bill, I desire to state my reasons therefor. As a general principle the Republican party and Republicans are against an extension of the public debt. Only the direst necessity, such as preserving the national honor or the nation's credit, would justify the increase of the interest-bearing debt in time of peace.

The first section of this bill is supposed to furnish the means to maintain the gold reserve and the second section to borrow money to pay the ordinary expenses of the Government.

If there were no other means to keep the gold reserve to the point of safety save the passage of this measure I would vote for it, but a principle can not be sunk or set aside for no other reason than to save 1 per cent of interest. The Cleveland Administration has construed the statutes so as to afford ample power to protect the reserve. The Republican party provided this means as one of the steps to resumption of specie payments, but by reason of its wisdom in the management of our fiscal affairs resort was had to this power of selling bonds but once and that was to gather a portion of the original fund.

Facing this situation, gentlemen who support the first section of this bill are in the attitude of opposing the increase of the public debt on principle, but waive the principle to save a paltry sum in interest. What difference is there between selling bonds under the act of 1875 or the act of 1895, save that the former bear 4 or 5 per cent of interest, according to time, and the latter bear 3 per cent?

In the last two campaigns in Ohio the Republican party denounced the present Administration, not so much for selling bonds and thereby enlarging the public debt as for the manner in which they were sold and because it had created a necessity for such sale. The situation is one created by Democratic mismanagement and lack of business and statesmanlike qualities in the Administration. Let the Democratic party confront this situation, and if there is any agony let that party endure it; if there is any crown of thorns, let its brow wear it. Understand, Mr. Speaker, that I do not see any danger to the Government; if so, duty might point a different course. Gentlemen may get excited, and with outstretched hands clasp an imaginary emergency, but there is no emergency. The Administration is practicing a bit of domestic diplomacy to secure the approval of this Congress of its debt-increasing scheme; to bring upon the Republican party a portion of the obloquy which has fallen upon it. I for one will stand from under—the Government will not die nor the suffering of the people be accentuated till the Republican party can come back to power and dig up the roots of this evil in a Republican way.

It is already announced from authoritative sources that this bill will not receive the Executive approval. Why then attempt to do a thing that is wrong in principle to relieve a supposed emergency when it is prefecty certain that it will all end in the attempt? You are "carrying coals to Newcastle."

Again, what will the Senate do with this bill? Defeat it certainly. It is a proud thing to come to the country's rescue in the hour of peril, but one who ties himself to the cannon's mouth in the time of profound peace gathers no victor's wreath. It is never wise to do a futile thing, and especially a wrong thing, that can not be justified even by good results.

A cry of distress comes from the other end of the Avenue. Why are gentlemen so frantically rushing to the rescue? So swiftly have they moved that they reach the field of battle without their battle armor on. Shorn of its tragic features, it seems to me like a modern instance of that great tragedy which was enacted in the Imperial City nearly two thousand years ago. It is another "Help me, Cassius, or I sink." If to-day or to-morrow the Republican party hears this tired Cæsar from the turbid waters of this Tiber it will only be that next week his blood may stain the Senate house.

To support the second section of this bill there is neither necessity nor request. The President protests that he has plenty of money to pay expenses. His party followers on this floor enforce that declaration. They are now and will be for a brief time responsible for the management of affairs. Why not allow them to go on in the uneven tenor of their way?

Under no circumstances save those of immediate danger to the credit of the nation would I vote for a measure to borrow money and pay interest therefor to run the ordinary affairs and pay the ordinary expenses of the Government. Yesterday we passed a bill which it is announced will raise enough additional revenue to pay expenses. If passed by the Senate and signed by the President it will go into effect immediately. Where, then, is the need of more money? If that bill does not raise enough why did we stop short? If that bill does not provide a sufficient amount of additional revenue it was the duty of the Republican party to enlarge the schedules and raise the tariff duties until it did. Are we to be put in the attitude of refusing to increase tariff rates to the protection point and then supply the deficiency in revenue by borrowing money? This is not my construction of Republicanism. I am sure it does not accord with Republican principles and achievement, and, for one, will not support it.

The Coin Redemption Fund.

REMARKS
OF
HON. L. M. STRONG,
OF OHIO.
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895.

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. STRONG said:

Mr. SPEAKER: I have hesitated to give my support to this bill lest it be taken to imply acquiescence in a practice of issuing bonds to meet requirements which should be provided for in another way.

An examination of this bill, however, discloses the fact that so far as the first section is concerned no new principle is involved. Its provisions relate to matter of detail only.

The present law authorizes the issue of bonds redeemable in ten or thirty years, bearing interest at the rate of 5 and 4 per cent, respectively, and they may be disposed of in secret. The first section of this bill provides for bonds for the same purpose, running for a shorter time, and bearing interest at the rate of 3 per cent or less.

It also provides that these bonds shall be of small denominations and disposed of publicly, so as to give the people of this country an opportunity to take them. Bonds have been issued and disposed of for the purpose mentioned. While the present conditions exist bonds will continue to be issued and disposed of. Shall these bonds bear interest at not over 3 per cent, or shall they bear 4 or 5 per cent? Shall they run for a long or a short time? Shall they be bartered away to syndicates at a great profit to the syndicates, or shall they be offered to the people? To answer these questions in a manner which will be satisfactory to myself compels me to vote for this section.

The second section of the bill proposes to give to the Secretary of the Treasury a power which, in my judgment, he ought always to

have; that is, the power to provide by short-time bonds or Treasury certificates for any temporary deficiency in the funds of the Treasury. This power would seem to be necessary to enable him in case of an emergency to maintain the credit and the honor of the Government.

But, Mr. Speaker, while I shall vote for this measure, I feel that it is a matter of detail only. It does not go to the root of the financial trouble nor to the evil which depletes the gold reserve.

The Treasury statement for to-day shows an available cash balance in the Treasury, including the gold reserve, of $175,470,249.92. The present Secretary of the Treasury has sold bonds, ostensibly to maintain the gold reserve, from which he has realized $182,288,040.33, and were it not for the proceeds of these bonds the Treasury would not only be empty, without a dollar of available funds and without a dollar of reserve, but there would absolutely be a deficit of $6,817,790.41. The Treasury would be bankrupt to that amount. And yet in the face of these facts, and in the face of the fact that the receipts of the Treasury under present laws were constantly less than the expenditures, the Secretary of the Treasury persists in asserting that more revenue is not needed, and, together with the President, undertakes to fix the entire responsibility upon the legal-tender notes, commonly called greenbacks, demanding their destruction.

In his message of December 2, 1895, Mr. Cleveland, having recited the facts concerning the issue and sale of bonds to maintain the gold reserve, says:

> The foregoing statement of events and conditions develops the fact that after increasing our interest-bearing bonded indebtedness more than $162,000,000 to save our gold reserve, we are nearly where we started, having now in such reserve $79,333,966, as against $65,438,377 in February, 1894, when the first bonds were issued.

And further along he says:

> Nearly $327,000,000 of this gold thus withdrawn has been paid out on these United States notes, and yet every one of the $346,000,000 is still uncanceled and ready to do service in future gold depletions.

Such statements are deceptive and misleading. The inference would be that the $162,000,000 had been lost by reason of the greenbacks. If that sum has been paid out for greenbacks, what, let me ask, has become of those greenbacks? Where are they? Have they been given away? Have they not been used to supply a deficiency in the revenue and paid out like other money in the discharge of Government obligations? We have simply been running behind and using the proceeds of the $162,000,000 of bonds to pay current expenses. If the receipts during this same period had been equal to the expenditures, as they should have been, and the same amount of bonds had been issued upon the same terms, the Treasury statement of to-day would show an available balance of $357,758,290.25, instead of the $175,470,249.92 now shown.

If the President and the honorable Secretary of the Treasury would cease their warfare upon the greenbacks and their contention for the gold bonds long enough to examine the facts and figures disclosed in the report of their faithful subordinate, the statistician of the Treasury, they would readily discover that all this charge of larceny against the greenback is unjust and unwarranted, and that the greenback has only been the innocent instrument of effecting the withdrawal of gold to meet demands made inevitable by the policy and laws of the President and his party.

They would find that for the year ending September 30, 1895, we sold to foreign countries $75,505,140 less of our commodities than we did in 1894, while under the McKinley law, and that for the same period in 1895 we purchased from foreign countries $83,185,302 more than in 1894, making a difference in the balance of trade of $158,690,442, and that difference was against us.

It would require $158,690,442 in gold to be taken from this country to make up this difference. Is there any wonder that there is a demand for gold? Can there be any reasonable expectation that such demand will cease so long as we pursue a policy which fosters and encourages the importation and purchase of foreign products in preference to those of our own people? The way to stop the drain of gold from the Treasury is to stop the drain of gold from the country. The way to stop the drain of gold from the country is to discourage the importation of the products which compete with American productions, and thus give preference to our own artisans and laborers. Buy the product of American labor and you need no gold. Buy the product of foreign labor and you must pay gold. Restore the balance of trade as it existed under protection laws and gold will flow to us. You will then have no need to issue bonds to maintain the gold reserve. The greenback need not then be retired or destroyed. It may remain to serve and bless, and, perchance, again save a grateful people.

The Democratic theory of securing the markets of the world by free trade or tariff for revenue only has again been exploded. Instead of securing us the markets of the world they have lost our own markets. A like experiment was tried in 1846, when the markets of the world were to be secured by the Walker free-trade tariff, and the result will be found expressed in the message of President Fillmore, in December, 1851, as follows:

> The value of our exports of breadstuffs and provisions, which it was supposed the incentive of a low tariff and large importations from abroad would have augmented, has fallen from $68,000,000 in 1847 to $21,000,000 in 1851, with almost a certainty of a still further reduction in 1852. The policy which dictated a low rate of duties on foreign merchandise, it was thought by those who established it, would tend to benefit the farming population of this country by increasing the demand and raising the price of our agricultural products in foreign markets. The foregoing facts, however, seem to show incontestably that no such result has followed the adoption of this policy.

The free-trade theory proved false then, just as it has proven false now.

Mr. Speaker, if we could only get away from the din and confusion of those who operate in Wall street long enough to hear the voice of the people who operate on the farms and in the workshops we would soon find out that something is needed besides issuing bonds to maintain the gold reserve. The languishing industries of the country need the life-restoring tonic of a genuine Republican tariff law; a law which will put an end to the importation of rags and shoddy; a law which will protect the woolgrower, the farmer, the manufacturer, and the laborer; a law which will give our own people a fair chance in their own markets and an opportunity to compete for the markets of the world.

I believe this House should pass such a bill. It is what the people want; it is what the people expect. If it shall not become a law, let the responsibility rest where it may belong. But, Mr. Speaker, at this time, when all are inspired with sentiments of patriotic devotion to their country, may we not hope that even a Democratic President would consent that the fires be relighted in the furnaces and workshops of America, sending a ray of light and hope and joy and prosperity to all the people throughout the whole land?

The Coin Redemption Fund.

REMARKS
OF
HON. HARRY SKINNER,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. SKINNER said:

Mr. SPEAKER: I regret that the representatives of the political organization with which I affiliate and which stands before the people of the country in their name for the protection of their interests have not been accorded time upon the floor for the consideration of this important measure that we might have the opportunity of exposing before the country in detail this false issue and false emergency which the Ways and Means Committee have thought proper to meet in a summary manner, and to exhibit the sham battle which the American Congress has displayed to the public for their entertainment during the Christmas holidays. By the use of the words "false issue" I should not be understood to refer to the spirit of the President's "emergency" Venezuelan message.

I heartily approve of the maintenance of the Monroe doctrine, and my people, true to their tradition and history, will freely give their men and treasure to sustain our flag on land and over sea in maintaining the right and protecting the weak. Still, it seems to me, the President and Congress have acted precipitately in the matter. The President has strained the Monroe doctrine. He doubtless claims that, as American territory is involved, the doctrine applies, since if a part of an American State may be taken the whole could be, and thus its government overthrown. Here, I believe, the President is in error, since boundary disputes are necessary incidents to adjacent States, and are among the most common to arise. The Monroe doctrine was never intended to apply to such ordinary and necessary disputes. The commission authorized can accomplish nothing. It can have no international authority; it can not reach a conclusion; and if it should ever make a report, which is very doubtful, there is no use to which it could be put.

The message coming at this time, when there was no reason for undue haste, and at an hour when the President wanted to force his financial views upon the country, and creating a panic, which he must have known would have followed his message, and then supplementing the same with his financial message calling for the retirement of the people's money and the issuance of gold bonds looks as if there was method in this exhibition of his patriotism,

the method being to popularize himself upon a patriotic issue and then, before the people could recover their second thought and good judgment under the pressure of a panic which he had voluntarily created on the issue of patriotism, to have Congress indorse his financial policy. By far Congress had better permit Great Britain and Venezuela to settle in their own way and time their disputed boundary than to adopt the financial policy of Mr. Cleveland and that contemplated by the measure under consideration, and thereby give legislative assent that gold, and gold alone, shall become the world's money, of final redemption, which would mean the pauperization of our people, the annihilation of their hopes, and in time the destruction of their Government.

It will take something more than the Venezuelan boundary, and repeated panics in Wall street and other commercial centers to divert the minds of the plain, producing people from the issues of civilization and humanity involved in the proper solution of the silver question. The issue can not be avoided. The American people are determined that they shall have the opportunity of passing directly upon the question in which is involved their happiness and prosperity without unnecessary delay and distracting entanglements. The dominant parties may as well realize that the people can not be longer deceived either by the glamour of party prestige, sectional partisanism, or race prejudices, but in the future will act and vote for themselves.

The Democratic party deceived them in 1892—and I say deceived them because they had every reason to know Mr. Cleveland's attitude on the silver question before he was nominated—and for the expediency of temporary party success they ought not to have persuaded their confiding constituents to support the worst enemy of silver in Christendom. The Republican party will doubtless attempt to deceive them in 1896 by repeating the straddling policy adopted by the Democratic party in 1892. The developments in this debate ought to convince Republicans that they can not retain their strength on the Pacific Slope, in the States west of the Mississippi, or maintain a broken South unless they make concessions in their platform to the silver element of the Republican party.

They may retain them in 1896, but when their President, to be elected, breaks faith with the people, then the time of reckoning will be at hand. The people doubtless are laughing at the sham battle that has been played on the boards in the halls of Congress in a so-called emergency; the remedy which they offer they know before it is offered can never pass the Senate, and the Democrats resisting it under the plea that free silver, 16 to 1, is the proper remedy to be applied, when they know that if they could succeed their President would veto such a remedy, and when they further know that they are fighting in the name of a political organization and that after the next Democratic convention they will become the special champions of the single standard gold policy as taught and practiced by Cleveland and Carlisle. What is to become of the silver Democrats?

I will not presume now to prophesy, but I can not, I will not, believe, after hearing the silver sentiment and speeches made on this floor during this discussion, that these gentlemen will remain in the Democratic party after their party has passed under the golden rod. But, Mr. Speaker, I will reserve further remarks in this line for the hustings after I have had the opportunity of judging these gentlemen by their actions. I will only at this time extend to them an invitation to join the only free-silver party in America, the People's Party. It is the natural political home of every free-silver Democrat and Republican, and let me say that you injure the cause of free silver more than your free-silver speeches do good by remaining in gold organizations. If free silver, 16 to 1, is the remedy, I invite you as patriots to come to us and help us furnish this relief to the people.

I wish that the House could approach the discussion and vote upon this measure in an unselfish, nonpartisan, and patriotic spirit, with the interest of the people only at heart. Then we might look for a restoration of peace, confidence, and prosperity throughout the land. The members of the House will appreciate this patriotic declaration when I tell them that I bear the distinction of representing in a nonpartisan manner the ducking territory of our gaming President, to whose broad waters, pure air, historic and patriotic surroundings he had to have recourse to summon the patriotic fire and courage necessary to issue his very manly and courageous message referred to. History is only repeating itself.

In 1862 there was a real emergency to be met before which the present manufactured emergency pales into insignificance. Our Treasury was empty. Gold, coward as it has always proven itself to be since the creation of the world, had hid away or fled to other quarters. Not only the current expenses of the Government had to be met, but an army and navy necessary to suppress a rebellion. In this exigency the Ways and Means Committee were called upon for a summary remedy. The Republican party at this time, like patriots, met the issue, not in the manner that you meet it to-day, but in a bold declaration, in substance expressed in the speech of that great commoner, Thaddeus Stevens:

Cut the country up into one-dollar bills and let the boys fight it out.

You did not attempt at that time to maintain any gold reserve; you did not think at that time it was necessary to have gold to meet the current expenses of the Government or to meet the expense that was then upon you by reason of the war. North Carolinians, in fact the South, know by experience how well you fought it out. The remedy that you gave them saved the flag and saved the Union, and made liberty universal throughout the borders of our common country. When peace came the South had all of her property swept away from her and nothing left but her men and land; she was wrapped in the drapery of mourning and the dewdrops upon the gentle roses seemingly turned into tears of grief.

This remedy brought as a result to the harvest that succeeded the surrender of Lee and Johnston more prosperity and better times to our country and to our governmental affairs than is enjoyed to-day or has been enjoyed since the demonetization of silver in 1873 and the realization of resumption in 1879. You exemplified by this remedy that you furnished that this Government was independent of gold and that you could succeed independently on financial lines without the assistance of any foreign power or syndicate. The remedy that you gave at this time gave the Populists their cardinal truth that what in common everyday life is called money is but a creature of the law; that its office is to measure value, facilitate exchange, and to act as a unit of account in settling the balances between individuals and nations. By law this office, this unit of account, may be attached to any proper material, and when so attached becomes a check upon society, and, like all other checks, must be redeemed.

According to the science of trade, the process of redemption is accomplished when earned by labor, passed from labor to tradesman, to and on and around the circle of human aspirations, desires, wants, and requirements. If made receivable for public taxes, you have demonstated that it will always maintain a parity with the money of other nations, regardless of what material they may use, so long as the interest-bearing bonds maintain par, and this can always be secured by making such currency convertible into interest-bearing securities, and these likewise reconvertible at the option of the holder into the same class of legal-tender notes. It is very clear to my mind that this function, this office, this unit of account, should always be retained by the Government as an inseparable incident to the welfare of state and people, and should never be delegated to individuals or corporations, lest this great power in their hands, as we are daily experiencing, be used to destroy the liberty and government of the people.

To surrender this high prerogative of state, this function, this office of measuring value, this unit of account, to the owners of the gold of the world, and consenting that gold alone shall become the world's money and the measure by which we shall labor, produce, be taxed, the unit by which we shall exchange, buy, sell, and settle, is simply surrendering ourselves into perpetual bondage and losing all control over our labor and products as well as all control over our form of government. This would be an outrage, a crime against humanity, the destruction of our liberty, the robbery of our homes, and the pauperism of our posterity. It is the cowardly surrender of the God-conceived and great human purpose for which this continent was discovered, this Government created, and the Constitution framed as the ark of our country's hope and the hope of our people's prosperity and happiness.

The example of this surrender made by other nations has produced anarchy in France and Spain, nihilists in Russia, agrarian insurrection in India, and socialism in England, and if you love this country, its flag and institutions, if you want to prevent this country from inheriting and contracting these disorders, you should as quickly as possible come to the coinage of the Constitution, for without the money and the coinage thereof the day is not far distant when we will have no Constitution and no Union. Human rights and civil liberty, losing their champion and protector, will take flight, for in the present and future as in the past on the road of gold monometallism can be found neither bud, flower, blossom, or hope. Let us stand firm by the unwritten American doctrine, woven into the warp and woof of our discovery and creation, that the human race will always find a champion and a protector in this country. Let us break the shackles of gold monometallism by sending out no uncertain sound that this country, even in an exigency such as is presented, will not go any further committing itself to a single-standard policy and will become self-reliant and use all its great resources, integrity, and assets to give the world back its silver money.

All admit that international free coinage would serve the best interests of America and humanity. If it were well to be accomplished by international agreement by independent action, we will lead the way, and the struggling masses of all nations will follow and force the agreement. They say independent action would

drive all the gold from this country. They make this mistake, for our purpose is to increase the primary money of the country to the extent of the silver of the world. This being done, there will be no necessity for silver to replace gold, for the reason that by its recognition and restoration by this Government it will become the equivalent of gold the world over.

Admit for argument sake that silver will displace our gold, we have then in that instance increased the stock of European gold six hundred million—this increase of their money, with the demand for gold decreasing everywhere, will make European purchasers of our export crops more thrifty, enterprising, and consuming, while the increase in America in her silver primary money will cause it to flow in trade, invest in manufacture, operate agriculture, employ our labor, and vouchsafe a happy, thrifty, and contented people. But we need not fear or be alarmed at the exportation of our gold.

Gold never hides or flows out of a country that is prosperous. In time of danger, or war, and depression in peace is the time it can not be found for the purposes of money. Our wheat and cotton exports, properly handled and protected, will always command what gold we have any practical use for. In fact, by wise and practical control of our great Southern crop of cotton which stretches its white scepter of power from the Old Dominion border to the Gulf of Mexico, producing eight-tenths of the cotton to clothe the human family, to furnish house comforts, equip the white-winged fleet of commerce, and cover the camping armies of the world, we can in a few years either put all the gold of Europe in our Treasury or transfer the cotton manufacturing of the world to the American shores. I had rather see this be done, even if it be called paternalism, than to submit this great field crop of the South to have its price dictated by gold owners at such a price as to cause these Southern people to lose their home and the labor that produces this staple to become paupers and serfs.

They admit that the free coinage of silver at 16 to 1 would give us higher prices for our land, higher prices for our cotton, wheat, corn, and other produce. They admit that mills would be run on full time, manufacturing increased, mines successfully operated, railroads extended, commerce expanded, and they need not tell us that an increase of price for labor will follow the increased demand therefor. They appeal to our high sense of honor and want to know if our consciences will permit us to pay our obligations, national, State, and individual, in fifty-cent dollars. To discharge a forty-cent obligation in fifty-cent dollars is keeping good faith. I assert that the present indebtedness of the country is but the renewal of obligations that did not cost more than forty cents in gold in which they would exact payment to-day.

The national debt was created when gold was at a heavy premium, incident to the peril of war, and was originally payable in the lawful money of the United States, which at the time of its creation was greenbacks. The nature of this contract was changed in the interest of the bondholder and was made payable in coin. By the act of 1873 silver was demonetized, the gold dollar was made the unit of value, and thereby every 40 cents of contract debt was made by legislation a dollar, while the resultant effect of this legislation was to reduce the people's means of paying for their land, labor, and produce from one-half to two-thirds. To restore coinage to the ratio of 16 to 1 places the contracting parties—the nation representing the people and the bondholder—in the same position they were when the contract was made. The South and the West are the debtors of the nation, not only as related to the nation, but individually and in sections. They have to bear more than their share of the public burden in proportion to their wealth, by reason of the levying and collection of taxes. As a section the South, at the surrender of Lee, had no money, her wasted lands was all that was left. Before she could plant and harvest her first crop she had to turn to the more favored section of the country whose currency was not destroyed, but inflated and made better by the results of the war, and in this condition and under these circumstances she borrowed of this currency to rebuild, to repair her fences and reclaim her lands, to cultivate her crops, and to educate her children. The West turned to the same section of the country and borrowed of the same currency to develop her fertile and promising territory.

Now, all we ask for the South and the West is that justice which is due them—to be permitted to settle under the same conditions under which they contracted their debts—this is yielding to Shylock his ducats, but it is refusing him the pound of flesh next to the heart, because the taking of this is inhuman and death.

Now, Mr. Speaker, conceding that an emergency exists for immediate legislation—which I doubt—the remedy is not in a coin bond bill such as the House is considering, which only invests the Secretary with additional authority to issue bonds, but the plain and unmistakable remedy is to deprive him of any authority to issue bonds except as specifically authorized, and the free and unlimited coinage of silver at the ratio which obtained antecedent to the crime of 1873. This is what the people demand, nothing less will satisfy them.

The Coin Redemption Fund.

SPEECH

OF

HON. JOHN L. McLAURIN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. McLAURIN said:

Mr. SPEAKER: I am opposed to the passage of this bill because its provisions will not only burden an already debt-ridden people, but will legalize a long series of usurpations by different Secretaries of the Treasury. The caption declares this a bill "to protect the coin redemption fund," while at the same time there is not a single line of law upon the statute book authorizing or providing any such fund. Judging from past experience, without doubt this language would be construed by the Secretary for the purpose of sequestering in the Treasury this vast sum of $100,000,000, which should be in the channels of business, giving life and vigor to our commercial transactions. This unauthorized fund has been maintained in absolute idleness for over twenty years, and at simple interest has cost the people more than $80,000,000. This is a covert attempt to legalize an unwarranted assumption, which alone should prevent the passage of the bill. Mr. Speaker, instead of this being a bill to protect the coin redemption fund it is, more properly speaking, in my judgment, an act to provide for a deficiency in our revenues. The President has already issued over $160,000,000 of interest-bearing bonds for the alleged purpose of strengthening this reserve fund. In my opinion we might with profit inquire as to what has become of the proceeds of the sale of these bonds.

Mr. Speaker, is it not true that the one hundred and sixty millions of gold received from the sale of these bonds was drawn out of the Treasury through the redemption of United States notes or greenbacks? Is it not also true that these one hundred and sixty millions of United States notes or greenbacks have been paid out by the Secretary of the Treasury in the ordinary expenses of the Government? I repeat, has it not been the custom of the present Secretary to sell bonds for gold, to exchange the gold for United States notes, and then to use these notes in payment of our governmental expenses? Then why come here with a bill claiming to protect "the coin redemption fund" when in fact and in practice it is a bill to supply a deficiency in the revenue?

I believe in dealing with the people frankly and squarely, and if this bill is really to maintain a redemption fund it should be so stated, plainly and distinctly, and then used for no other purpose whatever. If, on the other hand, as is now secretly practiced, it is to supply a deficiency in the revenue, I maintain that such a declaration should be made, in order that all may clearly understand its import.

Besides, I am decidedly in favor of curtailing rather than extending the discretionary powers of the Secretary of the Treasury in our financial affairs. The act of 1875, mentioned in this bill, provided for the sale of bonds at his discretion, at not less than par in coin, while the last issue of bonds by the Secretary of the Treasury was made for so many ounces of gold bullion. I merely mention this to show the character of the usurpation of power by the Secretary of the Treasury. Mr. Speaker, there is a vast difference between selling bonds for coin, which means both gold and silver, and bartering the obligations of the United States for gold bullion.

I assume that all of our present difficulties would be eliminated and further legislation upon this subject unnecessary if we had a Secretary of the Treasury who would obey the law now upon the statute book of the nation. There is to-day not a bond, coupon, obligation, or debt of any character against the United States which is not payable, principal and interest, in coin; and coin to-day means just what it has since the foundation of the Government—both gold and silver.

Now, Mr. Speaker, with the vaults of the Treasury bursting with silver, with the great plain people struggling beneath a load of debt and distress, I assert that it is unfair, unjust, wholly uncalled for that interest-bearing bonds in time of peace should be sold to further impoverish our people, and through this interest levy tribute upon their hard toil, while there are lying idle in the Treasury one hundred and fifty millions of silver. [Applause.] Let the Secretary of the Treasury obey the law. Let him treat alike all obligations of Government. Let him consider the debt of the humblest American laborer in the same light that he does the debt due the alien money lender. All are payable in coin, and all should alike be paid in coin.

If it could be announced to-morrow that an American policy of finance would be inaugurated and the further domination of alien money lenders resisted, the same enthusiasm and patriotic response would come from the people to the support of the Administration that was witnessed when the President so forcibly reaffirmed the Monroe doctrine and notified England to encroach no further upon American soil. A similar announcement on the financial situation would infuse new life into the Democratic party, from which hope has been crushed by the financial policy of the present Administration.

Let the United States, like France, begin the payment of silver for her paper money when presented for redemption, and the necessity for another bond issue would vanish. Let us also imitate the example of France in refusing to furnish gold for export. In doing this we would simply be putting into practice that grand rule of humane government, "Equal rights to all; special privileges to none."

There is another point, Mr. Speaker, that seems to have been overlooked. It is claimed by the Secretary in his last report that there is in circulation among the people four hundred and seventy-five millions in gold coin. From the report of the Comptroller of the Currency it is learned that not over one hundred and fifty millions is held by the banks, leaving three hundred and twenty-five millions among the people. If the Secretary of the Treasury would expend as much energy in exchanging with the people greenbacks for this gold that he does in exchanging gold for greenbacks with alien financiers, I am of the opinion that the exigencies of the Treasury might be relieved without a further issue of bonds.

The gentleman from Maine [Mr. DINGLEY] advanced the proposition to secure this gold by an issue of interest-bearing certificates of indebtedness. In my judgment the object might be attained at far less expense by exchanging greenbacks which come into the Treasury for this gold coin among the people.

In order to meet the temporary deficiency in the Treasury, instead of interest-bearing obligations to become a burden upon the people, I would suggest certificates be issued against every idle ounce of silver in the Treasury. This would give instantaneous relief and would put into circulation among the people, without the burden of interest, a kind of currency that none would refuse and all be glad to get.

I can see no good reason why the taxpayers, the producers, and toilers of this country should be forced to pay an interest tribute extending to generations yet unborn when the simple application of justice and common sense would obviate the necessity of it all. [Loud applause on the Democratic side.]

Mr. Speaker, for fear my position upon this alleged gold-reserve fund may be misunderstood I desire to say like many other usurpations of the Treasury Department its legality remained unchallenged until somewhat recently. During a debate in the Senate in 1890 the following statement was made by Senator SHERMAN, the originator of this fund:

> It is certain from that day to this every officer charged with the responsibility has treated that as a fund set apart for this purpose, and the man who, in violation of that statute, as Secretary of the Treasury, should reduce the gold balance for the redemption of United States notes below $100,000,000 would be impeachable for high crime and misdemeanor.

The Senator referred to the time when this fund was created, but was very careful not to mention the precise statute which provided for it. Senator COCKRELL refused his consent to Senator SHERMAN'S statements and emphatically declared:

> There is not one particle of law upon the statute books of the United States directing or requiring the Treasury Department to hold $100,000,000 of gold for the redemption of United States notes or, as we call them, legal tenders.

Senator Ingalls also declared at the same time:

> The claim that this $100,000,000 in the Treasury is necessary to maintain the credit of this nation, that it ever was pledged to be deposited there as a matter of faith or of public honor, is a fiction. It is a dream.

This debate was continued at some length and the following facts were established: First, that no authority save the caprice of the Secretary of the Treasury could be found for accumulating this vast idle reserve; and second, no law could be discovered that permitted its being paid out in the manner adopted. From that date until the present no one has been able to find a line of law providing for this reserve. In my opinion it should be covered into the Treasury as a miscellaneous fund and the Secretary of that Department compelled to treat all the obligations of Government alike. That portion of the act of January 14, 1875, referred to in this bill reads as follows:

> SEC. 3. And whenever and so often as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of $300,000,000 to the amount of 80 per cent of the sum of national-bank notes so issued to any such banking association as aforesaid, and to continue such redemption as such circulating notes are issued until there shall be outstanding the sum of $300,000,000 of such legal-tender United States notes, and no more.
>
> And on and after the 1st day of January, A.D. 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding on their presentation for redemption at the office of the assistant treasurer of the United States, in the city of New York, in sums of not less than $50. And to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues from time to time in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the description of the bonds of the United States described in the act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid.

Under this act Senator SHERMAN, then Secretary of the Treasury, sold $95,500,000 of 4 and 4½ per cent bonds for gold, and established this so-called reserve fund. The object of this fund was to redeem and retire the United States notes or greenbacks from the amount then outstanding, $375,771,580, down to $300,000,000. This was to be done gradually as additional bank currency was issued to the banks. In 1876 there was retired $5,999,296. In 1877 there was also retired $10,007,952. During 1878, and up to the passage of the bill forbidding their further destruction, there was retired $13,083,316, or a total of $29,090,564.

In the meantime the people grew uneasy over the destruction of these legal tenders and the demonetization of silver, and as a result of this agitation the act of May 31, 1878, was passed. It reads:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That from and after the passage of this act it shall not be lawful for the Secretary of the Treasury or other officer under him to cancel or retire any more of the United States legal-tender notes. And when any of said notes may be redeemed or received into the Treasury, under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation: *Provided*, That nothing herein shall prohibit the cancellation and destruction of mutilated notes and the issue of other notes of like denomination in their stead, as now provided by law. All acts and parts of acts in conflict herewith are hereby repealed.

By this act the canceling and retiring of greenbacks was stopped, and the books of the Treasury showed at that time $346,681,016 of this kind of currency outstanding, at which figure it has been given since.

This gold-reserve fund is mentioned for the first time in the statutes in the banking act of 1882, in the following words:

> The Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below $100,000,000.

Mr. Speaker, I have been careful to quote all the acts or parts of acts upon the statute books which in any way relate to the gold reserve or the further issue of interest-bearing bonds, in order to disclose the narrow foundation upon which this idle hoard of gold is held or additional bonds issued to further burden the people. The fact is, Mr. Speaker, there is no authority of law for either, and the time has come when the people of this country should understand the real situation. In my opinion, the country is not suffering from laws which have passed Congress, some of which I admit are wholly bad, but is being destroyed by Department rulings made upon these laws. We may enact laws ever so carefully, but no one can determine their final operation until they have run the gantlet of the Departments. For this reason I am opposed to granting any increase of discretionary powers to any and all public officials.

Mr. Speaker, having mentioned the fact that the last issue of bonds was for gold bullion, I desire to give that portion of the contract between Secretary Carlisle and the alien money lender. It reads as follows:

> Now, therefore, the said parties of the second part hereby agree to sell and deliver to the United States 3,500,000 ounces of standard gold coin of the United States, at the rate of $17.80441 per ounce, payable in United States 4 per cent thirty-year coupon or registered bonds, said bonds to be dated February 1, 1895, and payable at the pleasure of the United States after thirty years from date.

This idea of buying coin at bullion rates is no doubt dictated by some ulterior purpose that will come to the surface some day to plague and plunder the people.

Mr. Speaker, gold bullion is a commodity, and, under any construction of law, Secretary Carlisle could have issued bonds as legally for so many ounces of pork, beef, wheat, or cotton. It is time such flagrant violations of the plain statutes ceased by those whom we trust with important positions, for if they will not obey the law how can obedience to the law be demanded of their subordinates?

Mr. Speaker, the provisions of this bill as first presented would, under the rulings of the Secretary of the Treasury, have retired and canceled every dollar of United States notes or greenbacks. This was no doubt the intention of its originators; but, fearing exposure and defeat, an amendment declaring against such action was added. These greenbacks have been doing service for more than a third of a century, and never, until the present Administration permitted them to be used as the tools of alien money lenders in raiding the National Treasury, have they given rise to any complaint. These greenbacks cost the Government but a trifle, and burden the people with no interest. If the Secretary of the Treasury were to establish an American financial policy, and in doing so obey the plain letter of the laws, all objections to the continued

use of this form of currency would vanish. These United States notes during their long existence have saved the people of the nation more than $700,000,000 in interest, and are at the present time the favorite currency of the people. In my opinion they should not be retired, but permitted to continue their work of facilitating business.

I am opposed to the issue of the proposed certificates of indebtedness, since they bear interest and can not be used in the channels of trade. Instead, let silver certificates against this vast horde of idle silver in the Treasury be issued. Such certificates would bear no interest, become no burden to the people, and would readily become absorbed in the exchanges of the country. They would increase the volume of currency and to that extent assist the people in their almost hopeless struggle against general bankruptcy. The people do not want another bond issue. They know what it means and fear the result. They know it means harder work, less comforts of life, and lower prices for the fruits of their hard toil. They are in financial distress now and ask for relief from their present burdens instead of being loaded down with more.

This relief must come, and in my opinion quickly, or great danger threatens this country.

Mr. Speaker, where is the end? Selling bonds does not replenish the Treasury under its present administration. The jugglery of these financial deals is apparent and the rapacity of those profiting by them seems to have no limit. It is estimated that the total value of all of the property in the United States is about $65,000,000,000. At least forty-five billion of this has already been appropriated through bond dealing and stock watering by the capitalistic class. At the present rate it will not be long before they will have the other twenty billion, and the entire property of this country will be represented by paper securities, upon which interest and dividends must be paid by workers to drone capitalists.

The producer and the man who works with his hands pays for everything. He is the mudsill, and without his toil stocks, bonds, and factories become valueless.

If these bonds are to be continually issued, and the public and private debt of this country increased at the rate that has obtained for the past two years, our entire wealth within ten years will be represented by interest-bearing securities, and the seat of our Government transferred from Washington to Wall and Lombard streets. The people will no longer rule, but will become the mere serfs of a bondholding class, "who toil not, neither do they spin." Wages under such conditions will be the pittance necessary to sustain life, while the wealth created will go to swell the hoard of those already monstrously rich. The picture is not overdrawn, and unless our people are aroused to a comprehension of this iniquitous system no one can foretell the calamities which await us in the future.

The masses believe that finance is the paramount issue, and no amount of deception or sham battles over the tariff is going to deter them from a settlement of this question before all others. For the last thirty years the people have been divided on the question of tariff and marshaled into two hostile camps, while the money owners have fastened upon us a financial policy which has brought the country to the verge of bankruptcy.

I want these bond dealers to push their schemes to the uttermost limit as rapidly as possible, for the sooner then will the end come. When rulers become mad with power, their fall is near.

Napoleon, intoxicated with success, sought to rule the world, but he died on a speck of rock in mid-ocean, far from the scenes of his success and glory.

Had he been satisfied with a reasonable amount of power, Europe would not have been convulsed with carnage and St. Helena never heard the heartbroken sigh of an exiled and dying monarch.

History teaches the lesson that centralization of wealth and power may, like the tower of Babel, stand for a while, but the law of gravitation defies the one as surely as justice decentralizes the other.

The masters of to-day become the servants of to-morrow; the conquerors become the conquered.

Selfish ambition and love of unmeasured power overthrew the Cæsars and Napoleons, and a day of reckoning will come for the Rothschilds, the Shermans, and the Clevelands.

Mr. Speaker, I am opposed to the further issue of interest-bearing bonds, but I am in favor of the free and unlimited coinage of silver at a ratio of 16 to 1. If we may believe the press of the country, bonds will soon be issued in the same clandestine manner as the last issue without either the knowledge or consent of the people or the legislative branch of the Government.

To-day gold is at a premium of 1¼ per cent among the money changers of Wall street. This reduces it absolutely to a commodity instead of a medium of exchange. In this we see that no matter which way we may turn, either toward a war over the boundary line of Venezuela, complications arising from the seal fisheries, or a depletion of the Treasury reserve, we are making progress, whether we wish to or not, toward the use of silver as money.

Mr. Speaker, in my judgment, the people of this country want free coinage of silver. There is not a State in the Union that would not record its vote overwhelmingly for free coinage if its people were permitted to vote on that proposition alone. The wishes of the people may be hindered, but the time is not far distant when the members of this Chamber will be only too glad to register their votes in favor of such a measure.

The money of the Constitution, which since the foundation of the Government has been accepted by the people until it was clandestinely taken from them, must be restored. For one, I shall bend my energies and cast my votes in this direction.

The Coin Redemption Fund.

REMARKS

OF

HON. RICHMOND PEARSON,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. PEARSON said:

Mr. SPEAKER: No man can preach an edifying sermon in a whirlwind, and no man can make a satisfactory argument in five minutes on a question of finance involving indefinite hundreds of millions of untried bonds. The gentleman from Tennessee [Mr. MCMILLIN] compares our distinguished chairman of the Ways and Means Committee to the Indian chief called the "Young Man Afraid of his Horses." I should rather say, that "his driving is like the driving of Jehu, son of Nimshi," for "he driveth furiously." In fact, he is driving at such a virtiginous rate of speed that his horses have not even time to "kick." A decent respect for the opinions of my Republican associates and a proper regard for the wishes of my constituents oblige me to state my reasons for opposing this proposition to issue bonds.

I wish to say that I voted for the revenue bill not as a declaration of Republican principles, but simply as a modus vivendi. It would be called a modus vivendi in diplomacy. It might be styled a "makeshift" in a Democratic platform, not a cowardly one, but a bold and magnanimous offer to meet the President on halfway ground, in the hope that he will display equal patriotism, meet concession with concession, for the public good.

His annual message gives reason to hope that in this emergency he will yield some of his hard-earned views and not blight "the counsels of the brave" in their hour of patriotic inspiration. When a drowning man cries out for help it would be humorous but inhuman to stand on the bank and discuss tariff schedules.

The course of the Democrats on this floor in refusing the revenue proffered in the new tariff bill convinces me that the gentleman from Maine has to administer relief to the Democrats as the Frenchman in Perigord administers food to those interesting birds whose livers are highly prized by epicures, but whose brains are proverbially defective. The nourishment has to be poured into their mouths in liquid form by means of a hose under heavy pressure. The process is painful, but the results are none the less invigorating, fortifying, and comforting.

Now, I oppose this bond bill—

First. For the all-sufficient reason that I am explicitly and irrevocably committed against the policy, and so are all my constituents.

Second. I oppose it for the further reason that I would not do what I have condemned others for doing.

Third. I oppose it for the further reason that it gives increased power to the Secretary of the Treasury, instead of curtailing the power which, in my judgment, he has already abused.

Fourth. I oppose it for the further reason that if it does not retire the legal-tender notes it would enable the Secretary of the Treasury to "corral" them. I can think of no better word.

Fifth. I oppose it for the further reason that its avowed purpose is to redeem the United States legal-tender notes—that is, to buy in the greenbacks and substitute an interest-bearing debt for the best money that ever served our people in war or in peace.

Sixth. I oppose it for the further reason that, if economy be the object, it is cheaper to buy gold at a small premium than to borrow gold by issuing hundreds of millions of bonds. I am informed by an officer of this Administration that France has taken $32,000,000 of our gold within two years at a cost of about one-half of 1 per cent—that is, she has secured $32,000,000 of our gold by paying

$160,000. Why does not our Secretary of the Treasury display this kind of discretion? Our people have no patience with a discretion "which depletes but does not discern." The interest on the bonds which he has already issued at his "discretion" will amount to $120,000,000 at the maturity of the bonds. That is, the interest alone will amount to 3 per cent of all the gold on the globe, and yet to-day he has less gold than when he started on this ruinous policy.

Seventh. I oppose it for the further reason that it can have only one of two objects, economy or contraction. The first it can not attain; the second we can not allow.

Eighth. I oppose it for the further reason that it places all these bonds at the "discretion" of the Secretary of the Treasury, a quality which the present incumbent, in his dealings with bond syndicates, has not demonstrated to the satisfaction of the American people. If nothing but that discretion stands between us and ruin, I for one am not willing to take the risk.

Ninth. I oppose it for the further reason that I can find no warrant for this policy in the Republican creed, and I defy any man here or elsewhere to cite the article of Republican faith which favors the borrowing rather than the earning of money by the Government in time of peace. Every Republican convention, every Republican orator, and every Republican paper has denounced the Democratic Administration for issuing bonds, and pointed to that fact as the humiliating product and signal proof of Democratic incompetency. If it be said that the Republican party stands for the honor of the nation, I am proud to believe it; but that party does not stand for the dishonor of the Democratic party, and ought not to be asked to bear any part of that dishonor, even in this hour of need.

REPUBLICAN STATE CONVENTIONS CONDEMN BOND ISSUES.

[Massachusetts Republican, October 5, 1895.]

The last Congress provided a revenue shamefully inadequate, and by the issue of bonds shifted on to succeeding Administrations the burden of their outlay.

[New York Republican, September 17, 1895.]

We denounce the Democratic Administration for its gross mismanagement of the finances of the nation. It already has added more than $165,000,000 to the national debt and the burdens of the people, and there is every evidence that this increase is to be continued.

[Kentucky Republican League Clubs, May 1, 1895.]

We believe in the doctrine of protection to American labor, American industries, and American homes; and we attribute the unparalleled business depression of the country to the utter failure of the Democratic Administration in its management of both foreign and domestic affairs, which has created national distrust and general paralysis, has driven capital from the factories and labor into the streets, reduced the revenues of the Government, and increased its bonded indebtedness.

[Ohio Republican, May 28, 1895.]

We denounce the present Democratic Administration, whose vicious and vacillating course has brought us distress at home and humiliation abroad. It has inaugurated a policy looking toward ultimate free trade, which has deranged business, crippled our industries, distressed our homes, and dealt labor a serious blow. With deplorable incompetency it has failed to raise revenue enough to run the Government and has had to borrow, in less than two years, $162,000,000 mainly to pay ordinary running expenses, selling in secret to favored foreign syndicates the bonds of the Government at prices far below their actual value.

[Pennsylvania Republican, August 28, 1895.]

Charges upon the Democratic party the fault for a constantly growing deficit in receipts, as compared with expenditures, thus compelling the borrowing of money in large amounts at exorbitant premiums in time of peace to maintain the credit of the Government. For the failure of the Democratic Administration to provide sufficient revenue to meet the wants of the Government "its responsibility is absolute, and it has exhibited to the world such inability and faithlessness in the discharge of the high trust committed to its care that its history continues to excite the contempt and distrust of all thoughtful citizens."

[Utah Republican, 1895.]

The first State Republican convention of Utah was held at Salt Lake City, August 28, 1895. The platform adopted was as follows:

"We condemn the action of the present National Administration for issuing Government bonds in time of peace to meet a deficit caused by unwise and un-American legislation, and for its unprecedented and unpatriotic coalition with a syndicate of foreign money lenders to procure the sale of Government bonds adversely to the interests of the people."

This bill would throw the Republicans in many sections immediately on the defensive, and I would say, with all respect to the distinguished gentleman from Maine [Mr. DINGLEY], that he may do more in two days for the Democratic party than that party could do for itself in forty years; he may lift them out of the mire; but I venture to submit that he ought not to put us in their places. That would be too generous, too hospitable.

Mr. Speaker, the right place for the Democratic party in the fulfillment of their strange mission is on their backs; they can criticise, but they can not execute; they can obstruct, but they can not construct; they can promise, but they can not perform. A magnificent party in the minority—but in the majority, impotent. To epitomize in a homely phrase their record and character, that party fights splendidly on its back, but is not worth a darn on its feet. The gentleman from Pennsylvania [Mr. BROSIUS] tells us that the President appeals to us for succor. He goes out fishing; if he does not catch "suckers" he may at least capture a scapegoat to bear the sins of the Democratic Administration.

Tenth. I oppose this bill finally because I know—in fact every wayfaring man, even though he be a Democrat, knows—that it can not pass the Senate, and the Secretary of the Treasury has taken extraordinary if not indiscreet pains to tell us that it can not pass the White House. Under these circumstances we are now asked to make a voluntary declaration of a policy which I believe to be un-Republican, and which I know to be unavailing; which has been tested and condemned as furiously unpopular and uselessly expensive. I stand ready to vote a thousand millions for the national defense, for the glory of the flag, and for the maintenance of Republican institutions in the Western Hemisphere, but not one cent to cover up, brace up, or patch up, or to indorse, condone, or compound the hopeless incompetency and purblind folly of the Democratic party. I will help the gentleman from Maine to keep them on their backs, but never to lift them to their feet.

The Coin Redemption Fund.

REMARKS

OF

HON. CHARLES A. TOWNE,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. TOWNE said:

Mr. SPEAKER: I avail myself of a brief space to state shortly the reasons why I must oppose the first section of this bill. I can not indorse it as a matter of principle; I can not indorse it as a matter of party tactics, and I can not indorse it as consistent with the views, the very decided views, of an overwhelming majority of my constituents. The gold reserve, sir, it has constantly been claimed on this side of the House, has been depleted both because of the insufficiency of the Government revenues provided by a Democratic tariff and by the maladministration of the Treasury Department by a Democratic Secretary.

The other day the Republican majority of this House, rising to the demands of an urgency that could not brook the delay necessary for a systematic treatment of the tariff upon well-known Republican lines, passed a bill, not in many respects entirely satisfactory to me or wholly just to some interests of my district, and in my judgment justifiable only as an emergency measure, the object of which was to provide the National Treasury with an income in excess of its expenditures. By the second section of the pending bill, for which I shall vote, we shall furnish the Secretary with a resource up to $50,000,000, in the nature of exchequer bills, to enable him to meet any temporary deficiency for current expenses. Now, sir, I regard these measures as meeting and satisfying the reasons for the depletion of the reserve that have been assigned by the Republican press and the Republican party generally, except as to the alleged mismanagement of the Treasury.

This, sir, is part of the political responsibility of the Cleveland Administration, and my opinion is that it ought to be left upon that Administration until the people of this country shall, as next November they surely will, visit upon the Democratic party their deliberate and crushing reprehension. Either this or a more drastic and complete enactment controlling the Treasury management. It is significant, sir, that when this bill was first laid in printed form upon our desks it plainly contemplated the effectual retirement of the greenbacks, and partly on that account I am not surprised to find that the amendment which is claimed to obviate that objection does not, in my opinion and that of several other members of this House, clearly and certainly accomplish that result.

Sir, the people of the United States will not permit the retirement of the greenbacks, and I can not vote for a measure which, being under the rule not now open to amendment, may carry with it permissive authority to a too-willing Administration to lock up and retire from circulation the best kind of paper currency the world has ever seen. With ample revenues, which the new tariff provisions will supply; with a restored favorable balance of trade created by the same agency, lessening or destroying the demand for gold to export, and so doing away with the chief incitement to the withdrawals of gold from the Treasury; and with an emergency resource of fifty millions under the second section of this bill, to be used solely for defraying current expenses, and thus fencing off the reserve from the desperate resort of a lawless Administration, I contend that we shall have done our duty and that no exigency has yet been shown to exist compelling another issue

of bonds in a time of peace, entailing a new mortgage of the country to the English gold farmers, and needlessly increasing the interest burdens of the people.

Now, sir, is this bill demanded by party policy? I care not by what hair-spun distinctions gentlemen may seek to explain and excuse it, the plain people of this country will see in this bill a surrender to Grover Cleveland's patent system of bond financiering, a virtual indorsement of what we have for two years reprobated with emphasis if not violence of speech, and an explicit authority for further transgressions. We are asked by several gentlemen supporting this bill to rise to high grounds and grant the President the relief he has besought. And yet we are assured from the other side of the House by those who are close enough to the throne to catch the expressions of the executive inner consciousness, as well as by an authorized interview with the Secretary of the Treasury reported in the morning papers, that the Administration is not favorable to this measure, but condemns it and spews it out of mouth. So, sir, we are asked to grant the President's prayer by affording him relief that he rejects.

Sir, the Republican party in this House has rallied round the President in his foreign policy, it has passed a tariff measure which our leaders on the floor have vied with one another in calling not a protective tariff but a tariff for revenue, and if we now surrender to Grover Cleveland's financial policy will not the people wonder where they are to look for the Republican party?

Sir, the President now has authority to dispose of any bonds issued by offering them at public sale in this country. If we fail to pass this section, how can he justify, as we are told he may, a failure so to offer them by citing the neglect of a Republican House to compel him to do what he is already perfectly free to do? And so far as the rate per cent of the bonds is concerned, if they are offered in open competition the rate will regulate itself through the price brought at the sale; a point not difficult to comprehend, either, though I have heard men say here that, while true, the people could not understand it.

Mr. Speaker, I do not lightly vote against a proposition that receives the indorsement of the leaders of my party in this House. It pains me to do so. They are men I honor for their ability and respect for their personal worth and their past service to the country. But, sir, I have never found it possible to compromise a principle, and in the present instance, as I conceive it, both principle and wise party policy are against the passage of the first section of this bill.

Revenue—No Tariff Tinkering Needed.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

Mr. MAGUIRE said:

Mr. SPEAKER: The bill before the House is strictly a Republican party measure. It is to be railroaded through the House in accordance with a prearranged Republican programme, concerning which perhaps a dozen members of the dominant party were consulted. All other Republicans in the House are expected to swallow it without making faces, because it is decreed by those to whom their obedience is due that it is good for the party, and any question concerning the wisdom of that decree by individual Republicans is to be regarded as treason. The party lash is the answer to any question or protest which they may conceive in their minds but dare not permit to reach their tongues.

> If any there be who would dare to refuse,
> Cry "Traitor!" and then your authority use
> To frighten him into submission.

The Committee on Rules has formulated an edict depriving this Congress of its deliberative character, at least in so far as it is to deal with the tariff question, by far the most important measure of legislation that will come before it, and the great Republican two-thirds majority of the House have, in obedience to the demands of the committee, surrendered their own right of discussion in order to deprive the Democratic minority of its right to suitably discuss the measure.

Gentlemen on the other side have said that this is a measure of hasty legislation, intended only to meet a present emergency. In that, I think, they are entirely right, but their statements as to what the emergency is are entirely misleading. It is not an emergency relating to the public revenues which they are seeking to meet, but an emergency relating to the campaign fund of the Republican party for the approaching election. Republican political methods require enormous campaign funds, and no legislation can be so important to that party as that which puts it in a position to secure such funds. The monopolists, who are the beneficiaries of the special-privilege system which they call protection, are the sources of their campaign funds. Those interests are thoroughly selfish. Their contributions are given only in return for great financial advantages bestowed, or certain to be bestowed, upon them by the party which they support. They have no political principles save those which have their foundation in their own avarice, and this appeal to their cupidity is the only certain means of bringing out their financial support for the party of special privileges in the next campaign.

The pretense that this bill is prompted by a desire to respond to the call of President Cleveland is a very transparent subterfuge. It is not in any sense an answer to that call and will not in the least relieve the distressing situation of the Administration pointed out in the President's message. The legislation called for by that message is of a character making a radical change in our system of finance, such as would relieve the Treasury of the gold drain, inevitable under existing law, or legislation providing a means of securing the gold with which to meet the demands therefor which may be made—which are being made, and which are sure to be made—upon the Treasury as long as the present financial system continues. The party in power in pressing the present measure is seeking, first, to satisfy the monopolists who are enriched by the protective tariff, as I have said, and, second, to deceive the masses of the people, who are robbed by that system, into the belief that this is intended merely as a temporary measure to meet a financial emergency in the affairs of the Government. They will not be permitted to go through the campaign without having their false pretense in this behalf thoroughly exposed. The stifling of debate will not shield them from exposure, but will rather make the public more curious to learn why the Republican majority deemed it necessary to avoid reasonable discussion of this measure.

If the bill should pass the Senate, as it is already programmed to pass the House, the country will learn, at least, that the foreigner does not pay the tariff taxes. The country will learn a lesson in political economy which will never be forgotten, namely, that the tariff paid on foreign goods is added to the price of the goods advanced by the importer, and paid with interest and incidental expenses by the American citizens who ultimately consume the goods; and that domestic producers of the same kinds of commodities are enabled thereby, arbitrarily and without doing or giving anything in return for their increased profit, to correspondingly increase their prices as against all American consumers, the consumers of the foreign goods paying a burdensome tax for the support of the Government, and the consumers of domestic goods paying an equally burdensome tax for the enrichment of their specially privileged fellow-citizens.

"But," say the bolder protectionists, who believe that popular ignorance on the tariff question will still permit their absurd claims to pass as valid, "the labor of this country needs protection." I will not essay to discuss that question at this time. The labor of this country was never protected by tariff legislation, and if our Republican friends imagine that the severe reprimand recently given to the Democratic party is an indication of the returning popularity of the system of special privileges which they call protection they will be rudely awakened from their dream. The people have ceased to worship the fetich of protection. The "tabu" of protection is broken.

> That spell upon the minds of men
> Breaks, never to unite again,
> Which taught men to adore
> That pagod thing of despot sway,
> With front of brass and feet of clay.

The masses of the people are turning their faces in another direction for relief. They realize that they need protection, but not the kind of protection offered by the Republican party. They need protection from monopoly, from the classes whose special privileges have been built up to the ruin and oppression of the masses by the Republican party. They want legislation which will restore to them their natural God-given opportunities. They want legislation that will restore to them their natural heritage—the land from which all wealth is produced by the application of labor. They want legislation that will make them free in their homes and industries and make them masters, as they should be, of the whole field of wealth production. They are beginning to realize that what they really need is not work, but the wealth which work will produce, and that free land will give them more wealth for less work and constant opportunity for productive labor.

They are beginning to realize that land and labor are the primary and only essential factors in wealth production; that the

trouble in the industrial world is, that by the power of monopoly those two factors are kept apart and that those who own the land of the country control the conditions upon which all landless people may produce wealth, and the share of wealth which shall go to the producer. They are beginning to realize that as long as that condition continues labor must continue to be the helpless victim of robbery, and must continue to suffer either for the opportunity to produce things that will satisfy their wants or for the very things that they have produced, but which have been taken to satisfy the wants of nonproducers, who, by a false system of land tenure, are in a position, without producing themselves, to take as toll what the labor of others has produced from the God-given sources of production. The people are rapidly losing interest in the tariff discussion, and they are as rapidly turning their attention to that question which lies deeper than the tariff, which lies deeper than trade—the land question—upon the right settlement of which depends freedom of production and the future comfort and happiness of mankind.

My purpose to-day is not to deal with the merits of the tariff question, but, under the leave to print given by the House, to publish in the RECORD, for the edification of those who seek instruction from its pages, some views which I have prepared upon the single-tax question, and also the following masterly historical paper upon the same subject, prepared with great care and written with an ability worthy of his ripe scholarship and experience, by my friend Mr. Joseph Leggett, of San Francisco. I desire first to insert the following address, delivered by me before the State Grange of California in August last:

EFFECTS OF THE SINGLE TAX ON FARMERS.

[Address of Hon. James G. Maguire before the State Grange of California, in Normal Hall, San Jose, August 14, 1895.]

LADIES AND GENTLEMEN: It affords me uncommon pleasure to appear before you, as the guest of the State Grange of California, to discuss the single-tax question.

As my time is limited to less than an hour, because of the absolute necessity of my returning to San Francisco on the 11.40 train, I will be obliged to avoid details in discussing all but one phase of the single-tax question, namely, the effect upon farming, and upon farmers, of concentrating all taxes upon land values.

I will deal as fully as possible with that branch of the general subject, because I am sure that it is regarded by you as the most immediately practical part of the discussion.

In what I shall say to you to-day my effort will be, above all things, to be plain and clear, sacrificing all other considerations to that purpose and leaving rhetoric and sentimental appeals to their proper occasions in the future.

Let us first understand distinctly what is meant by the single tax. The proposition of the single-tax advocates is to raise all public revenue for national, State, county, and municipal purposes by a single tax upon the value of land, irrespective and exclusive of the improvements thereon, and to abolish all other taxes.

I wish you to remember, for it is important, that the single tax is a tax on land values and not upon land. I think you will at once admit that our proposed reform has at least the merit of singleness and simplicity, but you may not so readily see that no single reform in the history of the world has been so far-reaching in its economic consequences as this one must be. It will necessarily affect, for good or evil, the interests of every human being in the nation, State, or community where it is adopted. Every man, woman, and child in the world is necessarily a user of land, and the single-tax system will very materially affect the conditions on which land may be used.

It is not, as very many suppose, a sentimental plan to give the idle or the unthrifty a share in the results of the industry and thrift of others, but is a well-considered, scientific method of restoring and preserving to all men their equal natural opportunities, sacredly guarding the right of industry and thrift to produce and to accumulate wealth, leaving the willful idler to the natural consequences of his failure to produce a living. Our concern is solely for those who are willing to work and for those who are unable to work. The willful idler has no place either in our sympathies or in our economy. Our doctrine is that every man who is able to support himself by physical or mental labor should be first permitted and then compelled to produce his own living.

We hold that no man is entitled to receive service from his fellow-men except in return for equal service rendered by himself, unless his pyhsical or mental infirmity shall appeal to the instincts of charity and humanity in the individual or the community.

But we hold that every man has an inalienable right of access to the natural opportunities which God has freely provided for the support of all mankind, and from which alone he can produce a living.

It is said that our doctrine is an assault upon the sacredness of private property. That is not true. We do not assail or deny the sacredness of private property. On the contrary, we attach a sacredness to the right of private property, in all wealth produced by labor, such as has never yet been recognized either by law or by custom, but we deny that any such sacredness attaches to the right of private property in the things which are the common heritage of the whole race from the free gift of the Creator.

We hold that the man who produces any utility or value from the natural resources of the earth by his labor has a sacred right of private property in the thing which he so produces, but we deny that any man can have any such right of private property in the natural God-given sources from which all men may by their labor produce such things of value or utility. This is a very important and fundamental distinction which we draw between private property in the products of labor and private property in land, and our reasoning is largely based upon that distinction.

There is a natural connection of right and of property between the man whose voluntary labor produces a thing and the thing which would not have existed in its useful form but for his voluntary labor.

This watch (showing) is the product of the labor of some man, or men. Its elements, lying in the earth, were useless until the voluntary labor of certain men brought them forth and combined them into this useful form. Independently of all law, then, the producers of the watch have manifestly a better right to it than any other persons in the world. It is no hardship upon any other person or persons to be excluded from any right in the watch, because, as it would not have existed but for the voluntary labor of those who produced it, the rest of the world is no worse off than it would have been if the watch had not been produced at all. The producers should, therefore, as a matter of natural right, be entitled, after producing the watch, to keep it and use it, or lend it, or sell it, without any limit or restriction upon their action. If the producer of such wealth exchanges it for what, to him, is an equivalent, all of his rights pass, and ought to pass, to his vendee.

What is true of the watch is equally true of all other wealth produced by human labor. It should be sacredly guarded to its producers and to those who honestly acquire the rights of the producers.

But there is no such natural foundation for private property in land. Property in land has no foundation in nature or in natural right. Indeed, it is directly contrary to the common, natural right of all men, and must be justified, if it is to be justified at all, by considerations of expediency.

No man has any natural right of property in land, either by production or purchase, because no man made the land. It is the common heritage of all mankind from the immediate gift of the Creator. As no man made the land, thereby originating a natural right of ownership, no man was ever in a position to originate a title to land such as attaches to personal property. Title to land is, therefore, purely conventional, and is based solely and at all times on considerations of expediency. That is to say, it is to be supported or overthrown according to its effect upon the general good of the whole people at any given time.

These views did not originate with single-tax men. They are as old as our moral philosophy; as old as our political economy; as old as written treaties on human laws.

John Stuart Mill, in his Political Economy (book 2, chapter 2), says:

When the sacredness of property is talked of it should always be remembered that such sacredness does not belong in the same degree to landed property. No man made the land. It is the original inheritance of the whole species. Its appropriation is wholly a question of general expediency. When private property in land is not expedient it is unjust.

Sir William Blackstone, the greatest of all English law writers, in his Commentaries on the Laws of England (book 2, chapter 1), says:

The earth is the general property of all mankind from the immediate gift of the Creator. Accurately and strictly speaking, there is no foundation in nature or in natural law why a set of words upon parchment should convey the dominion of land.

Herbert Spencer, in his Social Statics (chapter 9), says:

It may by and by be perceived that equity utters dictates to which we have not yet listened, and men may then learn that to deprive others of their right to the use of the earth is to commit a crime inferior only in wickedness to the crime of taking away their lives or personal liberties.

Hon. William E. Gladstone, speaking of proposed restrictions on the vested rights of the landowners, says:

Those persons who possess large portions of the earth's space are not altogether in the same position as the possessors of mere personalty. Personalty does not impose limitations on the action and the industry of man, and on the wellbeing of the community, as possession of land does, and therefore I freely own that compulsory expropriation is admissible and even sound in principle.

James Anthony Froude, the great English historian, says:

Land is not and can not be private property in the sense that movable things are property. Every human being born into this planet must live upon the land, if he live at all. The land in any country is really the property of the nation which occupies it.

Innumerable quotations from the world's greatest thinkers in the various sciences might be quoted to the same effect. It is enough for my purpose, however, to show that the doctrine of the sacredness of private property has never been recognized by the world's great philosophers and scientists as attaching to private property in land; that private property in land rests solely upon the laws and usages of each country, while private property in the wealth produced by labor is based upon a fundamental principle of natural justice as well as upon statutory laws.

Nor is there anything in the single-tax system or its philosophy which interferes with the permanent tenure of land for use, nor with security of improvements, nor with security to the improver and user of land in the fruits of his industry.

The regulation of the use of land in every generation is a proper and highly important function of the State. The best possible use and improvement of land should be encouraged and are essential to the stability of society and its various industries and to the healthy growth of civilization.

Under the single-tax system permanency of tenure, security of improvements, and security in the fruits of labor expended upon the land are all guaranteed more fully and with infinitely greater generality to the whole people than under the present system. It is only against that vicious element in our system of land tenure which encourages the monopoly of land that the single tax is aimed. We would take for public uses the entire unearned increment of land, which political economists call the economic rental value; that is, the present annual value of the use of any given piece of land, exclusive of the improvements thereon, at the time of levying the tax.

If this unearned increment which attaches to land solely as the result of the presence, industry, enterprise, and virtues of the people of each community were taken by taxation for public uses, no man would have any possible incentive or inducement to speculate in land, nor to hinder others in the pursuit of subsistence, happiness, or wealth by monopolizing the land, which is the only source from which subsistence or wealth of any kind can be produced.

The next objection, and the one which is probably of the greatest practical interest to you, is that "the single tax would largely shift the burden of supporting the Government from the owners of great personal wealth in cities to the shoulders of the farmer."

To this objection it is my purpose to devote the principal part of my address.

I shall endeavor to demonstrate to you that that objection is not founded upon truth, but that, on the contrary, the statistics of taxation show the contrary to be true. I am persuaded that a belief in the objection which I have just stated has, upon superficial thought, closed the minds of the farmers of this country very generally against any consideration of the single-tax question.

If, therefore, I shall be able to demonstrate, as I believe I can, that the farmers in every State in this Union do now pay, and have always paid, a larger percentage of the taxes levied upon personal property, in proportion to the taxable value of their lands, than do the residents of cities, I will have opened the way for a more general study of the single-tax question among farmers, and will have accomplished as much as I should hope to accomplish by any single address.

Perhaps Ohio is as good an example as any State in the Union of the relations of the city and agricultural districts to the various subjects of taxation, and its data on that subject are more complete and accessible than that of any other State.

In 1892 the legislature of Ohio authorized the appointment of a tax commission to investigate and report upon taxation in that State. The commission, consisting of two Republicans and two Democrats, appointed by Governor McKinley, made an elaborate and instructive report to the governor of that State on December 23, 1893. That report and the data furnished in it are so tersely and clearly discussed and reviewed by Mr. Thomas G. Shearman in his work on Natural Taxation that I can do no better on this point than to read portions of his chapter drawn principally from that report, and from the statistics of the State of Missouri on "Effects of the personalty tax on farmers."

Let me say here that Mr. Shearman is a distinguished lawyer and law writer, as well as a distinguished political economist and statistician. I read from chapter 6, page 84, of Mr. Shearman's book, and, without designating the subsequent pages, I will read various parts of that chapter down to the bottom of page 100:

Of course there are some forms of personal property which can be seen and appraised by the assessors almost as readily as real estate, though not with so correct an estimate of value. The objection to taxation of chattels is not that none of them can be fully taxed; it is that so many of them can be and are reached, while so many more are not, that the tax is necessarily unequal and unjust. The important question, therefore, is, Upon what class does this tax bear most oppressively? Is that class the more wealthy or the less wealthy? Is it the city population or the farmers? If taxes were levied only upon the value of real estate, would the farmers pay more or less of the whole taxes than they do now?

Farmers in general have been long convinced that the rigid taxation of personal property would relieve their burdens, and it is entirely by their votes that the existing system is maintained. This is all theory on their part. * * *

But let us study the facts before discussing any theory.

Any attempt to separate the community into two distinct classes, one of which is taxable only on real estate and the other of which is taxable only on personal property, is obviously impossible and absurd. No man is ever reached by the taxgatherer who does not occupy some piece of land. If he did not, the taxcollector would never find him. Tramps pay no direct taxes. Neither can any man live without occupying some improvements on real estate and possessing some personal property. Every taxpayer, without exception, is an occupant of land and improvements upon land, and an owner of personal property. The only selfish interest which any taxpayer has in deciding between rival systems of taxation is to know which will produce a sufficient revenue to the State with the smallest possible burden to him. In considering, therefore, the interest of any class, such as farmers, the real question to be answered is not whether they, in fact, own more or less personal property than merchants, bankers, and money lenders. The questions to be answered are:

1. Do farmers own less personal property, in proportion to the value of their land, than do those other classes?

2. Are the particular kinds of personal property which they own less easily reached by the taxgatherer than are the kinds of property owned by the other classes?

The State must raise a certain fixed amount for public purposes. This amount it will assess upon all taxpayers in proportion to the value of their property as reported by the assessors, not in proportion to its real value, which the assessors, of course, are never able exactly to ascertain. If, therefore, experience proves that assessors are able to find twenty times as much land value in the possession of merchants as they can among farmers, but only ten times as much personal property among merchants as they find among farmers, it is a plain result, as simple as the rule of three, that the taxation of personal property will end in making farmers pay a larger proportion of the taxes than they would pay if all taxes were concentrated on the value of real estate.

After discussing at some length the foundation of the farmer's idea—that the exemption of all personal property from taxation would impose a greater proportionate burden upon him than upon the owners of city real estate—Mr. Shearman proceeds:

SEC. 5. *The experience of Ohio.*—In the light of these considerations, let us review some of the statistics furnished from year to year by the official reports of assessors in Ohio, as compiled annually in the auditor's report. For the purpose of such comparison let us set on one side the four counties which include all the largest cities and, on the other side, the five counties which contain the smallest proportion of city population among all the counties of Ohio.

The former, which we will call the city counties, include Hamilton, Cuyahoga, Franklin, and Lucas, with the cities of Cincinnati, Cleveland, Columbus, and Toledo.

The latter, which we will call the rural counties, are Geauga, Noble, Carroll, Medina, and Monroe.

These counties respectively represent the extreme contrasts between the cities and the farms of the State. Thus, in Hamilton and Cuyahoga the assessed value of town lots is about seven times the assessed value of the farms; whereas in the five rural counties the assessed value of farms is nowhere less than ten times that of town lots, while in Geauga County the farms are worth twenty-seven times as much as the town lots. Hamilton County, which includes Cincinnati, is the typical city county of Ohio, while Geauga County, which includes no large town, is the typical rural county.

SEC. 6. *Farmers pay largest share of taxes on personal property.*—Now, the first thing which strikes the eye on looking over the statistics of these counties is the following comparison.

Ohio valuation, 1887.

	Assessed value of real estate.	Assessed value of chattels.
City counties	$317,854,665	$113,340,087
Rural counties	29,733,450	14,307,668

Anyone can see that in the counties which include all the large cities the assessed value of personal property is only about one-fourth of the whole assessment, while in the rural counties personal property constitutes very nearly one-third of their whole assessed value. In more exact figures, the value of assessed personal property in the city counties is 26¼ per cent of the whole, while in the rural counties it is 32½ per cent. If, therefore, all personal property should be exempted from taxation the farmers of these five exclusively rural counties would pay 8 per cent less taxes than they do now.

That this result is not a mere accident, owing to some peculiar condition of these peculiar counties, is easily proved by testing the same question in other ways. Thus, if we set apart the four great city counties and compare them with all the rest of the State, including farming districts and smaller towns, indiscriminately, we find substantially the same result, as follows:

Ohio valuation, 1887.

	Real estate.	Personal property.
City counties	$317,854,665	$113,340,087
Remainder of State	867,155,960	406,832,007

Here in the counties which include all the great cities personal property amounts to 26¼ per cent of the whole valuation, while in the remainder of the State it amounts to 32 per cent.

But if we compare single counties, such as Hamilton, in which town lots compose about 85 per cent of all the real estate, with Medina, in which town lots compose only 10 per cent of the real estate, we find the result as follows:

Ohio valuation, 1887.

	Real estate.	Personal property.
Hamilton	$163,732,580	$53,144,182
Medina	8,304,740	5,012,304

Here we find that the real estate of Hamilton County is assessed at twenty times the value of Medina County, while the personal property of Hamilton is assessed at less than eleven times that of Medina. Personal property constitutes 24½ per cent of the valuation of Hamilton and 37½ per cent of the valuation of Medina. The total exemption of personal property from taxation, therefore, would, if taxes were divided only between the counties of Hamilton and Medina, relieve the farmers of Medina from exactly one-sixth of their present burdens. Invariably farmers are compelled to pay a much larger share of State taxation, as the result of taxing personal property.

SEC. 8. *Taxation of credits heaviest on farmers.*—But let us test this question in still other ways. The chief clamor in favor of taxing personal property has been directed toward the taxation of moneys and credits. The money lender, who is supposed to have vast sums on deposit in bank, and the merchant, who is supposed to have vast outstanding credits due from the poor farmers, are the special objects against whom this method of taxation is aimed—all for the relief of the farmers. Let us see how this works by a comparison of the same typical counties. The Ohio report for 1887 shows that their relative assessments were as follows:

	Real estate.	Money.	Credits, etc.
City counties	$317,854,665	$5,328,050	$13,291,833
Rural counties	29,733,450	907,829	4,384,381

Roughly stated, it thus appears that if taxation were confined to real estate alone the city counties would pay eleven times as much as the rural counties, whereas if taxation were levied on money alone they would pay less than six times as much, and if levied on credits alone a little more than three times as much, while if taxation were levied on both money and credits they would pay about four times as much. Consequently, the burden of taxation in rural counties, as compared with the large cities, is nearly three times as heavy on money and credits as it is on real estate. The only result, therefore, of taxing money, credits, and similar investments is to relieve the burden of the cities and increase the burden of the farms.

Let us test this particular illustration by comparing the county of Hamilton, in which town lots are worth seven times as much as farm lands, with Geauga, in which farm lands are worth twenty-seven times as much as town lots:

1887.	Real estate.	Money.	Credits.
Hamilton	$162,732,580	$1,833,279	$735,945
Geauga	5,555,800	282,118	534,477

Roughly stated, Hamilton County is assessed for nearly thirty times as much real estate, less than seven times as much money, and less than eleven times as much credits as Geauga County. If taxation were levied exclusively upon money on hand, Geauga County would pay between four and five times as much as it would if the taxes were levied exclusively on real estate. If taxes were levied solely upon credits, Geauga would pay nearly three times as much as it would if they were levied solely on real estate.

He then proceeds to show from statistics that the adoption of what is known as the spy system in Ohio, that is, a secret-service system for finding and compelling the assessment of personal property, instead of tending to the relief of the farmer, or to the greater equalization of the burdens of personal property taxes, has really made the burden of the farmer proportionately heavier instead of lighter than before, and has been an utter failure in the great cities.

Further discussing the report of the State Tax Commission, which was filed on December 23, 1893, he says:

That their report confirms all that he has said, and "shows, moreover, that the disproportion between burdens imposed by the tax on personal property upon the cities and upon the farming districts, respectively, has increased considerably since 1887." A few comparisons are here given between the assessments in 1887 and 1892 in Hamilton and Geauga counties, respectively:

Money on hand.

County.	1882.	1887.	1892.
Hamilton	$2,321,502	$1,833,279	$1,535,375
Geauga	352,053	282,118	451,567

Here it will be seen that the amount of taxable money reported in Geauga, which is a purely farming district, has largely increased, owing to the spy system established by the State. But the amount of taxable money reported in Hamilton County, which includes the great city of Cincinnati, has again largely decreased, the spy system having entirely failed there.

We will now compare results in—

Credits.

County.	1882.	1887.	1892.
Hamilton	$6,571,029	$5,735,945	$4,289,901
Geauga	560,693	534,477	507,651

Although there has been a shrinkage of about 5 per cent in the taxable credits of Geauga since 1887, that is nothing compared with the 28 per cent reduction in Cincinnati.

The tax commission report gives many other instructive figures; too many to be repeated here. To mention, however, a few examples, it appears that the county of Lucas, which contains "the flourishing city of Toledo," is rapidly increasing in population, and has more than double the stationary population of Muskingum County, nevertheless returned in 1892 very much less than half as much intangible personal property for taxation, little more than one-third as much in credits, and not nearly one-third as much in money. Thus the rural county is taxed thrice as heavily as the city. The county of Cuyahoga, including the great city of Cleveland, the population of which is rapidly increasing, and is already about twenty-five times as large as that of Geauga County, returned for taxation less than four times as much money and much less than seven times as much credits. Thus Geauga was taxed, upon these values, about five times as heavily as Cuyahoga.

The net result of all the comparisons made by the commissioners between city and farming districts is to prove that the tax upon personal property makes farmers pay from $4 to $7 where it makes city residents pay $1.

The preposterous nature of returns of personal property for taxation is further illustrated in the report of the commission by comparison of the amounts of money on hand or on deposit, thus returned, with the amounts actually held on deposit in banks within the cities making these returns. The following examples will show the general drift:

Deposits (partly estimated).

1892.	Deposits in bank.	Deposits taxed.
Cincinnati	$29,000,000	$1,300,000
Cleveland	63,000,000	1,000,000
Toledo	8,120,000	253,000

Here again the farmers come to the front, to bear their share of taxation with a generous hand; for while five counties, containing all the large cities, held on deposit in banks $120,000,000, and returned for taxation only $5,000,000, the remainder of the State, including all the farming districts, having only $70,000,000 in banks, returned for taxation over $32,000,000. That is, having 40 per cent less, they were taxed 450 per cent more! So the tax on "money" bears upon the farmers about ten times as heavily as upon city residents.

SEC. 13. *Conclusions of the commission*—No wonder that the commission, after giving many more illustrations, concluded by saying: "It is useless to pursue this subject further. * * * While in the country counties * * * taxation of intangible property is perhaps feasible, it is in city counties an utter failure. * * * It is confidently believed that no appreciable part of the intangible property existing in the city counties is reached by our method of taxation. It is the country counties which pay the taxes upon personal property."

The commissioners further say: "It is to be remembered that we have in this State an extremely rigid system." They show that personal property is pursued with more severity and ingenuity in Ohio than in any other State; and notwithstanding all this, they declare that the system is "an utter failure," and that even with the respect to the spy law of Ohio, "this scheme, like all other attempts to reach intangible property, follows the universal law * * * that the large cities escape, and the country counties feel its burden." Again, they say: "The system, as it is actually administered, results in debauching the moral sense. It is a school of perjury. It sends large amounts of property into hiding. It drives capital in large quantities from the State. * * * The moral sense of the community is blunted; its citizens are made familiar with all manner of evasion; they are taught to lie."

SEC. 14. *Experience of Missouri.*—Lest it should be imagined that the experience of Ohio is peculiar, let us inquire into the experience of Missouri, which is even more decidedly than Ohio an agricultural State. In Missouri there are only four cities of over 15,000 population, and only three of over 25,000. Only four counties show a decided preponderance of town-lot values over farm values, and only two more even the smallest difference that way, and those for one year only.

The four counties in which all cities worthy of the name are situated are Buchanan, Greene, Jackson, and St. Louis City. These we will call the city counties and the others the rural counties.

The following are the official and latest figures published:

Missouri valuations, 1893 (in thousands of dollars).

	Farm lands.	Town lots.	Total real estate.	Personal property.
4 city counties	29,572	320,177	349,749	70,161
101 rural counties	277,348	67,524	344,872	159,514
Total	306,920	387,701	694,621	229,675

Here it can be seen at a glance that the four cities, with their adjoining counties, in which farms form much less than one-tenth of the whole value of real estate, pay taxes on more than one-half of all the real estate in Missouri, but on much less than one-third of its personal property. Personal property in the cities amounts to less than 20 per cent of their real estate, while in the rural counties it amounts to 46 per cent of real estate. The farmers of Missouri pay 1¼ per cent less taxes on their land than the cities pay, but 127 per cent more on personal property. Even in the eight poorest counties in Missouri, where farm lands are worth from twenty to one hundred times as much as town lots, personal property is assessed at 40 per cent of real estate; so that the poorest farmers of the State pay 100 per cent more taxes on personal property than do the richest cities, in proportion to their real estate.

Let us compare St. Louis city with the rest of the State:

Missouri assessments, 1893.

	Real estate.	Personalty.	Money, notes, etc.
St. Louis	$259,781,100	$44,341,110	$8,449,790
Rest of State	434,839,557	185,334,285	67,663,576
Total	694,620,657	229,657,395	76,113,366

These figures show that, while St. Louis pays about 40 per cent of the taxes on real estate, it pays less than 20 per cent of the taxes on all personal property, and just 11 per cent of the taxes on money and credits. The rest of the State pays 70 per cent more on land than St. Louis does, but 318 per cent more on personal property in general, and exactly 700 per cent more on money and credits.

Summing up the result of his investigation in these two typical farming States, he says:

Figures like these might be collected, not only from Ohio and Missouri, but from every State and country under the sun, where statistics are kept and personal property is taxed. * * * Farmers can not conceal their sheep and oxen, their plows and implements; and they have enormous difficulty in concealing their wealth in any form, because their affairs are so well known to all their neighbors. If they have any money in bank, all the village knows it. If they have loaned money or sold goods on credit, their debtor is pretty sure to be someone in the immediate neighborhood; and all the circumstances are known to 50 people. The average farmer, when making his returns to the assessor, is afraid to understate his wealth very greatly; because he could hardly look the assessor in the face after doing so, being conscious that if the assessor does not already know the truth he can with very little difficulty find it out for himself. But in large towns and cities scarcely any man knows intimately the affairs of his neighbor; and the assessor knows least of all.

People are reputed to be worth $1,000,000 who in reality are not worth $50,000, and others are reputed to be worth only $100,000 who in reality are worth $2,000,000. Even if the amount of any man's wealth is approximately known, none of his neighbors know how that wealth is invested unless it is put in real estate. City assessors, therefore, have absolutely no means of ascertaining the value of any man's personal property except by returns from that man himself or from the corporations with whom he may happen to invest. If an Ohio man makes his principal investments in corporations outside of the State the assessor is entirely at the mercy of the taxpayer. He can tell any number of lies with impunity. The assessor rarely or never examines his books of account; and if assessors once began to make such an examination many rich men would cease to keep books of account at all, as it is notorious that they did when the income tax was in existence between 1864 and 1872. All things combine to make it easy for the assessor to reach the farmer's personal property and difficult for him to reach that of the merchant, banker, or city capitalist.

Mr. Shearman's chapter on "Taxation of improvements" is not less interesting than his chapter on "Taxation of personal property," and shows that under the present system of taxation taxes on improvements as well as those upon personalty fall heaviest upon the rural districts in proportion to land values. That chapter is numbered VIII, commencing on page 106 and ending on page 114. But time will not permit me to read it or even to refer to it further.

Taxes for the support of the Federal Government now levied upon imported goods and upon certain domestic products manifestly fall most heavily upon the farmer, because he has no relief whatever from the burdens which they impose.

The tariff enables the domestic producer of the kind of commod-

ities on which it is levied to charge and obtain a higher price for his product in this community than he could if the tariff were not levied. But it is not so with the farmer. While he is obliged to pay a higher price for almost every commodity that he purchases, either by way of tariff burden, if he use the foreign commodity, or an increased price made possible by the tariff, if he purchase a domestic article of the same kind, he has not and has never had the slightest advantage in the sale of the commodities which he produces. His grain of all kinds must be sold at prices fixed in the freest markets of the world. This has always been true, and it must ever be true of the farmers of this country, because conditions of soil and climate and area make it certain that this country will always produce a surplus of grains which must be marketed abroad. That surplus must be sold in the world's market at the prices prevailing there, and the home price is fixed by the laws of trade at exactly the price which the surplus brings in the free market of the world less the cost of shipping the grain to that free market.

So that while other producers in this country may have some compensation for the burdens imposed upon them by Federal taxation, the farmer has no such compensation, and as the tariff must, in order to raise sufficient revenue, be levied upon articles of general consumption, the tax falls finally upon the people of this country according to their consumption and not according to their wealth. It therefore falls upon farmers with unequal severity, because, as compared with the city classes, the wealth of the farmer is small.

A single tax upon land values would bear upon city and country districts in proportion to their respective land values. The value of land, speaking economically, is the annual margin which it will yield over the cost of production at any given time.

A large part of what we now call land value is speculative—that is to say, it does not rest upon the present value of the land for use, but partly upon that real or economic value and partly upon the expectation that population will grow, or enterprise and industry increase, and thus give a return to the land owner in the increase of the market price of his land. That is to say, the speculative element would disappear under the single-tax system and the value of land would depend entirely upon the margin which it will at any given time yield over the cost of production, which of course includes the wages of superintendence. Nothing but that margin would be taxed under the single-tax system. Unless the land would yield some margin over and above the cost of cultivating it or otherwise using it, including the wages of superintending the cultivation or use, it would pay no tax whatever under the single-tax system.

Now, this economic value of land is highest at the industrial and commercial centers and shades away to nothing, or comparatively nothing, in the farming districts. We frequently hear farmers say that they are opposed to the single-tax system because they are already taxed too heavily; and sometimes we hear farmers say that they are not able to make a living upon their land and pay the present taxes which are imposed upon them.

If a man is not able to make a living upon land which is sufficient in quantity according to its location to keep its occupier employed throughout the year, or during the seasons of cultivation and harvesting, then, of course, that land has no economic rental value. It has no margin of production to be taxed under the single-tax system, and instead of having his taxes even upon his land value increased he would be relieved of the present tax on his land value, as well as of the tax upon his improvements and personal property.

Let it be borne in mind that no land will be taxed under the single-tax system which will not command a ground rent, irrespective and exclusive of its improvements, if the owner shall choose to discontinue his use of the land and lease it to another. There are thousands of farmers now in isolated districts paying taxes not only upon personal property and improvements, and indirect taxes for the support of the Federal Government, but taxes also upon the speculative value of their farms, who would be relieved of taxes altogether under the single-tax system, because their lands have no present economic value and are not at present capable of yielding any margin of production or ground rent.

Of the incidental advantages of the single tax to the farmer I have not time to speak. I had occasion about three years ago to present my views upon that phase of the question in the Pacific Rural Press. I regard these incidental advantages as vastly more important than the relief of the farmer from tax burdens. They will include to him better roads, better schools, greater social advantages, and better public conveniences of all kinds, with far less outlay and trouble than at present. They will, in short, be the substitution of a natural growth of settlement and industry from the centers to the outer circles of the rural districts, bringing the relations of all who are engaged in industrial and commercial pursuits into a harmony and unity of interest such as has never been known since the monopoly of land was first established as an "industry" in England three hundred and fifty years ago.

It was recently read by Mr. Leggett before the Single Tax Society of that city and also before the Institute of Applied Christianity in the city of Oakland, Cal.:

ORIGIN AND RESULTS OF LANDLORDISM IN ENGLAND.

ADDRESS OF HON. JOSEPH LEGGETT, OF SAN FRANCISCO, CAL.

If we could first know where we are and whither we are tending, we could better judge what to do and how to do it.—*Abraham Lincoln.*

The late Prof. James Edwin Thorold Rogers deserves to be held in grateful veneration by everyone who feels an earnest interest in the well-being of mankind. As an original investigator of the past industrial condition of the English people, Professor Rogers is without a peer. The value of his investigations in that field is incalculable. The importance of his work has never received the recognition it deserves, although the facts brought to light by his labors have a momentous interest for all civilized peoples, and particularly for the people of the United States at this juncture of their history.

Mr. Rogers, after a brilliant career as a student at Oxford, entered the of the established church, but soon abandoned that calling and devoted himself to other pursuits. In 1862, having then acquired a high reputation for classical scholarship and varied knowledge, he was chosen professor of political economy at the University of Oxford. From that time until the close of his life, in 1890, he confined his studies to economics. Immediately upon his appointment as professor he began the investigations which have since made him famous. As he proceeded in his work he published its results in successive volumes of his History of Prices. In 1868 the Tories, guided by their natural instincts, deprived him of his professorship and elected Bonamy Price in his stead. He entered Parliament in 1880, was reelected in 1885, but was defeated in 1886, going down with Gladstone on the home-rule issue. In 1888, upon the death of Bonamy Price, he was reelected to the professorship at Oxford, which he thereafter held up to the time of his death. Goschen, the Tory chancellor of the exchequer, who voted for his reappointment, declared that Rogers was the only man in England who ought to fill the post. That Professor Rogers felt keenly the punishment inflicted upon him by the Tories in 1868 is evident from the following statement, made by him in a lecture to the students at Oxford after his restoration in 1888: "Since I have been restored to an office of which I was unjustly deprived because I traced certain social mischiefs to their origin twenty years ago."

A writer in the Westminster Review (volume 134, page 604), referring to his original appointment in 1862, says: "Never was an appointment more thoroughly justified." The same writer further says of him: "Although his labors had not received the recognition to which they were entitled, his patience and his devotion to his economic work never ceased. * * * We never yet had, before Thorold Rogers's time, anything like a satisfactory account of the condition of the English people. * * * None of them (the historical school of economists) did original work of such magnitude as this. * * * He loved to linger over the details of social and industrial life in former centuries. * * * He had an intense dislike of theory not guaranteed by fact. * * * He was one of the best of men in private life."

From the foregoing quotations the reader may gain some idea of the character of the man and of the nature of his work. In 1884 he published his work entitled Six Centuries of Work and Wages, and in 1888 his work entitled The Economic Interpretation of History. These two books contain in condensed and popular form the results of the investigations to which he devoted the greater part of his life work, and it is to the facts recorded in them that I propose, for the most part, to confine the present discussion.

The conditions and the modes of life of the people of England at different periods of their history and progress can be ascertained with an accuracy and completeness unattainable in the case of any other people. The reason for this fact is thus stated by Professor Rogers: "No other country possesses such a wealth of public records. * * * The information from which the economical history of England and the facts of its material progress can be derived become plentiful, and remain continuously numerous, from about the last ten or twelve years of the reign of Henry III." (Work and Wages, page 18.) The facts contained in the works of Professor Rogers are derived from records made at the time, and are, therefore, absolutely reliable. And it was the facts brought to light by him, and not his deductions from them, "that had affrighted the representatives of wealth" and the privileged classes of England in 1868.

Of all the facts ascertained by Professor Rogers through his indefatigable investigations, the one that most surprised the world and most troubled the privileged class of England was the fact that during the three centuries preceding the middle of the sixteenth century the condition of the masses of the English people—that is, of the laboring and producing classes—was more comfortable and prosperous than it has ever been at any time since. We moderns are inclined to regard skeptically the accounts of ancient golden ages, but he has clearly shown that prior to the reign of Henry VIII there was a veritable golden age for English labor. He says:

"I believe, indeed, that under ordinary circumstances the means of life were more abundant during the Middle Ages than they are under our modern experience. There was, I am convinced, no extreme poverty." (Economic Interpretation of History, page 16.) "The fifteenth century and the first quarter of the sixteenth were the golden age of the English laborers." (W. and W., page 326.) "Men got just as good wages in the fifteenth century whether they were employed for a day or a year; nor, as I have already observed, were the hours long. It is plain that the day was one of eight hours." (Id., page 327.) "As the century goes on the wages of labor tend decidedly upward." (Id., page 327.) "The English laborer for a century or more became virtually free and constantly prosperous." (Id., page 271.)

Speaking of the plenty that marked the first half of the eighteenth century, he says: "But this plenty was as nothing to the golden times of the fifteenth, when the earth brought forth by handfuls, and the yeomanry were planted in England." (Id., page 271.)

Again, he says: "I can assure my hearers that a mason in Oxford four hundred and forty years ago was paid relatively better wages than he is paid in London for fifty-six hours work at present. The fifteenth-century workman worked for only an eight-hour day." (Economic Interpretation of History, page 303.)

And, speaking of the fourteenth century, he says: "The greater part of the handsome churches and conventual buildings of that age were the work of the artisans themselves, who 'could draw their own plot.' It needed no common or brief training to enable the mason to himself design these structures from the foundation to the roof, and then resign his work to an equally skillful carpenter." (Id., page 304.)

And again referring to the centuries which I have mentioned, he says: "During all this time the mass of English laborers, by no means claiming more than the reasonable reward for their services, were thriving under their guilds and trades unions, the peasants gradually acquiring land and becoming the numerous small freeholders of the first half of the seventeenth century, the artisans, the master hands in their craft, contractors in the same period for considerable works, planning the solid and handsome structures in what is known as the perpendicular style, and withal working with their own hands on the buildings which their shrewdness and experience had planned." (Id., page 34.)

These conditions were maintained in spite of the efforts of the privileged classes, who were the only lawmakers of the time, to depress the condition of labor by acts of Parliament. He says: "Now, I have told you how, for two hundred years and more, the representatives of rent tried to depress wages by force of law, in the interests of rent, and failed. So complete was the failure that in 1495 the legislature enacted that scale of wages for which the workmen had contended, and so left them in possession of the situation." (Id., p. 239.) "The laborers had won the day." (Id., page 33.)

During the last half of the reign of Henry VIII an ominous change in the condition of the English masses began. Vagrants and beggars swarmed throughout the land, and the most harsh and cruel statutes were enacted for their punishment and suppression. In the twenty-second of Henry VIII an act was passed providing that any person, being whole and mighty in body and able to labor, found begging or being vagrant, might be arrested by a constable, and a justice might, in his discretion, cause every such idle person to be taken to the nearest town and there tied to the end of a cart, naked, and to be beaten with whips throughout the town "till his body be bloody by reason of such whipping." And this whipping was to be repeated as often as he made default.

In the twenty-seventh of Henry VIII an act was passed providing that if the vagrant persisted in his course after being whipped, he should have the upper part of the gristle of his right ear clean cut off, and if he still persisted he was to be tried and executed as a felon. And a writer narrates "how Henrie the Eight, executing his laws verie severlie against such idle persons * * * did hang up three-score and twelve thousand of them in his time." Similar statutes were enacted and barbarously enforced during the reigns of Edward VI and Elizabeth. In the first Edward VI an act was passed providing that a vagrant "might on conviction be marked with the letter V, and adjudged to be the slave for two years of the person buying him, giving him only bread and water or small drink, and such refuse of meat as the master should think fit."

If he ran away, the justices "on conviction were to have him marked on the forehead or ball of the cheek with a hot iron with the letter S, and adjudge him to be the master's slave for life." If he ran away again he was to be executed as a felon. The vagrant's children between 5 and 14 years of age might be adjudged the servants or apprentices of any person willing to take them until the age of 24 if males, and 20 if females. If they ran away they were to be enslaved for life. The masters of these slaves might put a ring of iron about the neck, arm, or leg of the slave, and any person helping the bondman to take it off was subject to a penalty. The slave who resisted correction was to be executed as a felon. And these slaves might be sold or devised like other property. (Encyclopedia Britannica, Volume XIV, page 168.) An act passed in the fourteenth Elizabeth recites that "all the parts of this realm of England and Wales be presently with rogues, vagabonds, and sturdy beggars exceedingly pestered, by means whereof daily happeneth in the same realm horrible murders, thefts, and other great outrages, to the high displeasure of Almighty God, and to the great annoy of the common weal."

Another portentous sign and proof of the change that had taken place in the condition of the English people was the alarming growth of extreme poverty and destitution. The existence of this evil is also evidenced by the legislation of the time. By the act twenty-seventh Henry VIII it was provided that "every preacher, parson, vicar, and curate, as well in their sermons, collections, bidding of the beads, as in time of confessions, and at the making of the wills and testaments of any persons, at all times of the year shall exhort, move, stir, and provoke people to be liberal." And by the act of first Edward VI it was provided, for the furtherance of the relief of such as were in unfeigned misery, that the curate of every parish should, on every Sunday and holiday, after reading the gospel of the day, make (according to such talent as God hath given him) a godly and brief exhortation to his parishioners, moving and exciting them to remember the poor people and the duty of Christian charity in relieving of them which be their brethren in Christ, born in the same parish and needing their help. (Encyclopedia Britannica, Volume XIX, page 463.)

"Legislation for the relief of the poor, at first by voluntary contributions, began with the year 1541. Between this date and 1601, inclusive, * * * there were twelve acts of Parliament passed with the distinct object of providing relief against destitution." (E. I. of H., page 241.) "It was at first believed that private benevolence would fill up the void in wages. * * * But private benevolence can never grapple with a national calamity. * * * It is possible that Henry and his son's guardians fancied that private charity would fill the void. * * * It is certain that the anticipation was disappointed." (Id., page 242.)

The earlier of these acts claimed only voluntary gifts, and ecclesiastical discipline was relied on to enforce the claim. "Very soon the appeal for voluntary aid was followed by exhortations to the richer folk to give of their abundance. Soon the caitiff who would not give was to be delated to the bishop, who was to exhort him. * * * Very soon compulsion followed. The rich but covetous man who remained obdurate was to be sent to gaol, and an assessment levied on his goods. Finally a general assessment was ordered." (Id., page 242.)

Thus came in the English poor rate, or tax levied for the support of paupers. This system for the legal relief of the poor was inaugurated by the act of 1601, which was substantially the law down to the year 1835. And so rapid was the growth of pauperism that "in the latter part of Charles II's reign it was returned at £665,365, according to Davenant, or more than a third of the whole revenue in the time of peace." (Id., page 486.)

In 1785 the poor rate was £2,004,238. In 1802 it was £4,267,965; in 1813 it amounted to £8,640,842. (Work and Wages, page 410.) The total amount raised by the poor rate between 1601 and 1890 is estimated at £734,000,000 ($3,670,000,000).

The deplorable change in the social condition of the English people, which I have thus briefly sketched, appalled thoughtful men of the time in which it began, and has perplexed and puzzled the thinking men of every succeeding generation from that day to this. I have found no writer who, in my judgment, has assigned any adequate or sufficient cause for the origin and growth of English pauperism and the degradation of English labor.

But a careful study of changes that have taken place in the social condition of the people of our own country within the memory of the present generation will, I think, afford a key to the solution of the question that has so long perplexed and puzzled. American labor has had its golden age, too. Men still living remember well the time when the "tramp" had no existence in this country and "industrial armies" were never dreamed of; when the possibility of millions of men being permanently unemployed in this country seemed inconceivable; when the means of life were more abundant than they had ever before been in any other age or country, and when the standard of living was higher than was ever enjoyed by the workers of the world at any other time or place. Within the present generation we have had the tramps and vagrants and industrial armies, and the innumerable hosts of the unemployed swarm upon us as they swarmed upon the people of England in the reigns of Henry VIII and his immediate successors.

On the statute books of every State in the Union are now to be found laws passed for the punishment and suppression of vagrants, tramps, and beggars, as harsh and cruel for our time as were those of Henry VIII, Edward VI, and Elizabeth for their times. The appeals for charity made by our churches are as general and as strenuous as were those made then by the state church by direction of Parliament. And frantic appeals are being made to us through the schools and through the various agencies of charity, organized and unorganized. Nor is this all. The State is called upon, out of moneys raised by general taxation, to make provision for the support of the poor. American legislators display a natural aversion to the pauperization of their fellow-citizens, and this aversion is creditable to them. But they will not be able much longer to postpone the evil day, and an American poor rate is as inevitable as was the English poor rate.

We shall find out, as Henry VIII and his son's guardians did, that, as Professor Rogers, says: "Private benevolence can never grapple with a national calamity." In fact, we have already found it out. Police stations are, in the theory of our laws, places of temporary detention for persons accused or suspected of crime. We know that all over the United States they are being largely used as poor houses and our hospitals and asylums are to an increasing extent used in the same way. The same cause that made English pauperism inevitable after Henry VIII's time is operative in this country now, and must produce a like effect.

This change in the condition of the English masses was brought about by the introduction of the system of absolute private ownership of land, with its attendant rack-renting. And this was, I am convinced, effected principally through the sale by Henry VIII of the lands of the church, which his Parliament confiscated upon the dissolution of the monasteries. Professor Rogers says these lands "are over and over again said to have been one-third of the whole area of the kingdom." (W. and W., page 297.)

What did Henry do with those lands? It is, I think, very generally supposed that he gave them away to his courtiers. A careful analysis of Henry's character ought to convince anyone that such an assumption is inherently improbable. He was not the kind of a man to give away anything that he could sell, and by the sale of which he could obtain means to gratify his insatiable appetite for display and wanton extravagance. He inherited from his penurious and miserly father, Henry VII, an immense accumulation of wealth, which the latter had acquired by the meanest and cruelest methods.

The son soon scattered what the father had gathered. Professor Rogers says: "He was extravagant to such a degree that he succeeded in ruining the unfortunate people over whom he reigned. * * * The wastefulness of Henry was incredible. The establishments of each of his infant daughters were more costly than the annual expense of his thrifty father. He had fifty palaces, whims of the hour, in which profusion was constantly going on. He was incessantly building, altering, pulling down, by day and night, on Sundays and festivals from year to year." (W. and W., page 321.)

But there is a positive proof that Henry never intended to give away what he took from the church. After squandering what his father left him he appealed to his Parliament to replenish his exhausted exchequer by the levy of taxes upon his people. And these demands grew year by year, until the burden became intolerable. Finally he cast his longing eyes upon the lands and accumulated wealth of the monasteries, and, upon his demand, his obsequious Parliament confiscated these lands and this wealth to the Crown. Professor Rogers says: "It was said that Henry entered into the possession of one-third the area of England. It is certain that he promised, if this grant were made him, that he would ask his people for no further taxes. It is equally certain that he broke his word. It is quite as certain that the whole of what he appropriated disappeared in a marvelously short time, and that before he died he was reduced to the greatest straits and resorted to the most disgraceful frauds in order to extricate himself." (E. I. of H., page 420.) "Henry had spent his own substance and that of his people. The treasures of the religious houses had been squandered in an incredibly short time; hurled away in the wanton waste of his boundless extravagance." (W. and W., page 341.)

If he had intended to give away these lands, how could he promise to ask for no more taxes? If he intended to sell them he might well believe that their sale would supply a fund sufficiently large to meet even his extravagant demands and render further taxes unnecessary.

We have some direct historical testimony to the fact of the sale of the confiscated lands. In Knight's History of England, volume 2, page 465, it is said: "There were abbey lands to be sold or let." Professor Rogers, speaking of Tandridge, a village in Surrey, famed for the completeness of its ancient records, says: "It possessed a hospital, to which charity a good deal of the parish was annexed. This foundation fell at the dissolution into the hands of Mr. Froude's patriot king, as indeed nearly everything else fell, and was, it seems, parcelled out among numerous proprietors, probably to a great extent purchasers of the hospital lands." (E. I. of H., pages 484, 485.)

In 1886 Hubert Hall, of Her Majesty's public record office, published a book entitled Society in the Elizabethan Age, on pages 26 and 27 of which the author, speaking of the sixteenth century "after the final accomplishment of the so-called reformation of the temporal position of the church," says: "Land was no longer regarded as a military or labor fee, but as a serious industry and profitable investment. For half a century a violent land fever raged in town and country. The Crown was a ready seller, and found still more eager buyers. These new men—officials, merchants, lawyers, usurers—jostled the ancient owners, impoverished by mismanagement and extravagance, and each other. Both alike joined in an attempt to wrest from the subtenant his vested interest or fixity of tenure in the land."

And Green, in his History of the English People, Volume II, page 19, says, speaking of this period: "The new wealth of the merchant classes helped on the change. They began to invest largely in land."

The merchants had the money that Henry so much needed to gratify his desire for profusion and extravagance, and he had the lands in which they desired to invest with a view of founding families and of securing admission into the ranks of the privileged classes. Hubert Hall says the mercantile interest was "athirst for those political and social distinctions which a connection with the land alone afforded." (Society in the Elizabethan Age, page 33.) And he says the trader "was ever on the lookout for a profitable investment in land." (Id., page 41.) This is a process that has gone on in England from that day to this. And this was the Genesis of English landlordism. Modern landlordism, as the word is now understood, was a thing unknown in England before the time of Henry VIII. It came into existence as a logical result of the sale of the church lands by that monarch. Professor Rogers says: "From the earliest period of recorded agriculture, by which I mean of such accounts as give us an insight into the occupation of land, till some time after the middle of the sixteenth century—i. e., for fully three centuries—the rent of agricultural lands remains unaltered at from 6 pence to 8 pence per acre. (E. I. of H., page 167.)

The mere statement of this fact is sufficient to convince anyone that there was no landlord of agricultural land, in any modern sense, during those three centuries. A rent of 6 pence to 8 pence per acre was not rent in any sense of the term with which we are familiar.

And Professor Rogers says: "No one who knows anything about economical history can doubt that rent was originally, and for centuries, a tax imposed by the strong on the weak in consideration of a real or pretended pro-

tection of the tenant. The invariable and fixed character of the tax seems to me to prove this; and the fact that no attempt was made to alter the fixed rent, save by open or disguised violence or fraud, is to me conclusive." (E. I. of H., page 172.)

And again he says: "And it is a proof of Adam Smith's sagacity that, without the materials before him from which the facts could be demonstrated, he saw that rent was originally a tax, and that a long interval must have occurred before farmers' rents became real and oppressive." (W. and W., page 58.) And on pages 235-236 of The Economic Interpretation of History, he says: "Undoubtedly, in the earlier stages of this and other societies, rent was a tax, levied by downright force, either with or without the pretense of an equivalent, or as the representative of reciprocal advantage, as defense and payment of administration, or as mere blackmail, the rent receiver, in consideration, refraining from plunder."

Of the thirteenth century he says: "In the thirteenth century there was no rent paid, in the ordinary sense of the word." (W. and W., page 56.) In a lecture delivered in 1888 at Oxford, and printed after his death, he says of the fourteenth century: "Good arable land was let in the fourteenth century at 6d. an acre. I have never found a higher price." (Industrial and Commercial History of England, page 209.) In Work and Wages, page 293, he says: "It is certain that during the fifteenth century the landowner was unable to screw them (his tenants), and that the rack-rent is a product of the early part of the sixteenth century." And at page 296 of the same work he says: "It was not till the sixteenth century that rack-renting began."

Now, as the rack-rent is a "rent nearly equal to the annual value of the property rented," it is clear that its first appearance marks the advent of the modern landlord. When the merchants of Henry VIII's time "began to invest largely in land," they carried into their speculations in land the same business methods that they had acted upon in their commercial dealings. They figured out the cost of an acre of land and fixed its rent at interest on that amount, and as competition raised the price they raised the rent to correspond. It is safe to assume that, when the first purchaser of abbey lands thus set the pace of rack-renting, all the other landowners in England were not slow to follow his example. But we are not left to mere assumption on this point. We have indubitable historical proof. In Volu e II, page 465, of Knight's History of England it is said, speaking of this period: "Rents were everywhere rising." And in Cunningham and McArthur's Outlines of English Industrial History, at page 181, it is said: "Rent comes to have the clear and obvious character of a payment for the use of the soil." Professor Rogers says: "From the middle of the sixteenth to the middle of the seventeenth rack-renting of a very harsh kind occurred and with very disastrous effects." (Ind. and Com. Hist. of Eng., page 208.) And in the Economic Interpretation of History, page 174, he says: "The rents of the seventeenth century, small as they seem to us, began with competition rents, which rapidly slid into famine rents, by which I mean rents which leave the occupyers with a bare maintenance, without the power of either improving or saving." "The earliest writer on husbandry in the seventeenth century admits the fact of competition rents, defends the lord's action in taking what is offered him, and treats the farmer's remonstrances with ill-disguised contempt." (Id.) And this raising of rent went on until by the year 1879 the rent of agricultural land, which had for three centuries prior to the middle of the sixteenth century remained fixed at an average of from 6d. to 8d. an acre, had risen to an average of more than 45s. (Id., pages 179 and 293.)

But the most striking and important historical evidence on this point is to be derived from the sermons of dauntless old Hugh Latimer, who was burned at the stake at Oxford in 1555. Of these sermons a writer in the Encyclopedia Britannica says: "It is possible to learn from them more regarding the social and political condition of the period than perhaps from any other source." On the 7th of March, 1548, the year after the death of Henry VIII, Latimer preached in the King's private garden at Westminster, before the young king and his courtiers, the first of a series of seven sermons in which he says: "You landlords, you rent-raisers, I may say you steplords, you unnatural lords, you have for your possessions yearly too much. For that herebefore went for twenty or forty pound by year (which is an honest portion to be had gratis in one lordship, of another man's sweat and labor) now is let for fifty or a hundred pound by year. Of this too much cometh (that) this monstrous and portentous dearth is made by man, notwithstanding God doth send us plentifully the fruits of the earth, mercifully and contrary to our deserts.

"Notwithstanding too much which these rich men have causeth such dearth that poor men (which live of their labor) can not with the sweat of their face have a living, all kind of victuals is so dear, pigs, geese, capons, chickens, eggs, etc., * * * I will tell you, my lords and masters, this is not for the King's honor. * * * Also it is the King's honor that the commonwealth be advanced, that the dearth of these aforesaid things be provided for, and the commodities of this realm so employed as it may be to the setting his subjects on work and keeping them from idleness. * * * Furthermore, if the King's honor (as some men say) standeth in the great multitude of people, then these graziers, inclosers, and rent rearers are hinderers of the King's honor, for where as have been a great many householders and inhabitants there is now but a shepherd and his dog. So they hinder the King's honor most of all. * * * I know where is a great market town, with divers hamlets and inhabitants, * * * and the vicar that serveth (being so great a cure) hath but 12 or 14 marks by year, so that of this pension he is not able to buy him books nor give his neighbor drink.

"All the great gain goeth another way. My father was a yeoman, and had no lands of his own, only he had a farm of three or four pound by year at the uttermost, and hereupon he tilled so much as kept half a dozen men. He had walk for a hundred sheep, and my mother milked 30 kine. He was able and did find the King a harness, with himself and his horse, while he came to the place that he should receive the King's wages. I can remember that I buckled his harness when he went unto Blackheath Field. He kept me to school, or else I had not been able to have preached before the King's majesty now. He married my sisters with 5 pound or 20 nobles apiece, so that he brought them up in godliness and fear of God. He kept hospitality for his poor neighbors, and some alms he gave to the poor. And all this he did of the said farm. Where he that now hath it, payeth 16 pound by year and more, and is not able to do anything for his prince, for himself nor for his children, or give a cup of drink to the poor. Thus all the enhancing and rearing goeth to your private commodity and wealth. So that where you had a single too much, you have that, and since the same, ye have enhanced the rent, and so have increased another too much. So now ye have double too much which is too too much. But let the preacher preach till his tongue be worn to the stumps, nothing is amended. We have good statutes made for the commonwealth as touching commoners, enclosers, many meeting and sessions, but in the end of the matter there cometh nothing forth.

"Well, well, this is one thing I will say unto you, from whence it cometh I know, even from the devil. I know his intent in it. For if ye bring it to pass that the yeomanry be not able to put their sons to school (as indeed universities do wonderfully decay already) and that they be not able to marry their daughters to the avoiding of whoredom, I say ye pluck salvation from the people and utterly destroy the realm. For by yoemen's sons the faith of Christ is and hath been maintained chiefly. * * * But verily they that should look to the redress of these things be the greatest against them. In this realm are a great many of folks, and amongst many I know but one of tender zeal, at the motion of his poor tenants hath let down his lands to the old rents for their relief. For God's love let him not be a Phœnix: let him not be alone; let him not be a hermit closed in a wall: some good man follow him and do as he giveth example. Surveyors there be, * * * but the commons be utterly undone by them. Whose bitter cry ascending up to the ears of the God of Sabbaoth, the greedy pit of hell burning fire (without great repentance) do tarry and look for them. A redress God grant. For surely, surely, but that two things do comfort me, I would despair of the redress in these matters. One is that the King's majesty when he cometh to age, will see a redress of these things so out of frame. Giving example by letting down his own lands first, and then enjoin his subjects to follow him. The second hope I have is, I believe, that the general accounting day is at hand, the dreadful day of judgment I mean, which shall make an end of all these calamities and miseries."

There was in England, during the period in which the awful transformation I have heretofore sketched took place, at least one clear, strong, logical, and observant mind that fully grasped its meaning and clearly perceived its efficient cause. No question of money, of transportation, or of machinery could obscure or hide from Latimer's clear and earnest mind the real cause of the calamities and miseries that had fallen upon his country. He knew, and knowing, dared declare, that they were the work of the landlord, the rent raiser and the incloser, who had shut men out from the land which the Creator had freely given to all his creatures, and robbed them of the product of their sweat and labor. To the thoughtful American mind of to-day it ought to be equally apparent that the calamities and miseries that have come upon this once prosperous and happy people, having for their heritage the most goodly land the sun ever shone upon, are due to the same cause that has blighted and pauperized the once prosperous and happy land across the sea. For nearly a century, from the first organization of this Government, the American people enjoyed a prosperity such as no other people had ever enjoyed before, because they had an abundance of good land open to American labor on even easier and better terms than the English people had for the three centuries preceding the middle of the sixteenth century. English land was open to English labor during these three centuries at 6d. an acre rent. During the first century of the existence of this Government, American land of the best quality was open to American labor at an annual rent of a little over 6 cents an acre (the Government price of $1.25 an acre, divided by 20). So long as that condition of things lasted American labor was prosperous But as soon as the supply of Government land became exhausted, the same phenomena that followed the sale of the church lands in England began to appear in this country. The scrambles for Government land at Oklahoma, at the Sisseton Reservation, at the Cherokee Strip, and at the Kickapoo Reservation have merely served to make patent to the general public a fact that has been fully known to thoughtful observers of passing events—that is, that the supply of Government land fit for occupation and use had given out. No one who will give the matter consideration can fail to observe how close is the parallel between the social and industrial conditions that developed in England about the middle of the reign of Henry VIII, and the social and industrial conditions that have developed in this country during the last twelve or fifteen years, since the supply of public land has become practically exhausted.

A few years after Henry VIII began to sell the confiscated lands of the church, England swarmed with vagrants and sturdy beggars, and Green tells us that "England for the first time saw a distinct criminal class in the organized gangs of robbers which began to infest the roads and were always ready to gather round the standard of revolt. The gallows did their work in vain. * * * The social disorder, in fact, baffled the sagacity of English statesmen." (History of the English People, Volume II, page 20.) A few years before the mad rush for land in Oklahoma sounded the alarm that our public lands were practically exhausted, the tramp made his first appearance and the unemployed became a permanent class with us. Like causes must produce like effects. And men denied access to the land from which and on which alone they can live, whether in the sixteenth or in the nineteenth century, whether in England or in the United States of America, could have or can have but one alternative, to die or to take to the roads as tramps and vagrants or as highwaymen. The English Parliaments of the sixteenth century attempted to suppress and exterminate the landless tramps and vagrants of that time by harsh and cruel laws, which were executed with barbarous severity. American legislators, in the last quarter of the nineteenth century, have attempted to attain the same end by the same means. The experience of the race during the intervening centuries has taught us no better method of dealing with our landless tramps, our submerged and disinherited ones. The prevalent altruism of our times will not permit our legislators to ordain that the unfortunate tramp shall have his ears cut off or that he shall be executed as a felon, and in most of our States it will not permit him to be whipped. The Commonwealth of Kentucky did, however, by an act approved May 6, 1890, provide that any male person over 16 years of age should, upon conviction of vagrancy, be "punished by a whipping of not less than five nor more than fifty lashes with a leathern whip, well laid on his bare back." (Session laws of 1889-90, chapter 1303, page 259.) The spirit of our legislation on this subject is essentially the same as that of the legislation of Henry VIII's time. And, indeed, it may well be doubted if our method of dealing with the victims of landlordism is any improvement on that of the Tudor sovereigns of England 350 years ago. The Tudors mercifully put them out of the way by hanging them. We slowly torture them to death by starvation or drive them to suicide.

In another respect the parallel between England in the sixteenth century and our country at the present time is striking. In the first year of the reign of Edward VI, who succeeded Henry VIII, a law was passed authorizing the sale into slavery of vagrants. On the 19th of June, 1893, the supreme court of the State of Missouri, in the case In Re Thompson (117 Mo., 83), declared section 8849 of the Revised Statutes of 1889, authorizing a vagrant not accused or convicted of any crime to be hired for six months to the highest bidder after the determination of the fact of such vagrancy by a jury before a justice of the peace, to be violative of both the State and Federal constitutions which prohibit slavery or involuntary servitude except in punishment of crime, whereof the party accused shall have been duly convicted. But in States that farm out convicts to contractors the same end is accomplished in another way. Vagrancy is made a crime, and the tramp, upon conviction, is let out to the contractor. In a considerable number of towns and cities in this country the tramp, upon conviction, is sentenced to work in the chain gang upon the public streets. Thus it appears that our modern American lawmakers have taken more than one leaf from the statute books of the time of the Tudors. I have already directed attention to the parallel between Henry VIII's time and our own time in the matter of appeals for charity. In dealing with the destitute, as in dealing with the vagrants, we are but blind and helpless imitators of our ancestors of three and a half centuries ago. We still "exhort, move, stir, and provoke people to be liberal" in giving alms. We know how utterly futile is the attempt to eliminate destitution in that way, but we seem to be incapable of studying out any other way, and so we keep up our frantic appeals for charity.

The Englisl poor law, inaugurated by the act of 27th Elizabeth and continued to the present day, is far from being a monument of human wisdom in the field of legislation. But American lawmakers have not improved upon it very much. Our county poorhouses are mostly modeled on the English workhouses, and our plan of supplementing them with the police station is certainly anything but an improvement. And yet it seems to me that, notwithstanding the inability of our modern legislators to find it, there is a rational remedy for vagrancy and pauperism, a sure preventive of both. If I have succeeded, as I believe I have, in proving that the efficient cause of these evils was and is the exclusion of men from the land, is it not clear that the only effective remedy or preventive must be to restore them again to that essential element from which they have been excluded? If a gardener, on his early round some morning, should discover that some malicious intruder had, during the previous night, pulled up his plants and left them lying on the ground to die, would he not at once set to work to restore them to the ground before they wilted and died? Vagrants and paupers are but human beings divorced from the land. Professor Rogers perceived this fact, for he says: "The growth of the poor rate * * * was due to the inclosures, the consequent exclusion of the poor from small agriculture. * * * The poor became more and more straitened, even when prices had not seriously risen, because they were more and more divorced from the soil." (E. I. of H., page 246.) The only way in which vagrancy and pauperism can be cured and prevented is to restore the vagrant and pauper to the land. And this the single tax will do without jar or disturbance. Adopt the single tax unlimited, and vagrancy and pauperism will soon become but the hideous goblins of a night forever past.

I have said that I have been unable to find any modern writer who has assigned any adequate or sufficient cause for the origin and growth of English pauperism. Professor Rogers has assigned four causes, and they are as valid, I think, as any I have come across elsewhere. They are: (1) Deluge of base money; (2) confiscation of the guild lands and the loss of the benefit societies' funds; (3) rise in prices, and (4) the enactment of the statute of fifth Elizabeth, chapter 4, known as the statute of laborers of that year. The first was due to the debasement of the coin in the latter years of the reign of Henry VIII, which was carried to such an extent that when Elizabeth called in the coin with a view to undoing the mischief which her father had done she found that about 60 per cent of the coins was base metal. The confiscation of the guild lands took place under Edward VI. During the golden age of English labor which preceded Henry VIII's reign the trade guilds and labor unions had acquired extensive holdings of land all over the kingdom, the revenues from which supplied a benefit fund for their members. The guardians of Edward VI confiscated these lands, as Henry had confiscated the lands of the church, and under the same pretense, viz, that they were being applied to superstitious uses. The land boom that followed the sale of the church lands naturally raised the price of all commodities. Of the statute of Elizabeth, Professor Rogers says: "This famous act, which consummated the degradation of the poor, made pauperism inevitable and misery universal, was really no new legislation. The acts repealed all the old statutes of laborers and reenacted all the provisions of those acts. It did not provide any new machinery, for the administration of the old laws had been in the hands of the justices for nearly the whole two hundred years, and sometimes the right of making the assessments. What it did was to seize the opportunity when the workmen were helpless to consolidate all the old statutes, to draw up rigid rules of apprenticeship so as to make agriculture the residuum of all labor, to enact exhaustive penalties, and to leave no loophole through which workmen could escape, so as to better themselves in the struggle with their employers. The English statute book contains many atrocious acts, most of them with hypocritical preambles. This act of Elizabeth is, in my judgment, the most infamous of them, for it was leveled against every right of the poor to live and entirely in the interest of rent." (E. I. of H. pages 240-241.)

Now, let us test these assumed causes by the experience of our own time and country within the last twenty-five years. I have shown that the same change has within that time taken place in this country that took place in England in the sixteenth century. But we have had no deluge of base money. On the contrary, we have had what the gold men call "sound" money during all the time that the dread change has been going on. As to the second cause, our trade unions have had no land to be confiscated, and their benefit funds, such as they have, have not been interfered with by the Government. As to the rise in prices, our calamities have fallen upon us at a time when prices are lower than they ever have been known to be in the history of civilization. And finally, we have had no legislation like the statute of Elizabeth. Now, it is apparent that, if an effect follows when an assumed cause is absent and when it is present, the assumed cause can not be the real cause. The real cause that consummated the degradation of English labor, made pauperism inevitable and misery universal in England, was the exclusion of English labor from English land. The real cause that has brought the tramp and the vagrant in this country, that has filled our streets with unemployed and our roads with industrial armies, that is degrading and pauperizing once free and independent American citizens, is the exclusion of American labor from American land.

Now, in conclusion, let me ask my thoughtful reader to consider the question, Where are we, and whither are we tending? If I am correct in the inference I draw from the facts I have presented in the foregoing pages we are entering upon the descent to an abyss of misery and degradation, poverty and pauperism, in many respects more dire than that down which the English people passed after the middle of the sixteenth century; a descent into conditions that will be the more intolerable by reason of the memories of our past prosperity and happiness and of the superior intelligence and greater refinement of the masses of our people.

And the worst of it is that this downward movement is the necessary result of the operation of natural laws; that is, of the law that impels the landlord to take all he can get as a condition precedent to his permitting labor to have access to his land, and of the law that compels laborers to bid against each other in their efforts to gain access to the landlord's land, without which they must perish.

And is this awful fate inevitable? Must we and our posterity drink to the dregs the bitter cup of misery that has been held to the lips of the English people for the last three and a half centuries? Must poorhouses rise in every township of this broad Republic as they have risen in every parish of England? Must our children and children's children be driven into exile from the land of their birth as millions upon millions of the people of England, Ireland, and Scotland have been during the past three centuries? Shall the plowers forever plow the backs of a class condemned to toil, in this once free and happy land? The single taxers answer no. They say these things must and shall not be. They are setting the ax to the root of the deadly tree which produces these evil fruits, and their brave and sturdy blows are beginning to tell. With a hope that inspires to high endeavor and a faith that falters not they are pressing forward in ever increasing numbers to the goal where equal opportunity shall be secured to all, where all men shall be not nominally but really free—

"And the truth shall ever come uppermost,
And justice shall be done."

The Coin Redemption Fund.

REMARKS

OF

HON. HENRY ALLEN COOPER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. COOPER of Wisconsin said:

Mr. SPEAKER: The one great objection urged here by gentlemen in opposition to the pending bill is that if enacted into law it would result in the final retirement and practical destruction of the greenbacks. This argument seems to me to be based upon an entire misapprehension of the facts; for, sir, the question is really one of fact. It is admitted on every hand that under the law as it now exists the greenbacks can not be retired, but that when they are taken into the Treasury the Government is compelled to reissue them and to keep them in circulation. The President in his message and the Secretary of the Treasury in his report both denounce this law which compels the reissuing of the greenbacks, and they urge upon Congress in vigorous terms its immediate repeal. This law, which thus makes compulsory the keeping in circulation of the greenbacks is the statute of May 31, 1878, entitled "An act to forbid the further retirement of United States legal-tender notes," and reads as follows:

And whenever any of said notes [greenbacks] may be redeemed, or be received into the Treasury, under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be issued and paid out again and kept in circulation.

This is the statute about which the President and the Secretary of the Treasury complain, and the repeal of which they assert is absolutely necessary.

Now the opponents of the pending bill unite in declaring that, in some way which I have been unable to discern, it essentially complies with this demand of the President and of the Secretary of the Treasury, and that if made a law it would result in the withdrawal of the greenbacks from the currency of the country. I am at a loss to know upon what any such argument is predicated, it seems to me so palpably untrue, so entirely baseless in fact. The pending bill either does or does not propose to repeal or change the law of 1878, which I have quoted. This question can be at once determined by a reading of the bill itself. The first section contains the following proviso:

Provided, That nothing in this act shall be construed to repeal or modify an act approved May 31, 1878, entitled "An act to forbid the further retirement of United States legal-tender notes."

The matter is too plain for argument. The proviso which I have just quoted explicitly declares that the pending bill, if made a law, shall not in any wise be held to repeal or to modify the statute of 1878. In other words, the statute of 1878 is to be continued in full force and effect, without change or modification, and therefore under no circumstances could the Administration finally retire the greenbacks or withdraw them from circulation without a deliberate violation of express law. In my opinion, as I have said, there is no room for argument upon this point. There is no occasion for invoking any rule of statutory construction, because there is here nothing contradictory, nothing ambiguous, nothing to construe. The language of the proviso is plain, unequivocal, and susceptible of but one meaning. It declares that the act of 1878 shall not only be continued in force, but that it shall be so continued without any modification whatever. This proviso is in the first section of the bill. The second and last section confessedly has nothing to do with the matter. How, then, can it be seriously claimed that this bill would result in the destruction of the greenbacks? What foundation is there for that statement? Where is the fact, or the semblance of a fact, to warrant the putting forth here of any such argument? If under the statute of 1878 the Secretary of the Treasury is compelled, as we all know he is compelled, to reissue the greenbacks and to keep them in circulation, then he would still be forced to reissue them if this bill were to become a law, for in this regard the law is to remain wholly unchanged. But, sir, there is no occasion for further elaboration of this point.

Mr. Speaker, there is another misapprehension concerning the purpose of this bill to which I wish briefly to refer. It seems to be assumed, by some of those who oppose it, that if made a law the bill would compel the Secretary of the Treasury forthwith to issue bonds. This is not true. The bill would not force the sale

of bonds, it would simply and wisely regulate the manner of their sale when necessary, and compel the Secretary of the Treasury on every such sale to first offer them to the American people in the open market, after due advertisement. It would give to the American people the first opportunity to purchase their own securities, and would make the sale open and public at the Treasury Department and at the subtreasuries and designated depositories of the United States. Until the Secretary of the Treasury had so publicly advertised and offered the securities for sale, it would prohibit him from negotiating any more issues by private contract.

Mr. Speaker, the sale of bonds by which the public debt is increased is always a misfortune; and I desire to say that nothing but an emergency of the most serious character could ever induce me to consent to such a transaction in a time of peace. But, sir, such an emergency now confronts the Government. The godl reserve established at a hundred millions by the resumption act of 1875, and kept intact at that sum from the 1st of January, 1879, until after the commencement of the present Administration, has been encroached upon until to-day nearly forty millions of it have been paid out, and there remain but a little over $60,000,000 with which to redeem more than three hundred and forty-six millions of greenbacks. Besides this, it appears from the last report of the Secretary of the Treasury that from the 1st day of July, 1893, until the 1st day of December, 1895, the receipts of the Government have fallen below its expenditures to the amount of $130,221,023, an average of about fifty millions a year of deficit during that period.

In this connection it must be borne in mind that the one hundred million of reserve is not kept separate and apart, but is mingled with the other funds in the Treasury; and, sir, notwithstanding what was said, and left unsaid, on the subject by the President and the Secretary of the Treasury in their communications to Congress, there is, I think, little doubt in the mind of any person who has carefully investigated the matter that the proceeds of the bonds issued to the amount of $162,000,000, and sold ostensibly to replenish the gold reserve, have in fact been used to defray the current expenses of the Government. The President in his message wholly fails to mention the fact of the great deficit in the revenues—an omission so remarkable that nobody would presume to attempt to explain it. He does, however, elaborate upon the danger growing out of the rapid depletion of the gold reserve, and he loudly calls upon Congress for legislation to avert threatened disaster. It is a matter of common knowledge that another bond issue is imminent. For many days the air has been filled with bonds and rumors of bonds. Under such circumstances it is that the pending bill is brought into the House. The bill proposes that if the threatened issue be made there shall first be an offer of the bonds, upon public advertisement, to the American people. It provides that until the people of this country have had a chance to buy their securities in the open market no syndicate, foreign or domestic, shall obtain them by private contract. This bill seeks to avoid, if possible, the scandal of another secret contract like that of last February, by which bonds worth 118 were sold for 104½—a contract which, when compelled to be made public, was thus described in that great Democratic newspaper, the New York World, in its issue of February 21, 1895:

BUNCOED OUT OF MILLIONS AND MILLIONS—THE BIDDING FOR THE BONDS PROVES THAT THE ADMINISTRATION LET SLIP A SUM EQUAL TO NEARLY HALF ITS LOAN—GENERAL SCRAMBLE FOR THE ISSUE—IN TWENTY-TWO MINUTES THE AMERICAN SHARE WAS BID FOR MANY TIMES OVER AT 116 TO 118, AND SLOW LONDON BID FOR $600,000,000 AT 116½—INTO THE JOBBERS' POCKETS WILL GO $8,418,757, WHICH, IN A SAVINGS BANK, WOULD GROW TO $27,628,676 IN THE LIFE OF THE BONDS—THAT IS WHAT THE PEOPLE PAY FOR STAR-CHAMBER VERDANCY.

Every day adds to the infamy of the transaction. * * * The more the bond deal is studied the more incompetent appear the Government officials who could sit by and listen to the argument of the bankers and then in all simplicity attach their binding signatures to any such contract as that of February 8. It would be more than interesting to have the whole story of that deal laid bare, as a warning, if nothing more. It is the duty of Messrs. Cleveland, Carlisle, and Curtis to say to the taxpayers who have been mulcted to the tune of millions just why such a one-sided contract was made. Mr. Cleveland has been a Wall street lawyer. He was in a position to know, by inquiry of honest, responsible men, just what a United States bond of the sort he proposed to issue was worth here and abroad. It was his sworn duty to get this information if, as an American citizen of ordinary intelligence, he didn't already possess it. He evidently did not post himself or, if he did, he cravenly surrendered the good name and credit of his country to a freebooter in finance, a man who is in his business for all there is in it, and whose policy has been for years to find a weak spot in a corporation and then squeeze it for all it is worth.

HOW THE ACCOUNT STANDS.

Face of loan	$62,315,000
Snydicate premium at 104.49	2,797,943
United States gets	65,112,943
Syndicate profit to 112½	4,835,644
What inside jobbers pay	69,948,587
Inside jobbers' profit to 118	3,583,113
The public pay and the United States should have received	73,531,700
United States has lost	8,418,757
Compounded as a sinking fund, at 4 per cent, for thirty years this lost profit would be	27,628,676

Or nearly one-half the original loan.

PROFIT AND LOSS.

Belmont and Morgan buy $62,315,000 at 104.49	$65,112,943
Belmont and Morgan sell $62,315,000 at 112.25	69,948,587
Belmont and Morgan profit	4,835,644
Inside jobbers buy $62,315,000 at 112.25	69,948,587
Inside jobbers sell $62,315,000 at 118	73,531,700
Inside jobbers' profit	3,583,113
General public buy $62,315,000 at 118	73,531,700
Loss by United States to the jobbers	8,418,757

Mr. Speaker, this is what this great Democratic journal said, in February, 1895, of that contract—a contract made in secret, and the provisions of which the Secretary of the Treasury earnestly sought to have kept secret until the Administration was practically forced to make it public.

Let it be remembered, sir, that that contract was negotiated with men some of whom, at least, were the close personal friends of the President, one of them being his business partner at the time of, or very shortly prior to, his inauguration.

Let it be further remembered that in 1862 more than five hundred millions of five-twenties, and in 1864 and 1865 more than eight hundred and twenty-nine millions of seven-thirties were sold to the people at par in currency, and that during all the war period the highest price paid by the Government to any agent for floating its loans was 1½ per cent, and this included all expenses connected with the issues.

After the war, while gold was still at a premium, the Government began to refund the national debt. It carried through all its gigantic refunding operations successfully, and, as I find upon investigation, never paid a higher commission than one-half of 1 per cent, which was the maximum rate fixed by the statute of 1865.

Beginning with the administration of Secretary Windom, in 1881, the Government refunded more than $700,000,000 of bonded indebtedness without paying one penny of commission. Yet, according to this great Democratic newspaper, the profits realized by the Morgan-Belmont syndicate and by the inside jobbers from the contract of last February were more than $8,000,000 in six months on an investment of sixty-five millions; but this statement of the World was made in February, 1895, and was therefore in the nature of a prophecy. However, the transaction under that private bond contract has been completed, and we are now prepared to give its history.

This history I have seen in several prominent newspapers, East and West, there being substantial agreement as to all details, but I think the most succinct statement of the matter which I have met with is that given recently by the distinguished journalist, Mr. W. E. Curtis, in the Chicago Record. From this it appears that the bonds, amounting in value to $65,117,500, were sold by the Government at a premium of 4.48 to Messrs. Morgan and Belmont, for themselves and the Rothschilds. These gentlemen disposed of them to their own syndicate at an advance of 9.75 on each bond of $100. This gave to Morgan and Belmont a profit of $4,831,575.

They kept only three-fourths of 1 per cent of this sum, however, as their commission, i. e., $488,372. The remainder was divided among the members of the syndicate, yielding a profit of 6.72 per cent on their investment, which, with 1¾ per cent interest accrued on the bonds, made a profit of 8.422 per cent. As their money was tied up only about six months, the transaction netted 16.844 per cent a year; but it will be remembered that these bonds, which they bought at 4.48 above par, in a little while rose to a premium of from 22 to 23 cents, or an increase of nearly $17 on every $100, so that the syndicate, if they have sold the bonds, have made a profit of $12,494,384, or, if they kept a part of them, can, when they sell, realize that sum. A profit of about 18 per cent in one year!

Is it any wonder, Mr. Speaker, that this extraordinary transaction has attracted the earnest, if not indignant, attention of the "plain people," of whom the President so often speaks?

Now, sir, it is in some measure to prevent a repetition of secret negotiations of this kind, at least until after a public offer of their securities has been made to the American people, that this bill is brought into the House.

Realizing that a bond issue by the Administration is inevitable, it seeks to make the best of adverse circumstances.

It may or may not pass the Senate and become a law. It seeks to remedy two or three patent defects in existing law, and I shall vote for it, though it is not all that I would desire. If I could have my way no bonds should ever be issued in time of peace by the Secretary of the Treasury except with the direct consent of Congress first obtained.

The piling up in a time of profound peace of the debt of the United States, a nation the richest in natural resources of any which the world has ever known, is nothing short of an outrage upon the taxpayers of the country, but at present there seems to be no possible way to prevent it.

The Coin Redemption Fund.

REMARKS

OF

HON. JOHN J. GARDNER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 6, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. GARDNER said:

Mr. SPEAKER: The position of the Democratic members of the Ways and Means Committee and the position of the party on the floor, on this measure, would put an ordinary paradox to blush. They insist, as the President does, upon the absolute retirement of the greenback. They assert that the greenbacks constitute an endless chain arrangement, crank, wheel, axle, and all, for drawing gold out of the Treasury, and that there is no financial safety until they are destroyed. To their view, an amplitude of revenue gives no relief from this danger, because they assert we have that now. They see no escape from ultimate bankruptcy but in ceasing to pay out the greenback, for as often as it is paid out it comes back knocking at the doors of the Treasury and imperiously demanding its equivalent in gold. When they talk about this bill, however, they find a comfortable surplus, sufficient to meet any temporary deficiency in revenue for years to come. This "comfortable surplus" is made up largely of redeemed greenbacks. If they are going to meet temporary deficiencies with them, they contemplate paying them out. They propose to do what they insist shall not be done. They find safety in what they declare is our only financial danger. They are going to save the credit of the Government by doing the only thing which they assert endangers it. They are going to restore confidence by resorting to the methods which they say has destroyed it.

It has often been suggested that there is very little, if there is anything, in all this talk about an "endless chain;" that the Government never pays out a dollar unless it owes one, and if the greenback was not paid a gold dollar would be paid. It takes no more gold to pay the greenback than was required to pay the debt. The only answer that I have heard is, "You confound the debt-paying power with the maintaining of specie payments." Well, it was to pay a debt that every dollar in greenbacks was ever issued. This is equally true of the reissue of them after redemption. One hundred and sixty millions of gold has been recently borrowed, ostensibly to redeem greenbacks. The redeemed greenbacks are in the Treasury or they have been used to pay debts. If they are in the Treasury, they are not in motion as a part of that fabled chain. If they are not in the Treasury, they have gone where just an equal amount of gold would have gone if the greenback had not been used. It will take no more nor other gold to redeem them than would have gone out to pay the debts which the greenbacks have satisfied. When they come in for redemption the Treasury, after redeeming them, will be in the same condition it would have been in when the greenbacks were paid out, if it had then paid gold.

If the Treasury reissues the greenbacks to pay debts, and again redeems them, they will not have drained it of a dollar. The greenback each time pays a debt that would otherwise have drawn the gold. This "endless chain" does not carry an ounce of gold out of the Treasury that would not have gone earlier if the chain had not been put in motion. It is trivial to answer that the law requires them to be paid out. The law does not require them to be given away. They go out to meet the obligations of the Government. If the greenback did not go gold must, as has been shown. They take the place of gold, which remains in the Treasury for their redemption.

The greenback only became troublesome when the revenues of the Government fell below the current expenses. The greenback became a troublesome factor when the public knew that the Secretary who paid it out had not received it as a part of the dues of the Government, but had bought it with borrowed gold. The difficulty is in the deficiency in revenue. To retire the greenback will not augment the revenue; it would not, therefore, furnish the necessary relief. If the Administration had borrowed $550,000,000 and retired all the greenbacks and Treasury notes, the Government would have been compelled to go into bankruptcy. It would have been unable to pay its daily expenses. It has lived, so to speak, on the redeemed greenbacks. The methods of the Administration precisely resemble those of an individual who should borrow money to take up his note, and immediately repledge his note and use the proceeds for family expenses.

His action would not indicate a sufficiency of revenue. It would suggest approaching bankruptcy and destroy his credit. The parallel suggestion in the administration of our national finances is what made the greenback troublesome. There was no "endless chain" until the present Administration forged it. To vociferate with admirable persistence that the greenback should be retired may aid in shifting discussion to currency measures, but it will never demonstrate that the present national currency is responsible for the late bond issues, nor for the issue contemplated. The causes for the increase of the interest-bearing national debt are to be found in the Wilson bill. They lie at the door of those who inspired that legislation and administered the Government under it.

The Coin Redemption Fund.

REMARKS

OF

HON. CHARLES S. HARTMAN,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 6, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. HARTMAN said:

Mr. SPEAKER: As one of the forty-seven Republicans who registered their votes against the bond bill reported by the Ways and Means Committee, it seems only right and proper that some of the reasons which impelled me to oppose that bill should be given.

Not having addressed the House on this bill, I have seen fit to avail myself of the privilege extended to all members to insert in the RECORD remarks upon the same.

In view of the fact that my objections to the merits of the bill have been so thoroughly expressed in detail by others who entertain like views upon the policy of bond issues I shall content myself by summarizing those objections as follows:

First. In my judgment, the effect of the bill, in spite of the Hopkins amendment, will be virtually a retirement from circulation of the greenbacks.

Second. While it is but fair to admit that the framers of the bill intended to throw around the Treasury Department such safeguards and restrictions as would prevent the secret negotiation of bond deals, yet in my judgment the bill does not accomplish the desired end, and while it was in no sense intended by those who supported the bill to be an approval of the disgraceful syndicate bond deal with the Administration of last winter, it will be treated by the public at large as a legislative ratification of that scandalous transaction.

Third. I am a Republican, and believe that this Government should raise its revenue for the expenses of the Government through tariff duties levied upon imports, and not by borrowing money. The Republican policy is, and always has been, to make the Government self-sustaining by levying adequate tariff duties to produce sufficient revenue, and at the same time to protect American industries and American labor. If the Administration had done this instead of devoting its energies to producing a tariff for deficit only, and in the further endeavor to forever clinch the gold standard upon this country, the President would not now find himself in the humiliating attitude of begging his British friends on both sides of the water for a loan of $200,000,000 of gold to preserve the nation's credit. I firmly believe that a very large majority of the American people, irrespective of their place of habitation, are irrevocably opposed to any policy which makes it necessary for the Government to borrow money in times of peace.

Fourth. On the 26th day of December, 1895, we passed a revenue bill which we were assured by the Ways and Means Committee would produce $40,000,000 per year additional revenue. I presume the Ways and Means Committee, composed of able, well-informed and honorable members, are reasonably accurate in that estimate. If that estimate be correct, then there is no need of giving the Secretary of the Treasury additional or any authority to borrow money, for it will give us a surplus, instead of a deficiency. I voted for the revenue bill as an emergency measure, not as expressing the Republican idea of protection.

Fifth. In my judgment the policy involved in the bond bill is not a Republican policy and never has been. No national Republican platform ever contained a declaration which could be construed or distorted into an approval of the principles contained in that bill. I do not believe that any Republican convention in any State or Congressional district within the limits of the United States ever made a declaration which could be construed as authority for

the framing of this bill and its presentation as a Republican measure by the Ways and Means Committee. The bill was not even submitted to a caucus of the Republicans of this House. It therefore came into the House, not as a Republican measure, but as the individual opinion of the individual members of the Ways and Means Committee who voted for it. There was, therefore, no political obligation on any Republican to support the bill.

Sixth. We were asked to support the bill by its advocates not only as a party measure, but we were appealed to in the name of patriotism to respond to the call of the President for aid, and yet before the vote was taken on the bill the President's Secretary of the Treasury announced that he did not want the bill. He wanted gold bonds or none. We were told that there was a crisis; that the credit of the nation was menaced; that the prompt passage of this bill was essential to maintain it, and this plea was made in the name of patriotism.

It seems to me that, under the circumstances, with which every man in this House was familiar, that plea was, to say the least of it, decidedly absurd, for this reason: Let it be admitted, for argument's sake alone, that this fearful crisis was staring us in the face, and that the bond bill was the perfection of human wisdom and the only possible solution of the difficulty. What could be accomplished by the passage of the bill through the House? Everyone knew that the bill would go to its defeat in the Senate, and therefore this wonderful panacea for all ills which the Ways and Means Committee had evolved would fail to perform the wonderful cure it was intended to perform. We were therefore invited, in the name of patriotism, to do a vain and useless thing; to vote for a measure that both we and our constituents were opposed to, and which could not, under any circumstances, become a law. In short, in the name of patriotism we were invited to butt our heads against a stone wall for the dear privilege of learning how many of us could possibly survive the shock. The bill ought never to have been presented to the House, and it is a matter for general congratulation that when it reaches the Senate it will certainly go to its death.

The Coin Redemption Fund.

REMARKS
OF
HON. CHARLES H. YOAKUM,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. YOAKUM said:

Mr. SPEAKER: We need no more bonds. They mean burden and poverty. The power to issue bonds exists in law, to the sorrow of our people. The proposition to reduce the rate of interest is not calculated to deceive anyone with a memory.

In the Fifty-third Congress the great syndicate proposed to accept bonds at 3 per cent interest if Congress would insert "gold" where "coin" occurred.

When the Republican party say coin, it means gold. Its great leader in the Senate from Ohio, while Secretary of the Treasury, declared our obligations payable in coin should be paid in gold, and even declared any other payment would be dishonest.

Mr. PAYNE of New York, a member of the Ways and Means Committee, says the Administration is opposed to this bill, that they want to retire the greenbacks, and yet in the next breath he says this bill is in response to the appeal for relief by the President. Thus the good faith of the authors is impeached by a member of the Committee on Ways and Means, and thus they snub the President and consume the time of this expensive body in discussing a measure that they know can not and will not become a law.

Instead of the Department demanding this character of legislation they are actually protesting against it. Furthermore, no reasonable man can seriously insist that the President in his special message wanted any power to issue bonds—that power has existed by express statute for twenty years, and has been exercised during that period.

This bill does not repeal or in any manner affect the acts of 1870 and 1875, under which all our outstanding bonds were issued; in fact, it recites that "in addition to the authority now conferred on the Secretary of the Treasury under the act of 1875." Thus we are to have two laws to facilitate the issuance of our interest-bearing obligations. Under the act of 1875 bonds could be negotiated at 4, 4½, or 5 per cent, at such a premium that would reduce the actual interest to 3 per cent. Therefore the proposed reduction of the rate of interest in the first section of this bill can not confer any benefit to the people and has nothing new in it that confers any additional power upon the Department that calls for help. Sir, it is a mere mockery, that will be understood by those who sent us here to protect their interests financially and commercially.

An analysis of the message will show that if we can not agree to overhaul and remodel our entire financial system that the only help now expected from this body by the President is simply a declaration by us in this panicky and feverish condition of the country that the dignity of the Government will be maintained, and all its obligations now in existence or to be contracted shall be paid in the best money "current at the world's counter," which he contends is gold. After deploring the evils in the present system of finance in his message, he says:

The real and sensible cure for our recurring troubles can only be effected by a complete change in our financial scheme.

Is a law conferring power to issue bonds or the mere reducing the rate of interest on the issue a complete change in our financial scheme, or is the provision for the sale of bonds in our own country a complete change in our financial system? If so, we must admit that the bill presented here and urged by the Republicans is in response to the demand of the President; otherwise it is a mockery, and its authors know it.

The second section of this bill provides for the issuance of a class of bonds heretofore unknown in the history of our country, that is, to pay deficiencies. They have measurably relieved it of its repugnant sound by calling them certificates of indebtedness instead of bonds, but, mind you, they draw interest at the same rate as the bonds provided for in the first section, and are only "to be issued for temporary deficiency now existing or which may hereafter occur." Now, by reference to page 52 of the report of the Secretary of the Treasury it will be seen that from July 1, 1893, to December 1, 1895, there is a deficiency of $130,000,000.

Thus the issue of these harmless certificates will only reach that small amount which is very little short of the entire bond issue of the present Administration, which has been deprecated by the Republicans to-day with so much eloquence and patriotic fervor. Therefore, sir, we are being pulled over the hill and are just heaving in sight sufficiently that we can see the future of this country and make a reasonable estimate of the proposed legislation of the Republican party added to the recommendation of our President; that is to say, that the bonds which we now owe are simply $650,000,000, and to retire paper money $500,000,000, and under this bill $150,000,000. We will be blessed with a bonded debt of $1,300,000,000. At an average rate of 4 per cent interest, which will be more burdensome than that imposed by the Fifty-first Congress, and for which the people indignantly smote the Republican party, sir, the President is not alone in the belief that the present monetary system has to be overhauled and a complete change had, but if no other change is to be made than that embodied in this bill, then the change is not radical enough to satisfy the people.

I reflect the sentiments of my district, and I believe of the whole State of Texas, when I say that we are opposed to the issue of national bonds of any size, of any kind or character, or of any rate of interest, or under any circumstances in time of peace.

And, further, that as long as we have gold or silver to pay our interest-bearing obligations and redeem our paper money there is no law authorizing the issuance of a bond. To-day, sir, we are confronted with a deficiency, while there lie idle in the Treasury $349,000,000 in standard silver dollars, and a negotiation pending to borrow $100,000,000 in gold. Why should we borrow when we have such a quantity of coin at hand? The resumption act passed January 14, 1875, provided that—

On and after January 1, 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding * * * and to enable the Secretary to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues from time to time in the Treasury, not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, any bonds authorized by the act of July 14, 1870.

This act in no way authorizes the Secretary of the Treasury to sell bonds for gold while there is in the vaults of the Treasury such a large quantity of silver. This act was passed two years after the demonetization of silver, and it occurred to the Secretary of the Treasury (Sherman) that a bond under the act of 1875 could not be payable in anything but coin, and since silver had been demonetized the gold bond was more desirable; therefore, on April 21, 1877, he wrote to the Attorney-General, in which he said:

It may become important to the public interests to make the new bonds payable in gold coin. Can I stipulate in the body of the 4 per cent bonds about to be issued that they shall be redeemable in coin of the present standard value (under the act of February 12, 1873, demonetizing silver, gold was then alone coin of standard value, and so remained to the passage of the Bland Act in 1878), that is, the standard value at the date of their issue, or must it be at the date of the law?

To which the Attorney-General replied:

It must be the date of the act. It was not intended that this should be varied according to the changes which might be made in the coinage, because a definite rule was given by reference to the coin of a particular date. That

which will pay the bonds heretofore issued under this act will pay the bonds which you may hereafter issue.

Thus the head of the legal department of the nation decides that bonds hereafter issued, like those heretofore, can be paid off in silver as well as gold. But Mr. Sherman was satisfied that the construction of the Attorney-General was correct and the law would have to be amended before a bond payable in gold could be issued; hence in December, 1877, he recommended to Congress—

That an express exception shall be made requiring that gold coin alone shall be paid for principal and interest on bonds issued to the public creditor since February 12, 1873, the amount of which is $592,990,700.

To this recommendation the Senate of the United States replied by a resolution, as follows:

Resolved, That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver, and that to restore to its coinage such silver coins as a legal tender in payment of such bonds is not in violation of the public faith nor in derogation of the rights of the public creditors.

Pending this resolution, Senator Edmunds offered an amendment substituting "payable in gold or its equivalent, and that any other payment, without the consent of the creditor, would be in violation of the public faith and in derogation of his rights." This amendment was voted down by a vote of 48 to 18.

The resolution then passed the lower House by a vote of 189 to 79.

We believe that if the spirit and the letter of the resumption act of 1875 had been adhered to by our Government, and the interpretation thereof by the Attorney-General and the resolution adopted by both Houses of Congress in 1878 had been duly observed, congestion, stagnation, and prostration would not confront us to-day; and we steadfastly believe that a return to that policy that recognizes the equality of both metals in the payment of all debts, public and private, will restore not only contentment but actual and permanent prosperity to the people.

We believe that this change of policy, or, properly, returning to our former policy, should be gradual and not too abrupt. Begin by providing that all paper money hereafter redeemed and reissued shall be paid in equal amounts of gold and silver, as embodied in section 1 of a bill introduced by myself on a former day of this session, to wit:

That all paper money, either greenbacks or Treasury notes, that may be reissued under present laws shall be stamped thus: "This note is redeemable in equal sums of gold and silver, or in United States Treasury notes thus redeemable."

This would recognize 349,000,000 standard silver dollars as real money, and we could pay off at this moment one-half of our interest-bearing debt, which must be refunded, principal and interest, so often as it matures, if it has to be paid in gold, because of our inability to obtain sufficient gold to pay it.

But, sir, I undertake to say that this body will give no relief to the situation. The contrariety of opinion here renders it absolutely impossible for us to agree, and, in fact, no intelligent citizen is looking to the Fifty-fourth Congress for relief. The whole matter is thrown back to the people, and they must settle it in 1896; and if they, by schisms and divisions among themselves, destroy this opportunity, it will only prolong the struggle for freedom from the evils of a bonded debt and a single gold standard.

The Coin Redemption Fund.

REMARKS
OF
HON. WALTER EVANS,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. EVANS said:

Mr. SPEAKER: Nothing could overcome my extreme reluctance to offer to this House any observations at this early period after my advent into it except an urgent desire to support the action of the majority of the Ways and Means Committee upon this bill. That committee, composed of 11 Republicans and 6 Democrats, has been divided upon this measure by strictly party lines, every Republican upon it favoring the bill and every Democrat upon it opposing it. The Democratic opposition to this measure in this House, as far as I know, is likewise unanimous, and yet I have been astonished, in the progress of this debate, to hear the action of the majority of the Ways and Means Committee stigmatized as Democratic, and my astonishment at this species of opposition to this measure has been all the more marked as we have heard the character of argument urged against it. In order that we may clearly understand what the bill proposes, it may be necessary to advert to certain provisions of the financial laws of the Government in relation to its bonded indebtedness, which, while they are well known to the public, seem to have been forgotten in the discussion of this measure.

The greenback currency, which has received much sentimental laudation in the course of this debate, and for which, indeed, I cherish the highest and most grateful appreciation, because of the great service it rendered the country in time of war as well as peace, had its origin in a condition of affairs which the Supreme Court has adjudged could alone constitutionally excuse its creation. During the war of the rebellion so much was it depreciated in value that a greenback dollar sunk far below par, being at one time worth only 30 or 40 cents on the dollar. The reviving prosperity of the country after the war had closed rapidly appreciated the value of the greenback dollar, and farseeing financiers among the great Republicans of that day knew it was necessary that that currency should be brought to par if our financial condition was to be either sound or stable. The only way to do this was to provide authoritatively for its redemption in coin upon presentation at the Treasury. Pursuant to this wise policy, and to carry it into effect, the Congress of the United States, in spite of a Democratic opposition as unreasonable as that which is offered to the pending bill, and with the approval of President Grant, enacted the law of January 14, 1875, providing for the resumption of specie payments four years later. By the third section thereof it was provided that—

On and after the 1st day of January, A. D. 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding on their presentation for redemption, at New York, in sums of not less than $50. And to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus of revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purpose aforesaid.

By the act of July 14, 1870, referred to in the resumption act the Secretary of the Treasury was authorized to issue two hundred millions of 5 per cent ten-year bonds, three hundred millions of fifteen-year 4½ per cent bonds, and one thousand million thirty-year 4 per cent bonds, one thousand five hundred millions in all, and all expressly payable "in coin," and all for the sole purpose of redeeming some five hundred million greenbacks.

After the passage of the resumption act the contraction of the currency, by reason of the coming into the Treasury of large amounts of the greenback circulation which were retained and not paid out, was very great (bringing them down to some $346,000,000), so much so indeed as to alarm some of the timid financiers of the country, and the result was the passage of the act of May 31, 1878, to prevent the further retirement or cancellation of the greenbacks. The terms of that act were—

That from and after the passage of this act it shall not be lawful for the Secretary of the Treasury, or other officer under him, to cancel or retire any more of the United States legal-tender notes. And when any of said notes may be redeemed or be received into the Treasury under any law from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again, and kept in circulation: *Provided*, That nothing herein shall prohibit the cancellation and destruction of mutilated notes and the issue of other notes of like denomination in their stead, as now provided by law.

These statutory enactments have continued to be the law of the country from those times until now, and they are yet the sole and only statutory laws in force upon the subject. From 1875 until 1893, while the Republicans had entire or partial control of the Government, in no single instance was it found necessary or was it even contemplated by the Secretary of the Treasury to issue any of the bonds provided for by the resumption act for the purpose of taking care of the redemption of the greenback currency. Republicans believe to-day, as they have always believed, and as fifteen years of good management demonstrated, that if the revenues of the Treasury were sufficient to meet the expenditures of the Government there would be no reason for solicitude about the gold redemption fund; that there would be no occasion to so doubt the credit of the Government as that anybody would desire (unless for very special purposes of an occasional nature) to withdraw any gold from the Treasury. But since 1893 the report of the Secretary of the Treasury shows that great deficiencies have resulted annually. To say nothing of the deficiency accruing between March 4, 1893, and the 1st day of July, 1893, the last annual report of the Secretary of the Treasury shows that the deficit for the fiscal year ended July 1, 1894, was $69,803,260.58, and the deficiency for the year which ended July 1, 1895, was $42,805,233.18. The daily statement of the condition of the Treasury shows that the deficit since the 1st day of July, 1895, is in the neighborhood of $18,000,000, or at the rate of over thirty millions for this year, even should there be an improvement between now and the 1st of July, 1896. This deficit has largely resulted from the changes in the tariff laws, which so greatly decreased the income of the Government, and the bill that we passed

on the 26th instant it is hoped (if it shall become a law) will prevent the recurring of any deficit from this time on. Coincident with this deficit came the drainage upon the redemption fund.

Mr. Speaker, it was never contemplated that the Government should sell bonds, without special legislative authority, for the purpose of paying current expenses; but it is clear to everybody that the proceeds of the one hundred and sixty-odd millions of dollars of bonds which the Secretary of the Treasury has issued during the present Administration have been for the most part devoted to the payment of the current expenses of the Government, represented by this large deficit of one hundred and thirty-odd millions of dollars, and which expenses otherwise would not have been paid. This reduction in revenues, and its concomitant evil, the immense increase of the bonded debt, are to be attributed solely to that bad financial management which under the present Administration has brought about that unfortunate condition of things which led the people to overthrow the last Congress. The consequence is that the President, while now threatening to issue bonds for another hundred millions of dollars, has urged Congress to remain in session, to forego its usual holiday recess, and to speedily and promptly provide some relief for the Treasury. Congress, pursuant to the suggestion, has remained in session, and while the measures that have been proposed by the Republicans of the Ways and Means Committee have not been precisely such as the President desired, nor by any means such as meet the best views or wishes of the Republicans themselves, they are the only ones which seem likely to pass both Houses.

The first measure, already passed, will raise the revenue necessary to prevent future deficits, while the pending bill has only four objects in view. They are: First, to authorize the issuing of a bond which will bear less than 4 per cent interest per annum; second, to make clear that there is no intention at present to retire the greenback currency, as otherwise it would have no chance to pass this House; third, to prevent the continuance of those profitable syndicate purchases of bonds, which have created much scandal, and, by requiring the Secretary of the Treasury to advertise all sales of bonds, to give the people and the public everywhere a chance to invest as highest bidders, instead of closing them out in secret deals to syndicate bankers, so much to their profit and so greatly to the injury of the Treasury; and, fourth, to provide for the issue of certificates of indebtedness where the Government, by reason of a deficiency of revenues, is temporarily unable to pay an acknowledged liability. Opposition to a measure which has only these objects in view is most remarkable and inexplicable to as inexperienced a member of this House as I am. Much of that opposition seems to be based upon the notion (how derived it is impossible for me to imagine) that the provisions of the first section of the proposed legislation require and command the Secretary of the Treasury to issue in time of peace additional bonds bearing 3 per cent. But the most casual reading of the bill will demonstrate that there is not the slightest occasion for any notion of that kind.

The Secretary of the Treasury has the power, under the resumption act, to issue one thousand five hundred millions of bonds of the United States, all payable in coin, to maintain the redemption fund in the Treasury, subject to credit by the number of bonds that have been issued during Mr. Cleveland's Administration. It requires no additional legislation to enable him to do this. The whole object of this phase of the bill is to add to former laws so as to provide that when, in the exercise of previously given powers, he does issue bonds, he shall have the power to issue 3 per cent bonds instead of bonds bearing a higher rate of interest. Gentlemen seem to forget that the issuing of bonds is but another form of borrowing money for the purposes of the Government, and strange as it may seem, opposition is manifested to a proposition to authorize the Secretary of the Treasury to borrow that money at 3 per cent if he can get it, instead of at a higher rate.

Inquiry is made as to why we should not substitute this act for the previous laws, and thus to limit the power of the Secretary in borrowing money to 3 per cent interest. But gentlemen forget that it might be impossible, when the Government most needed money, and especially gold coin for redemption purposes, to borrow at that figure, although the law requires that the bonds shall be sold at not less than par, and the result would be if money was not obtainable for the purposes specified in the act at 3 per cent (and by money in this connection I mean gold coin for the purposes alone of the redemption fund, which is all this section deals with), then we could not borrow the money at all, unless existing laws remain in force, which enable the Secretary to go into the market as a borrower, and if he can not get the money at 3 per cent, to get it at 4, or 4½, or 5 per cent interest; so that practical business judgment demands that we shall leave to the Secretary of the Treasury that much discretion, that much power, to borrow gold-redemption-fund money if he can at low rates but if the Government must have it and he can not get it at low rates, then to leave with him the authority to get it at the market or higher rate, not exceeding 5 per cent.

True the Secretary now can sell the bonds at a premium, and in this way to some extent reduce the rate of interest, but if we are to continue year by year to have a large deficit in our revenues it will not be long until we can not sell 4 per cent bonds of the United States at a premium. I have too much respect for anyone who shall become the incumbent of the great office of Secretary of the Treasury to believe that he will so far differ from all of his predecessors, whether of one party or another, in honesty, in patriotism, and in an earnest desire to creditably fill the great office he holds, that if he can borrow money at 3 per cent he will decline to do so and pay a higher rate of interest. No man who has ever held that office has been of such a mold as to yield to any temptation to pay the highest interest when he can borrow at a lower, no matter whether he belonged to one party or the other, and I believe he should be invested with the discretion given by law.

Objection is made upon the part of some, and especially of those speaking for the Administration, that the law now proposed does not make the bonds payable specifically in gold coin. The gentlemen will remember, or ought to remember, that every statute of the United States upon the subject of issuing bonds, as well as the resumption act itself, is worded precisely as this proposed bill is worded in that respect, and provides that the bonds should be payable "in coin," and that the greenbacks shall be redeemed "in coin." I, for one, believe that this means gold coin. It has always been so construed by the Government, and could have meant nothing else at the time. I believe that the Government will ultimately pay and should pay every one of these bonds in gold coin or its full and accepted equivalent, and not in depreciated silver, but it might discredit (and the argument is used with much force that it would discredit) all previous issues of bonds of the United States issued under the resumption act to make new ones payable in gold coin. Should we now, for the first time, discriminate against them in the language used, and say that the bonds provided for by this act should be payable in gold coin, while the language of the other, to which it is an amendment, remained as before?

Mr. Speaker, it is exactly right in my judgment, in view of the previous legislation, which we are amending, in view of the honorable obligations of the Government, in view of the certainty that the utmost good faith will be preserved by the Government toward all of its creditors, and because previous bonds issued for redemption purposes are so worded, that this bill should be worded in this respect precisely as it is. It will not do to say the other bonds are sold and we have no interest in them. That would not be the language of an honorable Government.

Apprehension has been manifested, and most unnecessarily and without any sort of ground for it, that this bill would result in the retirement of the greenbacks, but the least attention to the real legislation proposed will show that it leaves untouched the act of May 31, 1878, which has been read, and which absolutely forbids the retirement of a single one of the greenback notes. The pending legislation not only does not propose to retire them, but in language as explicit as it is possible to use forbids their retirement. This is the purpose of the bill, although the time will, in my judgment, soon approach, especially if we continue to have a deficit and continue to issue bonds to keep up a consequent depletion of the redemption fund, when it will be absolutely necessary to consider whether the greenbacks should not be gradually retired in a period of say five or ten years, but whatever may be our individual views upon that subject this bill contains no sort of suggestion or requirement in that direction.

If this bill contained no other provision than the one which requires that the Secretary of the Treasury shall hereafter advertise any proposed sale of bonds, that alone ought to entitle it to the support alike of every Republican and every Democratic member of this House.

It is somewhat astonishing that more public scandal has not resulted from the syndicate operations, by which certain private individuals profited so much at the expense of the Government. It may be that the first syndicate operation was somewhat excusable under the then existing circumstances into which the Administration and the Democratic party, by their lack of wisdom, had brought the finances of the country, but surely such operations should be discountenanced by the law-making power, and as the people of this country have always shown themselves to be ready, able, and willing to maintain its credit, they ought, in common with the moneyed powers of the world, be given an opportunity to make bids for any bonds that the Government may sell. This feature of the bill surely is most commendable.

But one other subject requires to be noticed, namely, the second section of the bill. Some provision like it should always have been in the laws of the country. It is a business measure that should never have been overlooked, though probably no other occasion than the present has ever arisen when it was so much needed. In a nutshell, it gives the Secretary of the Treasury an opportunity either to issue to an acknowledged but unsatisfied creditor of the United States not otherwise provided for a certificate of indebtedness bearing 3 per cent interest, by which means the creditor can be treated justly and his claim bear an interest that ought to be paid upon it, or else, if he does not care to take

the certificate himself, in order to pay him the Secretary of the Treasury is authorized to sell the certificates and thus provide the cash means of doing so. This is the manifest effect and object of the second section. These certificates of indebtedness are not authorized, except when there is a deficiency of the revenue to pay current expenses of the United States. It is a just, reasonable, and wise measure, to which no one ought in seriousness to object.

Mr. Speaker, this bill, as I have read it and analyzed it, has no politics in it. It is founded in its entirety upon plain common sense business principles. It takes sharper eyes than mine to discover any politics in the bill, however much of the play of politics there may be around the opposition to its passage. But because it is a business proposition, because it provides, in my judgment, a wise enactment, because I believe the officers of the Government ought to be allowed, if they can, to borrow money at 3 per cent instead of a higher rate, because I believe that secret syndicate transactions in bonds ought to be discountenanced, as tending too much to bring the officers of the Government into great stock-jobbing operations, and because I believe that long before the Government has issued as large an amount of bonds as is authorized by the resumption act, the necessity for taking care of, or indeed for having a gold redemption fund, will be past or removed by wiser financial legislation, I most cheerfully support this bill, and upon these grounds offer a word in vindication of the action of the Republican majority of the Ways and Means Committee, although myself wishing that the resumption act itself had required all bonds to be payable in gold coin, and have thus saved a great deal of unforeseen trouble. But as the other bonds issued for the same purpose are payable in coin, these should read the same way; otherwise, if a 4 per cent redemption fund bond is issued it will be payable "in coin," while the 3 per cents issued for the same purpose would be payable "in gold coin." While this might please some, the practical judgment, indeed knowledge, of the committee was that it was impossible for it to pass into law in that shape, and that it was better not to attempt it, and thus sacrifice to the impracticable the other valuable features embraced in the proposed act.

The Coin Redemption Fund.

REMARKS

OF

HON. GEORGE W. HULICK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. HULICK said:

Mr. SPEAKER: I shall vote for the bill now under consideration, not because it commends itself to my judgment as being the very best measure of relief possible, but because it is a step in the right direction, and under the circumstances, in view of the deplorable condition of our national finances, possibly all that can be done at this time. On principle I am opposed to issuing the bonds of the Government in times of peace. There would be no necessity for it if the party in power would in good faith carry out even the Democratic principle of a tariff "for revenue only"; but to raise revenue sufficient to pay the current expenses of the Government, the interest on the public debt, pensions, etc., a tariff sufficiently high would have to be levied on imports which would result incidentally in protection to American labor and encouragement to American industries. This the Democratic party will never permit, so prejudiced are they against anything and everything that savors of protection. They had full control of the Government in the Fifty-third Congress, and placed upon the statute book a law that has utterly failed to produce sufficient revenue, so that President Cleveland, under the act of 1875, to provide for the resumption of specie payments, has issued bonds of the Government for $162,000,000, paying 4 and 5 per cent interest thereon, and on which was realized the sum of over $182,000,000.

Notwithstanding this vast sum has been poured into the Treasury, the gold reserve fund of $100,000,000 has melted away so that to-day there remains less than $65,000,000 to the credit of that fund. The statement of the Secretary of the Treasury this morning shows an excess of expenditures over receipts for the fiscal year of over $15,000,000. This, Mr. Speaker, is the unfortunate condition in which we find our finances to-day. What ought to be done? Aye, what can be done? is perhaps the better way to put the question, because the Republican party, as represented on this floor, can not get what we would like to have; we can not legislate as the best interests of the people demand.

The adoption of the bill now under consideration is, therefore, in my judgment, the best that can be done under the circumstances.

Now, what is the purport of this bill? It has two objects in view: First, to maintain and protect the coin redemption fund; and second, to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Under the resumption act of 1875 the Secretary of the Treasury is authorized to issue bonds of the Government at 4 and 5 per cent and to run from ten to thirty years. Under this bill interest must not exceed 3 per cent per annum, payable semiannually, and the bonds to be "redeemable at the pleasure of the United States in coin after five years from their date, and payable in fifteen years from their date"; thus placing on the market a bond at a lower rate of interest and upon a shorter time to run. In this same section there is another very important provision, in view of what the President and Secretary of the Treasury did last February in negotiating the secret sale of the sixty-two millions of bonds to a foreign syndicate. Under this bill such a reprehensible sale can not be made, and it also prohibits such a contract under the act of 1875. It provides that under this act and under the act of 1875 the Secretary "shall advertise the same and authorize subscriptions therefor to be made at the Treasury Department and at the subtreasuries and designated depositories of the United States"; thus affording to the American people an opportunity to invest American capital in American securities. Do we hear anybody object to this? Yes, I regret to say. We hear it on the floor of this House of Representatives, and the same sentiment is echoed from the White House. Let us pass this bill and forever prohibit by law the secret sale of our bonds to foreign syndicates reaping millions of profits to the exclusion of American capitalists.

The second section of the bill provides for issuing $50,000,000, payable in three years, at 3 per cent per annum, of the denomination of $20 or multiples thereof, payable at the Treasury of the United States and at such post-offices as the Secretary may select. This, Mr. Speaker, is getting near the people—within their reach. Twenty-dollar Government bonds for sale at your post-offices. Scattered all over the United States are many thousands of people who would gladly invest their small earnings in these securities. There are trust funds, guardian funds, corporation funds, individual funds—every description of funds in every bank and depository in this country, amounting to millions, that are now idle, drawing no interest, that would flow into the United States Treasury, and these bonds would be taken up and held by all classes of our people.

Mr. Speaker, I hear it said by those who oppose this bill—notably, the learned gentleman from Georgia [Mr. CRISP], the leader of the minority—that this bill proposes to retire the greenbacks and thereby contract the currency. Certainly no graver error could be indulged in by the opponents of this measure. If I could be convinced that the greenbacks would be permanently retired if this bill were to become a law I should vote against it. I don't think the Treasury notes should be withdrawn from circulation. The eminent chairman of the Ways and Means Committee, who drafted this bill, said in his speech on yesterday that the greenbacks would not be retired, that the currency would not be contracted, if this measure is adopted. In fact, Mr. Speaker, the language of the bill is so explicit on this point that there can be no mistake about it.

It is true that this bill provides that "the Secretary of the Treasury shall use the proceeds thereof for the redemption of United States legal-tender notes and for no other purpose," but it further provides that "nothing in this act shall be construed to repeal or modify" an act to forbid the further retirement of the United States legal-tender notes, passed May 31, 1878. Let me call the attention of the House to the language of that act of 1878, which is plain and unequivocal:

That from and after the passage of this act it shall not be lawful for the Secretary of the Treasury or other officer under him to cancel or retire any more of the United States legal-tender notes.

Now, I want to emphasize the following express language of the law and call the attention of those who oppose this bill to this provision:

And when any of said notes may be redeemed or be received into the Treasury under any law from any source whatever and shall belong to the United States they shall not be retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation.

Could language be more explicit than this? They (the greenbacks) shall not be canceled or destroyed, but shall be reissued and kept in circulation.

Mr. Speaker, there is no tenable argument against this bill. Is it not true that our Democratic friends oppose it because the Republicans favor it? They are keeping up their reputation for opposing every measure advocated by the Republican party for the last thirty years—opposing, discouraging, tearing down, destroying, and protesting against everything that was for the benefit of the people—a policy of antagonisms, and, when for some unaccountable reason, which no man can understand, the Democratic party was placed in full control of the Government, it most sig-

nally failed to do one single thing for the good of the people, but on the contrary has emptied the Treasury, run in debt over $162,000,000, and had to call on a foreign syndicate of capitalists for a valuable consideration to act as a protectorate over our Treasury and to assist that party in trying to maintain the national credit.

And at this very hour the Secretary of the Treasury and the President are negotiating another loan of one or two hundred millions from these foreign protectors (?) of our national credit. Pass this bill and thereby say to the President and Secretary of the Treasury, We have in our country, in the hands of our own people, money enough to take up every bond issued or to be issued—only give them a chance. Send your bonds out to the post-offices all over this country and see whether or not the people haven't money and patriotism enough to meet the emergency.

On day before yesterday we passed a bill in this House that will yield about forty millions of revenue. It is not what the Republicans wanted, it is quite as much as we can faintly hope the Senate and President will give us, but as far as it goes it will protect the woolgrowers' interests and other industries.

In the fullness of time, however, such legislation will be placed on the statute book that will yield sufficient revenue to pay all the current expenses of the Government, pay all pensions to the soldiers without disallowing or cutting them down, pay interest on Democratic bonds, reduce the public debt, maintain the gold reserve fund, and at the same time will afford protection to American labor, encourage and foster American industries, and again place our country on the highway of prosperity, as it was when the Republican party turned it over to the present Administration.

The Coin Redemption Fund.

REMARKS
OF
HON. DAVID G. COLSON,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 6, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. COLSON said:

Mr. SPEAKER: The President in his message of emergency to the Congress, says:

I ask at the hands of the Congress such prompt aid as it alone has the power to give to prevent in a time of fear and apprehension any sacrifice of the people's interest and the public funds or the impairment of our public credit in an effort by executive action to relieve the dangers of the present emergency.

The bill just reported by the Committee on Ways and Means and now before the House for consideration, if intended as a response to the President's request, in my opinion, is not such a response as should be given.

I not only have no objection to but favor section 2 of the bill, which authorizes the Secretary of the Treasury, at his discretion, to issue certificates of indebtedness of the United States to an amount not exceeding $50,000,000, payable in three years after their date to the bearer in lawful money of the United States of the denomination of $20 or multiples thereof, with annual coupons for interest at the rate of 3 per cent per annum, and to sell and dispose of the same for not less than an equal amount of lawful money of the United States at the Treasury Department, at the subtreasuries and designated depositories of the United States, and at such post-offices as he may select, for the purpose of providing for any temporary deficiency now existing or which may hereafter occur in the current revenues of the Government. The certificates of indebtedness provided for in this section of the bill, being of small denominations and distributed through the post-offices of the country, would afford a safe investment to our own people, especially to that class of our own people who are unable to buy the bonds of the Government of larger denominations and who desire to invest without delay for a short time any funds they may have idle. These certificates will also invite from its hiding place much of the yellow metal now in demand and so much needed by the Government and which for years has been hidden away in private places of deposit because of lack of confidence on the part of the owners in the banking institutions of the country. I believe that the power which this section confers upon the Secretary of the Treasury is such as he should have, because it is not always possible to anticipate and provide for every expense of the Government, and deficiencies are liable to occur, to provide for which this section of the bill gives the power by selling a form of certificates of indebtedness which the great mass of the people can readily absorb at any time the Government may desire to secure the loan.

The people of this country have confidence in the ability of the Government to redeem or make good its obligations, and I believe that not only the confidence of the people but their patriotic impulses would cause them to come to the support of the Government by absorbing these certificates of indebtedness at any time the Government might be required to issue them to provide for any temporary deficiency in its revenues. I believe that every act authorizing the issue by the Government of certificates of indebtedness or bonds for any purpose should require that such certificates or bonds should be issued in sums of $20 or multiples thereof, so that a larger number of our citizens could share in the benefits resulting from the investment of funds in the Government securities. Only a small per cent of our people can purchase Government securities of the denominations of a thousand dollars or more; a much larger per cent of our people can purchase Government securities of the denomination of $20 or small multiples thereof. It should be as easy for any citizen who has $20, $40, $100, or $200 to invest it in a Government security as it is for a citizen who has $1,000 or $50,000 to do so. Section 2 of the bill is a recognition of this principle, and this is one of the facts that commend it to the favor of this House. The purpose for which this section is intended is clear and explicit, and there can be no misapprehension of its purpose, and that purpose being right and proper, I give this section of the bill my hearty support.

Now, Mr. Speaker, as to the first section of this bill. What are the conditions which make it necessary for the Government to issue bonds to maintain and protect the coin redemption fund, and who is responsible for the existence of these conditions? Why is it that a "time of fear and apprehension" not only exists to-day but has existed during the last three years? It was not necessary in time of peace under any Administration before the present Democratic Administration or prior to March 4, 1893, for the Government of the United States to issue its bonds to maintain and protect the coin redemption fund of the Treasury. The conditions that have, since the 4th of March, 1893, rendered such action necessary are most remarkable, and the party responsible for their existence should be, as it already has been, condemned by the people.

We have here present the living evidence of such condemnation in the shape of an unprecedented Republican majority in this House. Under the Administration of Benjamin Harrison and the laws enacted during that Administration and prior thereto by the Republican party the revenues of the Government were amply sufficient to meet its expenses, and the $100,000,000 of gold kept as a sacred reserve in the Treasury for the redemption of the greenbacks and Treasury notes was not encroached upon. Labor was employed, capital sought investment in every branch of creative industry, and our people were more prosperous than they knew. At the election of 1892, the Democratic party, having beguiled the people with the cry of tariff reform and having insisted that the masses were being robbed to enrich the few by tariff taxation, was put in control of both branches of the legislative department of the Government and the Chief Magistracy of the nation, an event which carried with it a responsibility which the Democratic party was ill prepared to assume.

It was the first time in more than thirty years that the Democratic party had the power to enact a law affecting national affairs. Swift upon its accession to power it proceeded to inaugurate its tariff reform by repealing the McKinley tariff law, which afforded ample revenues to the Government and gave protection to American interests and American labor, by enacting what in the House was called the "Wilson bill," and which as amended in the Senate was called the "Brice-Gorman-Wilson tariff bill," and which by Mr. Cleveland, the occupant of the White House, because of the incidental protection given by its Senate amendments to a very few industries, was denounced as an act of "party perfidy and party dishonor," and which, considered in the light of results, had more appropriately been called "An act to create a deficiency in the public revenue and make it necessary for the Secretary of the Treasury to sell the bonds of the Government worth $1.18 in the open market for $1.04 in a private deal with a bond syndicate."

The report of the Secretary of the Treasury shows that during the first fiscal year of Mr. Cleveland's Administration, ended June 30, 1894, the expenditures of the Government exceeded its revenues by $69,803,260.58, and for the fiscal year ended June 30, 1895, by $42,805,223.18, making a deficit of more than $112,608,483.76 for the two years. The Wilson tariff law failing to provide a sufficient amount of revenue to meet the expenses of the Government, the hundred million dollars of gold held in the Treasury as a fund for the redemption of the greenbacks and Treasury notes was diverted from its intended purpose and used to meet the ordinary expenses of the Government. This raid upon the gold reserve had the effect of intensifying the distrust in the business world that began with the election of Mr. Cleveland as President of the United States and a Democratic Congress in 1892, with the result that the banking institutions of the country, in order to fortify themselves

against the extraordinary demands that accompany business panics, declined to make further loans, increased their gold reserve by converting their greenbacks and Treasury notes which they received in settlement of their claims against their debtors into gold by having them exchanged for gold at the Treasury of the Government.

To meet this demand for gold upon the Treasury the Secretary of the Treasury has issued and sold bonds of the Government to the extent of $162,000,000 since the 4th of March, 1893, and bonds worth $1.18 have been sold at $1.04. The deficit of more than $112,000,000 which existed on the 30th of June, 1895, has increased enormously, and is at present increasing at the rate of four or five million dollars a month, and the consequent stream of gold which has been kept flowing into the Treasury and credited to the fund maintained to redeem the greenbacks and Treasury notes has steadily been withdrawn from that fund to meet the current expenses of the Government. This condition is intensified by the fact that the greenbacks and Treasury notes which the Government is pledged to redeem in coin and which it is the Government's policy to redeem in gold if the holder so demands, which policy meets with my approval, as soon as so redeemed have to be reissued under the existing law, and as soon as so reissued are again used to withdraw the gold from the Treasury. It is to meet this condition that the President asks Congress to take some action. I do not believe that section 1 of the bill now under consideration meets the condition.

The Secretary of the Treasury, under his construction of the act of January 14, 1875, now has the power to sell 4 per cent or 5 per cent bonds to replenish the gold reserve. It is claimed by gentlemen who have spoken in advocacy of section 1 of the bill before the House that as it authorizes the Secretary of the Treasury to sell 3 per cent bonds to replenish the gold reserve, its passage would result in a saving to the Government. In this they are mistaken, because if, when bonds are sold, money can be had for 3 per cent, a 4 or a 5 per cent bond can be sold on a 3 per cent basis, and net as much to the Government as a 3 per cent bond sold at par. This section provides no solution of the financial difficulty confronting the nation. It does not go to the root of the evil, as the bill we pass should do. It contemplates a continuation of the disastrous policy pursued by the present Administration, and if it had been submitted to a caucus of the Republicans of this House would not have been approved by it in its present shape.

We have in this country a circulation which is barely ample to meet the requirements of trade, and I am opposed to any form of legislation that looks to a contraction of the currency. I would prefer to see some legislation that would provide for a gradual increase in the money of the country, providing always that every dollar of our currency is kept as good as any other dollar. I had hoped that the Committee on Ways and Means would report a bill that would put an end to the embarrassment now being caused by the constant presentation of our greenbacks and Treasury notes at the Treasury for redemption in gold. I am opposed, however, to the retirement of the greenbacks and Treasury notes unless some other form of currency is provided to take their place, because such contraction of the currency would result in additional distress to the people. If the responsibility of maintaining a current redemption could be obviated, I would be glad to see all currency issued by the Government itself, but as no provision has ever been suggested for this, as it seems necessary for currency to be based upon some form of bond payable in future I would favor any legislation that would retire the greenbacks and supply their places with some form of national currency.

It is my opinion that the bonded debt of the Government should not be increased in time of peace, but that, on the contrary, the bonded debt created in time of war should be paid as rapidly as possible. Such has been the policy of the Government as administered by the Republican party. From the close of the late civil war to the beginning of the present Democratic Administration the bonded debt of the Government was constantly reduced, the total reduction being about $2,400,000,000. The Democratic party, reversing this policy, has, since the 4th of March, 1893, increased the bonded debt of the Government more than $162,000,000. Which policy is right? The people of this country have answered this question. What the country now needs is a tariff law which will insure an amount of revenue which, supplemented by the internal revenue, will amply meet the expenses of the Government. This House has passed a tariff bill which, while not such as it would have passed had the committee not been called upon to act with great haste, will, we believe, if it becomes a law, provide ample revenues to meet the expenses of the Government. Having done this, I doubt that we should pass section 1 of this bill, because such action will be regarded by the country as a quasi indorsement by the Republican party of the Democratic policy of increasing the public debt in time of peace, and also, by implication, of the Democratic legislation which caused the deficit I have mentioned, from which our embarrassing condition has arisen. I can not, for this reason, and for the further reason that it provides no solution of the financial difficulties present or impending, give my support to section 1 of the bill.

I believe this House should pass a bill providing for the issue of five hundred millions, or as great a sum as might be necessary, of 2½ per cent fifty-year coin bonds, for the purpose of retiring the $346,000,000 of the greenbacks and $147,000,000 of Treasury notes issued under the act of 1890, the bonds to serve as a basis for a national currency to take the place of the greenbacks and Treasury notes so retired. Such a law would at once relieve the Treasury of the burden of maintaining current redemption, restore confidence in the business world, and go far toward ending distress among the people. The country expects the House to pass such measures as will deal thoroughly with the evils of our financial system, and it should do so, and put the responsibility of their failure to become laws upon the Senate or the Chief Magistrate of the nation.

The Coin Redemption Fund.

REMARKS
OF
HON. JOHN A. BARHAM,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. BARHAM said:

Mr. SPEAKER: I am an American first and a Republican afterwards. The bill which is under discussion is neither an American nor a Republican measure. The first section of the bill is a legislative ratification of all the secret manipulations of Mr. Cleveland and his Secretary of the Treasury with the foreign syndicate, out of which the people lost more than $8,000,000. If it is intended to deal fairly with the people, why, in heaven's name, was not a plain, ordinary amendment made to the act of 1875 making it necessary to advertise for bids on a sale of bonds and reducing the rate of interest to 3 per cent? Then the American people would be placed upon equal terms with Wall street and Rothschild & Co.

It is perfectly apparent that this section is in the interest of these institutions and people who can control large sums of money and who are seeking long-time loans. Now, look at the second section of the bill. It provides for a low rate of interest—3 per cent—and short-time bonds, made payable in lawful money. It is expected that the people, from patriotic motives, in the case of an emergency will take these bonds. Why should this discrimination be made against our people? Why require the people to take low-rate bonds and make them accept in payment lawful money, when the bonds which it is expected the banks, Wall street, and the Rothschilds to take are made payable in coin (which means gold, as construed by Carlisle), and are long-time obligations? No Republican convention ever indorsed such a measure; no Republican caucus of this House ever indorsed such a measure. This bill is the creation of Grover Cleveland. I am not a cold, clammy, Republican Cleveland cuckoo. I am now and always have been opposed to bond issues in time of peace, and if Mr. Cleveland will approve the bill which was passed by the House on yesterday no further emergency legislation will be necessary by this Congress. The revenues will be amply sufficient for all the purposes of this Government; and if he sees proper to veto yesterday's action by this House let him and his party, if he has any left, account to the people.

This bill is one which is susceptible of more than one construction even by lawyers. Now, why should we place such a bill in the hands of Secretary Carlisle for construction when all know who have read what he says that he does not know what money is?

Before the Chamber of Commerce of New York, in the course of his remarks upon the financial question a few days since, he said:

> The proposition that a promise of the Government to pay money is money is just as absurd as the proposition to deliver a horse is a horse. Yet there are eminent men in public councils who believe that the United States promisory note is actual money.

A greenback is the promissory note of this Government and is a legal tender for debt.

The term "money" is used to designate the whole volume of the medium of exchange recognized by the custom of merchants and the laws of the country. It includes coin, but is not confined to it. Whatever is lawfully current in buying and selling is money.

By universal consent, under the sanction of all courts, the lawful currency of a country, that which may be tendered and must

be received in discharge of a debt, is money. The Supreme Court of the United States and nearly every State supreme court in the Union have so held. From which it follows that anything which this Government makes a legal tender for debt is money, notwithstanding the declaration of our distinguished Secretary to the contrary. Under the Revised Statutes of the United States gold coins, silver dollars to any amount, silver halves and quarters to the amount of $5 in one payment, minor coins to an amount not exceeding 25 cents, and United States notes are all legal tenders for debt, and under the decisions of our courts are each and all money. A very elaborate discussion and full citation of authorities may be found in Klauber *vs.* Biggerstaff, 47 Wisconsin, 557.

The Legal-Tender cases reported in 12 Wallace would be fine reading upon the question of what is money for Mr. Carlisle, who thinks greenbacks are not money. Now, if he does not know what money is, why place in his hands for construction an act the meaning of which is doubtful in the judgment of men who know what words in the English language mean? We all know how he has construed the word "coin." He says it means gold. Anyone who ever looked at the definition of the word "coin" knows that it means a metal stamped and made a legal tender. It means gold to any amount. It means silver dollars to any amount. It means half and quarter dollars to the amount of $5, and nickels to the amount of 25 cents.

Conditions are bad enough now without placing further and more doubtful and dangerous legislation in the hands of this Administration.

The advertisement clause in the bill will not prevent Mr. Cleveland and his Secretary from violating the statute. You can not prevent larceny by providing in a statute that it is a felony. You may convict and punish the guilty under a statute, but you can not prevent crime by making a law. It was as much a violation of the act of 1875, and no more, to make a secret contract with a foreign syndicate, without advertisement, for the sale of $163,000,000 of bonds, as it would be to disregard the provisions of this bill; and the sale will be to a foreign combine even though the bill becomes a law. A sale, when made, will be for $100,000,000 of bonds, and no one but Rothschilds, Belmont, Morgan & Co. will be able to take the bonds. The sale will not be parceled out, but to one syndicate.

The second section discriminates against our people. The bonds are payable in lawful money, while bonds for millions, which will be sold to a foreign syndicate, are made payable in coin. Why discriminate against our people in this manner and expect thereby to arouse patriotic feelings?

Suppose I take a hundred thousand dollars of these certificates. Can I compel the Treasury to take silver for them? Anybody knows that Mr. Carlisle would not accept such a bid. Yet they are payable in silver. I will never support a measure which addresses itself to a patriotic people on such unequal terms.

The Coin Redemption Fund.

REMARKS

OF

HON. WILLIAM F. STROWD,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 28, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. STROWD of North Carolina said:

Mr. SPEAKER: I apprehend that the excuse for the introduction of this bill grows out of the fact that the Secretary of the Treasury, in construing the second section of the law known as the Sherman Act, persists in using his discretion in favor of gold, when the law expressly says he shall redeem these obligations in either silver or gold. And in order to maintain the parity between the two metals he should have treated both as equal in discharging these obligations. Then there would be as great a necessity for a silver reserve as for a gold reserve.

Let him use the discretion the law gives him and coin the silver and pay in whichever metal is most convenient, and the problem is solved. The Treasury will not be looted by gamblers and money sharks.

The trouble is not in the law but in his strained construction of the law. There is no law to keep one hundred millions in gold in the Treasury. If the Secretary would take away this temptation from the money manipulators by redeeming the greenbacks and Treasury notes in silver or gold, whichever is most convenient, and let that be the American policy, he would at once solve these fiscal problems. Why issue interest-bearing bonds in time of peace? Why not issue legal-tender notes based on the same security as the proposed bonds? Speaking of such notes, one of the wisest men that ever occupied a seat on this floor said, in reference to these same notes:

Mr. Speaker, I hold in my hand a legal-tender Treasury note. It is good money. Good for the farmer, good for the merchant, good for the banker, good for the manufacturer, good for the great plain people. Why is it good? Because every dollar's worth of property and every drop of loyal blood in the patriotic heart of every citizen of this country is behind them.

Then why issue bonds—gold compound interest-bearing bonds—and put a debt upon the country which our children's children will not see paid? Day before yesterday you passed a bill largely increasing the tariff, which is now a tariff for protection. There is no such thing as protection without a protector, and who, let me ask, are the protectors? Some say the consumer, but I say, in its final analysis, it comes out of the farmer. When you speak of business you do not mean farmers or farming. You mean commerce, finance, manufacturing, etc. The great toiling masses are not in it, except about election times.

This bill is altogether in the interest of the bankers and money classes of this country and England. This and all other laws that have been passed for the last thirty years and more have been in the interest of the wealthy classes, and to the detriment of the laboring classes of this country. It is paternalism of the worst kind. As a Populist, I protest against creating an army of beneficiaries who think that inasmuch as the Government has so shaped its financial policy as to give nearly all the wealth of the nation into their hands, they ought of right to rule it. That their protectors and benefactors have no rights they are bound to respect. The object of this bond bill is to retire the greenbacks and Treasury notes—to still further contract the currency by hundreds of millions and thereby enriching the few to the utter ruin of that great upper middle class of society which is, and has been in all times, the saving strength of the nation.

They could coin the seigniorage and get the amount of money needed by the Treasury, but they will not do that. They will reject every proposition to raise money that can be suggested or submitted. Nothing will satisfy them but gold bonds. Switzerland is the model Republic of the world. Fifty years ago she faced the problems confronting the poor of the United States to-day. Her patriots were equal to the emergency and established a Government bank. The public credit was printed on notes, and these notes were loaned to the farmers on mortgages, running for thirty years, at 3½ per cent interest, the borrower to pay one-thirtieth of the principal back annually. The old mortgages were taken up; prosperity smiled upon the people; Shylock was banished; usury was impossible, and the little nation went upward and onward to its happy destiny.

To debase silver and exalt gold, and then cry out dishonest dollar, 50-cent dollar, is about on a parity with overproduction and laziness. It is the argument that the highway robber makes to his victim. It is the argument that the wolf makes to the lamb. It is the argument that Amnon made to his sister Tamar when he despoiled her of her virtue and then kicked her out of the door.

Suppose gold should receive the same treatment at the hands of the legislative bodies of all civilized nations, what would be the result? Why, a child would know the answer. If the same treatment had been accorded to silver as has been accorded to gold, does not every man in this House know they would be as near on a parity as they were prior to 1873?

Whenever silver receives proper legislation at the hands of this Congress it will be upon a parity with gold at any ratio Congress may establish, whether 16 to 1, or more, or less. If the price of gold and silver and the parity between them is maintained by the quantity of each produced, or by intrinsic value, why was it that England's demonetizing silver in 1816 did not degrade it below the price of gold? Why was it that France by having a ratio of 15½ to 1, notwithstanding the fact that England had demonetized it, kept silver at a premium of 3 per cent throughout the civilized world for more than fifty years? All these arguments about parity, cheap money, and dishonest dollars border on the "vulgar confines of sophistry." It is the only argument they have (and that is no argument) to cover the most vicious system of financial laws ever enacted in the civilized world. That system is to exalt the dollar and debase the man; it is a system that enhances the value of money and depresses the prices of property and products; a system that has inaugurated a slavery in the rural districts of this nation among the farmers and laborers, more galling, more cruel, more oppressive than any African slavery that this country ever saw.

If the demonetization of silver has the same effect in this nation as it has produced in England it will cause the farmers to lose their homes and make them slaves where they were heretofore masters. When silver was demonetized in England in 1816 she had 180,000 landowners. In less than fifty years four-fifths of them had lost their homes. England to-day has a peasantry too poor and

ignorant to rise to the dignity of patriotism, instead of a yeomanry whose manhood and prowess made her the mistress of the world. In an evil hour for old England she yielded to the cry of the money shark, she contracted her currency, making her money too dear for the plain, honest man, and degraded and debased the manhood of her own people so that she never can again reproduce the armies that conquered Napoleon. In an evil hour our own country followed her example; and this bill crowns the climax of a conspiracy which began with placing the exception clause on the greenbacks when the gold gamblers got control of the finances of this country; and I say here and now that every act of Congress passed from that day to this day, namely, the banking act, the act contracting the currency, the public-credit-strengthening act, the act demonetizing silver, the act resuming specie payments, and this present bond bill, which retires all the greenbacks and Treasury notes and increases the public debt hundreds of millions and brings the country to a solid gold basis, means endless poverty and never-ceasing toil for the laborer and the poor man—a struggle for existence to keep the wolf of hunger and want from his door.

It is estimated that the indebtedness of this country of all kinds, public and private, municipal and corporate, amounts to the enormous sum of $30,000,000,000, the average interest on which is 6 per cent per annum, which amounts to $1,800,000,000. When we consider that all the corn, wheat, oats, and cotton produced by the farmers and all the gold and silver mined in the United States amounts to only about fourteen hundred millions, the appalling fact remains that after taking nearly everything the farmer and miner produces in this country, leaving nothing for the support of their families, we then fall short of meeting the interest on this indebtedness nearly $400,000,000 annually.

It is plain that this debt can never be paid. When we take into consideration the further fact that out of the 14,000,000 of homes in this country, 9,000,000 of them are under mortgage, is it not time that this Congress should be considering something else rather than increasing the debt of the nation? It is not the business of Congress to enact laws to enable a few men to live in wealth and luxury and consign the toiling millions to serfdom, but to enact such laws as will give every man and every woman and every boy and every girl an open field and a fair chance in the race of life.

The Tariff.

REMARKS

OF

HON. JOHN A. BARHAM,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

Mr. BARHAM said:

Mr. SPEAKER: It is not my purpose to discuss at length the measure before the House. While it is not all that I desire to advocate and not all that our interests and industries demand, yet it is all that we may expect the President to approve, or, by not approving, allow to become a law. My section of the country and its industries require for successful competition the full restoration of the McKinley tariff on lumber, wool, fruits, butter, and agricultural products. The increase of duty on these articles, as provided in this bill, will, however, place these industries beyond the point of bankruptcy and will enable the people so engaged at least to live until the restoration of the Republican party to power, the inauguration of a Republican President, and the convening of the Fifty-fifth Congress, when, as the country may be well assured, a protective tariff will be fully restored.

The passage of this bill, which is an assured fact, in the speedy manner proposed by the rule which has just been adopted, will reassure the people and inspire them with confidence that the Fifty-fourth Congress means to transact business and not build up politics. The President, in his message, in response to which this measure is introduced, substantially concedes that the revenue raised by the hyphened tariff bill for revenue only passed by the last Congress is wholly and entirely inadequate to suit conditions with which the country is confronted. In fact, we are face to face with a condition, and not a theory. It is true a theory has produced this condition, and the President's message can in no way be construed other than admitting that the theories of the Democratic party, found announced in the Gorman-Wilson bill, are colossal failures which have brought the richest, best, and most productive country on God's green earth to the very verge of financial bankruptcy while having the most wonderful resources and integrity beyond question.

It seems to me that the other side of the Chamber can ill afford to taunt this side with haste and want of due consideration of this measure. The people fully understand the question of tariff and have in the most emphatic manner passed upon that question through the ballot box. Besides being fully advised, those of them who doubted, in fact denied, the correctness of the doctrine of Republican protection have been educated in the school of experience until they no longer desire discussion. What the people most desire at the hands of Congress is action; and beyond this the request of the President in his message is so urgent for immediate and speedy relief, he asks us to forego our usual Christmas holiday, to waive our Christmas turkey, that the country may be relieved. In the face of such urgency by a Democratic President it is difficult for a reasonable person to see how the Democrats upon this floor can cry haste upon the part of the Republicans.

The people do not desire further discussion; your side ought to have discovered your error; if not, time and argument will not remove your want of capacity to discover. Yet you argue that if a tariff measure is to be enacted we should enact the McKinley bill. We certainly most sincerely thank you for your kind solicitude for what Republicans ought to do. But in so far as I am concerned I reject your advice for a great number of reasons. It is perfectly apparent from your past record and history that your party is a party of errors. It is not advisable to consult error with the hope of getting right. No, the Republican party has always been big enough, broad enough, and had brains enough to meet any emergency. None has ever arisen which was too great for it to overcome, or for which it failed to adopt a full, fair, adequate, and complete remedy. No, we will not follow your advice, for it would be a mistake, of course.

The Secretary of the Treasury has, in the last two and a half years, sold bonds to the amount of $162,000,000, from the proceeds of which he has paid out for the current expenses of this Government $133,000,000. Just so long as there is a deficiency in the revenues which comes to this Government to pay current expenses the "endless chain" will run on, and bond issue after bond issue will be the result. The revenue which will come from this measure will be about $44,000,000, and thereby the income of the Government will equal its expenditures, and there will be no deficit, and the bond issue will cease. It is useless and idle work at this time to discuss a general protective tariff measure; the people do not desire it, and this Congress will pass this measure, which will meet the present urgent emergency, and delay the consideration of a protective measure until after there is a change of administration.

Bonds, High Tariffs, and Certificates of Indebtedness.

REMARKS

OF

HON. A. M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. DOCKERY said:

Mr. SPEAKER: I shall avail myself of the courtesy of the House to state succinctly some of the reasons which impel me to oppose the propositions submitted by the Republican party to meet the exigencies of our Treasury situation. They provide not only for a "horizontal" annual increase of tariff taxation amounting to about $40,000,000, but also for the issue of 3 per cent coin bonds, without limit, to replenish the gold reserve, together with the authorization of 3 per cent certificates of indebtedness not to exceed $50,000,000 to meet temporary deficiencies in our national income.

It may be well to state that the existing tariff law would probably have met all the requirements of the Treasury but for the unexpected decision of the Supreme Court depriving the Government annually of not less than $30,000,000 of income tax revenue.

In view of this decision, however, declaring the unconstitutionality of the income tax, the Secretary of the Treasury estimates that the deficiency on account of revenues and expenditures for this fiscal year will amount to about $17,000,000, and at the close of the fiscal year 1897 the surplus in the Treasury on the basis of current revenues and liabilities will be about $7,000,000.

It may be well to state in passing that the deficiency is in no wise due to wanton expenditures on the part of the present Administration. During the fiscal year 1895 receipts were greater by $15,668,055.86 than during the prior fiscal year; yet the expendi-

tures were reduced by an economical Administration below the previous year in the sum of $11,329,981.54. Indeed, during the fiscal years 1894 and 1895, as stated by the Secretary of the Treasury, the ordinary expenditures of the Government were decreased by $27,282,656.20, as compared with the fiscal year 1893. It must also be remembered in this connection that receipts from customs revenue were greatly diminished by the McKinley Act, while expenditures have been greatly increased, largely on account of the legislation of the Fifty-first Congress, commonly known as the Reed Congress.

The results of dwindling revenues and increasing expenditures were becoming apparent even under the Administration of Mr. Harrison, for during the last four months of his term the expenditures exceeded the receipts by $4,094,021.38.

This deficiency, with others that have followed, was almost solely due to the riotous appropriations of the Republican party. From March 1, 1885, to March 1, 1889, a period covering the four years of Mr. Cleveland's first Administration, the entire income of the Government amounted to $1,451,660,246.74, while the total receipts from March 1, 1889, to March 1, 1893, under Mr. Harrison, aggregated $1,539,723,590.58. The entire expenditures for the same periods, exclusive of bond purchases and premiums thereon, were $1,063,223,202.93 under Mr. Cleveland and $1,330,394,780.55 under Mr. Harrison. In other words, while the receipts of Mr. Harrison's Administration exceeded those of President Cleveland's by $88,063,343.84, the expenditures of Mr. Harrison were $267,171,577.62 greater than those of his Democratic predecessor. The expenditures of the Government leaped from $318,040,710.66 during the fiscal year 1890 to $383,477,954.49 in 1893.

It is impossible to state with accuracy what proportion of this increased outlay was due to the legislation of the Fifty-first Congress, but it is known that of the appropriations of the Fifty-second Congress about $154,000,000 were consequent upon the legislation of the Fifty-first Congress. Moreover, at the close of Mr. Cleveland's first Administration the Democratic party turned over to the Administration of Mr. Harrison, upon the present basis of stating the Treasury account, $83,827,190.29 of available cash assets in excess of the $100,000,000 gold reserve. After four years of Republican rule the Democratic party resumed control of national affairs, and found in the Treasury at the beginning of March, 1893, an apparent surplus of but $24,128,087.88, exclusive of the gold reserve. This meager surplus, consisting in great part of unavailable subsidiary and minor coin, was all that remained, notwithstanding, as has already been stated in this debate, the Republican party had extended $25,364,500 of bonds maturing September 1, 1891, and had also covered into the Treasury and used for general expenditures $54,207,975.75 of trust funds belonging to the holders of national-bank notes.

The Republican Administration had also defaulted during the fiscal years 1892 and 1893 in the requirements of the sinking fund by an amount exceeding $40,000,000, and had reduced the disbursing officers' balances available for current expenses from $47,905,423.30 to $23,515,033.70 during the four-year term beginning March 1, 1889.

It can not be claimed that the diminishing surplus was due to the purchase of Government bonds, for during President Cleveland's first Administration bonds were retired at a cost of $360,419,953.11, as against but $292,963,486.67 used by President Harrison for like purposes. There were also inherited at the time Mr. Cleveland was inaugurated President, on the 4th of March, 1893, outstanding liabilities authorized by prior Congresses amounting to $96,051,325.96. These liabilities were to be met by appropriations or expenditures after the close of the fiscal year 1894, the items being as follows:

River and harbor contract liabilities	$28,112,147.00
River and harbor appropriations not to be expended until after close of fiscal year 1894	2,500,288.00
Balance under contracts authorized for Army Gun Factory and heavy ordnance	5,526,000.00
Balance to be appropriated for the Library of Congress under contracts authorized	2,150,000.00
Amount to be appropriated under authorized limit of cost for public buildings	$9,989,265.71
Amount to be appropriated for light-houses	725,600.00
Increase of the Navy	16,325,000.00
National-bank redemption account, July 1, 1894	15,263,473.25
Cherokee Outlet lands	8,300,000.00
Additional amount to be expended on public works under continuing appropriations heretofore made	7,159,552.00
Total fixed liabilities to be met after the fiscal year 1894	96,051,325.96

Mr. Speaker, I have felt constrained to make this hurried summary of fiscal affairs, inasmuch as the leaders of the Republican party in the course of this debate have persistently sought to fix the responsibility of the Treasury deficiency upon the legislation of the Democratic party and its national Administration. In the presence of this fiscal exhibit, however, it becomes obvious that the Democratic party is acquitted of responsibility, except in so far as the deficiency results from income-tax legislation, and we have no apologies to offer for our efforts to require the accumulated capital of the country to bear its just proportion of the burdens of Government.

PROPOSED LEGISLATION.

Mr. Speaker, I come now to a very brief review of the so-called remedial propositions submitted by the Republican party. It will not be denied that the Treasury situation, both in respect to current income and the gold reserve, is far from satisfactory, but in order to make an intelligent application of a remedy we must first determine the causes which have depleted this reserve and reduced the revenues. I do not concur in the view that the Secretary of the Treasury should be clothed with power to issue three-year 3 per cent certificates of indebtedness to an amount not exceeding $50,000,000 to meet temporary deficiencies "now existing or which may hereafter occur." I know that this proposition comes to the House not only with the approval of the majority of the Committee on Ways and Means, but also with the indorsement of the Secretary of the Treasury. That is to say, the Secretary thinks there should be authority to issue temporary deficiency certificates, although there is no existing necessity for such an issue.

My opposition to this proposed legislation rests on the conviction that it will ultimately lead to extravagant appropriations. I think it altogether likely that this authority would be wisely employed not only by the present Secretary but by his successors in office, and my apprehension is not therefore based so much upon a fear that the trust may not be judiciously exercised by the Secretaries of the Treasury, but that it will prove to be a constant menace to the Treasury and lead to deficiencies that would not otherwise exist. There is no influence so restraining upon Congress and more certain to assure economical appropriations than revenues which, while ample for the needs of the Government, are yet not in excess of those requirements. Therefore, it seems to me that the lodgment of this power with the Secretary of the Treasury would likely operate as an invitation to Congress to profligate appropriations in many instances, for should such appropriations result in Treasury deficiencies, the deficiencies can be easily supplied by the issue of temporary 3 per cent certificates as authorized by the pending bill. The legislation would therefore be unwise, and if deficiencies occur in the future they should be met from time to time as they occur.

TARIFF TAXATION.

The proposition to increase the burdens of tariff taxation to the extent of about $40,000,000 annually is wholly indefensible, inconsistent with the public interests, and not demanded at this time by the condition of the Treasury. This bill evidently rests upon the theory that because ordinary current revenues are not sufficient to meet current liabilities additional taxation should therefore be invoked to supply this deficiency, notwithstanding the Government has availed itself of other sources of revenue. It is not demanded by the Administration, but, on the contrary, the able Secretary of the Treasury, in his annual report, clearly shows that there is, and will be, abundant revenues to meet all the obligations of the present and ensuing fiscal years.

The revenues of the Treasury are derived from customs, internal taxes, postal receipts, and certain miscellaneous sources, which the Secretary of the Treasury estimates for the current fiscal year will yield about $432,000,000, while at the same time he estimates the expenditures at about $449,000,000, thus leaving a deficit, as heretofore stated, in round numbers of about $17,000,000.

These are the ordinary resources of the Government, and if this were a complete exhibit of the existing financial situation some additional revenue would undoubtedly be required. But this bill wholly ignores the fact that the Administration has already sold $162,315,400 of bonds, for which the Treasury realized in cash $182,288,040.33. These bonds were issued to maintain the gold reserve. The gold realized from their sale has been used to redeem what are commonly known as greenbacks and Sherman notes; but, under the act of May 31, 1878, greenbacks can not be "retired, canceled, or destroyed, but they shall be reissued and paid out again and kept in circulation." The act of July 14, 1890, also provides that the Sherman notes "may be reissued."

Under the practice of the Treasury Department, when these notes are once redeemed they become available for current expenditures, and are paid out, as other moneys of the Treasury, to meet the current obligations of the Government. Under this practice, therefore, there is in the Treasury this day an available cash balance, including gold reserve, of $175,470,249.92. Of this amount, $66,286,320.53 constitute the gold reserve, thus leaving cash available for current expenses aggregating $109,183,929.39. In other words, Mr. Speaker, there is now $75,470,249.92 available in the Treasury for current expenses, after fully meeting the requirements of the gold reserve.

Whatever may be said as to the policy of issuing these bonds, it will not be denied that the issue is an accomplished fact, and that the people will be taxed not only to pay the bonds, but to meet the amount of interest thereon. Now, then, the Government having, in addition to its ordinary revenues, secured this income from bonds, it becomes an unwarranted exaction upon the people to impose the additional burden carried by the proposed horizontal tariff bill. If the Republican party is simply seeking to make good a temporary deficiency in current revenues, then it would

seem that the provision to authorize the issue of 3 per cent temporary certificates would meet all the possible demands of the situation, without the levying of protective tariff duties. Yet this bill not only levies an annual tribute of $40,000,000 not now needed by the Treasury, but it enables the manufacturers of this country to exact increased prices upon everything they produce, except, perhaps, the one article of sugar, which I believe is undisturbed by this so-called "emergency revenue bill."

BOND ISSUE.

I come now to consider, very briefly, the proposition to authorize the Secretary of the Treasury to sell 3 per cent coin bonds for the purpose of redeeming United States legal-tender notes commonly known as greenbacks. The resumption act of January 14, 1875, authorized the sale of ten-year 5 per cent bonds, fifteen-year 4½ per cent bonds, and thirty-year 4 per cent bonds, for the purpose of maintaining resumption. This bill gives to the Secretary of the Treasury the right to issue a 3 per cent fifteen-year coin bond, redeemable by the United States at its pleasure after five years. It in no wise disturbs the resumption act of 1875, but is, to quote the language of the bill, "in addition" to that already provided by statute.

Mr. Speaker, I do not and have not favored an increase in the interest-bearing bonded debt of the United States. I do not hesitate to say, however, that if in my judgment such issue were required to maintain the credit, the honor, and the safety of this Government, I would most cheerfully support the proposition. This bill is not necessary to maintain either the honor, the integrity, or the safety of our institutions. It does not relate to certain grave questions which have recently challenged the attention of the country in connection with foreign affairs. I am in hearty accord with the President in his recent masterly exposition of the principles of the Monroe doctrine. If bonds should become necessary in the future to maintain the supremacy of that doctrine, I should unhesitatingly vote for their issue, for I agree with the President that—

> While it is a grievous thing to contemplate the two great English-speaking peoples of the world as being otherwise than friendly competitors in the onward march of civilization, and strenuous and worthy rivals in all the arts of peace, there is no calamity which a great nation can invite which equals that which follows a supine submission to wrong and injustice, and the consequent loss of national self-respect and honor, beneath which are shielded and defended a people's safety and greatness.

Let us not, however, confuse the issue. These bills are not war measures, neither do they relate to any future policy of the Government in respect to the free coinage of silver. These measures simply raise the question as to the proper action to be taken with reference to the existing volume of gold, silver, and paper money. The provision for a new form of bond seems unnecessary and is an additional power given the Secretary of the Treasury, supplementing the resumption act.

Now, then, the question becomes material whether or not it should be granted. The Administration has called upon Congress for relief in the exigency which confronts the Treasury in reference to the gold reserve. This is the issue raised by the President's message and emphasized by the recent interview of the Secretary of the Treasury, in which he asks Congress to authorize the issue of gold bonds. I can not consent that any obligation of the United States should be written in such terms as would exclude silver from an equal responsibility in the discharge of such obligation. I believe in the use of both gold and silver upon equal terms, but I do not intend to discuss that issue here. The questions for impartial consideration at this moment are the causes which have led to the invasion of the gold reserve, and the remedies necessary to restore and maintain it.

If trade conditions were favorable, I think apprehensions as to the Treasury reserve would quickly dissipate; but the unfavorable business situation prevailing in this country during the last three or four years has resulted in an adverse balance of foreign trade, thus creating an unusual demand for our gold, to settle balances due other countries. This gold has heretofore been supplied in large part by banks and individuals, but under the operations of the Sherman law and the act of May 31, 1878, the Government has been compelled to furnish a large part of the gold required for export. That is to say, these obligations, which under the construction of the Treasury Department are redeemable in gold if demanded by the holder, have been used as vehicles to raid the Treasury. They have constituted the "endless chain" which has despoiled our gold resources. It seems to me very clear, Mr. Speaker, that the difficulty arises from the large amount of uncovered paper which is redeemable by Treasury construction in gold alone. That is to say, we have issued a volume of paper money entirely out of proportion to the primary money held for its redemption.

SHERMAN ACT.

So long as the greenbacks only were in circulation there was no disturbance on this score, and the Treasury reserve was not under the constant menace of invasion. From January 1, 1879, the date of resumption, until the passage of the Sherman Act, July 14, 1890, a period of nearly twelve years, the total withdrawals of gold from the Treasury amounted to but $28,250,000. Then the greenback circulation was $346,681,016, while the gold in reserve for its redemption was $100,000,000. That is to say, there were about $3 of paper outstanding for every dollar held for its redemption. This was a safe limit, and conclusively established to be such by the limited gold withdrawals to which I have adverted. In an evil hour the Republican party, against the protest of the united voice of the Democratic party, enacted the Sherman law. It was indeed a "cowardly makeshift," and recognized for the first time in our fiscal policy the vicious principles of the sub-Treasury scheme. It was the deadliest assault made in this century by the enemies of silver under the guise of friendship.

It dishonored silver by storing it away in the Treasury as merchandise, and issued in payment therefor Treasury notes redeemable on demand in coin; and it conferred upon the Secretary the discretion to pay these notes either in gold or silver, while its author secured the declaration that it was the established policy of the United States to "maintain the parity" between the two metals. This declaration as to "parity" would seem to be somewhat ironical in the light of subsequent events, inasmuch as the maintenance of "parity" under this law requires and permits gold payments only. Under this statute $139,583,280 of Sherman notes were outstanding December 1, 1895, and treated by the Treasury Department substantially as gold certificates, without any provision having been made by the Republican party to redeem such certificates by an increase of the gold reserve. This Treasury construction was originally made by President Harrison's Administration, and the notes, although issued in payment for silver bullion, are, as I have just stated, treated as gold obligations, resting in mid-air, without any sufficient reserve for their redemption. The greenbacks and Sherman notes outstanding now amount to about $485,000,000.

While the Government can easily float $3 of paper on the basis of $1 of redemption money, it is unsafe in times of financial peril, such as these through which we are passing, to issue paper currency on the basis of $5 for every dollar of redemption money. This statement is conclusively demonstrated by the fact that from the passage of the Sherman Act until the first of the present month (a little more than five years) the Treasury has been drained of more than $375,000,000 of gold for redemption purposes. The "endless chain" continues its circle, and something should be done for the relief of the Treasury. To retire the greenbacks, as suggested by the President, seems to be unwarranted, as shown by the official statement of the Secretary of the Treasury, disclosing the meager withdrawals of gold during the long period of years when the greenbacks alone were the only charge against the gold reserve. The cloud upon the financial sky, not perhaps "larger than a man's hand," first made its appearance in October, 1891, after the enactment of the Sherman law. In that month a firm of bankers and brokers in New York, whose names I do not now recall, secured a supply of Sherman notes and presented them to the Treasury Department for redemption, demanding payment in gold. Their demand was complied with, and from that hour, and under that pernicious construction, the habit of raiding the Treasury has grown, until it has become a serious menace to all our material interests.

Shall it be met by a further issue of bonds? To this suggestion I most earnestly dissent. It seems to me that the way is clear. Remove the cause, and the effect will inevitably cease. The cause of existing troubles is in great measure found in the exercise of the discretion by the Secretary of the Treasury in favor of gold to redeem Sherman notes. They were issued in payment of silver bullion. The silver bullion lies stored in our Treasury vaults, and if the Secretary of the Treasury will, pursuant to the authority of section 3 of the Sherman act, "coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for," the situation will be greatly relieved. I am sure that the present Secretary of the Treasury would reverse the existing construction, if the matter were presented to him as an original proposition. This opinion rests upon his testimony given before the House Committee on Appropriations January 21, 1895, in which the following colloquy appears:

> Mr. SIBLEY. I would like to ask you (perhaps not entirely connected with the matter under discussion) what objection there could be to having the option of redeeming either in silver or gold lie with the Treasury, instead of with the note holder?
>
> Secretary CARLISLE. If that policy had been adopted at the beginning of resumption—and I am not saying this for the purpose of criticising the action of any of my predecessors or anybody else—but if the policy of reserving to the Government at the beginning of resumption the option of redeeming in gold or silver all its paper presented I believe it would have worked beneficially and there would have been no trouble growing out of it; but the Secretaries of the Treasury from the beginning of resumption have pursued a policy of redeeming in gold or silver at the option of the holder of the paper, and if any Secretary had afterwards attempted to change that policy, and forced silver upon a man who wanted gold, or gold upon a man who wanted silver, and especially if he had made that attempt at such a critical period as

we have had in the last two years, my judgment is it would have been very disastrous. There is a vast difference between establishing a policy at the beginning and reversing a policy after it has been a long time established, and especially after the situation has been changed.

Mr. Speaker, the apprehensions of Secretary Carlisle as to a change of policy may to some extent, in view of existing conditions, be well founded. It is possible that some financial disturbance might result from the proposed reversal of policy in respect to the Sherman notes. The Secretary admits, however, that if this policy had been adopted at the outset it would have "worked beneficially." Upon this question there seems to be no difference of opinion between the Secretary and myself. But the issue for present determination is whether the existing construction shall be maintained. The proposed change might not operate "beneficially." It is impossible to speak definitely in advance of a trial of the policy. I am prepared to say, however, that the existing construction has resulted most disastrously, and should give place to some modification that will permit the use of both the gold and silver of the Treasury to meet the coin obligations of the Government. The law under which the Sherman notes were issued gives to the Secretary of the Treasury, in express terms, the right to pay them either in gold or silver. This discretion must, however, be exercised by the Secretary, and I challenge reference to one line of that law which permits him to abdicate his high duties and divest himself of responsibility by giving to the holder of the Sherman notes the right to elect that payment shall be made in gold alone.

Such a policy obviously gives to the holder of these notes an unfair advantage. I desire to press this view somewhat earnestly upon the attention of the Secretary of the Treasury, because under the extraordinary special rule under which this bill is now being considered it is impossible to offer any amendment that will require the Treasury Department to deal with gold and silver upon equal terms in meeting the obligations of the Sherman law. The Committee on Rules of the House have reported a rule, without precedent, for the consideration of the tariff bill and of the bond bill. which permits no amendment and requires the House either to accept the propositions as a whole or reject them as a whole. The House is therefore powerless under this new departure of the Republican Committee on Rules to do more than either accept or reject the measures as a whole.

Again, Mr. Speaker, should the Secretary of the Treasury hesitate to make so pronounced a change in the existing policy respecting the Sherman notes, why would it not be wise at least to follow in the lead of France, where the discretion of the finance minister is exercised by making equal payments of gold and silver in meeting the obligations of the Government?

The law insists that the "parity" between the two metals should be maintained. How can such "parity" be more certainly upheld than by dealing with both metals upon equal terms? They are both clothed with full legal-tender powers, and should under that authority be charged by the Secretary of the Treasury with equal duties and equal responsibilities. I know, Mr. Speaker, of no other way to properly "maintain the parity" than by affording each metal an equal opportunity to discharge the coin obligations imposed upon the Treasury of the United States. I am utterly at a loss to understand that policy which proclaims a "parity" and yet denies to one of the two metals the privilege of exercising its full legal-tender qualifications. This discrimination necessarily operates to make one metal virtually redeemable in the other, and to unduly enhance the value of the metal in whose favor the discrimination is exercised. The effect of this policy is to devolve upon gold alone the duty of performing monetary functions, and this added duty necessarily operates to enhance its value, and thereby discriminates against silver and depreciates its value.

Now, Mr. Speaker, the situation is so plain that a "wayfaring man can not err therein." "He that runs may read." The deficiency in current revenues is not properly chargeable with any responsibility for the raid upon the gold reserve. This reserve is being reduced, and has been heretofore depleted, because of unfavorable business conditions, and because it is inadequate in amount to meet the liabilities imposed by the $485,000,000 of outstanding Sherman notes and greenbacks, with the right of indefinite and perpetual redemption accorded by law to each.

CONCLUSION.

And now, Mr. Speaker, having stated my own views in reference to the Treasury situation, I may say that, in the face of the present exigency, I will support any honorable, just proposition that will afford relief to the suffering Treasury. In conclusion, I desire to summarize very briefly the situation in respect to the legislation pending. The Republican party have proceeded on the theory, as announced by their speakers in this debate, that the gold reserve has been depleted because of inadequate revenues. This "theory" (properly characterized as such, because it has no foundation in fact) is thoroughly discredited by the official statement of Secretary Carlisle, showing that during the fiscal years 1891, 1892, and 1893, beginning July 1, 1890, and terminating June 30, 1893, the receipts of the Government surpassed its expenditures more than $39,000,000; and yet the gold withdrawals during this period amounted $117,212,258. He further shows that of the latter sum, $58,746,008 were withdrawn during the last nine months of the Administration of President Harrison.

If, however, the Republican contention is correct, that the deficiency alone is responsible for the assault upon the gold reserve, why did they not content themselves with the passage of a measure designed to make good the deficiency and rest their "exigent" remedial legislation at that point?

The deficiency for the fiscal year ending June 30, 1895, amounted to but $42,805,223.18. If that deficiency, with the one existing at the close of the prior fiscal year, be responsible for the depleted gold funds, why the necessity for the three so-called remedial propositions which have been offered? With an annual deficiency of about $40,000,000, they present a bill authorizing the issue of $50,000,000 of 3 per cent 3-year certificates; a "horizontal" tariff bill imposing more than $40,000,000 of annual taxation for the benefit of the Treasury, and untold millions for the benefit of manufacturers; and a bill to authorize the issue of 3 per cent 15-year bonds without limit.

Mr. Speaker, let me say finally, if the Republican party had been sincere in their diagnosis of the economic ailment which has wasted the resources of the gold reserve, they would have contented themselves with the passage of a measure designed to meet a temporary Treasury deficiency. But the ruling passion, strong even in death, is stronger still in the hour of victory. Not satisfied with meeting the temporary Treasury deficiency, they seized the first opportunity to attempt to restore to the statutes the protective system of taxation to which the Republican party is committed. The plea that the $40,000,000 of revenue is needed at this time by the Treasury is shown by Secretary Carlisle to be utterly fallacious, and is only a flimsy subterfuge behind which is ambushed the organized avarice of protected monopolies.

Furthermore, Mr. Speaker, if the Republican party had been candid in their position respecting the coin obligations of the Government, they would have responded to the President's message by the passage of a bill authorizing the issue of a gold bond, because they are committed by practice, if not by platform, to a single gold standard. The controlling forces of that party believe that the coin obligations of the Government should be paid in gold, if so demanded. Standing, however, upon the threshold of a Presidential contest, the Republican leaders in this House fail to exhibit the courage of their convictions, and adroitly evade the real issue by the passage of a 3 per cent coin bond. Still, Mr. Speaker, I congratulate the Republican party, after having indulged in vituperative denunciation of the President because of bond issues heretofore made, upon coming now, at this late hour, to give their sanction to the action already taken by the President, and upon bidding him Godspeed for the future by enlarging his powers and responsibilities under the resumption act.

The Coin Redemption Fund.

SPEECH

OF

HON. ROBERT J. GAMBLE,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 27, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. GAMBLE said:

Mr. SPEAKER, I have endeavored to carefully consider the provisions of the pending bill, and am unable to discover any valid reasons why it should not receive my support. It makes no difference that the appeal comes to this House from an Executive representing an opposite political faith. Our response must be measured by our own sense of patriotic duty and obligations to our country under existing conditions—conditions, sir, that have been brought about by policies of administration, it seems to me, wantonly and persistently followed out by the Democratic party against the repeated warning, protest, and prophecy of the Republican organization. Higher motives than mere party advantage or resentment should actuate us as individuals, and we should answer this appeal from the nation's Executive, whether made in good faith or otherwise.

The spectacle here presented appears to me anomalous. The Republican party meets the crisis promptly and with courage. By them a revenue bill was passed with great expedition to meet the demonstrated deficiencies in the Government's income, and it met the persistent opposition of the President's own party on this floor. The same opposition is made to the pending measure, both here and from the executive department. All the power of the Administration is exercised for some occult purpose to nullify the

efforts of the majority of this House to grant the relief for which so strong an appeal was made. From the evidence at hand good faith seems wholly lacking in the Administration and its supporters on this floor.

The Administration proposes, independent of any further legislation upon the subject, or any action taken by Congress in the premises as indicated in the message of the President, to issue bonds for the purpose stated in the first section of the bill. Shall we, by the passage of the pending measure, make the interest lower, the time for which they are to run much shorter, and their sale public? Surely, if bonds are to be issued these provisions are to the advantage of the Government. The power is already vested in the Secretary of the Treasury by existing law to issue bonds. It is not contemplated by this bill to give any new power to that officer. The only manner in which the proposed issue can be defeated is to repeal the law which authorizes it. As both branches of Congress are now constituted would such a proposal receive favorable consideration? You may answer for yourself.

Even if a bill were passed repealing the statute of 1875 it is well known it would receive the Executive veto. With practical certainty it can be asserted the law will remain in force at least during the balance of the term of the present Executive.

The legislative branch of the Government is powerless to repeal it if it were so disposed in the face of Executive opposition. If this, then, is the position by which we are confronted shall we not modify the provisions of the existing statutes in the interest of the people rather than have the Government again subjected to the exactions of the sale of last year. If I err, either in my conclusions or sense of duty as regards the pending measure, it has not been without an earnest effort on my part to see clearly the issue and responsibility before me.

We will not accuse Mr. Cleveland with such obtuseness that he believes the present Congress will carry out the recommendations of his message to authorize the issue of bonds payable in gold under any circumstances, or that the legal-tender notes under present conditions will be retired and withdrawn from circulation. Does he expect, at his call, the Republican party will renounce the policy of bimetallism for which it has uniformly declared? It has too long been the doctrine of the party that it now can, or should, abandon this vital principle, fraught with such vast interests to the people of the country. From my understanding, I can not conceive, whatever views individuals may have upon the silver question, how an issue upon that subject can be logically injected into this discussion, or in what manner it is involved in the pending measure.

The greenback was born in the necessities of war. The Republican party brought it into being, and is responsible for its creation. Its mission has been one of lasting honor to its authors, and it sustained itself as long as Republican legislation remained upon the national statute books. It has only recently been brought into disrepute by the suicidal enactments and hopeless incompetence of the present Administration. For more than thirteen years, from the date of resumption of specie payments to the accession of Grover Cleveland as President in 1893, the gold reserve stood unimpaired, under legislation inaugurated by the Republican party. No blight during that golden era fell upon or stifled the energies of the nation. Unexampled development marked every avenue of industrial and commercial life, the like of which no people ever witnessed. Great enterprises developed, industries extended, labor always found remunerative employment, with constantly increasing wages. In 1892 our industrial and commercial development had reached a point of prosperity that no people under any government had theretofore enjoyed. Peace and contentment reigned supreme within our borders, and we were the envy in material and domestic development of the nations of the world. The great national debt had been reduced with amazing rapidity under Republican legislation. The annual interest charge thereon had in like manner been diminished. Internal improvements had been extended and developed, and a great pension list had been unfailingly provided for the veterans of the war. No niggardly parsimoniousness in appropriations, or covert attack in construction of pension laws, was made by any Republican Administration to save depleted revenues, like the present, but always and at all times good faith was kept with the defenders of the nation.

By businesslike administration of the great fiscal affairs of the Government its obligations were always met, and no deficiency was ever apparent. No issue of bonds under the act of 1875, which was passed by a Republican Congress, was found necessary, except in the first instance, when specie payments were resumed. It remained for the present Administration to invoke the power reposed in its provisions. Since the date of resumption under the economic policy of the Republican party no statement from the Government records can be produced showing a deficit in income over the ordinary expenses of the Government until after the election of Grover Cleveland in 1892. Some months there were small deficiencies, but there was produced during the time of its operation an average monthly surplus exceeding $1,000,000. There has not been a month, with two exceptions, during the existence of the present tariff law but what there has been a deficiency in meeting the necessary expenses of the Government. Instead of a surplus its average monthly deficit has been $4,694,044. This fact alone is sufficient to condemn the policy upon which the last Presidential election was carried. The people now understand it, and their judgment has been most vigorously expressed in the succeeding elections.

In addition to this, although the gold reserve was intact when Mr. Cleveland was inaugurated, under his benignant reign of tariff reform it has gradually vanished, and it became necessary to replenish this to the amount of $182,000,000 by bond issues. And again, the danger line has long since been passed, and the reserve is now nearly $40,000,000 below the line of safety. But notwithstanding these temporary inconveniences of the Administration, it is still possessed of heroic courage, and is ready for war, even if within four days of its Venezuela declaration we are favored with a communication from the Executive of its threatened bankruptcy.

It is not difficult to find an explanation for the present condition of the Treasury. It is the direct result of the operation of the Wilson bill, so called. The solution is made manifest from a comparison of the effect of this act upon the Government revenues with that of the McKinley law. I quote from the last number of the American Economist, which shows the result, as taken from the official records of the Government, covering periods of the first fifteen months of the operation of each of these two acts:

Total, 15 months	55,551,162	Total, 15 months	35,792,110
Decrease under Gorman tariff to date			19,759,052

Results of fifteen months' operations.

Merchandise.	McKinley tariff, October, 1890, to December, 1891.	Gorman tariff, September, 1894, to November, 1895.
Exports	$1,239,864,599	$1,019,511,279
Imports	1,025,891,631	962,752,656
Excess of exports	213,972,968	56,758,623
Excess of gold exports	25,160,160	64,929,422

	Favorable.	Unfavorable.
Trade balance	$188,812,808	$8,170,799
Net loss under Gorman tariff in 15 months		196,983,607

FACTS.

The decrease in our exports of American products and manufactures during the first fifteen months of the Gorman tariff, as compared with the first fifteen months of the McKinley tariff, was $220,353,320.

The decrease in our imports under the Gorman tariff, comparing the same periods, was $63,138,975.

The excess of exports over imports in the McKinley period was $213,972,968, but only $56,758,623 under the Gorman period, a loss, under the latter, of $157,214,345.

Under the Gorman tariff we exported $20,010,210 more gold and imported $19,759,052 less gold than during the McKinley period.

The net loss in the trade balance of the United States has been $196,983,607 during the first fifteen months' operation of the Gorman tariff as compared with the first fifteen months of the McKinley tariff. This loss is at the rate of $13,130,000 a month, or $500,000 for every business day in the month.

The operation of the Wilson law has in every way been a direct menace to the agricultural interests of the entire country. Instead of opening up the markets of the world, as it was claimed it would, and increase our exports of the leading productions of the farm, its actual effect has demonstrated the reverse. The official publication of the Treasury shows, as regards the productions referred to, by comparing the result of the first year of the operation of this act with that of the McKinley law, that there was a decrease in the export of agricultural products amounting to $69,546,414. It also shows a like loss to our agriculturalists in the importation of articles that could have been produced by our own farmers to supply our own market rather than transfer it, as has been the case under this new régime, to foreign competitors. The importations during the time referred to under the Wilson law exceeded that under the McKinley law by $55,927,678. Another item of vast interest to the whole country, and a matter of especial interest to the people of my own State is, wool. Comparing the operation of the two acts as affecting this industry for the same time, it shows that under the Wilson law $26,289,857 worth was imported more than under the McKinley law. No account is here taken of the great loss in the value of the flocks or the product during the same time, in addition to the direct loss to our farmers in being robbed of a market that is justly their own.

With this immense loss to the Government in trade, and the balance always against us under the operation of the present law, is it at all strange that we have trouble with the gold reserve? Gold sufficient to make good this difference in our foreign trade is taken from the country. It must be supplied from some source, and the Treasury of the United States seems to be the most accessible. So long as the economic policy of the Democratic party is adhered to which brings about such a condition in our trade relations just so long will the raids continue on the gold funds of the Treasury. Restore again the policy of the Republican party and reverse the balance of trade in our favor, and the effect will be, as it always has been heretofore, to stop the outflow of gold from our shores and bring to us instead the yellow metal sufficient to make good the balance of trade in our favor. The real seat of the present trouble is largely, if not wholly, due to a false economic policy, insisted upon by the opposition in the face of overwhelming facts as well as the logic of the present unfortunate condition of our national well-being.

The statement of the Treasury Department which we received this morning shows, including the gold reserve, the available cash balance on hand a little upward of $175,000,000. But the Administration, in order to save itself from bankruptcy, has replenished the Treasury with upward of $182,000,000 by the sale of bonds to maintain the gold reserve. Had this course not been resorted to and reliance alone placed on the Government revenues, the gold reserve long since would have been swept away, a deficiency would exist, and the people would then have had even a more practical demonstration of the logical effect of the Wilson bill and Democratic policies than they have already, crushing though the weight has been upon every avenue of our commercial and industrial life.

For thirteen years succeeding July 1, 1879, the total withdrawal of gold from the Treasury only amounted to $43,310,896, while the country was enjoying the security and confidence of Republican Administrations, and under its legislation undisturbed by the prospect of a reversal of its tariff legislation by the Democratic party. But from July 1, 1892, up to December 1, 1895, the withdrawals of gold amounted to upward of $360,000,000, and of this vast sum over $305,000,000 during that time was exported—found lodgment in foreign countries. It can thus be understood that the demand for gold is not from the American people, but it is necessary to supply the deficiency in our trade relations consequent upon tariff agitation by the Democratic party, commencing with its threat of the enactment of free trade in 1892, and afterwards by its legislation upon the subject.

It is well understood that the balances in our foreign trade must be paid in gold. And when we add to this amount, under our present conditions, the vast interest charge annually paid to the holders of our securities abroad, aggregating substantially $75,000,000, and probably more than that, and also the amount spent by that large and increasing number of our population in foreign travel, ranging high into the millions, it is not surprising that gold shipments are necessary to keep our accounts balanced with the nations of the world. A policy that allows the shipment of gold to foreign countries to go on unchecked is unwise, unphilosophical, and suicidal. The reversal of the tariff policy of the Government has brought about this unfortunate condition in our financial operations. It occurs to me it would be the policy of wisdom to again inaugurate that system which gave us a balance in our foreign exchanges sufficient to liquidate the vast amount we must at any rate pay to our foreign creditors, rather than add to it, as we are now doing under present legislation. Other expedients will be but temporary, but this course will give us the permanent relief.

With a depleted Treasury as the result of its un-American policy, with a vanishing and constant fading gold reserve as a resultant from the same cause, with blind adherence to mistaken theories, the Administration is finally overwhelmed. After having by dark-lantern tactics contracted with foreign syndicates and imposed bond obligations on the Government aggregating $162,315,400, at long time and at usurious rates of interest, the representative of this ignoble business now appeals to the majority of this House, representing the only party that has shown capacity for government for the past thirty-five years. However humiliating the spectacle, or however much resentment we may feel, obedience to patriotism and to duty commands this response in the enactment of the measure proposed. We have already provided revenue, but the present exigencies plainly demand even more for the immediate needs of the Government.

As Republicans, we do not believe in, and never have put in practice, policies necessitating the issue of bonds in time of peace.

The law of 1875, however, is still in force, and authorizes the issue.

The Administration proposes to exercise the power, whether action is had by Congress or not. Already it is asserted, with an assurance of fact, that negotiations are practically completed with the same representatives whose cunning and avarice cost the Government so dearly in the last issue, to say nothing of our national self-respect. Shall we refuse to pass this bill, when by its terms it makes such contracts impossible? If we fail to pass it, it is practically a justification and indorsement of the acts of the Administration. Is this not one of the motives for the opposition? If it be true, as is charged, that secret negotiations are already being conducted by the Administration for the sale of $100,000,000 to $200,000,000, and a contract has been or is about to be entered into with the representative of the same or like syndicate to which the last sale was made, it occurs to me the proceeding can not be too

strongly denounced on this floor or by the American people. If such methods are being pursued, they appear to me iniquitous. The Administration can afford to wait for the action of Congress, and not be in too unseemly haste. The saving to the Government in the low rate of interest, as well as in the time the bonds would run under this bill, rather than proceeding under existing law, would be enormous. After having appealed to Congress, it would be a grave act of official discourtesy to negotiate a sale of bonds before both Houses have a full and fair opportunity to make answer to the President's appeal.

Under the law of 1875 bonds can only be issued for ten years at 5 per cent, or for thirty years at 4 per cent. It is proposed by this bill to also authorize the issue of bonds bearing interest not to exceed 3 per cent, and redeemable at the pleasure of the United States in coin after five years from date, and payable in fifteen years. Whenever bonds are to be issued, the Secretary of the Treasury must advertise the same. The proceeds must be used for the purpose of redemption, and for no other purpose.

It appears to me that these provisions are all in favor of the Government. It gives a lower rate of interest, and limits the time in which the bonds are to run, and places the redemption at the option of the Government. It also prevents the repetition of an iniquitous and disgraceful contract, unjust to the Government and humiliating to our people. It allows our own people to be open competitors for our nation's securities, and I believe their patriotic sentiment and ability will at all times be equal to the emergency or the necessities of the Government, especially with returning prosperity in the assurance of a Republican victory in 1896.

With the Republican party in possession of all the departments of the Government, as it surely will be in 1897, there will be no necessity for the exercise of the authority conferred by the proposed measure. A new era will again be upon us as a people, energized and quickened by the pulse beat of Republican courage and hope.

Under this bill there could be no retirement of the greenbacks, any more than under existing law. The proviso of the bill clearly negatives any such construction. The law of 1878 still remains in force, and is specifically referred to in the bill. That law provides as follows:

> And whenever any of said notes may be received into the Treasury, under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but shall be issued and paid out again and kept in circulation.

Under this bill I can see no way in which the circulation of the currency can be contracted. It is made the duty of the Secretary of the Treasury to reissue, pay out again, and keep them in circulation.

I have heard no serious objection made to the second section of the bill. Its provisions are so plainly requisite, usual, and necessary, it would seem idle to argue the necessity of its enactment.

I would, therefore, summarize my conclusions upon the pending measure as follows:

1. The bill is not a departure from Republican doctrine, but simply supplements the present statute, leaving all existing provisions in full force upon the subject.

2. The power to borrow for the purposes indicated in the first section now exists, and it is the granting of no new authority to the Secretary of the Treasury, and is a matter of detail only.

3. The provisions are all in favor of the Government making the rate of interest lower and the time for which the bonds are to run much shorter.

4. It prevents any secret contract in the future with a foreign syndicate and gives our own citizens an opportunity of purchasing the securities of the Government in the open market and upon fair competition.

5. It will give greater national self-respect, by having our own citizens hold our securities, rather than appealing to foreign representatives.

6. It meets the present emergency promptly, and saves the nation's credit and the integrity of the Treasury.

7. It will preserve the gold reserve for the use which the original law contemplated and prevent it from being wantonly diverted to replace the deficiencies in the revenues.

8. It condemns the methods of the Administration in prior sales of bonds, and to defeat this measure would be construed by it as a justification of its proceedings.

9. It in no sense can be used to retire the greenbacks or to contract the circulation.

10. To oppose it drives me into cooperation with Democracy, whose wisdom in legislation or administration has never yet developed in me, by practical example, the profoundest faith.

Revenue.

REMARKS

OF

HON. JOEL P. HEATWOLE,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

Mr. HEATWOLE said:

Mr. SPEAKER: The first necessity of the Government is revenue sufficient to pay all its obligations as they mature. This bill aims to secure revenue which the last Democratic Congress failed to provide. No man on the Republican side pretends to say that it is all that he desires as a revenue bill, and it is brought forward and supported by Republicans at this time to meet an emergency. Under Republican control no such emergency would have arisen, as it has always been the policy of the Republican party, as it is to-day, to provide sufficient revenue to properly carry on the Government.

This emergency began when the people after thirty years—a period in which many forgot the disasters of the last time the Democratic party was in control—trusted that party with full power in both legislative branches of the Government and the executive branch as well. Up to that time there had been no question about maintaining the gold reserve. Up to that time the gold reserve had never been attacked. Up to that time it had never been necessary to draw upon the gold reserve, in a roundabout manner, to pay the running expenses of the Government.

In November, 1892, when the returns had all been counted and it was known that the Democrats had not only carried the Presidency, but the House and Senate as well, there began that depression which the country has suffered from ever since, and from which it will not recover, in my judgment, until the Republicans are restored to power in every branch of the Government and can undo what the Democratic party has done and do what the Democratic party has left undone. The result of that election caused the business interests of the country to suspend. Every industry was threatened by free trade. Capital was withdrawn from business enterprises. Money was held in strong boxes, and did not seek investment in the usual channels because no one could tell what mischief the party now in full control would do. The threatened attack upon the protected industries of the country proclaimed in the Democratic national platform was nearly as efficacious in causing a stagnation in business as was the fulfillment.

A natural result of Democratic success was a decrease of revenues of the Government. Importers bought as small stocks as possible, waiting until they could reap the harvest of Democratic pledges and bring their goods in at reduced tariff rates. There was a decreased demand for all goods on account of the hard times and the industrial stagnation following the election. Revenues fell off even before the present tariff law was prepared. The passage of the bill did not aid business nor secure an increased revenue. Instead there has been a constant growing deficiency ever since. More revenue was promised by the Democrats as a result of increased importation. But now we have had an increased importation, and still the deficit grows larger. The rates of duty are not high enough to provide sufficient revenue, yet the imports far exceed the exports.

It is this latter fact to which may be attributed the raid upon the gold reserve. With a balance of $160,000,000 against us it is natural that gold must be drawn out of this country to pay the difference. Should the balance be in favor of this country there is little doubt that the gold reserve could be easily protected, as there would be no demand upon it to pay foreign exchange. It has been demonstrated that the demand for gold was for commercial transactions, and what has been called a "raid" was nothing more than a demand created by business conditions. If the present bill should check foreign importations, create a demand for goods produced at home, and turn the tide of trade into domestic channels, I believe we would not be troubled with the so-called "raids" unless they should be made by the officers of the Treasury to pay the running expenses of the Government.

If this bill should check the tide of importation, and at the same time raise the revenue necessary to meet the deficit, then it will accomplish what it is intended to do. It may not be adequate for both of these purposes, and for that reason I will support a bill authorizing the issue of short-time, low-interest bonds of small denomination to meet emergencies until the Republicans are in

full control again and a safe and equitable tariff measure can be framed upon Republican principles, which will not only produce sufficient revenue, but will turn the balance of trade in favor of this country and do away with the necessity of protecting the gold reserve, which is now drawn upon so heavily to meet foreign balances.

No one on this side of the Chamber can be wholly satisfied with the present law, nor as it will be after this bill amends it. It will take weeks to prepare a measure to meet the wishes of the Republicans of this House, and it is well known that when such a measure is prepared it will not meet the approval of the Democratic Executive. When such a bill is prepared it will be found that more hearty support will be accorded it than is now given a measure which is temporary only, and which is intended for an emergency, and that alone.

I have the honor to represent an agricultural district. My constituents have had a few years of Democratic tariff, and they do not approve of it. They know that protection for agricultural interests is as important as protection for manufacturing interests. And, in fact, even more so. When the receipts of the manufacturer are reduced below his expenditures he can reduce wages to the European scale, or can close his factory and await better times. The farmer must sow and reap, and accept the prices which are offered for his products, no matter how low they may be made by competition with foreign products. When the workingman is thrown out of employment and his wages reduced, he is not so large a purchaser of the products of the farm. There is a surplus of products, and then the laws of supply and demand work to the detriment of the farmer. Indirectly the home market is one of the great dependencies of the farmer to keep up the prices of his products.

But it is where the foreign importations come in direct competition with the products of our fields that the farmer finds he has sustained the greatest loss by Democratic ascendancy. The importation of Russian and Canadian barley has caused a decline in the price of that cereal which has been marked in every farming district in the United States, and more especially in Minnesota and the States on the Canadian frontier and which by lake transportation are compelled to compete with the Russian article. The tariff act of 1890 advanced the duty on barley from 10 to 30 cents per bushel and the imports of barley fell off from 10,000,000 bushels to less than 2,000,000. During the time this law was in operation the farmers of the United States increased their barley product 15,000,000 bushels over the average for eight years. The increase in one year was worth to the farmers over $6,000,000, which is one of the items that has gone to swell the balance of trade against the United States in the past year and a half of Democratic tariff. In the past twenty years, from 1873 to 1893, the production of barley has increased nearly 118 per cent, from 32,000,000 in 1873 to 69,869,000 in 1893.

The farmers of Minnesota, Wisconsin, and the Dakotas have had the experience of seeing Russian barley sold in competition with their own products in the great markets of the West, Chicago and Milwaukee. These cities as a market are best described in a communication of the Milwaukee Malt and Grain Company in January, 1894, when the Democratic bill was before the House of Representatives.

They said under above date:

"In these cities is marketed a large proportion of the barley grown in Wisconsin, Minnesota, and Iowa, which three States, together with California, furnish more than one-half of the barley crop of the United States. In six years, from 1884 to 1889 inclusive, the combined receipts of barley at Milwaukee and Chicago averaged 17,300,564 bushels per annum. Then came the increased duty, and in line with it the receipts during the subsequent years promptly ran up to an annual average of 25,706,923 bushels, an increase of 8,406,359 bushels per annum.

"In support of this statement we herewith append in detail the official figures of the secretaries of, respectively, the Chamber of Commerce of Milwaukee and the Board of Trade of Chicago:

Year.	Chicago receipts.	Milwaukee receipts.
	Bushels.	*Bushels.*
1884	7,849,829	4,702,666
1885	10,700,127	5,302,106
1886	12,740,953	6,019,424
1887	12,476,547	5,778,663
1888	12,387,526	6,465,471
1889	12,524,538	6,765,537
1890	15,133,971	10,825,391
1891	12,228,480	10,001,293
1892	16,989,278	11,788,298
1893	13,375,845	12,495,136

"Is not the aforementioned phenomenal increase of 8,406,359 bushels per annum in the receipts of American barley at but two points proof positive that the duty of 30 cents per bushel has resulted in a great benefit to the American farmer? It can not be denied that the higher duty has stimulated to a degree hitherto unparalleled the cultivation of barley in the States of Wisconsin, Minnesota, Iowa, North Dakota, and Nebraska, and that, as a further result, thousands of acres of land that stood in danger of being impoverished through the long-continued cultivation of wheat are now being strengthened and reclaimed to usefulness by the change from wheat to barley.

"The full effect and benefits of the 30-cent duty are now but just beginning to make themselves manifest. The excellent quality of the barley raised in the States above referred to is rapidly making friends for it everywhere, and more particularly in those sections of the country where formerly Canadian barley was in general use. It can not be claimed that the American cereal is inferior to its foreign rival, as witness the unexcelled reputation of Milwaukee beer, in the manufacture of which our own barley is almost exclusively employed. We firmly believe that if the present duty is not disturbed Canadian barley will eventually be driven entirely from the United States.

"On the other hand, if the Wilson bill becomes a law and the duty be reduced to an ad valorem duty of 20 per cent, the floodgates on the other side will promptly discharge such an enormous load of barley into our land as can not but prove disastrous to the interests of the American farmer. He has spent money, time, and brains in the laudable enterprise of furnishing the brewers and distillers of our land with a grade of barley that shall answer all the requirements as to quality. The question is, shall we encourage him herein by retaining the present duty, or shall we expose him to ruinous competition? Ruinous it certainly will be, for Canada is in position to send us with ease from 15,000,000 to 25,000,000 bushels of barley per annum, and far more if necessary. If she could unload on us more than 11,000,000 bushels per annum when the specific duty was 10 cents per bushel, then how much more will she dump on these shores under an ad valorem duty of but 20 per cent, which will in reality not amount to more than from 6 to 8 cents per bushel? Fix the duty as the bill proposes, and we prophesy that in the very first year thereafter not less than 15,000,000 bushels of Canadian barley will come across the line, thus crowding out an equal quantity of American grain.

"It must not be forgotten that geographically Canada enjoys a great advantage over the barley-producing States of the Northwest in that she is closer than they are to the great brewing centers of the East, notably Buffalo, Rochester, New York City and vicinity, Philadelphia, and Boston and vicinity. The bulk of the barley she exports to our country is raised almost at the water's edge of Lake Ontario. Its north shore, from Kingston to Hamilton, is the dumping ground of her barley farms. So close, indeed, are the farmers to the lake ports that it costs them virtually nothing to market their barley, for they haul it there themselves by teams, thus avoiding the payment of any and all railway freights. Here it is quickly absorbed by conveniently located marine elevators, where vessels and boats of every description lie in waiting to carry it to Buffalo and Oswego for a consideration of half a cent to 1 cent per bushel. And what does it cost the farmers of Wisconsin, Minnesota, Iowa, the Dakotas, and Nebraska to lay their barley down in the aforementioned American markets, Buffalo and Oswego? From 10 to 15 cents per bushel."

Every farmer who has received a low price for his products now realizes that the predictions made in the above letter were based on sound principles and that the man who wrote it was fully alive to the importance of protecting the products of the farm.

It is also interesting to note how the imports of barley fell off under the protective duty of 30 cents per bushel of the Republican tariff and increased again when the Democratic tariff went into effect. The figures given are for the past six years ended June 30, which include the year just before the new Republican tariff went into effect and the years subsequent:

Year.	Bushels.	Value.
1890	11,332,545	$5,629,849
1891	5,078,733	3,222,593
1892	3,146,328	1,592,040
1893	1,970,729	921,605
1894	791,061	358,744
1895	2,116,816	867,742

Heretofore Canada has been our greatest competitor in the barley market, but since the Democratic tariff went into operation the Russians have begun exporting barley to this country, and unless the duty is restored she will prove a formidable competitor. For a period of seven years, from 1881 to 1887, the average export value of Russian barley was 35 cents per bushel at the port of shipment. At the above price the Democratic tariff would add 10½ cents, and about 4 cents a bushel for freight would make the price at New York 49½ or 50 cents per bushel. It is known that Russia is ready to produce barley much cheaper than this, and unless the duty is restored the Western farmer will find his former well-established and compensatory prices reduced to a figure that will make the raising of barley far from profitable.

But the farmers of Minnesota, Wisconsin, Iowa, and the Dakotas have still a greater rival to fear than Old Canada and Russia, if the present duty on barley is to remain.

In the far northwest, on the other side of the British boundary line, lies a stretch of country 1,500 miles wide, where the Dominion Government is offering every inducement to settlers.

The season is so short that only crops grown in least possible time will ripen before the fall frosts.

Barley is one of these crops.

The possibilities of production is unlimited.

Since the Democratic tariff law was passed thousands of acres of this country have been devoted to barley, and millions of acres will follow if it is to remain.

Barley is one of the crops which the farmers of my district have heretofore found profitable to diversify with their other products. If they are granted a reasonable protection they can make it profitable. They are also interested in many other agricultural

products which the Republican tariff protects and which the Democratic tariff places upon the free list, or only grants a small duty which is far from adequate. If the present bill were not an emergency measure, I should like to have offered amendments to the agricultural schedule which would have furnished sufficient protection to the farmers of the whole country. I apprehend when the time comes to frame a bill on Republican lines that the men charged with that duty will give due care to all the vast interests of the United States, and that the agricultural interests will share the beneficent care to which they are entitled and which they can only expect in Republican legislation.

So much has been said in the past by Democratic orators on the stump and in the Halls of Congress concerning the great results that would accrue to American agriculturists by free trade or a reduction of duties by reason of an increased demand for American products, that some figures on this line are pertinent. "Throw open your ports to the world and you will capture the markets of the world," they have asserted time and again. We have tried that long enough to see how it works. The following table shows what has been the result, so far as the exports of many agricultural products are concerned. The figures given are for the year ended June 30, 1894, under a Republican tariff, and the year ended June 30, 1895, under the Democratic tariff:

	1894.	1895.
Barley.....bushels..	4,740,586	1,556,715
Corn.....do....	63,425,655	25,507,753
Butter.....pounds..	11,658,313	5,462,563
Cheese.....do....	72,102,644	58,446,036
Eggs.....dozen..	2,159,047	1,698,366
Flour.....barrels..	16,536,991	14,942,647
Oats.....bushels..	5,671,352	540,975
Tallow.....pounds..	53,588,800	25,030,339
Wheat.....bushels..	87,958,280	75,831,639

It will be seen by these figures that the farmers of the United States are not capturing the markets of the world very fast under the Democratic tariff law. I append hereto principal agricultural products, showing the tariff rates of 1890 and the reductions made by the act of 1894. The rates of 1883 are also given. Many of the rates were changed in the Democratic bill from a specific to an ad valorem rate, which allows undervaluations, working a greater injustice to the farmer.

Comparative tariff on agricultural products.

Articles.	Law of 1883.	Republican tariff of 1890.	Democratic tariff of 1894.
Barley	10 cents per bushel.	30 cents per bushel.	30 per cent ad valorem.
Buckwheat	10 per cent..	15 cents per bushel.	20 per cent ad valorem.
Corn	10 cents per bushel.	15 cents per bushel.	20 per cent ad valorem.
Oats	10 cents per bushel.	15 cents per bushel.	20 per cent ad valorem.
Wheat	20 cents per bushel.	25 cents per bushel.	20 per cent ad valorem.
Butter	4 cents per pound.	6 cents per pound.	4 cents per pound.
Cheese	4 cents per pound.	6 cents per pound.	4 cents per pound.
Beans	10 per cent..	40 cents per bushel.	20 per cent ad valorem.
Eggs	Free.....	5 cents per dozen.	3 cents per dozen.
Hay	$2 per ton..	$4 per ton...	$2 per ton.
Hops	8 cents per pound.	15 cents per pound.	8 cents per pound.
Potatoes	15 cents per bushel.	25 cents per bushel.	15 cents per bushel.
Flaxseed, etc	20 cents per bushel.	30 cents per bushel.	20 cents per bushel.
Garden seeds	20 per cent..	20 per cent..	10 per cent ad valorem.
Bacon and hams	2 cents per pound.	5 cents per pound.	20 per cent ad valorem.
Beef, mutton, etc	1 cent per pound.	2 cents per pound.	20 per cent ad valorem.
Wool:			
First class	10 cents per pound.	11 cents per pound.	Free.
Second class	12 cents per pound.	12 cents per pound.	Free.
Third class	2½ cents per pound.	32 per cent..	Free.
Third class	5 cents per pound.	50 per cent..	Free.
Leaf tobacco:			
Stemmed	$1 per pound	$2.75 per pound.	$2.25 per pound.
Not stemmed	75 cents per pound.	$2 per pound	$1.50 per pound.
All other stemmed	40 cents per pound.	50 cents per pound.	50 cents per pound.

I also give the rates imposed by Canada upon American farm products, which show the opposition that would be met with in the Dominion if American farmers should undertake tc capture that market for their surplus products:

Canadian tariff on agricultural products.

Animals, living, not elsewhere specified, 20 per cent ad valorem.
Live hogs, 1½ cents per pound.
Meats, 2 cents per pound, when in barrel, the barrel to be free.
Meats, fresh, 3 cents per pound.
Canned meats and canned poultry and game, extracts of meats and fluid beef not medicated, and soups, 25 per cent ad valorem.
Mutton and lamb, fresh, 35 per cent ad valorem.
Poultry and game, 20 per cent ad valorem.
Lard, lard compound and similar substances, cottolene, and animal sterine of all kinds, 2 cents per pound.
Tallow and stearic acid, 20 per cent ad valorem.
Beeswax, 10 per cent ad valorem.
Candles, 25 per cent ad valorem.
Soap, pearline and other soap powders, pumice, silver and mineral soaps, sapolio, and like articles, 35 per cent ad valorem.
Soap, common or laundry, not perfumed, 1 cent per pound.
Castile soap, mottled or white, 2 cents per pound.
Glue and mucilage, 25 per cent ad valorem.
Feathers, undressed, 20 per cent ad valorem.
Feathers, 30 per cent ad valorem.
Eggs, 5 cents per dozen.
Butter, 4 cents per pound.
Cheese, 3 cents per pound.
Condensed milk, 3 cents per pound.
Condensed coffee, condensed coffee with milk, milk foods and all similar preparations, 30 per cent ad valorem.
Apples, 40 cents per barrel, including the duty on the barrel.
Beans, 15 cents per bushel.
Buckwheat, 10 cents per bushel.
Pease, 10 cents per bushel.
Potatoes, 15 cents per bushel.
Rye, 10 cents per bushel.
Rye flour, 50 cents per barrel.
Hay, $2 per ton.
Vegetables, when fresh or dry-salted, n. e. s., 25 per cent ad valorem.
Barley, 30 per cent ad valorem.
Indian corn, 7½ cents per bushel.
Dutiable breadstuffs, grain and flour and meal of all kinds, when damaged by water in transitu, 20 per cent ad valorem upon the appraised value, such appraised value to be ascertained as provided by sections 58, 70, 71, 72, 73, 74, 75, and 76 of the customs act.
Buckwheat meal or flour, one-fourth of 1 cent per pound.
Corn meal, 40 cents per barrel.
Oats, 10 cents per bushel.
Oatmeal, 20 per cent ad valorem.
Rice, uncleaned, unhulled or paddy, three-tenths of 1 cent per pound, but not to be less than 30 per cent ad valorem.
Rice, cleaned, 1½ cents per pound.
Rice and sago flour and sago, 25 per cent ad valorem.
Rice, when imported by makers of rice starch for use in their factories making starch, three-fourths of 1 cent per pound.
Wheat, 15 cents per bushel.
Wheat flour, 75 cents per barrel.
Biscuits of all kinds, 25 per cent ad valorem.
Macaroni and vermicelli, 25 per cent ad valorem.
Starch, including farina, corn starch or flour, and all preparations having the qualities of starch, 1½ cents per pound; the weight of the package to be in all cases included in the weight for duty.
Seeds, viz., garden, field, and other seeds for agricultural and other purposes, when in bulk or in large parcels, 10 per cent ad valorem; when put up in small papers or parcels, 25 per cent ad valorem.
Mustard, ground, 25 per cent ad valorem.
Mustard, cake, 15 per cent ad valorem.
Sweet potatoes and yams, 10 cents per bushel.
Tomatoes, fresh, 20 cents per bushel and 10 per cent ad valorem.
Tomatoes, and other vegetables, including corn and baked beans in cans or other packages, 1½ cents per pound; the weight of the cans or other packages to be included in the weight for duty.
Pickles, sauces, and catsups, including soy, 35 per cent ad valorem.
Malt, 15 cents per bushel, upon entry for warehouse, subject to excise regulations.
Extract of malt (nonalcoholic), for medicinal purposes, 25 per cent ad valorem.
Hops, 6 cents per pound.
Compressed yeast, in bulk or mass of not less than 50 pounds, 3 cents per pound; in packages weighing less than 50 pounds, 6 cents per pound, the weight of the package in the latter case to be included in the weight for duty.
Yeast cakes and baking powders, 6 cents per pound, the weight of the package to be included in the weight for duty.
Trees, viz, apple, cherry, peach, pear, plum, and quince of all kinds, 3 cents each.
Grapevines, and gooseberry, raspberry, currant, and rose bushes; also, fruit plants, n. e. s., and shade, lawn, and ornamental trees, shrubs, and plants, 20 per cent ad valorem.
Blackberries, gooseberries, raspberries, strawberries, cherries, and currants, n. e. s., 2 cents per pound, the weight of the package to be included in the weight for duty.
Cranberries, plums, and quinces, 25 per cent ad valorem.
Prunes, 1 cent per pound, including raisins and dried currants.
Apples, dried, desiccated, or evaporated; dates, figs, and other dried, desiccated, or evaporated fruits, n. e. s., 25 per cent ad valorem.
Grapes, 2 cents per pound.
Oranges, lemons, and limes, in boxes of capacity not exceeding 2½ cubic feet, 25 cents per box; in one-half boxes, capacity not exceeding 1¼ cubic feet, 13 cents per half box; in cases and all other packages, 10 cents per cubic foot holding capacity; in bulk, $1.50 per 1,000 oranges, lemons, or limes; in barrels not exceeding in capacity that of the 196-pound flour barrel, 55 cents per barrel.
Peaches, 1 cent per pound, the weight of the package to be included in the weight for duty.
Fruits, in airtight cans or other packages, 2 cents per pound, the weight on which duty shall be payable to include the weight of the cans or other packages.
Fruits, preserved in brandy, or preserved in other spirits, $1.90 per gallon.
Jellies, jams, and preserves, 3 cents per pound.
Honey, in the comb or otherwise, and imitations and adulterations thereof, 3 cents per pound.

Revenue.

REMARKS

on

HON. BINGER HERMANN.

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895,

On the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency.

Mr. HERMANN said:

Mr. SPEAKER: I avail myself of the opportunity given to express my views and those entertained by a large majority of the people whom I have the honor to represent in this the great council chamber of the nation.

We have assembled, sir, under remarkable conditions. The annual message of the President notifies us of what we are already painfully aware, that our domestic concerns are "in such a perplexing and delicate predicament as to require prompt and wise treatment." These are his words. Before this House was organized under the rules, and within eighteen days from the first, another message comes to us from the Executive in which he reminds Congress of his previous comments on the country's unhappy situation, and then he says:

This condition is intensified by the prevalence in certain quarters of sudden and unusual apprehension and timidity in business circles.

Still further on he says:

We are in the midst of the season of perplexity caused by our dangerous and fatuitous operations.

Since this second message we have also had a third in reference to the perils which threaten us from abroad.

NEVER SO MANY MESSAGES IN THE SAME TIME.

Never before since the beginning of our Government have we had so many messages in the same brief interval from any President, and all breathing such despondent spirit and predicting such calamitous results. From the day this Administration first went into power not one encouraging message has yet come from the Chief Magistrate to the people's representatives, and not one cheerful ray has that Administration contributed to inspire hope. We recall the very outset, when we were summoned to this Capitol in the heat of the summer, in extraordinary session, when we listened to a doleful message, in which it was proclaimed to all the world that there existed "an alarming and extraordinary business situation, involving the welfare and prosperity of all our people." This situation was attributed to the continuance of the Sherman law, and we were assured if this obstacle to prosperity were repealed all would be well, because, as we were reminded, the ills which had in a few months befallen us were "chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government." The very message, with the extraordinary meeting of the nation's Congress, as if in war time, did much to intensify the prevailing timidity which everywhere had already bred distrust, evil forebodings, and alarm; and yet these were not occasioned by the operations of the so-called Sherman law. But the law was hurriedly repealed. The continued and greatly increased depression, panics, business failures, and commercial ruin everywhere which followed afford the best proof that the President's diagnosis of the nation's condition was incorrect.

FREE-TRADE PRESIDENTS ALL REPORT EMPTY TREASURIES.

The alarming messages of Grover Cleveland recall to our minds the historic parallel with every message from a free-trade President. We remember the wretched failure of James Buchanan, the financial distress, bankruptcies, and universal hard times which befell the country under his Administration. Just as we see it now; there was then an empty Treasury, bonds were issued, moneys borrowed to pay the current expenses of the Government, high rates of interest paid, the imports exceeded the exports, we were buying more than we were selling, there was a distrust in foreign countries as to our securities, and a lack of confidence at home. And yet, with all this, there was an abundance of that which the soil produces and a rich store of resources which only wanted the quickening spirit of an American policy to produce a generous activity, remunerative capital, profitable markets, good prices, and industrial prosperity. Let us reproduce that well-remembered portion of Buchanan's message in 1857. Read what he there says:

In the midst of unsurpassed plenty, in all the elements of national wealth, we find our manufactories suspended, labor of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want.

If this gloomy message were read to most people to-day and the author's name withheld, it would be said to be the production of President Grover Cleveland. The same policies produce the same results. They can all be described in the same language. When the sickened nation reaches that condition, history teaches us that there is but one medicine which will restore the patient, and that remedy is a protective tariff.

REPUBLICAN PRESIDENTS REPORT PROSPERITY.

We have read the gloomy portrayal of national affairs when free-trade Presidents describe the close of their unhappy Administrations. Let us now read the contrast of a Republican or protective tariff Administration in the last message of President Harrison. He said:

In submitting my annual message to Congress I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most varied period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

The student of history would at once say, in reading that message, that it described the splendid results of a Republican Administration.

HARD TIMES FOLLOWED CLEVELAND'S INAUGURATION.

Within ninety days after that cheering message was read to the American people Grover Cleveland was inaugurated, and immediately a chill came over the country. Capital fled in terror from the busy haunts, enterprises withered, factories suspended, business houses failed or reduced their trade, the mines closed or worked on diminished wages, laborers were without work, the mills and the farms suffered all alike. Why this immediate change in our conditions? The answer is self-evident. The profitable American market opened its capacious gates to the products of a foreign soil and a foreign labor, and the energetic home toiler found himself unequal to the cheap competition which displaced him in the market. The tide quickly turned. It is easy to destroy confidence, as it is difficult to restore it. With our own factories and forges, and farms and mines, and mills deprived of their accustomed traffic, and that traffic largely supplied by the foreign competitor, what else could be expected than that which we now experience? The first effects of the Cleveland Administration are seen in our foreign trade relations. The repeal of the McKinley law threw down the bars. We at once increased our purchases from abroad, and soon we were buying more than we were selling. Our imports exceeded our exports. The balance of trade was against us. The American gold went to Europe. It was used in foreign factories, foreign farms, and mines, and it was paid to foreign wages. Under the Republican Administration the balance of trade was in our favor and the European gold came to America. It found its way into the Treasury and among the people. We not only had abundant money, but we had abundant circulation. There was no alarm from the so-called Sherman law. Nobody called for its repeal, and nobody said then, as Mr. Cleveland declares now, that "we are in the midst of the season of perplexity caused by our dangerous and fatuitous operations."

FREE TRADE INCREASES IMPORTS AND DECREASES EXPORTS.

It is a well-established fact that whenever in this country we have a free-trade or tariff-for-revenue Administration we at once increase our imports and decrease our exports. A few facts will illustrate.

For woolens the Wilson bill took effect January 1, 1895. The first six months after this we imported from abroad 19,418,029 pounds of woolens and worsted goods, valued at $12,723,032, while for the first six months of 1894, under the McKinley bill, the like imports were only 2,716,710 pounds, valued at $2,529,694, a difference in value of over $10,000,000 against our own country. During the same six months of 1895 American manufacturers imported 100,628,257 pounds of foreign wool, as against 42,438,461 pounds in 1893 and 44,062,211 pounds in 1892. In 1832, under protection, our general imports were then $101,029,266, while in 1834, two years later and under free trade, our imports had increased to $126,521,000.

WE HAVE NOT THE WORLD FOR OUR MARKETS.

In Mr. Cleveland's last campaign it was freely asserted that if his cause should triumph we should have the world for our markets and that our exports would increase marvelously, and the free traders' favorite maxim was that if we would not buy abroad we could not sell abroad, and it was explained that if the foreigner could freely sell to us he would more freely buy from us. Many believed this, not reflecting that it is with nations as it is with individuals, that they buy only in that market where they can derive the best advantage. The statistics show that we not only did not sell more to the foreigner under the Wilson bill, but that, as a matter of fact, we sold less, and our sales are still decreasing. Our exports to Europe in 1894 were $700,870,822, and in 1895 they were $627,975,133, or a decrease in one year's time of $72,895,689. In contrast to this, under the McKinley bill, our exports in 1891 increased $134,276,000, while at the same time Britain's

exports decreased $82,291,000. It might be thought to follow that if we should sell so much less than before we naturally would buy less than before. A prudent business man would at least pursue such course. But not so with a Government doing business under free-trade ideas and practices, as the figures show. In 1894 our imports from Europe were $295,071,865, while in 1895, one year later, under the Wilson bill, the imports from Europe had increased to $383,686,842. It will thus be seen that we spent $88,600,000 more money for European goods, and the European spent nearly $73,000,000 less money for American goods. This represents a difference which had to be met by sending away our gold. It is thus proven that under a lower tariff we do not increase our exports and that we do not "conquer the markets of the world," as the free trader so loudly boasted. Indeed, it looks as though the markets of the world had conquered us. In trying to capture them we have lost our own.

FREE TRADE DIMINISHES CONSUMPTION.

But it is replied that these increased imports are occasioned by our greatly increased consumption, and not to the decrease or removal of tariff duties. The painful fact, however, remains that the American nation consumes at least 20 per cent less to-day than it did two years ago, and yet our population is greater. The earning capacity and ability of our people to purchase has been impaired from 20 to 50 per cent by these Cleveland times. Four hundred and fifty-six employers have made reports stating the number of their employees and the rate of wages paid them for six months' time in each year from 1890 to 1895. In 1892 the number employed in these 456 establishments was 94,560, while in 1895 the number was reduced to 80,196. From the same reports, which are published in the American Economist, it is also shown that for 1894 there was a reduction of 21 per cent as compared with 1892 in the wages of these people. The lessening of wages always means the lessening of consumption. When it is estimated on the basis of the census of 1890 and on recent investigations that the wage disbursements in 1895 will be $300,000,000 less than in 1890, it can be seen how fearfully has consumption been decreased. The number of people unemployed to-day who were profitably employed during the existence of the McKinley law would constitute a vast army of people. It would be interesting to know how many thousands more are employed on European farms and in European factories this year, who were idle in 1890. With present conditions in our country it is extravagant to claim that there is greater consumption among the masses.

Nor can it be said that consumers are benefited substantially by cheaper prices. Meats and breadstuffs and fuel are about the same. Clothing has shown but little reduction in price, and where it is much cheaper it will be found to contain such quantity of shoddy and waste as to diminish the value of the product, so that in the end there is no real advantage to the consumer, and in proof of this is the statement from Mr. Justice Bateman, a well-known authority on foreign and domestic wools and woolens, that the wool adulterants imported in one year under the free trade Wilson bill amounted to the enormous quantity of 17,600,000 pounds, while under the entire period of the protective McKinley law there were only 1,300,000 pounds purchased from abroad.

The fact can not be denied that increased imports represent the displacement of home-made goods for foreign-made goods. The more we buy abroad the less we buy at home. The more the foreigner manufactures for us the less the American will manufacture. The more the foreign farmer produces for us the less we buy from the American farmer. Increased imports represent in proportion the closed American factory, mine, and mill, and the abandoned farm, fruit orchard, and sheep ranch. They represent diminished production, reduced wages, scarcity of money, increased indebtedness, and hard times on our side of the water. No nation can long remain prosperous with farms on one side of the ocean and workshops on the other. The money which under the McKinley law circulated at home now circulates in Europe. The wages once paid American labor are now paid European labor. Every day's labor by an Englishman on goods consumed here is one day's labor less for an American. How long can we remain out of the hands of a foreign receiver if this condition remains? What is true of individuals is no less true of nations. The same economic law applies to both. An individual long buying and seldom selling will soon come to want. The best proof of these remarks is found recently in an editorial from the great London journal, the Financial News, which is as follows:

Practically every penny that was subscribed in London toward the recent American loan has been got back through the expansion in the export of woolens and worsteds. During the last month America bought less raw wool than in September, 1894, but had to pay more for it. The total export value of worsted tissues for the nine months ended September 30, 1895, has been over $13,000,000 greater than for the same nine months of 1894, and the lowering of the American tariff has been the British manufacturers' salvation.

It was believed by some of our own manufacturers that free wool would benefit them, as it would aid them to enter the foreign markets to compete with manufactured woolens there. But this hope has not been realized. It has been a severe struggle with many American woolen mills to maintain themselves, and such manufacturers freely and publicly proclaim their regret that foreign wools were placed on the free list. They have learned that free wools produce free woolens to Americans, and this produces bankrupt American woolen factories as well as deserted sheepfolds. The protective tariff is reciprocal. Contrary to the belief of American manufacturers and tariff reformers, our exports of all kinds of woolen fabrics have decreased. For the first three months of 1894 the exports were $196,173, while for the same period in 1895, under the Wilson law, they were but $180,223. For the advantage that was pretended to accrue to the manufacturers a costly sacrifice has fallen upon the American woolgrower. It is estimated that his loss amounts to $40,000,000 a year. The price of wool to him has declined 50 per cent in the last two years, while his production has decreased from 364,000,000 pounds in 1893 to 264,000,000 pounds in 1895, and the number of sheep has diminished from 49,000,000 head in 1893 to 39,000,000 head in 1895. Take the loss in the value of sheep, and it represents a decline in three years from $125,909,264 to $66,685,767, as at present. Our country was the third largest of woolgrowing nations and would soon have been the second largest had the American policy continued. It is estimated that the annual loss to the woolgrowers of the State of Oregon and her two neighbors, Idaho and Washington, in the reduced price on wool will equal $1,800,000 a year.

THE CHANGE HAS BEEN A COSTLY ONE.

This is the price they pay in the insane attempt to "conquer the markets of the world." Had the McKinley law continued, the American woolgrowers would soon have supplied all the wool consumed in this country, as they had already reached within 55,000,000 pounds of the entire consumption. What, then, have we gained? Woolen manufactures are but little, if any, cheaper; the raw wool, to the producer, is reduced one-half in value; the American manufacturer is no better off, while a great American industry is rapidly going to destruction. When this is completed and the wool supply of the world correspondingly diminished prices will then advance, but the American woolgrower will have disappeared and the foreigner will fix the price. As it has been with wool so also has it been as to the many other products of American growth and industrial development which were removed from protection and placed under the sharp edge of European competition. Lumber is one of the greatest of American industries. In 1890 the capital invested amounted to the enormous aggregate of nearly $500,000,000. The lumber product was valued at $390,000,000 and exceeded the value of the iron, cotton, and woolen products, and it employed nearly 800,000 people. Even under the McKinley law the foreigner was enabled to pay $1,139,000 in tariff duties to enter our market with his lumber. In three Pacific Coast States—Oregon, California, and Washington—the wages paid in 1890 amounted to $7,715,000. There was not $3,000,000 paid in lumber wages in those States in 1895 under the Wilson bill. It was predicted that lumber would be cheaper to the consumer under the Wilson bill. This, however, has not resulted. Lumber is no cheaper than it was under the McKinley bill. The mill owners have suffered, the whole country has been punished, and the consumer is not benefited by cheap prices. We lose the revenue to the Treasury and the foreigner alone is benefited.

THE FARMER HAS SUFFERED MORE THAN ALL.

Looking to the agricultural list, we find that the farmer has, perhaps, suffered more than any industrial class. To him no market is so profitable as that which brings in close proximity the farm and the factory—the consumer and the producer. Our observation teaches us that farm lands which are nearer to manufacturing centers are higher in value, and the profits are greater than from the farm lands more remote. It is to our interest to encourage the home market rather than the foreign market, and as a result only the surplus of our productions would find their way across the oceans. Only the single inducement found in cheap labor abroad could justify the foreigner to transport from across the Atlantic Ocean to our markets so many of the common farm products the like of which are so abundantly grown in our own country. Within the last ten years the statistics show we have sent ten millions of American gold abroad to buy the one product, such as potatoes. We buy them from such remote countries as Scotland and the British North American provinces, from Germany, Belgium, and from the Bermuda Islands. A farm product so common with us, it would seem, should be produced sufficient for our entire demand, to the exclusion of the foreign product. It would be if the American product was sufficiently protected. Take another item, such as eggs, for instance. The egg product of the American farm amounts in value to $100,000,000, and it is estimated that if to this we add the poultry product of the farm we shall have $300,000,000 as the annual output for these items. In 1893 the entire wheat yield of our country amounted to 396,000,000 bushels, and was valued at less than $300,000,000, so that the egg and poultry sales of the American farmer actually exceed the value of his entire wheat crop. Since the repeal of the McKinley law

immense shipments of eggs and poultry are daily entering our markets from the most remote countries.

Take, again, the item of hay. Over $20,000,000 of this product has been imported from Canada and adjoining countries in the short period since the repeal of the McKinley law. Another great product which suffers is that of the hop. Under the McKinley law the duty was 15 cents, while under the Wilson bill it was but 8 cents, per pound. We bought fewer hops under the McKinley bill than ever before, because our market was restricted more to the home supply, and prices were higher under the McKinley law than they were before. While it is true that we ship largely to the foreign markets, it must not be forgotten that we sell more to our own market than to any foreign nation, or to all combined.

Another product which has seriously suffered is that of the prune. California, Oregon, and Washington are now producing extensively of this fruit, and much labor and capital are annually being invested in this enterprise. The reduction of the McKinley duty on prunes invited a large importation of the foreign fruit to America. Under the McKinley law this importation was reduced to 23,225,821 pounds from 67,000,000 pounds under previous laws. Here was a demand in our own market for nearly 44,000,000 pounds previously supplied by the foreigner, which under the McKinley law was supplied by the American. The injury done the home producer is not so much in the foreign supply to this market as it is in the lowering of the home market price to meet the competing price of the foreign rival. The American grower suffers a loss of market and a loss of price. European cheap laborers and American free traders unite to inflict the blow. One is as dangerous to American labor as the other.

Another great product of the American farm is wheat, and it, too, is affected by the influence of the tariff. Our nation in 1893 had a surplus of about 120,000,000 bushels for export. It came in contact in the European market with a surplus of 230,000,000 bushels from Argentina, India, Australia, Chile, and Canada. The American surplus in the foreign market is sold at whatever price is fixed by that market. The only relief to our people is in less production or in increased home demand; and increased home demand must come from a judicious tariff which will encourage diversified farming and increased consumption by enlarging the manufacturing industries among our own people. A free-trade policy tends to discourage home manufactures and drives that labor from the factory to the farm, and this increases the farm products and adds to our wheat surplus in the already overstocked markets of Europe. While our home market was more than ever supplied by American farmers, under the McKinley bill our sales to the foreign market were greatly increased. The farm products exported in one year under that bill amounted to $793,717,000—indeed 78 per cent of our $1,030,723,000 of foreign exports was from the farm. The McKinley bill increased our sales abroad $200,000,000. Then the money of Europe came to America, now the money of America goes to Europe. Is it not easy to see why money is scarce now in our nation?

A BANKRUPT TREASURY THE LEGACY OF FREE-TRADE POLICY.

We find the condition of the Treasury as bad as we find the material interests of the country. Under the last year of the Harrison Administration the receipts were $385,819,629, while the receipts of the first year of the Cleveland Administration following were $296,960,336, or a falling off to the enormous extent of $88,857,293. Under Harrison there was a surplus in the Treasury, and the national debt was reduced $259,000,000. Under the Cleveland Administration there is no surplus and no debts paid, but, worse than all, there is a deficit and the national debt increased $162,000,000. In fifteen months' time the revenues under the Cleveland tariff left us a deficit of $70,000,000. There is now not a single month that the expenditures do not exceed the receipts; indeed, we are going behind at the rate of four million a month. As it was under the free-trade Buchanan Administration, so it is now. We are spending more than we are earning. We are appealing to the bankers of the world to come to our rescue. Three bond issues have already been made, and the Rothschilds and Belmonts are preparing to negotiate a fourth.

The whole difficulty, disguise it as they may, is that the revenues of the Government under Democratic policies are insufficient to meet the necessary expenses. The expenses are greater than the receipts. Articles which under the McKinley bill produced large revenues on foreign importations are now placed on the free list, and we lose those revenues. The result is that the Government, in order to maintain the reserve fund, must obtain money by other means, and it resorts to borrowing. The President asks Congress to approve of his alternative. I can not for one see my way clear to approve of further increasing the national indebtedness by bond issues and can not vote for such relief. President Harrison had no difficulty in maintaining the public credit and providing for the reserve fund and defraying all the expenditures of the Government, and even reducing the national debt, and there is no reason why the same means under Harrison will not now under Cleveland produce the same relief. The Republican party has severely arraigned this Administration for its ready resort to auctioning off the credit of the country, through bond issues, to every sordid syndicate, and now, sir, it is late in the day and comes with poor grace to solicit the approval of a Republican Congress, in time of profound peace, to the resort of further adding to the enormous bonded indebtedness. The bill now before us will give the President $40,000,000 by Republican protection. I would gladly go still further on this line, if I thought it would not meet an Executive veto; but to add to this relief an authority for bond loans will not, in my judgment, be approved by the people. Already intense disgust and indignation are expressed as to the advantage taken of our necessities through the imbecility of those who represented the Government in its deal with the shylock syndicate for sixty-odd millions of dollars in which bonds worth 120 were sold for 104½. This wanton and unjustifiable loss of $10,000,000 into the hands of a mercenary band of European and American money speculators is without a parallel in any country.

If the Administration had no other way to avoid national bankruptcy than by bond issues, an appeal to the American people alone would have negotiated the entire loan at home, and the legitimate price of the bonds would have been realized, as they would have been taken eagerly in the open market and $10,000,000 of the nation's treasure saved.

However we may view the subject, it is still a most painful one. Everywhere we behold incompetency, financial embarrassment, and losses which the country has been compelled to suffer by repudiating the wholesome doctrine of protection. It is not an overestimate, sir, to say that the two first years of Mr. Cleveland's administration have cost this country more than the entire indebtedness incurred by the late war. As a person in robust health exhibits the effects of sickness less than one already enfeebled, so it may be said of our unhappy nation—that had not the previous thirty years of prosperous Republican rule made us strong, rich, self-reliant, and resourceful, we should ere now have been in far greater peril, bankruptcy, and discredit.

A nation can ill afford to risk few such costly changes in a hundred years. The time has surely come, sir, when we should be less European and more American in our business, our policies, and our principles. But that wisdom, patriotism, and patience which at all times sustains the American people has at last come to the rescue. In the last Congressional elections public sentiment found expression for the first time, after a full trial of so-called tariff reform in this country in later years, and there was witnessed such an uprising and such a popular revolt as has never before occurred, even in war times. States which for thirty years had stood solidly in the Democratic column wheeled into line for protection, and as I look over this Chamber I see twenty-four States with not a single Democratic Representative. In the last Congress there was a Democratic House with a majority of 90, while in this House there is a Republican majority of 140.

THE REPUBLICAN PARTY EQUAL TO THE EMERGENCY.

Barely a week has elapsed since the President, in a special message to us, proclaimed the credit of the nation to be in danger and urged upon us immediate passage of relief measures. Every member of this House was at once notified of the pressing emergency, and before this day ends we shall pass such a revenue bill as will protect the public credit and prevent the deficiencies in the current business. The condition is a grave one, but the Republican party is equal to the emergency and will bring to it prompt and businesslike methods.

The bill before us does not attempt generally to revise the tariff. Its object is, rather, to increase the revenue by increasing some duties and restoring others, until the complete restoration of the Republican party to power, when, with a Republican Senate and a Republican President to cooperate with this body, there will be such a restoration of duties as will once again guarantee protection of American interests all along the line. This measure is based on protection doctrine, and it will provide $40,000,000 by duties on foreign imports. There will be no surrender of Republican policy; and if President Cleveland should decline this aid we shall still feel that we have performed our duty to our country without the sacrifice of those principles of revenue taxation which we believe most conducive to the prosperity and happiness of a free people.

AMERICAN POLICIES FOR AMERICAN PEOPLE.

It is a relief, sir, to know that the day has already dawned for a return to American policies and American institutions.

The first act of the Republican majority in this Congress was to rebuke the American ambassador to England, Thomas F. Bayard, for a speech delivered last month to the English people, in which he belittled his nation and scoffed at and abused the political policy entertained by a majority of our people. It was thought by many in this Chamber that an American official, whatever be his station, who would so far forget his country as to denounce a large body of the people whom he represents, should not only receive a stern rebuke from that country, but that he should be impeached.

There is already too much toadying by private American citizens who go to Europe and who at once become so affected with anglomania and with monarchial forms and society blandishments that they deem it the proper thing to ridicule and then to apologize for their native land and its institutions. Such people should be expatriated; but in the case of an American officer guilty of like offense, he should be impeached and driven into solitary exile by the sentence of a drumhead court-martial. The President should not have waited for Congress to notice and punish this unpardonable offense. He should himself have recalled his recreant ambassador and reminded him that only Americans were wanted to represent this nation at foreign courts.

THE MONROE DOCTRINE AN AMERICAN DOCTRINE.

Then again the majority in this Chamber were quick to resent the indignity attempted by England upon the Republic of Venezuela. We voted the President $100,000 to investigate the issue between the two countries and to determine whether the facts would warrant us in deciding that the cherished American Monroe doctrine had been violated by extending any foreign territorial possession upon the soil of that Republic. We love our country and revere its institutions, and we worship the old Stars and Stripes, the emblem of its liberty, its union, and its glory, and if there is any issue which our people regard paramount to another it is that the integrity of this nation shall be maintained; and whether the menace approaches us from without or from within the combined power of our mighty nationality will respond quickly to defend against the aggression.

We have no concern with foreign alliances or usurpations in the Eastern world, but we do declare that as to American Governments they shall not be subject to the domination of European powers. It is characteristic of England to extend her possessions in all directions, and among the weaker powers her lines are extended from one point to another until she occupies an entire empire of the rightful claimant. The early settlers of my own State once learned to experience the grasping and imperious exactions of that power in the dispute over the Pacific Northwest. The British claimed the Columbia River Valley and the vast regions north of it. They extended their trading ports and fortified as they advanced, and continued to dispute the peaceful set tlement of Americans within the country claimed. The Americans insisted on their right to all the country up to latitude 54° 40'. President Polk's Administration brought the controversy to an issue. The eloquent old Thomas H. Benton announced in the United States Senate that the best means of establishing our right of possession was by occupancy and the planting of 30,000 rifles in the Valley of the Columbia. The war cry of "Fifty-four forty or fight," which resounded throughout the nation, was the most effective assurance to Great Britain that we would assert our rights, and then, and only then, was a peaceful compromise effected. It has, however, always been regretted that we finally yielded so far as to accept to the forty-ninth degree. Looking still farther to the north of us we behold the lion's claw slowly and stealthily advancing over the distant Territory of Alaska. The usual pretext of boundary line is asserted as the basis of a claim, as it is in Venezuela.

We also recognize the possible conflict which may yet arise over the occupation by Americans of the proposed route of the Nicaragua Canal. There Britain likewise interposes an objection and asserts a joint right accruing to her under the terms of an obsolete and much misunderstood treaty made fifty years ago, and known as the Clayton-Bulwer treaty. That treaty has long since become inoperative and void. The construction of the Nicaragua Canal—now since the progressive Republican party is soon to be restored to power—is an assured fact. For commercial benefit, as well as for military defense, its construction is deemed to be one of the indispensable undertakings for the United States, and a general understanding seems to pervade the public mind that this great work shall go on, and that it shall be built by Americans and by American capital and under governmental control. We shall build the canal first and interpret the treaty afterwards, and neither the item of cost nor British intervention will stand in the way when the procession is ready to move toward active operations.

THE ANNEXATION OF THE HAWAIIAN ISLANDS.

The annexation of the Hawaiian Islands will be another great achievement for a patriotic Republican Administration to undertake. The responsible and energetic class of those people are American in heart, and many in nativity, and, above all, they are lovers of a republican form of government, and longingly hope that they may become a part of our great nation, to live under the Stars and Stripes, and to acknowledge their allegiance forever to its authority. The first flag they hoisted when independence crowned their efforts was that flag, and when it was hauled down by the direction of Grover Cleveland they continued to hope that in some day it would be restored to its place to float over their entire possessions by the authority of another President of the American Republic. There stands, however, the American sentinel, armed with the Monroe doctrine, and, watching foreign designs upon those islands, solemnly declares to the nations of Europe that their institutions must not find new sway in the Western Hemisphere, or in the language of President Monroe himself:

We should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety.

This is the doctrine of America for Americans.

IMMIGRATION MUST BE RESTRICTED.

The Washington maxim, "In time of peace prepare for war," while it admonishes us now more than ever to place our coasts in a position of defense by the erection of fortifications and the best approved armament, as well as for the construction and maintenance of an efficient and powerful navy, the same maxim also reminds us to guard against other dangers which menace the integrity and perpetuity of republican institutions.

Complaint is justly made that the gates of Castle Garden swing too far inward. The immigration to our shores in recent years of the criminal, the vagrant, the anarchist, and the irresponsible dregs which incite and foment disturbances, social disorders, riots, and destruction of valuable property, and even life, while they indulge in incendiary harangues and contemptuous and insulting threats against the authority of our laws and the peace and good order of our communities, should cease, and these enemies to all organized government should find no admission to our shores. They pollute and desecrate the temple of liberty. A sound protective policy must exclude these people as it excludes Europe's other cheap products. They do not come, as our fathers did, and as so many others still come, for bona fide citizenship and for the liberty it confers—constitutional liberty to them is tyranny. Their mission is to destroy, not to build. Let them understand that the mere oath of allegiance does not make the citizen of this Republic. If aliens are not attached to the principles of the Constitution they can not be made true citizens, and no oath can make them such. Until they can come up to this high standard they should find no refuge in this country. Some of the best blood of our nation is of foreign birth, but it is loyally American, and will be the first to resent an insult to the flag of the Republic. These citizens are not sympathizers of anarchy and misrule.

THE COMMON SCHOOL IS THE HOPE OF THE REPUBLIC.

In the education of their children let these doubtful citizens understand that the common schools of America are the nurseries for future citizenship; that there the young are inspired with a love of liberty and good government; that they are taught the lessons of the Revolution and learn the meaning of the conflicts of Lexington, of Bunker Hill, and of Yorktown, and there, too, they are taught to revere the memory of the immortal Washington, of Patrick Henry, of Hamilton, and Jefferson. There they will also learn that the illustrious Lafayette, De Kalb, Pulaski, and Kosciusko came to this country from their foreign homes not to tear down liberty but to offer their lives for its establishment, its maintenance, and its perpetuity. There they will behold in the splendid public-school edifices of the great cities, and even in the humble common-school log houses in the forests and on the frontiers of the remote West, the starry flag of our Union, itself teaching an object lesson of the dearly bought and precious legacy which it symbolizes.

ANARCHISTS, CRIMINALS, AND VAGRANTS MUST BE DENIED NATURALIZATION.

That better safeguards may be provided against the dangerous elements which so seriously threaten the stability and permanency of our Republic, I should be glad to unite in such legislation as will restrict citizenship so far as to exclude entirely the persons I have mentioned, and also for such further legislation as will require our courts to exercise greater care in the naturalization of aliens. The law provides that it shall be made to appear to the satisfaction of the court that during the time the alien has resided within the State or Territory "he has behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the same." In the face of this requirement, however, the courts in our great cities, just before election especially, manifest such indifference and disregard of duty as to make the admission to citizenship a burlesque and a scandal. Vast numbers of the most obnoxious persons, who can neither read nor write and have no conception of our Constitution or the obligations which it imposes, take the solemn oath of allegiance with uplifted hand, ignorant and indifferent as to the high qualifications which it confers. Men of notoriously bad character, bribed voters, anarchists, bomb throwers, and red-handed ruffians deliberately violate the law of naturalization, as if it were intended for outlaws and not for honest men. The time has come, sir, when it should be understood that our free institutions are for those who appreciate and observe them, and, while the fruits of the tree of liberty are within the reach of all citizens, that in enjoying those fruits they must not and they shall not girdle the tree.

REPUBLICANS WILL PROTECT THE OLD VETERANS OF THE WAR.

As we are discussing in this revenue or tariff bill the great question of protection, I have not deemed it inappropriate to refer

as I have also to that protection which shall go to our social and political institutions. One is for safety, and the other for revenue; both necessary for national preservation.

In conclusion, I may be excused for referring to another protection, which, it is expected, the Republican party when in full power will not overlook, and that is in a generous regard for the care and veneration of the old soldiers of the war for the Republic. Day by day their numbers are diminishing, and soon the places that now know them will know them no more. The magnificent Republic which they preserved, the vast wealth and prosperity which followed, and the liberty and happiness which are ours to transmit to our posterity are blessings for which every day in our lives we should feel grateful to these old veterans of the greatest war of record.

Thirty years have passed away since these patriotic men responded to their country's call. Many were then in the flush of young manhood. The exposures which thousands of them endured no mortal tongue can tell. Official reports show that of deaths during the past year 63 per cent was from disease of service origin, and in other cases life was shortened by the hardships incident to the ordinary service. No man ever entered that service and was discharged from it with such health and bodily vigor as when he was first mustered in.

Much of the past generous legislation by the Republican party has been rendered ineffective by unfriendly interpretation since then. The old soldier justly insists that after he has furnished his proofs and been granted a pension, he can not be deprived of it without due process of law. It is an injustice that pensions granted years ago on proper evidence then obtainable should now be reduced on no showing. Every day notices are going out as to reductions from $12 to $8 and still lower, and many entirely cut off. Rejections of applications are made after years of accumulation of evidence, and when a second application is filed for the same disability and granted largely on the evidence at first submitted, no allowance is made for the interval of time. Much delay is caused, as well as vexation and expense, in establishing nonessential details after the disability applied for is fully proven. The men who fought under Grant, Sherman, Sheridan, Logan, Thomas, Hancock, and Sedgwick, and those other brave men who bore the brunt of the naval battles on the high seas, are entitled to greater consideration and generosity on the part of the great Republic saved by their heroic deeds, their matchless valor, and their sublime endurance.

The Bond Bill.

SPEECH

OF

HON. RICHARD BARTHOLDT,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 28, 1895,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. BARTHOLDT said:

Mr. SPEAKER: While this question is being discussed in the House, the Bureau of Engraving and Printing is preparing, under an order of the Secretary of the Treasury, the plates for a new bond issue. This fact simplifies the situation very materially. It means that bonds will and must be issued, no matter what the Congress will do. It means that the spirit of insolvency conjured up by Democratic misrule threatens Uncle Sam, and, leveling a pistol at his head, asks him for "your bonds or your life!" and it means that the Administration, in order to avoid bankruptcy, has already decided to issue bonds, the same as has been done twice before, namely, under the law of 1875, which authorizes two kinds, 5 per cent ten-year and 4 per cent thirty-year bonds. The Administration was ready to issue such bonds when it sent forth its alarming messages, and the financial situation, accentuated as it was by these messages, now compel it to speedily carry out its plans.

This demonstrates clearly that the arguments of such of my colleagues as oppose the issuance of bonds as a matter of principle are not applicable now. The question confronting us is not whether bonds shall be issued at all, but whether, such issue being inevitable, Congress can not enable the Administration to float them under terms more favorable to the people than are specified in the law just quoted. The vast majority of the Republicans on this floor, among them all the distinguished leaders, are answering this question affirmatively by the advocacy of a bill which not only reduces the rate of interest and time of duration, but also provides that the bonds to be issued shall be first offered to the people of the United States by advertisement, so that our own people shall have an opportunity to purchase them if they so desire. I am willing and ready to support this bill as the best we can hope to get through the Senate and as a very material improvement on the statute under which bonds will be issued should this bill be defeated. The 3 per cent bonds authorized by this measure will on a ten-year loan save the people interest to the amount of $10,000,000, and will besides remain in the hands of our own people.

In the light of American history Republicanism means the redemption, not the issuance of bonds, and if the Republican party had remained in power Congress, it is safe to say, would not to-day be called upon to strike a bargain with capitalists and creditors. This is, let me say to my friends on the other side, not the claim of "pernicious partisanship," but the now commonly accepted theory of the country and the people, based as it is upon the history of a generation. While the revenues exceeded or equaled the expenditures the greenbacks were no source of trouble whatever to the Government; and we therefore claim to-day that they will be rendered harmless as a gold-withdrawing factor as soon as we succeed in again making both ends meet in the national household. This is the principal reason why this Republican House does not believe in the immediate retirement of the greenbacks and why the President's attempt to force the hands of Congress in this respect will be a failure. With the increased revenues resulting from the emergency tariff bill passed a few days ago, the needs of the Government will be amply provided for, and consequently the retirement of the greenbacks is deemed unnecessary. So strong is this conviction that quite a number of my colleagues on the Republican side of the Chamber are determined to vote against this new bond bill for the sole reason that it may indirectly and partly effect such retirement.

It is a mistake, of course, because the bill prohibits it in specific terms; but the vote will show, nevertheless, how little real sentiment and sympathy the President's proposition finds in the ranks of both political parties at this time. The popularity of paper money, as manifested during the last few weeks, is perhaps an indication of the world's advancement in the direction of the ideal money of the future. It is a constant process of evolution, from shells and hides to iron, from iron to brass, from brass to copper, from copper to silver, from silver to gold; and now the time is probably not far distant when the circulating medium, with the exception of small change, will be nothing but paper—paper backed and secured, of course, by the precious metals stored in the Treasury or in the banks.

But, Mr. Speaker, this is not the time to enter into any general discussion of the financial question. We are confronted with two dangers, an unfavorable balance of trade, and, as a consequence, a rapidly vanishing gold reserve, on the one hand, and a monthly excess of expenditures over revenues on the other. It is "a condition, not a theory"; it is a grave emergency, which may be denounced by the partisan and deplored by the patriot, but one that must be met in a patriotic spirit, and must be met at once. It is unnecessary at this time to remind the people that the Republican party is not responsible for this state of affairs, or to point out the malefactors, for the people have already begun chastising them, and it is also useless to assert that the Republicans, had they full control of all branches of the Government, would find a prompt and lasting remedy for the evils resulting from Democratic rule, because the record of our party speaks louder on this point than we, in the few hours of this debate, could hope to do. No; in the face of a grave emergency the duty of the hour is for all parties to join hands, for all to drop their differences of race, religion, and politics, and to stand up, one and all, heart and soul, for the credit of the Government and the honor of the nation. It is like in a case of war when we cease to be Protestants and Catholics, Republicans and Democrats, English, German, Irish, and are nothing if not parts of one great unit of patriotic American citizenship.

The two bills offered as a remedy for our temporary difficulties—one to increase the revenue and the other to maintain the gold reserve and to eventually meet deficits in the monthly balance sheets—these two bills are not exactly what our party would propose if it controlled all branches of the Government. Concessions had to be made to the peculiar complexion of the Senate and to the views and politics of the Executive; but it should be stated here, in the interest of our own party and for the information of the country, that never before in our history was it rendered so difficult to live up to the old maxim that all legislation is more or less the result of compromise.

A veritable volley of conflicting ideas and objections came from the Democratic camp as soon as this side had made the first step, and Democratic sentiment seemed more at variance on this question than Republican sentiment was with either of the many Democratic views. While the President and the Secretary of the Treasury insisted on the retirement of the greenbacks as the only remedy, the distinguished gentleman from Georgia, the leader of their party on this floor, declared openly, contrary to the Presi-

dent's views, against such retirement; and while one good Democrat reiterates, amidst Democratic applause, the arguments in favor of the free and unlimited coinage of silver, the other good Democrat predicts, amid the applause of his party, such a measure to become the calamity of the age. But when it comes to a vote, I believe all the Democrats, the gold men and the silver men, the greenbackers, the "cuckoos," the bond-syndicate men, the Democratic friends and the Democratic foes of the Administration, all will vote as a unit against the Republican measures of relief; nearly every one of them for a different reason. The main reason, of course, is the Republican authorship of these propositions, the same as always controls Democratic action when that party is in the minority. Thus our friends on the other side have returned unchanged from the November funeral of their party, divided when in power, unterrified when out of it. This is the lesson of our proceedings here. It will help to guide the people next November.

To this side of the House, however, this teaches the lesson that neither by concessions nor arguments can we succeed in persuading our Democratic friends, in view of the necessities of the situation and the dangers threatening the country, to momentarily lay aside all partisanship and join hands with us in any honest attempt to formulate measures of relief in emergency cases. This being the case, the Republican majority should, without looking right or left, adopt the motto "Be sure you are right and then go ahead."

The Tariff.

SPEECH
OF
HON. BENTON McMILLIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 26, 1895.

The House having under consideration the bill (H. R. 2749) to temporarily increase revenue to meet the expenses of Government and provide against a deficiency—

Mr. McMILLIN said:

Mr. SPEAKER: I want to call the attention of the gentleman who has just taken his seat, the attention of his colleagues on the Ways and Means Committee and of the majority in this House, to a very wise warning that was given them early in the action, which I think they would do well to heed now. On the evening on which the present Speaker was chosen in the Republican caucus to be presented as their candidate for the high office he now holds he is credited, in the report of his speech, with uttering this warning to his party:

History will accord us praise for what we did in the Fifty-first Congress, and it may accord us praise in this for what we do not do.

[Laughter.]

Now, gentlemen, this that you are doing to-day is one of the things to which that suggestion would very appropriately apply, for the country will give you more praise for abstinence than for continuance on these lines.

To-day, Mr. Speaker, we are confronted by an extraordinary situation. There is upon the statute books an old law, passed many years ago, to provide for the sustenance of the public credit and the maintenance of specie payments. That law was passed at a time when it was impossible to float a bond bearing only 3 per cent interest, or a rate much less than that provided for in the statute. As the holders of money at that time knew the probable exigencies of the Treasury for years to come, it was also impossible to obtain money on a short-time, low-rate bond, such as we can get money upon to-day. But the situation having changed with our great national growth and prosperity, it turns out now that whereas the bond provided for in the old statute is the only bond that the President of the United States and his Administration have legal authority to sell, we can get money on shorter time and at a lower rate of interest; and the President has suggested that view to Congress and asked that authority be given him to take advantage of it.

In the next place, just before that suggestion was made the President, in his advocacy of that national policy which was first advocated by Jefferson, first promulgated by Monroe, sent to this House a message proclaiming the ancient doctrine of the Democratic party, which I am glad to say has become the doctrine of this whole country—"the Monroe doctrine." Taking advantage of that promulgation, the English holders of our securities thrust them back upon us in an attempt to break our markets. England did what she always does in such cases—attempted to attack her adversary not at first with bullets, but through his financial weakness. To a certain extent they did break the market for our securities, and in the opinion of the President it became immediately important that there should be such a change made in the law as would authorize the sale of a bond at a low rate of interest, if bonds were to be issued, in order that we might not be compelled to pay the high rates provided for in the old statute. Thus far I do not think there can be any dissent from my statement of the case.

When that message, reaffirming the Monroe doctrine, came here, I say candidly that in the seventeen years of my service I have never beheld such a scene in this Capitol, and I never expect to see another like it. Throughout these halls and corridors, throughout this great building, from crypt to dome, the patriotic voice of the people's representatives resounded, proclaiming that the President was right and that the people of the United States would stand by him in upholding the Monroe doctrine. Then, taking advantage of the necessities of the Government, gentlemen on the other side of the Chamber—I say it with all candor and without any disposition to hypercriticism—have come and proposed a condition precedent to any relief.

There is no complaint that there is not money enough in the Treasury. There is money enough to supply any possible deficiency for three years to come. But these gentlemen say, "We will provide for bonds bearing lower interest instead of high interest, but before doing that we will impose upon you a bill creating additional taxes or increasing existing taxes. That is, they proclaim to the world in the hour of the country's extremity that they will allow the Administration to sustain the public credit if we will permit them to engage in some more public plundering. That is this proposition, unmixed, unmitigated, extenuating naught and naught setting down in malice concerning it. Now, are we going to sit here and submit to such terms? Are we going to say that patriotism and plunder go hand in hand and that patriotism can not advance a step unless we allow the increase of taxation to go with it? I am not in favor of running the Government by bond issues. But, sir, if you are going to authorize the issue of other forms of bonds instead of those now authorized, don't seize upon that as an excuse for pillaging the people by useless taxes. Doing so, the majority of the Ways and Means Committee of this House thereby put themselves in a very awkward light before the country, and the country in an awkward light before the world.

But that is not all that is embraced in this extraordinary proposition. They propose not only to do this, but to do it by a method that is almost as reprehensible as the thing to be done. It is known that there are men upon that side of the House and men upon this—men of all parties—who are not willing to return to the protection camp from which you gentlemen of the majority were driven in 1890; but it has been artfully provided here by a special rule for the consideration of this measure that those men can not utter any complaint, or, if they do complain, they can not make their complaints effective by offering amendments to or a substitute for this high-tax measure.

They say you must take the bill in toto, gentlemen, whether you like it or not, and for the first time in the history of our Government there is to be a general revision of the tariff law, affecting thousands of articles, affecting everything that enters into the commerce of this country except what is on the free list and sugar—I say there is to be a general revision of the tariff law in this summary way, yet not allowing any one of the 356 representatives of the people sitting here to have any power to amend the bill if wrong or say that the rates shall be reduced on any article or increased on any other. They are not even allowed to raise their voice in protest, the rule is so stringent. I submit, Mr. Speaker, that this is an unheard of proceeding and that such a measure ought not to be put through the House in this fashion.

Now, sir, as I stated before, this bill provides that it shall run for only two years, but there is not a man on that side of the House who will claim in candor that we can not, out of the seventy-seven millions of surplus money that we now hold in excess of the one hundred millions held for redemption, meet every deficiency that can possibly arise in those two years. Then why all this hot haste to go on and reimpose taxes? Unfortunately this Congress will meet a year hence, and, again, there will be other Congresses after this has gone. No exigency is upon you demanding any such hasty action or excessive taxes. Ah, Mr. Speaker, that poor fellow Foster who was so much lampooned a few years ago by his Republican brethren for speaking the truth concerning his party's methods—"frying fat out of the manufacturers for campaign purposes"—was, after all, telling what he knew.

I shrewdly suspect that the old game is to be worked again. A great campaign is coming on, funds must be raised, and in order to get them, the manufacturers must be convinced that their interests are to be taken care of, and the object of this legislation is to give them that impression, so that they may be put on the fire and have the "fat fried" out of them again. [Laughter and applause on the Democratic side.]

That is the secret of this proceeding. No man here is foolish

enough to believe this can become a law. Few are unpatriotic enough to want it enacted.

TAX LUXURIES.

If we are to impose taxes, why do you not select something less burdensome in its nature? We had taxes on what are known as luxuries—on those things which are not necessaries of life. Let me enumerate a few of them to show where the Republican party has given relief, and to point out a line where they might lay taxes without that oppression which would characterize the levying of them in the manner here proposed.

When the war had closed and a few succeeding years had rolled by there was on the statute books a tax on circuses. The Republican party repealed that. They relieved circuses and increased the tax on woolen goods. There was a tax on gift enterprises. The Republican party repealed that. Why untax them? There was a tax on jugglers—jugglers! And the Republican party repealed that. [Laughter.] They did not want to tax themselves! There was a tax on lotteries, and they repealed that. These broad-phylacteried gentlemen, who thank the Lord that they are not as these poor Democrats, came forward in hot haste to repeal the tax on jugglers and lotteries, and they are proposing to impose additional taxes to-day on clothing instead. There was a tax on the selling of lottery tickets. They repealed that, but left the tax on books. There was a tax on manufactures, a tax which had been imposed to counteract this very specific duty on wool which you are imposing to-day. They repealed that; and they did not take off the corresponding tax on woolen goods. They do not propose to reimpose that to-day, because if they did the "fat" would not come to the frying pan.

There was a tax on incomes, yielding from forty to seventy millions a year. It was paid by those able to bear it, and they repealed that in hot haste, and left high taxes on food and clothing. There was a tax on billiard rooms. Would you not suppose that billiard rooms could be taxed without any great difficulty or hardship? I know of no particular exigency that should free them from the hands of the taxgatherer. Yet these gentlemen rushed in in hot haste to free the billiard room, while taxing the very clothes of the man standing at his anvil getting his daily bread by his toil. There was a tax on pleasure yachts. They repealed that. Was it not a just tax? There was a tax on bank checks which yielded a large revenue. They repealed that. Where was the injustice of such a tax? Gentlemen, if you must impose more taxation—if you need more money—why do you not turn your patriotic attention to some of these things instead of going to shivering men and reimposing a tax of 144 per cent on their overcoats, or to freezing women and putting a tax of from 90 to 120 per cent on their dress goods?

HORIZONTAL RAISE OF TAXES.

Mr. Speaker, I am very glad that we live in a period of evolution, because by evolution (if there is anything in the doctrine) we may hope that ultimately these gentlemen will come out patriotic statesmen should they continue to progress. Only a few years ago the gentlemen on the other side said it was unwise and unpatriotic to change tariffs horizontally. Only a few years ago a bill was introduced here proposing to reduce taxation horizontally—to take off some burdens horizontally, to make men's lot a little easier horizontally. That movement was led by one of the greatest patriots of any country, a man whose name has only to be mentioned to be recognized as that of a patriot and statesman, William R. Morrison. [Applause on the Democratic side.] Yet when he came on this floor from the same committee to reduce taxes in that way you lampooned him from one end of the country to the other, and you cut the head off his bill. I am glad evolution has brought you up to the point where you can at least see that some wisdom may lie in that direction.

Again, Mr. Speaker, this party came in here with a flourish of trumpets in 1890 and passed what is known as the McKinley law. If they were right in passing it, why do not they have the courage to reenact it? If wrong, why not have the manliness to say so? This bill they bring in now is the most nondescript measure I have ever seen. It condemns all the rates in the McKinley bill, and it condemns all of the schedules except the wool schedule, in which it admits there was 40 per cent excess of taxation—40 per cent blunder. Yet the gentleman from New York [Mr. PAYNE] who has just taken his seat has had the unblushing effrontery to rise here and threaten the country with what his party will do two years hence. I will tell you what you will do two years hence. You will work the "fat-frying" game for all it is worth again; but those who are not ready to rob will come in your places. Ah, sir, you came here after the election of Mr. Harrison with just such a boast. You said, "We are in power; we have authority; we are going to run this thing upon our own schedule." You had the President, you had this House, you had the Senate. You passed your bill. You robbed the people, you squandered their money, you went home with a flourish of trumpets, and on election day you were beaten well-nigh to death and "taken out on a shutter." [Laughter on the Democratic side.]

Your President had to pick up his bed and walk from the White House. The author of the bill was beaten for reelection. A Republican majority in this House was converted to an overwhelming Democratic majority. The Senate was made Democratic. You lost the whole Government. And even now you are too cowardly to come forward with the measures you say ought to be adopted. What has become of your courage? Where are your alleged convictions? You have over two-thirds majority in this House; and I ask the gentleman from New York, Why have you not the courage of your convictions? Why do you not bring forward and adopt the measure which you say ought to be adopted? Has past experience made you timorous? Do future canvasses make you fearful?

I am very glad, Mr. Speaker, that one person who has generally figured very greatly in the mouths of gentlemen on the other side for campaign purposes is left out of this controversy and no longer used as a subterfuge. This is the first time that I have ever seen a tariff bill brought up here when these gentlemen were not folding their arms and walling their eyes and saying that all they were doing was "for the poor laboring man." Now they say that the laboring man is not in it. He is not in demand. He is not in evidence in this bill at all. They say this is a revenue measure; and, Mr. Speaker, I want to congratulate the country that they have at last come to the Democratic doctrine of a tariff for revenue only. [Laughter and applause on the Democratic side.] I congratulate the Republican party on its conversion to that principle.

TAX IN THE NAME OF THE FARMER.

But, sir, I want to point out to the House now a few more facts in connection with this extraordinary bill. Here is a class to which they call special attention in connection with the matter, the farmers. The solicitude, too, of the gentleman from New York [Mr. PAYNE] has just been amply exhibited in behalf of the great agricultural class of the country. Now, this bill proposes, according to the statement of the chairman, to raise $44,000,000 of revenue—to add forty-four millions to our taxes. I want to show you the hollowness and the hypocrisy of the claim that this is in any respect a bill for the benefit of the farming community. They say that they have done very much for agriculture. Let us see. They put 15 per cent additional tax on breadstuffs. How much does the poor agriculturist get?

On barley—and I call your especial attention to this—he will get the munificent increase of $38,300. On buckwheat he will get $1,194 increase, all told, throughout the whole country. [Laughter on the Democratic side.] On corn, that great cereal, that is bursting every barn in the country now, he is to get the magnificent sum of $213, all told. [Laughter and applause on the Democratic side.] And the millers of the country! They are given the consoling assurance that on corn meal something grand and glorious is to be done for them. Yet the increase in this bill on corn meal amounts to—now listen—just $5.70. How can the miller and corn grower refuse to vote the Republican ticket after they get this glorious treatment at the hands of the Republican party! [Great laughter on Democratic side.] On oats they do a little bit better, but not much. For all of the producers of oats in the United States they propose to make a donation in the shape of taxation of $2,384.60. On rye the amount is just $10.05; and on wheat—now listen, you wheat growers of this country, you who have your tax on clothing doubled or trebled by this bill, you upon whom a large proportion of the taxes making up this $44,000,000 is to be imposed—what is done for you to-day? What do they give you in this bill? They give you the grand tax premium of $394.65. [Great laughter on the Democratic side.] And you are to be regarded as rascals if you do not vote the Republican ticket in consequence at the next election. [Renewed laughter on the Democratic side.]

Sir, how do you suppose the exultant farmer will ever suppress his exuberant joy at this magnificent concession to his material prosperity? How can he refuse to be comforted when this legislative munificence is showered upon him? How can he refuse to vote the Republican ticket when thus benefited by the Republican party?

I imagine I can see the gentlemen of the Committee on Ways and Means as they return homeward singing pæans of protection; assembling their constituents around them and extolling and expatiating on the goodness of the Republican party in having contributed this magnificent sum to the farmers of this country. I happen to have in front of me a representative of the agricultural interests of this country—my distinguished friend from Indiana [Mr. STEELE] who helped to report this bill. When he assembles around him the grain growers of the Wabash region, I can imagine the applause that will greet the announcement that he has helped them to the extent of $5.70 on corn meal, and when my good friend from Iowa [Mr. DOLLIVER], who sits opposite to me and who

may even now be telling his colleague near him how he is going to bamboozle the people by describing what he has done when he returns home, I hope he will not forget to tell the great wheat producers of the Northwest that he has succeeded in getting for them the relief the country wants to the extent of just $394. [Laughter.] But, Mr. Speaker, I fear this little emergency raft will not suffice to carry this load of taxation of $44,000,000.

If you are to impose taxation at all, then do it in a manner that will be as little harmful as possible to the people. Impose your taxes where they will do least injury or detriment to the masses of the people. You speak of providing for a deficiency, when the Secretary of the Treasury says that there will be none two years hence, and but $17,000,000 next year with $77,000,000 surplus to meet it.

THE TEARING DOWN OF THE INCOME TAX.

Mr. Speaker, the Democratic party did not cause a deficiency. To prevent any deficiency, it provided that most just of all taxes, an income tax on the wealth of the country, but, through means I will not mention, through a decision that was never a law until promulgated, through the overriding of the Constitution and tearing down of law, after the collection of $346,000,000 under a similar provision of law, that great revenue measure was destroyed by the same court that upheld the other.

I am utterly unable to comprehend this decision. For ninety-nine years the power of the Government to impose such a tax had been sustained by the Supreme Court. During the war an income tax much more searching in its provisions and requiring more rigorous inspection than this was passed by Congress. Time and again its constitutionality was upheld by the Supreme Court. Under it $346,000,000 of taxes were successfully collected. Under it the wealthy of the country had to help support the Government. I believe one member of the present court was then a member. He did not rush forward then as a defender of the Constitution. He did not then regard it as an outrage to tax values. After a most thorough argument the constitutionality of that law was upheld. But time seems to have wrought changes—changes in the opinions of courts, as well as everything else. It has even wrought a change in the Constitution through the court.

Sir, the law of the last Congress imposing an income tax was thoroughly argued before the Supreme Court. A majority of the court held it constitutional, but in a few days one of the judges changed. He held that that which he declared a short time before was law was not law. That which he declared was constitutional was not constitutional, and in the twinkling of an eye the decisions of a hundred years were torn down. A deficiency was created and the power of the Government to perpetuate itself by taxation impaired. The distinguished jurist from whose eyes the scales so rapidly fell can congratulate himself that he has never had a superior in tearing down adjudicated decisions or well-founded constitutional law.

INCREASED TAX ON WOOLEN GOODS.

But, sir, lest it should be supposed there is any benefit to come to the people from this bill, I want to call your attention briefly to the fact that when this bill shall have passed the House—for it will never become a law—when it shall have passed the House, it will have fixed on certain classes of woolen goods from 90 per cent to 144 per cent; on a very large portion of them from 75 to 100 per cent; and all this done under the pretext of the exigencies of the Treasury.

Mr. Speaker, I will ask the House to go with me for a few moments into an examination of details of the high taxes again imposed on woolen goods by this bill. I have before me samples of woolen goods out of which our clothes are made, and will give the rates on some of them. These and their cost are furnished by a merchant of intelligence, integrity, and experience, the correctness of whose statements can not be questioned.

No. 1. Sample of English beaver for overcoating, weighing 26 ounces to the running yard, on which the present duty is 40 per cent, is increased by the proposed addition of 60 per cent of the McKinley specific rate to 144 per cent duty.

No. 2. Another sample of cloth for overcoating, weighing 27 ounces to the running yard, which now pays 40 per cent, must under this bill pay 119 per cent.

No. 3. Sample of English clay worsted, weighing 16 ounces to the running yard, which now pays 50 per cent duty, will, when it has passed under the fostering hands of this body, pay a duty of 94 per cent.

No. 4 is a sample of English clay worsted, weighing 18 ounces to the running yard. The present duty is 50 per cent, yet this reckless majority proposes to almost double this duty by making it 95 per cent.

No. 5 is a sample of 32-inch serge coat lining made of cotton warp and worsted weft—one-third of the value and weight in the cotton, weighing $4\frac{1}{10}$ ounces to the yard. The present duty, 40 per cent, is under this bill increased to 96, which is absolutely prohibitory.

No. 6. A sample of 32-inch black Italian cloth for coat linings made of cotton warp and worsted weft. The present duty of 40 per cent is also increased to 96 per cent by this bill.

No. 7 is a sample of 54-inch black Italian coat lining, cotton and worsted. Its present duty, 50 per cent, is made more than 101 per cent by this bill, which will exclude the goods.

No. 8. A sample of English chinchilla for overcoats. The present duty of 40 per cent is made 128, and the farmer who wears it is to console himself with the thought that while more than 200 per cent has been added to his coat, which he must pay, 15 per cent has been added to his corn and wheat, which he can never get.

Knit goods under 30 cents a pound, which are 35 per cent under the present law, will be increased to 119 per cent by this bill.

Unenumerated manufactures not above 30 cents a pound in value, which are now 40 per cent, will be raised to 116 per cent, or nearly trebled.

Other woolen goods unenumerated, worth from 30 to 40 cents, will be increased from 40 per cent to 104.

Cloths not over 30 cents a pound in value, which are under the present law taxed only 40 per cent, will be taxed 116 per cent by this measure.

Those from 30 to 40 cents per pound in value will be increased from 40 per cent to 108 per cent.

These are only samples, and not the most flagrant ones. Where the goods are less valuable, in many instances the rates are even higher than these. The old rule, so dear to the other side of the House—that the coarse goods used by the poor and humble should be taxed higher than the finer goods—has been most sedulously observed by them. All are taxed too much, but coarse goods are taxed most.

Sir, I do not wish to be tedious in these details, but at the risk of being so I must dwell upon this long enough to show at least some of the monstrosities of this outrageous and uncalled-for tax on clothing. From investigation I find that a large part of our importations of woolen goods—nearly $24,000,000 worth of the better kinds—will have the duty or tax advanced beyond 80 per cent, while the cheaper goods will go far above 100. This, too, when the processes of manufacture are constantly cheapening and when a surplus is already in the Treasury.

Now, what is the result of these great increases in practical affairs?

The man who buys a suit of clothes bearing this 100 per cent rate would, if he paid for it with labor, have to work ten hours for the manufacturer or to pay the import duty for every ten hours it took him to work out the intrinsic value of the goods.

The woman who buys a shawl bearing the 90 per cent rate would, if paying for it by sewing with a machine, have to work ten hours for the goods and then work nine hours to pay this legislative bonus to the manufacturer of the goods or to pay the duty at the custom-house, if imported.

We say and the Democratic party says no American citizen should pay 100, 90, or 80 per cent import duty or protection on any necessary of life and that no citizen of this country shall pay that rate.

TIN-PLATE INDUSTRY IMPROVED.

Mr. Speaker, the gentlemen on the other side predicted the "utter wiping out of the tin-plate industry" if we dared reduce the rates of duty on tin plate imposed by the McKinley bill. We reduced the duty about one-half, at the same time reducing the cost of materials entering into it, and behold the result. I quote from the report of Mr. Ira Ayer, special agent of the Treasury Department, made October last to Secretary Carlisle, viz:

OFFICE OF SPECIAL AGENT, TREASURY DEPARTMENT,
Custom-House, New York, October 18, 1895.

SIR: I have the honor to report that during the fiscal year ended June 30, 1895, the production in the United States of commercial tin and terne plates was 193,801,073 pounds, against 139,223,467 pounds produced during the previous fiscal year, showing thereby an increased production of 39 per cent.

Of the production for the year, 160,576,934 pounds, or about 83 per cent, were made from sheets rolled in the United States, against about 62 per cent made from such sheets during the fiscal year ended June 30, 1894.

The production for the year, distributed according to weight and kind of plates, was as follows:

	Lighter than 63 pounds per 100 square feet.	63 pounds per 100 square feet and heavier.	Total.
	Pounds.	*Pounds.*	*Pounds.*
Tin plates	103,256,143	17,071,806	120,327,949
Terne plates	62,934,216	10,538,908	73,473,124
Total	166,190,359	27,610,714	193,801,073

These figures show that about 86 per cent of the production belonged to the class weighing lighter than 63 pounds per 100 square feet, the proportion of the previous fiscal year having been about 95 per cent of the production for that year.

Forty-eight firms were producing during the quarter ended June 30, 1895, as against forty during the corresponding quarter of the previous fiscal year.

Sir, the following is his statement concerning—

BLACK PLATE PRODUCTION.

The production of black plates in the United States during the fiscal year, stated by quarters, is as shown below:

	Lighter than 63 pounds per 100 square feet.	63 pounds per 100 square feet and heavier.	Total.
Quarter ended—	*Pounds.*	*Pounds.*	*Pounds.*
September 30, 1894	26,681,855	5,570,511	32,252,366
December 31, 1894	16,801,660	8,805,543	25,607,203
March 31, 1895	37,751,102	11,388,665	49,139,767
June 30, 1895	67,229,153	11,342,990	78,572,143
Total	148,463,770	37,107,709	185,571,479

	Pounds.
Total production for the fiscal year ended June 30, 1895	185,571,479
Same, fiscal year ended June 30, 1894	98,970,880
The difference is	86,600,599

Showing an increased production of 87½ per cent.

The proportion of such plates lighter than 63 pounds per 100 square feet was 80 per cent, as compared with 82 per cent during the preceding year.

Twenty-eight rolling mills were producing black plates during the quarter ended June 30, 1895, against 20 that were producing during the quarter ended June 30, 1894.

Mr. Speaker, with all this record before them, the majority favor increasing the duty on tin plates and black plates. The roof, the fruit can, and the bucket are all to have their cost increased. I earnestly protest against it. Were the mills shut up? On the contrary, more new ones were built than ever before. The output increased to 193,801,073 pounds from 139,223,467 pounds, or 54,577,606 pounds net increase. Twenty-seven new firms started in the business in the years of the Wilson bill. No mill in the country but that used American black plate, and there were more black-plate mills started than were in existence after four years of the McKinley bill, and, besides all this, the special agent of the Treasury Department, who has followed the tin-plate industry since the McKinley bill became a law, now says that under present conditions there are enough new mills started to make within 10,000,000 pounds of our total consumption in the United States.

When the Wilson bill was under consideration, and everybody who desired in the United States was accorded a hearing, the committee were told—and it was loudly asserted on this floor and elsewhere—that a reduction of the duty on tin plate would close the mills of an infant industry. Yet nearly half that duty was taken off, and with what result? Were wages reduced? No; on the contrary, they were increased, and another lot of lugubrious prophets are discounted.

Sir, I am rejoiced to see that one specious plea which has always been made in season and out of season, especially out, is now abandoned by our adversaries, i. e., that the imposition of high rates of duty is made on behalf of labor. There was never any foundation for it. Under the present law, passed last Congress, thousands and multiplied thousands of those who had their wages reduced under the McKinley law have had them restored. Hundreds of industries closed under that have resumed operations under this. Will gentlemen on the other side wantonly or recklessly put an end to this returning prosperity by reimposing taxes not needed? There is not an important schedule in this whole list where the rate of duty does not exceed the entire labor cost in the article under the present law.

But, Mr. Speaker, time would fail were I to attempt to give all of the increases proposed by this bill. I shall have to content myself with giving samples, that you may form some idea of the enormities of the bill considered as a whole. I know that what we can say in opposition to it on this side of the House will be unavailing. We have already been told that it is only a tithe of what gentlemen would do if they dared and what they will do if they get full power. We can only say to those on the other side, and do say to them, Go on, gentlemen, in your wild career. Put your madness and folly into statutory form again. You have the majority. Wield it as you have before. Impose these taxes, and then go and give an account to a tax-ridden constituency. With the people we are willing to rest this controversy of high taxes or low taxes, of tariff for revenue or tariff for protection, of taxation or robbery, and we will abide the result. [Applause on the Democratic side.]

Silver Coinage and Coin Redemption.

SPEECH

OF

HON. WILLIAM A. PEFFER,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Wednesday and Thursday, January 15 and 16, 1896.

The Senate having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. PEFFER said:

Mr. PRESIDENT: At last the Populist is justified. What he predicted is coming to pass. The people of the United States are coming to see that they are face to face with the strongest, the most powerful combination of men on earth. While our political organization has believed, and still does believe, that among all the great monopolies of the world that which has possession of our land and is fast getting possession of our homes is the greatest; and while we have believed, and still believe, that the growing power of the railway corporations is a standing and a growing menace to the advances of civilization and to popular government, still we believe that the power which is now strongest, that which is pressing hardest and most oppressively upon the people, is the power which we designate the money power. Now, happily, we find that the two old parties out of which we sprang are discussing the various phases of the money question, something that ought to have begun with the infancy of the Republic.

The speech to which we have listened this morning is one of a multitude of evidences showing the trend of public thought. A distinguished member of the oldest, and I do not know but I might say the earliest, certainly one of the earliest, political parties of the country, is now denouncing in his zealous manner the action of a President which his own party placed in power.

Before entering upon the subject under consideration by the Senate, I desire to call attention to the parliamentary situation before us.

A few weeks ago the President in a special message called the attention of Congress to the unfortunate condition of the country's finances, and asked early remedial legislation. By way of information that might serve to guide our conduct somewhat, the President stated that the public revenues are, or soon will be, ample for all the Government's ordinary expenses, and that therefore our troubles do not come from lack of revenue. But the President urges upon our attention that the existence of about $500,000,000 worth of coin notes, that are to be reissued as often as they are redeemed, has proven to be a standing menace to our financial security; and he expressed the belief that the only safe way out of the trying situation is through the permanent retirement and cancellation of these notes.

GREENBACKS PAYABLE IN DOLLARS.

Mr. PLATT. Will the Senator allow me to interrupt him?

Mr. PEFFER. Certainly.

Mr. PLATT. The President speaks of the greenback as a coin note. The Senator himself speaks of it as such. Is it by law upon its face to be paid in coin?

Mr. PEFFER. I speak of them as coin notes, and so does the President of the United States; but the difference between us is that the President regards them, under modern construction, as coin notes which are payable in gold coin only. The Senator from Connecticut understands very well that the greenbacks are payable in dollars.

Mr. PLATT. That is what I was speaking of—greenbacks.

Mr. PEFFER. They are not payable in coin at all, and it is only by reason of the credit strengthening act of 1869 that we promised to pay them in coin at some future time, and in 1875 we made arrangements for doing so.

In response to the President's appeal two bills have been sent to the Senate; one a bill "to temporarily increase revenue to meet the expenses of Government and provide against a deficiency"; the other a bill "to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue."

The first bill was drawn on the theory that the Treasury is in need of more available funds for ordinary expenditures, and that from that fact has arisen our present misfortune.

The second bill is based on the belief that there is no harm to come from the circulation, redemption, and reissue of our Government notes, provided there be coin enough always in the Treas-

ury to make the redemption easy and certain. And to procure the coin so thought to be necessary the bill provides—

That in addition to the authority given to the Secretary of the Treasury by the act approved January 14, 1875, entitled "An act to provide for the resumption of specie payments," he is authorized from time to time, at his discretion, to issue, sell, and dispose of, at not less than par in coin, coupon or registered bonds of the United States, to an amount sufficient for the object stated in this section, bearing not to exceed 3 per cent interest per annum, payable semiannually, and redeemable at the pleasure of the United States in coin, after five years from their date, and payable in fifteen years after their date, with like qualities, privileges, and exemptions provided in said act for the bonds therein authorized. And the Secretary of the Treasury shall use the proceeds thereof for the redemption of United States legal-tender notes, and for no other purpose: *Provided*, That nothing in this act shall be construed to repeal or modify an act approved May 31, 1878, entitled "An act to forbid the further retirement of United States legal-tender notes."

In order to be prepared for "temporary deficiencies," this bill further provides for the issue of $50,000,000 in "certificates of indebtedness" to run three years.

The first mentioned of these bills is now before the Finance Committee of the Senate; and the other is before us, with an amendment proposing to strike out all that relates to bonds and certificates of indebtedness and insert four new sections, as follows:

That from and after the passage of this act the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of 412½ grains troy, of standard silver, nine-tenths fine, as provided by the act of January 18, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold; and whenever the said coins herein provided for shall be received into the Treasury certificates may be issued therefor in the manner now provided by law.

SEC. 2. That the Secretary of the Treasury shall coin into standard silver dollars, as soon as practicable, according to the provisions of section 1 of this act, from the silver bullion purchased under authority of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," that portion of said silver bullion which represents the seigniorage or profit to the Government, to wit, the difference between the cost of the silver purchased under said act and its coinage value, and said silver dollars so coined shall be used in the payment of the current expenses of the Government; and for the purpose of making the said seigniorage immediately available for use as money the Secretary of the Treasury is hereby authorized and directed to issue silver certificates against it, as if it was already coined and in the Treasury.

SEC. 3. That no national-bank note shall be hereafter issued of a denomination less than $10, and all notes of such banks now outstanding of denominations less than that sum shall be, as rapidly as practicable, taken up, redeemed, and canceled, and notes of $10 and larger denominations shall be issued in their stead, under the direction of the Comptroller of the Currency.

SEC. 4. That the Secretary of the Treasury shall redeem the United States notes, commonly called "greenbacks," and also the Treasury notes issued under the provisions of the act of July 14, 1890, when presented for redemption, in standard silver dollars or in gold coin, using for redemption of said notes either gold or silver coins, or both, not at the option of the holder, but exclusively at the option of the Treasury Department, and said notes, commonly called "greenbacks," when so redeemed, shall be reissued as provided by the act of May 31, 1878.

A week ago I submitted an amendment to be proposed to the committee's amendment in these words:

SEC. —. That all laws and parts of laws authorizing the issuance and sale of bonds of the United States are hereby repealed.

The first sentence of the amendment proposed yesterday by the senior Senator from North Carolina [Mr. BUTLER] covers the same ground that I had in mind. The Butler amendment provides, first, that no more bonds shall be issued without express authority of Congress; and, second, that silver coin and gold coin shall be kept at parity by paying out whichever of the metals is below the legal ratio when they are not both at par. I read the amendment in full:

SEC. 4. That the issuance of interest-bearing bonds of the United States for any purpose whatever, without further authority of Congress, is hereby prohibited; and that the Secretary of the Treasury, when redeeming United States notes, commonly called "greenbacks," and Treasury notes issued under the provisions of the act of July 14, 1890, and when liquidating either the interest or principal of any of the Government's coin obligations, is hereby directed to make such payment in gold coin whenever the market value of 25.8 grains of standard gold is less than the market value of 412½ grains of standard silver, and to continue to pay in such gold coin until the market value of 25.8 grains of standard gold shall be equal to the market value of 412½ grains of standard silver; but when the market value of 25.8 grains of standard gold shall be greater than the market value of 412½ grains of standard silver, he shall pay the interest and the principal of said coin obligations as they become due in silver coin, and continue to pay the same in silver coin until the market value of 412½ grains of standard silver shall be equal to the market value of 25.8 grains of standard gold; and said notes, commonly called "greenbacks," when so redeemed, shall be reissued, as provided by the act of May 31, 1878.

The parliamentary situation, then, is this: We have before us—

First. The Butler amendment, prohibiting further bond issues without express authority of Congress and providing for the maintenance of parity between the metals, using the market price of bullion as a regulator.

Second. A silver-coinage proposition, with provisions to promote the circulation of silver coin, and a provision for coining silver now belonging to the Government for immediate use.

Third. A proposition to issue and sell bonds to provide a fund for use exclusively in redeeming Government notes.

POPULIST DOCTRINE—OPPOSED TO THE PRESIDENT.

As Populists we appreciate the force of what the President has communicated to us, and we are ready as other Senators to perform our whole duty in providing appropriate relief. We see plainly enough that if the President takes a correct view of what ails the country and sees clearly what will cure the malady, then we need look no further and ought to respond by doing just what he asks us to do. If the President's premises are well grounded, his conclusion is a logical sequence.

But we differ at the start; we separate at the threshold. And in this respect we do as a majority of the President's political friends have done, and as a large minority of Republicans are doing—earnestly striving for that which is best and opposing that which is worst as things are seen from our point of view. We are opposed to the sale of Government bonds for any purpose. I doubt whether there is one Populist in a thousand who would now favor a bond sale even in time of war.

Had we resolutely fought the gold speculators in the years 1861 to 1865 as we fought armed enemies on the field of battle, we should now be the happiest and the richest people on earth—out of debt, every citizen owning his home, and the Government reflecting the popular will.

While, as an original proposition, if we were about to establish a monetary system, we would not probably favor the use of metal to represent values of all other kinds of property, we take things as we find them and make the most we can out of existing conditions. We find that from early times the precious metals have been used for monetary purposes, and we see that the people of every civilized nation do now so use silver and gold and copper. We take note of present financial methods, and we know full well that the only present practical thing to do in our fiscal policy is to first restore our old coinage laws, so as to increase the volume of circulating money, and provide coin for the payment of our coin debts, and then require officers to obey and execute the laws.

OPPOSED TO BONDS FOR ANY PURPOSE.

Mr. President, I shall first consider the first part of the Butler amendment—the bond question.

I am not only opposed to any further issue and sale of bonds, but am of opinion that there was no warrant in law, and no justification even if there had been such warrant, for either of the late sales. When I consider the havoc wrought by prior bond sales I dread the very thought of what must surely follow in the wake of this destructive operation. And believing that there is neither need nor lawful authority for further issues, I can not but regard further transactions of that character as equal to great public crimes.

Bonding a people is a perilous proceeding.

We have paid nearly 75 per cent of our debt as it was computed to be at the close of the great war of 1861–1865. We have paid more in the way of interest than of principal. Of principal and interest the total paid up to June 30, 1893, was—

On principal	$1,914,462,095.68
In interest	2,854,612,870.50
Total	4,769,074,966.18
Pensions, same period	1,823,240,560.09
Public debt August 31, 1865	2,756,431,571.43
Public debt June 30, 1893	838,969,475.75
Paid	1,914,462,095.68
Interest paid on public debt, 1866 to 1893	2,854,612,870.50
Pensions paid same period	1,823,240,560.09
Difference	1,031,372,310.41

But our business has been so done that our means of payment have been impaired fully 50 per cent since the debt was incurred. This impairment is shown in the fact that, taking a large number of articles produced by the farmers, tradesmen, and manufacturers of the country—articles from the profits on the production of which come the means for payment—it would require as much property in bushels, in number, in pounds, and yards to pay what is yet unpaid of our public debt, as would have been required to pay the whole debt in the beginning at the prices then ruling.

In passing, I will mention a matter which just comes into my mind. From reports made by the Secretary of Agriculture it appears that the acreage of wheat, corn, oats, rye, barley, and buckwheat in 1887 was about $80,000,000 less than the aggregate value of the same crops in 1867, twenty years before, though the acreage and production were twice as great. The figures are:

	Production.	Area.	Value.
	Bushels.	*Acres.*	
1867	1,329,729,400	65,636,444	$1,284,037,300
1887	2,660,457,000	141,829,315	1,204,289,370

Twice as many bushels in 1887 as in 1867; more than twice as many acres cultivated, but the value of the crop is nearly $80,000,000 less.

The figures for the same crops in 1894 are: 2,435,920,676 bushels, 130,392,872 acres; value, $1,043,006,948. Production and acreage nearly twice as much as in 1867, but the value is less by $241,030,552.

If it be objected that paper money was greatly depreciated in 1867, thus making prices abnormal, I give the crop figures for 1879, when specie payments had been resumed. Production in 1879 was: Bushels, 2,437,482,300; acres, 102,260,950; value, $1,245,127,719. It will be seen that while the number of bushels was about the same in both years, and the area was 28,000,000 acres more in 1894 than in 1879, the value was $202,000,000 less.

WHAT THE BONDS WERE SOLD FOR, AND WHAT THEY HAVE COST THE PEOPLE.

Banks suspended specie payment December, 1861. That of course forced the Government to suspend, and early in 1862 Congress authorized the issue of notes to circulate as money. Repeated issues were made from time to time, and when the war ended the notes of different classes which had been issued specially for currency and as a sort of security-currency, all of which had to some extent been actually used and reported as currency, amounted to about $1,900,000,000.

All of this, except the greenbacks, besides some $625,000,000 funded during the war period, was put into bonds bearing interest at from 5 to 7 per cent. The bonded debt June 30, 1869, included nearly all the notes that had been issued, except the greenbacks. And these bonds were purchased at an average of about 60 cents on the dollar. By the refunding act of 1870 Congress authorized the funding of the national debt into bonds of three classes: The first class to run ten years, at 5 per cent; the second class to run fifteen years, at 4½ per cent; the third class to run thirty years, at 4 per cent. These new bonds were all to be coin bonds. Up to that time more than two thousand million dollars' worth of our bonds had been purchased for about twelve hundred million dollars in paper money. They were exchanged for their face value in coin bonds. In the meantime the paper dollar had advanced rapidly toward par with gold.

Besides the profit of $800,000,000 in the purchase of the bonds and the additional profit coming from the advance in the coin value of paper money, in 1873 Congress changed the basis of our money from silver to gold and stopped the coinage of full lawful-tender silver coin. From that time forward, the officers of the Treasury Department construed the word "coin" to mean gold coin in all cases where the Government had to pay out money, except only when silver was demanded. Two years later, by the resumption act of 1875, Congress made provision for resuming specie payment on the 1st day of January, 1879, and authorized the Secretary of the Treasury to sell bonds for coin enough to redeem the United States notes—greenbacks.

Before the day of resumption was reached our paper money was at par and was received the same as coin in payment of interest on the public debt and for customs dues. These proceedings so greatly enhanced the market value of the bonds we had sold that the national banks found it more profitable to sell their bonds for the premium offered than to keep them as a basis of bank-note circulation. From 1882 to 1890 the bank notes retired and canceled amounted to upward of $230,000,000, which released about $255,000,000 in bonds. And from 1879 to 1891 the amount of premium paid by the Government on bonds which were not due amounted to a little over $60,000,000, while during the same period a yearly average of upward of $18,000,000 of public moneys was allowed to be used by national banks without interest. Besides all this, during the same years interest on bonds not due was advanced, ranging from one month to nine months and more, amounting in the aggregate to something more than $66,000,000.

And this is not all. By the practical demonetization of silver the value—that is to say, the purchasing power—of gold has steadily and rapidly increased to such an extent that that alone has had the effect to increase the value of all securities payable in coin, at the same time depreciating the selling price of property, out of the proceeds of which all the people's debts must be paid. The bondholder, the owner of permanent annuities, the mortgage holder, the great banker, and the speculator have gathered to themselves all these vast profits and gains, while the producing masses have lost accordingly; and these losses have cost the people millions of homes. Within the twenty-five years last past 52 per cent of the people of the entire country have become renters. Seventy-seven per cent is the average in our large cities, and in the great city of New York the average is 94 per cent.

I repeat, Mr. President, the bonding of a people is a perilous proceeding.

MARKET VALUE OF PUBLIC DEBT NOW GREATER THAN IT WAS IN 1865, WHEN MEASURED BY THE PEOPLE'S PROPERTY.

I found recently a very interesting article on this subject in The Arena magazine by the historian, Dr. John Clark Ridpath, an article beginning on page 266 of The Arena for January, 1896, in which the author goes somewhat into detail concerning the history of our bonded indebtedness, and after having written at length comes to the point which I have just been making in my argument, that the value of the present public debt of the United States is greater in the property out of which the people will have to pay this indebtedness than the total debt was at the close of our great war. The author says in a footnote:

The American people have never realized the incalculable sums which have been paid out of their Treasury in the ostensible work of discharging the interest and principal of the war debt of the nation. Sometimes, perhaps, the final aggregate may be made up and historically recorded. Within the first ten years after the conclusion of the war, that is, at the close of the fiscal year 1874-75, the Government had already paid in interest only on the public debt $1,442,057,577. And this was but the beginning. At the close of the year 1895 the interest account has reached the prodigious total of more than $2,635,000,000.

The verification of this astounding truth is as plain and irrefragable as any other arithmetical result.

On the 1st of March, 1866, the national debt was (in exact figures)	$2,827,868,959.46
For the sake of easy computation the same may be stated in round numbers at	2,825,000,000.00
The debt at the close of the year 1895 (statement for November) is	1,126,379,106.00
For convenience of counting the same may be given in round numbers as	1,125,000,000.00
To this add 10 per cent (a very low estimate) for the present average premium on the debt (interest-bearing and non-interest-bearing) above the par of gold	112,500,000.00
Total present gold value of the debt	1,237,500,000.00

On the 1st of March, 1866, the prices current of nine leading staples of the American market, selected broadly from the whole, were as follows:

Wheat, per bushel (from $1.78 to $2); average	$1.90
Flour, per barrel ($10.50 to $11); average	10.75
Cotton, per pound	.48
Mess pork, per barrel	28.37
Sugar, per pound	.11125
Wool, per pound (50 cents to 56 cents); average	.53
Beef, per hundredweight ($12 to $18.50); average	15.25
Bar iron, per pound (6 cents to 7½ cents); average	.0675
Superior farming lands in Ohio and Mississippi Valleys (approximately per acre	75.00

At the close of 1895 (figures for November 10) the prices current for the same staples were as follows:

Wheat, per bushel	$0.58
Flour, per barrel	3.50
Cotton, per pound	.085
Mess pork, per barrel	8.20
Sugar, per pound (4½ cents to 5½ cents); average	.05
Wool, per pound (20 to 23 cents); average	.215
Beef, per hundredweight ($8.50 to $10.50); average	9.50
Bar iron, per pound (1.6 to 3½ cents); average	.0267
Superior farming lands, same as above, in Ohio and Mississippi Valleys (approximately), per acre	35.00

The national debt on the 1st of March, 1866, would therefore purchase of the above staples as follows:

Wheat	bushels	1,486,842,105
Flour	barrels	262,790,697
Cotton	pounds	5,885,416,666
Mess pork	barrels	99,576,313
Sugar	pounds	25,393,348,314
Wool	do	5,330,188,679
Beef	hundredweight	181,967,213
Bar iron	pounds	41,851,851,851
Superior farming lands as above (approximately)	acres	37,666,666

The national debt at the close of the year 1895 will purchase of the above staples as follows:

Wheat	bushels	2,133,620,689
Flour	barrels	353,571,428
Cotton	pounds	14,558,823,529
Mess pork	barrels	150,915,853
Sugar	pounds	24,750,000,000
Wool	do	5,755,813,953
Beef	hundredweight	130,263,136
Bar iron	pounds	46,348,314,606
Superior farming lands as above (approximately)	acres	35,357,142

The purchasing power of the national debt at the close of 1895 is, therefore, greater than was that of the national debt on March 1, 1866, as follows:

In the case of—

Wheat by	bushels	646,778,584
Flour by	barrels	90,780,731
Cotton by	pounds	8,673,406,863
Mess pork by	barrels	51,339,540
Wool by	pounds	425,625,274
Bar iron by	do	4,496,462,755

The purchasing power of the national debt at the close of 1895 is, by like deduction, less than was that of the national debt on March 1, 1866, as follows:

In the case of—

Sugar by	pounds	643,348,314
Beef by	hundredweight	51,704,076
Farming lands as above by (approximately)	acres	2,309,523

From this calculation it is seen that the purchasing power of the debt at the close of 1895 is far greater than it was on March 1, 1866, on six of the nine great staples enumerated, and that it is less by a comparatively small per cent on only three of the articles enumerated. There is an overwhelming preponderance on the average of the whole list in favor of the debt as it stands at the close of the current year. That debt, in a word, is worth more to the holders than it was at its nominal maximum nearly thirty years ago! There is no kind of sophistical argument or doctored statistics in the world that can overcome or seriously modify the conclusions here drawn from premises that are incontrovertible.

Within a period of eighteen months of the last two years the Treasury Department issued and sold $162,000,000 of coin bonds running from ten to thirty years, $100,000,000 at 5 per cent interest, and $62,000,000 at 4 per cent. At the present rate of increase in the purchasing power of gold, and the consequent diminution of

the selling price of commodities which must pay these coin debts, the bonds recently sold and those soon to be issued, will, when they are due, cost the people twice as much as their face value. The $162,000,000 already sold, with the $100,000,000 soon to be sold, will cost the people fully twice their face, or $524,000,000, when they fall due, besides the interest, which is to be paid in coin quarterly. The interest alone, if compounded as paid, would pay the principal long before the last of these bonds falls due.

BONDS UNLAWFULLY ISSUED.

But, sir, bad as this showing is for the people, I now approach a feature of the situation that is alarming as well as burdensome, because it reaches vital parts and concerns the integrity of our public men and threatens the permanency of republican institutions. I refer to the issuance and sale of Government bonds without express authority of Congress. This point is sometimes made by objectors limiting its application to bonds issued in times of peace. But if an executive officer may bond the people and mortgage their property without their authority in time of war, he may do it in time of peace. That is for Congress alone to do or not to do, as that body may determine. It is the duty of the President to take care that the laws be executed. He is to execute the law, not to enact it. And so it is with respect to every officer. His duties are prescribed in advance and defined in the law. When we reach a time that public men may with impunity set themselves above the law popular government has ceased.

It is, of course, claimed that these late bond sales have at least the color of authority. But it must not be forgotten that their legality has been questioned in this body, as well as in the House of Representatives. On the day after the first of the last three issues was proposed, I offered a resolution, giving it as the sense of the Senate that the Secretary of the Treasury had no legal warrant for his proceeding, and the next day I argued the proposition before the Senate. A few days later, the then junior Senator from Nebraska [Mr. ALLEN] discussed the subject, taking the same position that I had taken.

On the 18th of January, 1894, I offered a resolution, which became Miscellaneous Document No. 39, Fifty-third Congress, second session, which reads as follows:

Whereas on the 17th day of January, 1894, the Secretary of the Treasury did prepare and publish the following notice:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., January 17, 1894.

By virtue of the authority contained in the act entitled "An act to provide for the resumption of specie payments," approved January 14, 1875, the Secretary of the Treasury hereby offers for public subscription an issue of bonds of the United States to the amount of $50,000,000, in either registered or coupon form, in denominations of $50 and upward, redeemable in coin at the pleasure of the Government after ten years from the date of their issue, and bearing interest, payable quarterly in coin, at the rate of 5 per cent per annum.

Proposals for the whole or any part of these bonds will be received at the Treasury Department, office of the Secretary, until 12 o'clock noon on the 1st day of February, 1894. Proposals should state the amount of bonds desired, whether registered or coupon, and the premium which the subscriber proposes to pay, the place where it is desired that the bonds shall be delivered, and the office, whether that of the Treasurer of the United States or an assistant treasurer of the United States, where it will be most convenient for the subscriber to deposit the amount of his subscription. Failure to specify the above particulars may cause the proposal to be rejected.

As soon as practicable after the 1st day of February, 1894, the allotment of bonds will be made to the highest bidders therefor, but no proposal will be considered at a lower price than 117.223, which is the equivalent of a 3 per cent bond at par, and the right to reject any and all proposals is hereby expressly reserved. In case the bids entitled to allotment exceed the bonds to be issued they will be allotted pro rata.

Notices of the date of delivery of the bonds will be sent to the subscribers to whom allotments are made as soon as practicable, and within ten days from the date of such notice subscriptions must be paid in United States gold coin to the Treasurer or such assistant treasurer of the United States as the subscriber has designated; and if not so paid the proposal may be rejected.

The bonds will be dated February 1, 1894, and when payment is made therefor as above accrued interest on both principal and premium from February 1, 1894, to date of payment, at the rate of interest realized to the subscriber on his investment, will be added.

All proposals should be addressed to the Secretary of the Treasury, Washington, D. C., and should be distinctly marked "Proposals for subscriptions to 5 per cent bonds."

J. G. CARLISLE, *Secretary.*

And whereas there is nothing in said notice to show that there is immediate or prospective need for the sale of bonds to accomplish the object sought by Congress in the enactment of the resumption law of January 14, 1875; and

Whereas the Secretary of the Treasury has no authority to issue and sell bonds for any other purpose than that set out in said resumption act: Therefore,

Resolved by the Senate, That in the opinion of this body the Secretary of the Treasury has no lawful authority for issuing and selling bonds as proposed in the notice aforesaid.

Some time afterwards I offered a resolution instructing the Committee on Finance to report a bill repealing all laws which authorize the issue and sale of bonds, if there were any such authority. That is known as Miscellaneous Document No. 128, Fifty-third Congress, second session, and reads as follows:

Resolved, That the Committee on Finance be, and it is hereby, instructed to prepare and report as soon as practicable a bill to repeal all laws authorizing or permitting the Secretary of the Treasury to issue bonds or other interest-bearing obligations of the Government, and to prohibit any and all such issues in future without express authority by act of Congress first had and obtained.

Later on I offered a resolution instructing the Committee on the Judiciary to inquire whether there was any lawful authority for the issue and sale of bonds by the Secretary of the Treasury. It is Miscellaneous Document No. 3, Fifty-third Congress, third session, and is as follows:

Resolved, That the Committee on the Judiciary be, and it is hereby, instructed to inquire and report whether the acts of the Secretary of the Treasury, in issuing and selling United States bonds in the months of February and December, 1894, were authorized by any act or acts of Congress then in force.

The resolution was referred to the committee, but no report has yet been made by the committee. A similar resolution was referred to the House Committee on the Judiciary with exactly similar result.

I hope it will not be out of order, Mr. President, to insert parenthetically here that it will hardly do for Senators to say that these resolutions were not worth attending to, that they were either not offered seriously or that the author had not properly considered the subject in advance. I have given a great deal of attention to this particular matter, and, as I expect to show before I get through, there is method in my madness, if I have been mad. To bond the people of an entire country without a specific act of the legislative authority would be without doubt a great public crime.

Had either of these great committees been of opinion that existing statutes do in fact clearly authorize the Secretary of the Treasury to issue a new series of bonds and sell them for gold coin, they would have come to the rescue of the Secretary promptly. And the last lot was sold for gold by weight, not for dollars in coin. The quantity purchased was 3,500,000 ounces of gold coin. Step by step we go on until finally we will get back to a system of barter that the ancients followed—3,500,000 ounces of gold coin, when, if the law authorizes the Secretary to do anything in the premises, it is to sell the bonds for coin, silver and gold, as I shall show most clearly before I get through.

Our standard is dollar, not ounce; and our law uses the word "coin," not gold coin or so many ounces of gold coin. This, however may be regarded as technical. I will therefore take up that which is substantial.

In the first place, the Secretary of the Treasury claims to have acted, as to the first two issues, under authority of the resumption act, which authorized the purchase of coin to redeem United States notes—greenbacks.

The bonds authorized by that act were those of the description provided for in the refunding act of 1870, when silver was our basic coin metal, and when silver coin and gold coin were the lawful coin of the country.

At the time the Secretary concluded to sell bonds, in January, 1894, there was plenty of coin in the Treasury to redeem all the notes presented. If it be insisted that the word "coin" must be construed to mean gold coin, which of course I deny, still I say there was plenty of coin on hand for purposes of redemption, as I shall soon show by a table of gold coin in Treasury each year since 1879.

If the Secretary had obeyed the law and offered coin of silver as well as coin of gold in redemption of the notes that were presented, he would have had abundance of coin.

The Secretary of the Treasury claims to have acted in the first two issues under authority of the resumption act, which authorized the purchase of coin to redeem the United States notes and greenbacks. I know, Mr. President, that it is tedious, not only to the speaker but to his hearers, to recur so frequently to the same subject, but I wish to call the attention of such Senators as may do me the honor to listen to the language of the resumption act. I read just a portion:

And on and after the 1st day of January, A. D. 1879, the Secretary of the Treasury shall redeem, in coin, the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the assistant treasurer in the city of New York.

That is all.

And to enable the Secretary to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges and exemptions, etc.

Mr. President, it will be observed that in the language I have just read the Secretary is first authorized to use any surplus funds that may be in the Treasury, not otherwise appropriated, for the redemption of outstanding notes. Then, if he needs more than that he can sell bonds of the character of those that were authorized by the refunding act of 1870. They are coin bonds.

NO RESERVE FUND FOR REDEMPTION EVER AUTHORIZED OR REQUIRED.

It is important to note and to remember that the resumption act of 1875 did not require or authorize the collection and setting apart of funds for redemption purposes or for any other purpose. The act requires the Secretary to resume specie payments on the 1st day of January, 1879, and in order "to enable" that officer to carry out the provisions of the law in this respect he is author-

ized to "use any surplus funds in the Treasury not otherwise appropriated." This is the first money to be used for redemption purposes—surplus moneys in the Treasury. If there were enough of such surplus funds on hand, then no bonds need be sold. The authority to sell bonds is second to the authority to use surplus funds. Bonds might be sold if the surplus funds were not sufficient for that purpose. And, now, if there be any authority to sell bonds to-day, or if there has been any such authority since the passage of the resumption act, it is for the purpose of redeeming notes, and such authority does not exist as long as there are enough surplus funds in the Treasury. I have shown that there has been an abundance of surplus coin in the Treasury at all times since 1878 for redemption purposes.

SECRETARY'S LETTER ON THE RESERVE FUND.

The Secretary of the Treasury, in response to a Senate resolution asking whether any particular fund is required by law to be kept as a redemption fund, and whether such a fund has been kept, sent in the following letter:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., January 11, 1896.

SIR: I have the honor to acknowledge the receipt of Senate resolution dated the 3d instant, as follows:

"*Resolved*, That the Secretary of the Treasury be, and he is hereby, directed to inform the Senate if the sum of $100,000,000, or any part thereof, has at any time since the establishment of the so-called gold reserve been actually segregated or set apart from the other currency or money in the Treasury Department, in gold coin, or gold coin and gold certificates, or either, for the redemption of the legal-tender notes and different forms of paper money of the Government; and when and by what act of Congress, giving the title of the act and the date of its approval, said so-called gold reserve was established, and if not established by act of Congress, state by what authority, if any, it was established."

In reply thereto, the Senate is respectfully informed that at no time since the establishment of the so-called gold reserve has the sum of $100,000,000, or any other sum, been segregated or set apart from the general cash in the Treasury for the redemption of the legal-tender notes of the United States, or for the redemption of any other form of paper money for which the United States is liable. There is no provision of law requiring a separate fund or separate account to be kept, and all moneys received into the Treasury, from whatever source, are deposited in the general cash. The fund for the redemption of United States notes was accumulated under authority of the act of January 14, 1875, which directed the Secretary of the Treasury to prepare and provide for such redemption on the 1st day of January, 1879. No specific sum was prescribed, but the Secretary of the Treasury was authorized to use the surplus revenues from time to time and to sell certain descriptions of bonds to an extent necessary to carry the act into full effect.

In the exercise of the discretion thus conferred upon him, the Secretary sold for resumption purposes, in 1877 and 1878, United States 4 per cent and 4½ per cent bonds to the amount of $95,500,000, and deposited the proceeds, $93,000,000 in gold, in the general cash in the Treasury. This, with other gold which had been received as surplus revenues, constituted the fund prepared and provided by the Secretary of the Treasury for the redemption directed in the act of January 14, 1875.

The existence of the reserve fund was generally recognized from the time of its establishment, as above stated, and one of the measures adopted by the Secretary of the Treasury to prevent its unnecessary depletion was the discontinuance of the issue of the gold certificates authorized by the act of March 3, 1863. This act authorized but did not direct such issue.

Some inconvenience resulted from this discontinuance, and by section 12 of the bank act of July 12, 1882, the Secretary was authorized and directed to receive deposits of gold coin and bullion and to issue certificates therefor; but it was provided "that the Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below one hundred millions of dollars."

No other reference to the reserve fund is contained in the laws of the United States.

Very respectfully, yours, J. G. CARLISLE, *Secretary.*

The PRESIDENT OF THE SENATE.

The act of 1870, as we all understand very well, was passed three years before the coinage act of 1873, which dropped the silver dollar out of the list of coins, and in that way, if at all, the silver dollar became demonetized. In the act of 1873, commonly called the demonetization act, there is nothing whatever to indicate that it was the intention of Congress to demonetize the silver dollar. It was simply left where it was, only the Secretary was not to coin any more of them. Then, when the revision was made, as will appear by reference to the Revised Statutes of 1878, this language was used:

> The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

That is section 3586 of the Revised Statutes. By the coinage act of 1873 it was provided that the silver coins of the United States should be a trade dollar, a half dollar, a quarter dollar, and a dime.

Now comes the revision, and in section 3586 it is provided that the silver coins of the United States shall be a legal tender for sums not exceeding $5. If there was any demonetization of the silver dollar at any time it was by the section which I have just read from the Revised Statutes, and that continued only until 1878, when by the passage of the Bland Act the legal-tender character of the silver dollar was restored. So, even if there has been a demonetization of the silver dollar, it is only by implication. The Legislature had no intention to demonetize the dollars then in existence. So the "coin" which was referred to in the resumption act of 1875 meant silver as well as gold.

The bonds authorized by that act were those of the descriptions provided for by the refunding act of 1870, when silver was our basic coin metal. From the beginning of our financial history silver was our basic metal, and whenever there was a change of ratio in the law, parity was maintained by bringing gold to the standard of silver. That happened in 1834, when the gold coins were reduced 6 per cent so as to make them correspond with the value of the silver bullion in the market.

COIN MEANS COIN OF SILVER AND GOLD.

The Secretaries of the Treasury in 1862, 1863, 1864, 1865, 1866, 1867, and 1868 (and I am not certain but that the argument was repeated in 1869—I will call attention to that later on) argued persistently that it was not the intention of the Congress of the United States to issue an irredeemable paper currency, but that the intention of the people and of Congress was that the notes which were issued during the war in the absence of specie should some day be redeemed in specie. They invariably used the words that had always been used, gold and silver, the precious metals, specie, etc.

The Secretary of the Treasury during the Hayes Administration, the gentleman who is now the distinguished Senator from Ohio [Mr. SHERMAN], submitted this very point to the Attorney-General, Mr. Devens. He asked him whether or not it would be legal or proper to sell gold bonds in order to establish a redemption fund. The correspondence is somewhat elaborate, and I shall refer to it before I conclude my remarks; but the substance of the Attorney-General's reply was that the character of the coin was determined by that which was coin in the United States in 1870, namely, gold and silver.

Mr. Matthews, of Ohio, a member of this body at the time, afterwards an associate justice of the Supreme Court of the United States, immediately after the Secretary of the Treasury had in his report recommended that Congress grant him authority to sell gold bonds, introduced a resolution into this body, with certain paragraphs of preamble, resolving that in the opinion of Congress silver was as good money as gold. The resolution was passed by an overwhelming majority in the Senate, without amendment, notwithstanding that the Senator from Vermont, Mr. Edmunds, proposed to insert an amendment making gold coin superior and making the parity play around gold. But the Senate would have none of it.

The same resolution was passed by the House of Representatives, and similar amendments were there proposed, but the House would have none of it. Immediately thereafter, indeed at the time, a bill was put in process of formation which afterwards became the Bland-Allison Act, restoring the legal-tender quality to the silver dollar. There has been no time when the National Legislature has approved the demonetizing process.

At the time when the Secretary concluded to sell bonds, in January, 1894, there was plenty of coin in the Treasury to redeem all the notes that were presented. In order that my statement might not be regarded as unfounded or farfetched, this morning, before coming to the Senate Chamber, I hastily drew off from the Treasury figures a statement of the amount of gold coin, excluding bullion, in the Treasury on the last day of January in each year since and including 1879. It appears that, beginning in 1879 with $128,000,000, we go on down to 1884, when there was $154,000,000. In 1889 there was $229,000,000; in 1890, $249,000,000, the largest amount in any one year. Then we come down to the last of January, 1895, with $51,000,000. On the last of January, 1894, when the first of the last three issues was made, there was $65,000,000 of gold coin lying in the Treasury.

Statement showing the amount of gold coin (excluding bullion) in the Treasury on the last day of January each year since and including 1879.

Year.	Amount.	Year.	Amount.
1879	$128,792,903	1888	$185,906,571
1880	96,463,601	1889	229,051,535
1881	60,797,508	1890	249,963,167
1882	81,206,312	1891	229,942,686
1883	121,868,452	1892	198,454,175
1884	154,882,129	1893	147,375,054
1885	172,747,344	1894	65,490,319
1886	179,402,994	1895	51,343,230
1887	189,122,038	1895—September 30	86,216,756

It may be said, however, that possibly that coin was subject to draft for some other purpose. Let us see how that is. I have here a statement showing the amount of net gold in the Treasury at the end of January of each year since 1878. Beginning with 1879, it was $116,000,000; coming on down to the largest amount in any one year, it was $202,000,000 in 1888, and in January, 1894, the amount was $65,650,175. That was when the first issue of the last three issues was proposed and the sale was made. There was then $65,000,000 of gold in the Treasury.

I submit a table giving the figures in detail:

Statement showing the amount of net gold in the Treasury at the end of January each year since 1878.

Year.	Amount.	Year.	Amount.
1879	$116,674,227	1888	$202,955,184
1880	143,340,027	1889	194,655,264
1881	148,052,809	1890	177,386,285
1882	159,972,569	1891	141,728,097
1883	125,648,195	1892	119,574,905
1884	144,350,736	1893	108,181,713
1885	125,187,595	1894	65,650,175
1886	136,086,610	1895	44,705,967
1887	168,475,361		

But those were not all the assets upon which the Secretary might have drawn. I have here a table showing the amount of silver bullion in the Treasury at the end of January each year since 1878:

Statement showing amount of silver bullion in the Treasury at the end of January each year since 1878.

Year.	Amount.	Year.	Amount.
1879	$10,347,889	1888	$10,219,546
1880	4,888,036	1889	10,606,677
1881	6,704,197	1890	11,557,760
1882	3,258,926	1891	21,277,979
1883	3,761,958	1892	57,940,646
1884	4,674,433	1893	99,282,961
1885	4,613,582	1894	127,215,171
1886	3,658,783	1895	124,852,679
1887	4,877,039		

Fractional coin in the Treasury.

January 31, 1893	$11,346,523
January 31, 1894	15,932,847
January 31, 1895	15,481,586

Total silver in the Treasury.

1893	$111,629,484
1894	143,148,018
1895	143,334,265

I remember quite distinctly that once when I was speaking of the same matter the Senator from Iowa [Mr. ALLISON] called my attention to what he alleged to be a fact, that the silver bullion in the Treasury at the time the bond issues were in contemplation was there as a security fund for the redemption of the Treasury notes issued under the Sherman Act of 1890. The answer to that was then and is now that if this bullion was held as security for the redemption of the 1890 notes certainly the Secretary would have used it for such a purpose.

The act of 1890 expressly requires the Secretary to coin out of the silver bullion purchased under the provisions of that act enough to redeem the notes issued under the provisions of the act. But instead of the Secretary obeying the positive command of the law, he utterly ignored it, refused to execute it, and therefore the silver lies as so much dead property. Whenever notes of the issue of 1890 are presented to the Secretary, he redeems them in gold, unless their redemption in silver is directly asked for, and it is only occasionally that such a transaction occurs.

Here was an available fund of how much? At the end of January, 1894, at the time when the first of the three issues was in process, the amount of silver bullion in the Treasury uncovered, I insist, was $127,000,000 worth, as will be seen in the table I have presented. In addition there was at the same time $15,000,000 of fractional silver currency, making a total of $143,000,000 of silver bullion lying idle in the Treasury which the Secretary and the President might have used and which the law requires them to use if they had performed their duty as the law specifies. If the Secretary had obeyed the law and offered coin of silver as well as coin of gold in redemption of notes that were presented he would have had an abundance of coin, and what is more than that, he would have saved us all this disgrace, all this shame, all this dishonor, and all the burden of the bonds.

There is no law and there never has been any law against the redemption of greenbacks and Treasury notes with silver coin. It is a mere gratuitous movement upon the part of the Secretary of the Treasury. I know that the argument against a proceeding of that kind is that it will destroy the parity and all that sort of thing. I confess that when the word "parity" is brought in in these connections I have but little patience with it, for it means that while the whole world is alive with business, everything moving under the operation of modern inventions, we must still hold to the old barbarous system of barter, so many pounds of gold and so many pounds of silver measured according to their bullion value in the market, when we are dealing in ships and railroads and wheat and corn and manufactured articles and ten thousand different articles. In one of our tariff bills there are in the neighborhood of four thousand different items upon which customs are levied. The world is full of productions of labor, while the quantity of these metals is limited and growing constantly less and less, in proportion to business and population, and yet we are to take the old, antiquated notion that gold and silver coin are the equivalent of the values of all the other property, when only a few men, one in a hundred thousand perhaps, are dealing in the sacred and scarce articles of gold and silver. All the gold and silver produced in the world in one year are not worth as much as the wheat and corn that the farmers of Kansas produce the same year. And yet we must measure the value of all property by those metals and must maintain the parity between them.

I think when the Populists come into power we will arrange the parity so that it will be satisfactory to at least a few people.

Mr. HOAR. That will be after the millennium.

Mr. PEFFER. The millennium is approaching now, so that we shall not have long to wait.

Mr. HOAR. If the Senator will pardon me, I am afraid that the coming in power of the Populists will be after the time spoken of in the Revelations, when the millennium is over and when Satan will hold forth.

Mr. PEFFER. We are the revelators.

When I had occasion to speak on this subject before, in January, 1894, I called attention to the correspondence which the Secretary of the Treasury had with the Finance Committee of the Senate, and I quoted a few paragraphs, and only a few from it. I find, in looking over that speech, that there is so little of the correspondence quoted that the reader does not get all that the Secretary said and all that there was in this transaction. I have here the letter of the Secretary, with the draft of a bill which he prepared and presented to the Committee on Finance, which was introduced in the Senate by a member of the committee, but never went any further. The object of the Secretary was to show that the condition of the Treasury was such that there must be some relief in the way of funds to be used in the ordinary expenses of the Government, for which certainly there was no provision in any law that had been referred to as authorizing a proceeding of that kind. Whatever authority exists under the resumption act of 1875 for the sale of bonds is for a specific purpose, and that is to procure coin with which to redeem the notes, and not to provide funds for carrying on the ordinary expenses of the Government.

The letter and the bill accompanying it will show that the Secretary wanted to use the proceeds of the bonds for the purpose of public expenditures.

LETTER FROM THE SECRETARY OF THE TREASURY SUBMITTING STATEMENT SHOWING THE ACTUAL CONDITION OF THE TREASURY ON THE 12TH DAY OF JANUARY, 1894, TOGETHER WITH DRAFT OF BILL.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., January 13, 1894.

DEAR SIR: In compliance with your verbal request I have the honor to submit, for the consideration of the Finance Committee of the Senate, statements showing the actual condition of the Treasury on the 12th day of the present month, and an estimate of the receipts and expenditures during the remainder of this month and the month of February.

It will be seen from these statements that there is an urgent necessity for such immediate action as will replenish the coin reserve and enable this Department to continue the payment of public expenses and discharge the obligations of the Government to pensioners and other lawful creditors

When my annual report was prepared it was estimated that the expenses during the current fiscal year would exceed the receipts to the amount of about $28,000,000, and I asked Congress for authority to issue and sell bonds, or other forms of obligations, to an amount not exceeding $50,000,000, bearing a low rate of interest and having a reasonably short time to run, to enable the Secretary of the Treasury to supply such deficiencies as might occur in the revenues. The estimate then made was based upon the assumption that the worst effects of our financial disturbances had already been realized and that there would be a substantial increase in the revenues for the remainder of the year. While it was not believed that the deficiency then actually existing would be supplied by increased revenues in the future, it was hoped that no additional deficiency would occur; but the receipts and expenditures during the month of December and up to the 12th day of the present month show that the estimate of a deficiency of $28,000,000 at the close of the year was much too low. The actual receipts and expenditures during each month of the year and the monthly deficiencies have been as follows:

Receipts and expenditures, fiscal year 1894.

	Receipts.	Expenditures.	Excess of expenditures.
1893.			
July	$30,905,776.19	$39,675,888.60	$8,770,112.41
August	23,890,885.30	33,305,228.48	9,414,343.18
September	24,582,756.10	25,478,010.17	895,254.07
Actual for three months	80,870,621.90	98,430,694.59	17,560,072.69
October	24,553,394.97	29,588,792.34	5,035,397.37
November	23,979,400.81	31,302,026.41	7,322,625.60
December	22,312,027.00	30,058,260.51	7,746,233.51
1894.			
January (12 days)	10,369,939.37	16,263,655.14	5,893,715.77
Total	162,085,384.05	205,643,428.99	43,558,044.94

If the same average monthly deficiencies should continue, the total difference between receipts and expenditures on the 30th day of June next will be $78,167,532.

According to the best estimate that can be made, the total receipts during the present month and the month of February will be $41,900,000 and the total expenditures will be $60,300,000, showing a deficiency during the two months of $18,400,000; but this does not include any payments on account of the sugar bounty, claims for which to the amount of nearly $5,000,000 have already been presented and are now under investigation in the Department.

The assets of the Treasury and the current liabilities in excess of certificates and Treasury notes outstanding were as follows on the 12th day of the present month:

Assets.

Gold	$74,108,149
Silver dollars and bullion	8,092,287
Fractional silver coin	12,133,903
United States notes	5,031,327
Treasury notes of 1890	2,476,000
National-bank notes	14,026,735
Minor coin	988,625
Deposits in banks	15,470,863
Total cash assets	132,327,889

Liabilities.

Bank note 5 per cent fund	$7,198,219
Outstanding checks and drafts	5,653,917
Disbursing officers' balances	28,176,149
Post-Office Department account	3,897,741
Undistributed assets of failed national banks	1,927,727
District of Columbia account	142,613
Total agency account	46,996,363
Gold reserve	74,108,149
Net balance	11,223,374
Total liabilities	132,327,889

It will appear from this statement that the coin reserve has been reduced to $74,108,149, and it is evident from the condition of the Treasury that the Department will have no means to defray the ordinary expenses of the Government unless a large part of the payments are hereafter made out of that fund. If this is done the coin reserve will be reduced by the 1st of February to about $66,601,864, a sum wholly inadequate for the purposes for which it was created.

On account of this critical condition of the Treasury, I have considered it my duty, in addition to the earnest recommendations contained in my annual report, to appear twice before your committee and after full explanations of the situation urge prompt legislative action on this subject. With the permission of the committee, I have prepared and presented for its consideration a bill which, if promptly passed, would, in my opinion, meet all the requirements of the situation by providing the necessary means for defraying the public expenses and replenishing the coin reserve to such an extent as to assure the maintenance of the parity of all forms of United States currency.

While this proposed measure of relief has not yet been disposed of or considered by the committee, the great differences of opinion which are known to exist in both branches of Congress concerning the propriety of granting additional or amended authority to issue bonds in any form or for any purpose, render it doubtful whether new legislation upon the subject can be secured in time to provide the means which are imperatively demanded in order to preserve the credit and honor of the Government. Authority to issue and sell bonds for the purpose of maintaining specie payments was expressly conferred upon the Secretary of the Treasury by the act of January 14, 1875, but it has not been exercised since 1879, and on account of the high rate of interest provided for, and the length of time such bonds would have to run, I have not been satisfied that such an emergency has heretofore existed as would clearly justify their issue. But the necessity for relief at this time is so urgent, and the prospect of material improvement in the financial condition of the Government is so problematical, that unless authority to issue and sell shorter bonds, or other obligations, bearing a lower rate of interest than that specified in the existing law, is granted by Congress at a very early day, I shall feel constrained by a sense of public duty to exercise the power already conferred, to the extent at least of providing an adequate coin reserve.

If this action should be taken, Congress ought, nevertheless, to provide promptly for the deficiency in the revenue during the current fiscal year, and I will from time to time advise your committee of the condition of the Treasury, in order that this subject may receive due consideration.

I have the honor to be yours, very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. D. W. VOORHEES,
Chairman Committee on Finance, United States Senate.

An act to amend section 3 of "An act to provide for the resumption of specie payments," approved January 14, 1875.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3 of "An act to provide for the resumption of specie payments," approved January 14, 1875, be, and the same is hereby, so amended that in lieu of the descriptions of bonds therein authorized, the Secretary of the Treasury is hereby authorized to issue from time to time, as he may deem necessary, and in such form as he may prescribe, coupon or registered bonds of the United States, in denominations of $25 and multiples thereof, redeemable in coin at the pleasure of the United States after —— years from date, bearing interest at a rate not exceeding 3 per cent per annum, payable quarterly in coin, and to sell the same at not less than par in coin; and the proceeds of such bonds shall be held and used to maintain the parity of all forms of money coined or issued by the United States, but the Secretary of the Treasury is hereby authorized to use from time to time such part of such proceeds as may be necessary to supply deficiencies in the public revenues during the fiscal year 1894.

SEC. 2. That a sum sufficient to carry the provisions of this act into effect is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SECTION 3700, REVISED STATUTES, PART OF AN OLD LAW THAT REFERS TO BONDS AUTHORIZED BY PRIOR ACTS.

The same objection is urged to the second bond issue, for the Secretary bases his authority upon the same law. The third issue is based upon the authority of section 3700 of the Revised Statutes, which is in this language:

The Secretary of the Treasury may purchase coin with any of the bonds or notes of the United States authorized by law, at such rates and upon such terms as he may deem most advantageous to the public interest.

While it would seem as though that was plenary authority and not encumbered with any sort of conditions, yet the history of that paragraph will throw a flood of light upon it. It is part of a section of the act of March 17, 1862. It could hardly be presumed that the Congress of the United States then, or at any time since or before, would throw out an unmodified and unqualified authority to the President or the Secretary to sell bonds ad libitum whenever they thought proper, upon the best terms they could get.

Now we will see the connection in which section 3700 of the Revised Statutes is found in the original act. It is not even a separate sentence, but it is part of a sentence. I will read the whole section. Section 1 of the act of March 17, 1862, entitled "An act to authorize the purchase of coin, and for other purposes," reads as follows:

Be it enacted, etc., That the Secretary of the Treasury may purchase coin with any of the bonds or notes of the United States, authorized by law, at such rates and upon such terms as he may deem most advantageous to the public interest;—

Semicolon—

and may issue, under such rules and regulations as he may prescribe, certificates of indebtedness, such as are authorized by an act entitled "An act to authorize the Secretary of the Treasury to issue certificates of indebtedness to public creditors," approved March 1, 1862, to such creditors as may desire to receive the same, in discharge of checks drawn by disbursing officers upon sums placed to their credit on the books of the Treasurer, upon requisitions of the proper Departments, as well as in discharge of audited and settled accounts, as provided by said act.

This entire section is one paragraph. There is no stopping point, no period, no end of a sentence, no punctuation points excepting commas and one semicolon. And yet a part of that sentence is incorporated in the Revised Statutes as a separate section appearing to be wholly independent and apart from all other connection.

I insist that the bonds referred to in the Revised Statutes, section 3700, are precisely the same kind of bonds that are referred to in section 1 of the act of March 17, 1862—that is to say, bonds that had been provided for in preceding acts—so that this section refers to acts of Congress that had been passed before that time. Whatever authority there is in section 3700 is to be applied to bonds provided for by earlier acts of Congress. There can be no question about that. Then there is only one act that the President makes applicable to his action, the refunding act of 1870, on which the resumption act of 1875 is based.

Senators should not overlook the fact that section 3700, on which the President bases the authority to sell bonds in 1895 and now, is part of the act of March 17, 1862, a clause, and the first clause, of a one-sentence section authorizing the Secretary to make certain uses of bonds and notes that had been provided for by and in prior statutes.

The Secretary has no authority to sell bonds that have not been previously provided for and particularly described. Indeed, Congress has no authority to delegate the power to borrow money. That power is vested by the Constitution in Congress alone. But it may provide for the borrowing of money in a particular way and then authorize the Secretary to perform the necessary work. But it can not authorize any officer to sell notes or bonds that have not been already authorized and described. The act of March 17, 1862, when empowering the Secretary to sell bonds on the best terms he could get, did not intend that he should make out such bonds as he chose and sell them, but only such bonds as had, before the date of that act, been authorized by Congress. So, when the President and Secretary claim to have acted under authority of section 3700 they can assert no authority not provided by laws passed before the act of March 17, 1862, and they were war acts—laws to carry on war. And if they claim that section 3700 authorizes them to sell bonds that were authorized by the resumption act of January 25, 1875, they are met with the objection that the bonds provided for by that act were for redemption purposes only, and that no sales should be made for such purpose so long as there were enough surplus funds in the Treasury to redeem outstanding notes. And there has all along been, and there is now, plenty of funds in the Treasury for that purpose.

I do not care, Mr. President, to pursue that branch of the subject any further. It seems to me to be entirely clear that it is a strained construction of the law, to say the least of it, that these officers are using. I am quite confident that it was not the intention of either the President or the Secretary to resort to such extraordinary measures in the beginning; they expected that Congress would authorize them to proceed, and having received no such authority they undertook it, expecting to have their conduct ratified by Congress.

Finally, on that branch of the subject, all bonds that have ever been authorized by Congress were redeemable either in "lawful money" of the United States, which meant legal-tender paper, or in "coin." There has been no law, there is none now, authorizing gold bonds any more than silver bonds.

RESTORE THE OLD COINAGE LAW OF 1837.

Now, Mr. President, taking up the coinage section of the bill, I shall endeavor to maintain that the sections of the act of Congress

approved January 18, 1837, providing for the free, equal, and unlimited coinage of silver and gold, ought to be reenacted, and that all laws and parts of laws inconsistent therewith ought to be repealed, because—

First. Our monetary system from the beginning to the approval of the act of February 12, 1873, commonly known as the demonetization act, was bimetallic, with coinage of gold and silver on equal terms; that there was no demand for changing the law in 1873, and that there has been very general and continual demand since that time for a restoration of the old law.

Second. That all our national coin obligations are payable in either gold or silver or both, and in order to make such payment we need more coin than we have, or probably ever will have unless we coin silver.

Third. The restoration of free silver coinage would at once put new money into circulation, the effect of which may reasonably be expected to be to stimulate enterprise and encourage trade and to raise prices in a corresponding degree.

HISTORY OF OUR COINAGE.

It may be said, to begin with, that our coinage laws, so far as they relate to the legal-tender functions of gold coins and silver coins, were exactly the same from the time of the first coinage under the mint act, April 2, 1792, until the passage of the act of February 12, 1873, except that in 1853 the legal-tender function of the minor silver coins was limited to sums of $5.

In order to a clear understanding as the argument proceeds, it may be well at the outset to review briefly the history of coinage in the United States.

In 1782 the Continental Congress appointed a committee to investigate the condition of the coins which were then current in the country. Many different coins were in circulation, principally those of Great Britain and Spain and the Spanish-American provinces, and each of the colonies had maintained a separate valuation of its own. While the British method of counting money was common in all parts of the country, the most generally current coins were those of Spain. The Spanish milled dollar was common among the people, and it was the most popular coin then in use here.

Mr. Robert Morris made an elaborate report and recommended a new system of United States coinage. But nothing further was done about it until two years afterwards, when the matter was taken up and referred to a committee of which Thomas Jefferson was a member. That distinguished statesman, after a careful examination of the whole subject, wrote out his views in what he termed "Notes on the establishment of a mint." These "Notes" may be found in Jefferson's Works, volume 1, beginning at page 162. In fixing the unit of money Mr. Jefferson laid down three rules:

First, that it be of convenient size to be applied as a measure to the common money transactions of life; second, that its parts and multiples be in an easy proportion to each other, so as to facilitate the money arithmetic; and third, that the unit and its parts or divisions be so nearly of the value of some of the known coins as that they may be of easy adoption for the people; and—

He added—

the Spanish dollar seems to fulfill all these conditions.

He gave the following as his reasons for selecting the dollar for the unit:

The unit or dollar is a known coin, and the most familiar of all to the minds of the people. It is already adopted from South to North, has identified our currency, and therefore happily offers itself as a unit already introduced. Our public debt, our requisitions and their appointments, has given it actual and long position of the place of the unit. The course of our commerce, too, will bring us more of this than of any other foreign coin, and therefore renders it more worthy of attention. I know of no unit which can be proposed in competition with the dollar but the pound. But what is the pound? One thousand five hundred and forty-seven grains of fine silver in Georgia; 1,289 grains in Virginia, Connecticut, Rhode Island, Massachusetts, and New Hampshire; 1,031¼ grains in Maryland, Delaware, Pennsylvania, and New Jersey; 966¼ grains in North Carolina and New York. Which of these shall we adopt? To which State is that preeminence of which all are so jealous, and on which impose the difficulties of a new estimate on their corn, their cattle, and other commodities? Or shall we hang the pound sterling as a common badge upon all their necks? This contains 1,718¾ grains of pure silver. It is difficult to familiarize a new coin to the people. It is more difficult to familiarize them to a new coin with a new name. Happily the dollar is familiar to them all, and is already as much referred to as a measure of value as their respective provincial pound.

On the 15th day of April, 1790, the House of Representatives passed a resolution asking the then Secretary of the Treasury, Alexander Hamilton, to prepare a report concerning the establishment of a mint and the coinage of money, and in response to that resolution the Secretary prepared a report and submitted it to the House on the 28th day of January, 1791. He sets out by saying that a plan for an establishment of this nature—that is to say, a mint—involves a great variety of considerations, intricate, nice, and important. The general state of debtor and creditor, all the relations and consequences of price, the essential interests of trade and industry, the value of all property, the whole income of both the state and individuals, are liable to be extensively influenced, beneficially or otherwise, by the judicious or injudicious regulations of this interesting institution.

After discussing the importance of the subject and the interests involved he divides the subject into six different heads, the first two of which are these: First, what ought to be the nature of the money unit of the United States; and second, what the proportion between gold and silver, if coins of both metals are to be established.

As to the first of these two divisions, the Secretary, after an elaborate discussion, came to the conclusion that the dollar ought to be established and maintained as the money unit for the currency of the United States, and he was of the opinion that the dollar then generally current, namely, the Spanish milled dollar, ought to be used as the money unit.

As to the second proposition, whether the standard of money ought to be a single one or a double one, the Secretary was of opinion that we ought to establish and maintain the double standard, namely, gold and silver. He was aware, and called attention to the fact, that in the discussion of the subject by public men generally our American statesmen largely leaned to the opinion that the standard ought to be single and that silver. But the Secretary came to the conclusion that the double standard was better. He said:

But upon the whole it seems to be the most advisable, as has been observed, not to attach the unit exclusively to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money, and reducing it to the situation of mere merchandise, which, accordingly, at different times, has been proposed from different and very respectable quarters, but which would probably be a greater evil than occasional variations in the unit from the fluctuations in the relative value of the metals, especially if care be taken to regulate the proportion between them with an eye to their average commercial value. To annul the use of either of the metals as money is to abridge the quantity of circulating medium and is liable to all of the objections which arise by a comparison of the benefits of a full with the evils of a scanty circulation.

After discussing at some length the probable results of a single standard, the Secretary said that the chief if not the sole effect of such a regulation would be to diminish the utility of one of the metals. He then proceeded to discuss the proportion in which the metals ought to be used, and he came to the same conclusion that Sir Isaac Newton had arrived at in his report to the treasury of Great Britain in 1717—the proportion of about 1 to 15; 1 unit of weight in gold to 15 of the same units of weight in silver; and such, in fact, was the proportion established in our coinage law the next year.

This report of Mr. Hamilton was by him submitted to Thomas Jefferson, who was then Secretary of State, for his inspection and consideration. After a very careful study of the report, Mr. Jefferson made a few suggestions, which were in the main accepted by Mr. Hamilton, and the report as it was finally presented to Congress was a substantial agreement between those two gentlemen. If there was any difference between them in respect to the subject it was upon the matter of a single or double standard. Mr. Jefferson inclined to the single standard, and that silver, while Mr. Hamilton preferred the double standard, that of silver and gold. The report of Mr. Hamilton is found in volume 3 of his works, beginning at page 149.

Having adopted the dollar as a unit, then Mr. Jefferson suggested that we ought to have at least four coins—one a golden piece equal in value to $10; second, the unit or dollar of silver; third, the tenth of a dollar, of silver also; and, fourth, the hundredth part of a dollar, this to be made of copper. And he suggested that perhaps it would not be amiss to coin three more pieces of silver—one of the value of half a dollar, the other 20 cents, and the other 5 cents. He concludes his "Notes" in these words:

My proposition, then, is that our notation of money shall be decimal, descending at the liberty of the person noting; that the unit of this notation shall be a dollar; that coins shall be accommodated to it from $10 to the hundredth of a dollar.

In accordance with the recommendation of this report Congress passed an act entitled "An act establishing a mint and regulating the coins of the United States." This act was approved April 2, 1792. The first eight sections provide for the establishment of the mint, name the necessary officers, prescribe their duties, etc., and section 9 names the coins that shall be made and fixes their value. I read the section:

And be it further enacted, That there shall be from time to time struck and coined at the said mint coins of gold, silver, and copper, of the following denominations, values, and descriptions, viz: Eagles, each to be of the value of ten dollars or units and to contain two hundred and forty-seven grains and four-eighths of a grain of pure or two hundred and seventy grains of standard gold. Half eagles, each to be the value of five dollars and to contain one hundred and twenty-three grains and six-eighths of a grain of pure or one hundred and thirty-five grains of standard gold. Quarter eagles, each to be of the value of two dollars and a half dollar and to contain sixty-one grains and seven-eighths of a grain of pure or sixty-seven grains and four-eighths of a grain of standard gold. Dollars or units, each to be of the value of a Spanish milled dollar, as the same is now current, and to contain three hundred and seventy-one grains and four-sixteenth parts of a grain of pure or four hundred and sixteen grains of standard silver. Half dollars, each to be of half the value of the dollar or unit and to contain one hundred and eighty-five grains and ten-sixteenth parts of a grain of pure or two hundred and eight grains of standard silver. Quarter dollars, each to be of one-fourth the value of the dollar or unit and to contain ninety-two grains and thirteen-sixteenth parts of a grain of pure or one hundred and four grains of standard silver.

Dismes, each to be of the value of one-tenth of a dollar or unit and to contain thirty-seven grains and two-sixteenth parts of a grain of pure or forty-one grains and three-fifth parts of a grain of standard silver. Half-dismes, each to be of the value of one-twentieth of a dollar and to contain eighteen grains and nine-sixteenth parts of a grain of pure or twenty grains and four-fifth parts of a grain of standard silver. Cents, each to be of the value of the one hundredth part of a dollar and to contain eleven pennyweights of copper. Half cents, each to be of the value of half a cent and to contain five pennyweights and half a pennyweight of copper.

Section 10 prescribes the devices that shall appear on the coins, and the next section declares what shall be the relative values of the two metals—gold and silver. I quote:

And be it further enacted, That the proportional value of gold to silver in all coins which shall by law be current as money within the United States shall be as 15 to 1, according to quantity in weight, of pure gold or pure silver; that is to say, every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion as to any greater or less quantities of the respective metals.

The twelfth section provides that the metal in the gold coins shall be "eleven parts fine to one part alloy;" that is to say, eleven parts shall be pure gold and one part of alloy, and the alloy is to be made of silver and copper in such proportion that not more than one-half shall be silver.

The thirteenth section provides that the—

Standard of all silver coins of the United States shall be 1,485 parts of fine to 179 parts alloy * * * which alloy shall be wholly of copper.

Section 14 provides for free and unlimited coinage of gold and silver bullion in the language following:

SEC. 14. *And be it further enacted*, That it shall be lawful for any person or persons to bring to the said mint gold and silver bullion in order to their being coined; and that the bullion so brought shall be there assayed and coined as speedily as may be after the receipt thereof, and that free of expense to the person or persons by whom the same shall have been brought. * * *

The rest of the section provides that after the bullion has been coined the coins shall be delivered to the person or persons entitled, and also provides that when convenient, and when money has been provided for that purpose, the Director of the Mint, if the depositor of the bullion so desires, may deliver to him at once coins of value equal to what the bullion will make when minted, charging one-half of 1 per cent for the accommodation.

The sixteenth section provides—

That all the gold and silver coins which shall have been struck at and issued from the said mint shall be a lawful tender in all payments whatsoever, those of full weight according to the respective values hereinbefore declared, and those of less than full weight at values proportional to their respective weights.

All the rest of the act relates to details. The points to be particularly noted with respect to the provision of this law are—

1. That the unit of value is a "dollar."

2. That the unit is to be represented by a coin which shall contain 371¼ grains of pure silver with copper alloy equal to a little more than one-ninth part in weight of the whole coin, and that its value shall be that of a coin then in general circulation—the Spanish milled dollar.

3. That certain gold coins representing multiples of the unit, with certain silver coins representing decimal parts of the unit, were provided for, and that each of them and all of them are made "lawful tender in all payments whatsoever," according to their respective weights, measured by the standard of value given in the law.

4. That any person or persons may take gold or silver bullion to the mint and have it made into any of these coins free of charge.

5. That the proportional weight of gold and silver coins, according to value, shall be 1 of gold to 15 of silver.

6. That the weight of pure metal in the coin, and not the name of the coin, is to be the standard of its value; that is to say, a "dollar" then had a certain value, not definable, to be sure, yet a well-understood meaning in estimating values of commodities; and this value and its multiples to be represented by certain weights of pure silver and pure gold when put in the form of coins prescribed in the law. If from abrasion the coins fell below standard weight their value was lessened accordingly.

By section 1 of the act of February 9, 1793, the values of foreign gold and silver coins then circulating in the United States were regulated, and at such valuations were to be legal tender. Section 3 of the same act provided that foreign coins received by the Government for moneys due the United States after our own mint began coining money should be recoined into United States money, according to our law of April 2, 1792.

Another act "regulating the currency of foreign coins in the United States" was approved April 10, 1806.

Again, April 29, 1816, a similar act was approved, and still another March 3, 1819.

March 3, 1821, and March 3, 1823, acts were approved continuing in force the act of March 3, 1819.

The following act was passed and approved on the 25th day of June, 1834:

Be it enacted, etc., That from and after the passage of this act the following silver coins shall be of the legal value and shall pass current as money within the United States, by tale, for the payment of all debts and demands, at the rate of 100 cents the dollar, that is to say: The dollars of Mexico, Peru, Chile, and Central America of not less weight than 415 grains each; and those restamped in Brazil of the like weight, of not less fineness than 10 ounces and 15 pennyweights of pure silver in the troy pound of 12 ounces of standard silver, and the 5-franc pieces of France, when of not less fineness than 10 ounces and 16 pennyweights in 12 ounces troy weight of standard silver, and weighing not less than 334 grains each, at the rate of 93 cents each.

SEC. 2. *And be it further enacted*, That it shall be the duty of the Secretary of the Treasury to cause assays of the aforesaid silver coins made current by this act to be had at the mint of the United States at least once in every year, and to make report of the result thereof to Congress.

By the act of June 28, 1834, the weight of pure metal in our gold coins was reduced about 6 per cent. The following are provisions of that act:

Be it enacted, etc., That the gold coins of the United States shall contain the following quantities of metal, that is to say: Each eagle shall contain 232 grains of pure gold and 258 grains of standard gold; each half eagle 116 grains of pure gold and 129 grains of standard gold; each quarter eagle shall contain 58 grains of pure gold and 64½ grains of standard gold; every such eagle shall be of the value of $10; every such half eagle shall be of the value of $5; and every such quarter eagle shall be of the value of $2.50; and the said gold coins shall be receivable in all payments, when of full weight, according to their respective values; and when of less than full weight at less values, proportioned to their respective actual weights.

SEC. 2. *And be it further enacted*, That all standard gold or silver deposited for coinage after the 31st day of July next shall be paid for in coin, under the direction of the Secretary of the Treasury, within five days from the making of such deposit, deducting from the amount of said deposit of gold and silver one-half of 1 per cent: *Provided*, That no deduction shall be made unless said advance be required by such depositor within forty days.

SEC. 3. *And be it further enacted*, That all gold coins of the United States minted anterior to the 31st day of July next shall be receivable in all payments at the rate of 94.8 cents per pennyweight.

The same day another act was approved regulating the value of foreign gold coins, and on the 18th day of January, 1837, the standard of the metal in our gold and silver coins was altered by reducing the quantity of alloy. The following are the sections providing for the changes:

SEC. 8. *And be it further enacted*, That the standard for both gold and silver coins of the United States shall hereafter be such that of 1,000 parts by weight 900 shall be of pure metal and 100 of alloy; and the alloy of the silver coins shall be of copper; and the alloy of the gold coins shall be of copper and silver: *Provided*, That the silver does not exceed one-half of the whole alloy.

SEC. 9. *And be it further enacted*, That of the silver coins the dollar shall be of the weight of 412½ grains; the half dollar of the weight of 206¼ grains; the quarter dollar of the weight of 103⅛ grains; the dime, or tenth part of a dollar, of the weight of 41¼ grains; and the half dime, or twentieth part of a dollar, of the weight of 20⅝ grains. And that dollars, half dollars and quarter dollars, dimes and half dimes shall be legal tenders of payment according to their nominal value for any sums whatever.

SEC. 10. *And be it further enacted*, That of the gold coins the weight of the eagle shall be 258 grains; that of the half eagle 129 grains; and that of the quarter eagle 64½ grains. And that for all sums whatever the eagle shall be a legal tender of payment for $10; the half eagle for $5, and the quarter eagle for $2.50.

SEC. 11. *And be it further enacted*, That the silver coins heretofore issued at the mint of the United States, and the gold coins issued since the 31st day of July, 1834, shall continue to be legal tenders of payment for their nominal values on the same terms as if they were of the coinage provided for by this act.

Free and unlimited coinage of both metals was provided for in section 14 of this act, as follows:

SEC. 14. *And be it further enacted*, That gold and silver bullion brought to the mint for coinage shall be received and coined by the proper officers for the benefit of the depositor: *Provided*, That it shall be lawful to refuse at the mint any deposit of less value than $100 and any bullion so base as to be unsuitable for the operations of the mint: *And provided also*, That when gold and silver are combined, if either of these metals be in such small proportion that it can not be separated advantageously, no allowance shall be made to the depositor for the value of such metal.

By section 18 of the same act it was provided "that the only subjects of charge by the mint to the depositor" shall be for assaying and refining metals below standard.

March 3, 1843, the values of foreign gold and silver coins were again regulated to correspond to our own coins.

March 3, 1849, the coinage of gold dollars and double eagles of standard weight was authorized.

By act of February 21, 1853, the weight of the silver coins below a dollar was reduced about 7 per cent and their legal-tender quality reduced to "sums not exceeding $5." Sections 1 and 2 are:

SEC. 1. That from and after the 1st day of June, 1852 (1853), the weight of the half dollar or piece of 50 cents shall be 192 grains, and the quarter dollar, dime, and half dime shall be respectively, one-half, one-fifth, and one-tenth of the weight of said half dollar.

SEC. 2. That the silver coins issued in conformity with the above section shall be legal tenders in payment of debts for all sums not exceeding $5.

Section 3 of this act provides that the bullion necessary for the coinage of these light-weight coins shall be purchased, and that the gain (what we now call seigniorage) shall be charged to the mint and credited to the Government. I read the section:

And be it further enacted, That in order to procure bullion for the requisite coinage of the subdivisions of the dollar authorized by this act, the treasurer of the mint shall, with the approval of the Director, purchase such bullion with the bullion fund of the mint. He shall charge himself with the gain arising from the coinage of such bullion into coins of a nominal value exceeding the intrinsic value thereof, and shall be credited with the difference between such intrinsic value and the price paid for said bullion, and with the expense of distributing said coins as hereinafter provided. The balance to his credit, or the profit of said coinage, shall be, from time to time, on a warrant of the Director of the Mint, transferred to the account of the Treasury of the United States.

Free coinage of these subsidiary pieces was not allowed, as shown in section 5, which reads:

And be it further enacted, That no deposits for coinage into the half dollar, quarter dollar, dime, and half dime shall hereafter be received, other than those made by the treasurer of the mint, as herein authorized, and upon account of the United States.

Section 6 of said act required a charge of one-half of 1 per cent for coining all gold coins and all silver dollars.

Section 7 provided for the coinage of three-dollar gold pieces of standard weight.

The act of February 21, 1857, repealed all laws which had declared foreign coins legal tender.

These are the only laws and parts of laws enacted by Congress affecting the coinage of the United States (except in cases of a few minor silver coins and some of coarser metals) until we reach "An act revising and amending the laws relative to the mints, assay offices, and coinage of the United States," approved February 12, 1873. That act contains sixty-seven sections, but only a few of them need be referred to in this connection. These are sections 13, 14, 15, 17, 21, 25, and 27.

SEC. 13. That the standard for both gold and silver coins of the United States shall be such that of one thousand parts by weight nine hundred shall be of pure metal and one hundred of alloy; and the alloy of the silver coins shall be of copper, and the alloy of the gold coins shall be of copper, or of copper and silver; but the silver shall in no case exceed one-tenth of the whole alloy.

SEC. 14. That the gold coins of the United States shall be a one-dollar piece, which, at the standard weight of 25.8 grains, shall be the unit of value; a quarter eagle, or two-and-a-half-dollar piece; a three-dollar piece; a half eagle, or five-dollar piece; an eagle, or ten-dollar-piece, and a double eagle, or twenty-dollar piece. And the standard weight of the gold dollar shall be 25.8 grains; of the quarter eagle, or two-and-a-half-dollar piece, 64½ grains; of the three-dollar piece, 77.4 grains; of the half eagle, or five-dollar piece, 129 grains; of the eagle, or ten-dollar piece, 258 grains; of the double eagle, or twenty-dollar piece, 516 grains; which coins shall be a legal tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided in this act for the single piece, and when reduced in weight, below said standard and tolerance, shall be a legal tender at valuation in proportion to their actual weight; and any gold coin of the United States, if reduced in weight by natural abrasion not more than one-half of 1 per cent below the standard weight prescribed by law, after a circulation of twenty years, as shown by its date of coinage, and at a ratable proportion for any period less than twenty years, shall be received at their nominal value by the United States Treasury and its offices, under such regulations as the Secretary of the Treasury may prescribe for the protection of the Government against fraudulent abrasion or other practices; and any gold coins in the Treasury of the United States reduced in weight below this limit of abrasion shall be recoined.

SEC. 15. That the silver coins of the United States shall be a trade dollar, a half dollar or 50-cent piece, a quarter dollar or 25-cent piece, a dime or 10-cent piece; and the weight of the trade dollar shall be 420 grains troy; the weight of the half dollar shall be twelve grams (grammes) and one-half of a gram (gramme); the quarter dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

SEC. 17. That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth.

SEC. 21. That any owner of silver bullion may deposit the same at any mint, to be formed into bars, or into dollars of the weight of 420 grains troy, designated in this act as trade dollars, and no deposit of silver for other coinage shall be received, but silver bullion contained in gold deposits and separated therefrom may be paid for in silver coin, at such valuation as may be, from time to time, established by the Director of the Mint.

SEC. 25. That the charge for converting standard gold bullion into coin shall be one-fifth of 1 per cent, and the charges for converting standard silver into trade dollars, for melting and refining when bullion is below standard, for toughening when metals are contained in it which render it unfit for coinage, for copper used for alloy when the bullion is above standard, for separating the gold and silver when these metals exist together in the bullion, and for the preparation of bars, shall be fixed, from time to time, by the Director, with the concurrence of the Secretary of the Treasury, so as to equal but not exceed, in their judgment, the actual average cost to each mint and assay office of the material, labor, wastage, and use of machinery employed in each of the cases aforementioned.

SEC. 27. That in order to procure bullion for the silver coinage authorized by this act the superintendents, with the approval of the Director of the Mint as to price, terms, and quantity, shall purchase such bullion with the bullion fund. The gain arising from the coinage of such silver bullion into coin of a nominal value exceeding the cost thereof shall be credited to a special fund denominated the silver-profit fund. This fund shall be charged with the wastage incurred in the silver coinage, and with the expense of distributing said coins as hereinafter provided. The balance to the credit of this fund shall be from time to time, and at least twice a year, paid into the Treasury of the United States.

It will be observed that there is no provision in this act concerning the silver dollar. It is simply omitted from the enumeration of silver coins, and it is provided that no coins other than those "herein set forth" shall be "issued from the mint." A new silver coin is, however, added—a "trade dollar"—which is 7½ grains heavier than the standard silver dollar of 412½ grains.

The revision act of 1874 provides that "the silver coins of the United States shall be a legal tender" for sums not exceeding $5 (section 3586).

The Bland-Allison Act of February 28, 1878, provided in section 1—

That there shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act; which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be a legal tender at their nominal value for all debts and dues, public and private, except where otherwise expressly stipulated in the contract. And the Secretary of the Treasury is authorized and directed to purchase, from time to time, silver bullion, at the market price thereof, not less than $2,000,000 worth per month nor more than $4,000,000 worth per month, and cause the same to be coined monthly, as fast as so purchased, into such dollars; and a sum sufficient to carry out the foregoing provision of this act is hereby appropriated, out of any money in the Treasury not otherwise appropriated. And any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed $5,000,000: *And provided further*, That nothing in this act shall be construed to authorize the payment in silver of certificates of deposit issued under the provisions of section 254 of the Revised Statutes.

This act was repealed July 14, 1890, by what has been commonly known as the Sherman law, which required the purchase of 4,500,000 ounces of silver monthly and the coinage of enough of it to redeem the Treasury notes paid for it, with the clause that it is the established policy of the United States to maintain the parity of the two metals.

The following are the sections of the Sherman law relating to silver and coinage:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371 25/100 grains of pure silver, and to issue in payment of such purchases of silver bullion Treasury notes of the United States, to be prepared by the Secretary of the Treasury, in such form and of such denominations, not less than $1 nor more than $1,000, as he may prescribe, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated, out of any money in the Treasury not otherwise appropriated.

SEC. 2. That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued; but no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom then held in the Treasury purchased by such notes; and such Treasury notes shall be a legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and such notes, when held by any national banking association, may be counted as a part of its lawful reserve. That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

SEC. 3. That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

SEC. 4. That the silver bullion purchased under the provisions of this act shall be subject to the requirements of existing law and the regulations of the mint service governing the methods of determining the amount of pure silver contained, and the amount of charges or deductions, if any, to be made.

SEC. 5. That so much of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," as requires the monthly purchase and coinage of the same into silver dollars of not less than $2,000,000 nor more than $4,000,000 worth of silver bullion is hereby repealed.

The purchasing clause of the Sherman law—that is, so much of it as authorized and required the purchase of bullion—was repealed at the extra session of Congress beginning August 7, 1893, by the following enactment:

An act to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

Approved, November 1, 1893.

This concludes the collection of laws of the United States relating to our coinage so far as the weight and fineness of the legal-tender coins is concerned, and it will be observed that the quantity of pure gold in the gold coins was once reduced (by the act of June 28, 1834) and that the quantity of pure silver in the dollar coin has never been altered in the least degree. The first silver dollar coined contained 371¼ grains of pure metal and the last one contained precisely the same amount. And so with all of the nearly 450,000,000 silver dollar pieces coined since the first mint was opened—more than a hundred years ago.

It may be remarked, further, that silver dollars have been all along and continuously full legal tender in payment of all debts

and of all amounts the same as gold coins, except that by the revision of 1874 all our silver coins were put into one class—subsidiary—and that, of course, included the dollar piece as well as the others. Its legal-tender function was restored by the Bland-Allison Act four years later, and it has not been disturbed since.

From 1794, when the first silver coins were issued from our mints, until 1873, the silver dollar was not only the unit of value but it was the equal of gold for all monetary purposes under all circumstances and conditions in the United States, and in commerce it was often worth more than gold at the legal ratio. All our contracts were made with that knowledge and understanding. All writers, statesmen, and economists so regarded it, and hence they always referred to our standard money as gold and silver—two bases, one standard. Our banks held gold and silver coins alike as specie reserves. No question was ever raised concerning the disparity of the metals by our merchants and ordinary business men; and when, during the war of the rebellion and for some years afterwards, our Secretaries of the Treasury urged the doctrine of redemption of the Treasury notes, they invariably referred to gold and silver alike as the money of final payment.

Mr. Secretary Chase, in his report dated December 4, 1862, discussing the currency question and recommending the issue of Government notes from time to time in guarded amounts, said, on page 21:

The Secretary recommends, therefore, no mere paper-money scheme, but, on the contrary, a series of measures looking to a safe and gradual return to gold and silver as the only permanant basis, standard, and measure of values recognized by the Constitution.

Mr. Secretary McCulloch, in his report, December 5, 1865, at page 8, urging immediate preparation by Congress for a resumption of specie payments, said:

An irredeemable paper currency may be a necessity; but it can scarcely fail, if long continued, to be a calamity to any people. Gold and silver are the only proper measure of value. They have been made so by the tacit agreement of nations, etc.

In the report for 1866, the Secretary (Mr. McCulloch), further urging return to specie payments, said, on page 10:

Ever since trade commenced between the people of different nations gold and silver have been the only reliable and recognized measure of value and medium of exchanges.

On page 11 he says:

Nothing but the precious metals is a legal tender.

On pages 12 and 13 he refers to—

the coin which is obtained in the gold and silver producing districts.

In the same officer's report for 1867, Mr. McCulloch, on page 7, quotes a resolution of Congress approving his recommendation of the preceding year, and he quotes his former report in part. And on pages 9, 10, and 11 he uses the terms "coin," "specie," and "precious metals" as meaning the same thing. On page 11 he writes of "gold and silver" as "the only true measure of value" recognized by "the great international law."

Again, in his report for 1868, the same officer (and the same person) at page 5 takes up the same subject, referring to his former recommendations, and by way of adding to their force he quotes from Daniel Webster a passage in which that eminent lawyer and statesman spoke of "gold and silver" currency being a "constitutional principle."

The arguments and recommendations of the Secretaries of the Treasury bore fruit on March 18, 1869, in "An act to strengthen the public credit," which promises to redeem in "coin" all the notes out and all the bonds except such as are payable in currency other than "gold and silver."

We are very apt, Mr. President, in discussing this subject to overlook the important fact that the act of Congress which authorizes the redemption of our greenbacks and Treasury notes in coin and the payment of our bonded indebtedness in coin particularly specifies that gold and silver coin was meant by the framers of the law.

That in order to remove any doubt as to—

the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver. But none of said interest-bearing obligations not already due shall be redeemed or paid before maturity unless at such time United States notes shall be convertible into coin at the option of the holder, or unless at such time bonds of the United States bearing a lower rate of interest than the bonds to be redeemed can be sold at par in coin. And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

That is the basis of all subsequent coin legislation so far as it is made applicable to the redemption of notes or the sale of bonds. The refunding act, following the next year, provided for the sale of coin bonds. The resumption act, passed five years later, referring to the bonds authorized by the act of 1870, brings up the same old question.

I have among my papers the language which appears upon the bonds issued under the authority of the refunding act of 1870. The wording of the statute is quoted on the face of the bonds. The language refers specially to the fact that the bond is to be paid in coin of the standard value of our coin in 1870.

The alteration made by the coinage act of 1873, changing the application of the unit from silver to gold, did not have the effect of demonetizing silver any more than the original act of 1792 demonetized gold by applying the unit to silver. There is nothing in the law of 1873 which in any manner affects the legal-tender functions of the silver dollar. Its coinage was stopped by that act, but its office as one of the lawful coins of the country was not in the least degree altered. Every silver dollar then in existence was as good for monetary purposes after the passage of the act as it was before.

NO DEMAND FOR THE ACT OF 1873.

And there was no demand for the coinage legislation of 1873. While gold and silver coin were assumed to be the basis of our money, the truth is we were then, and had been at least twelve years, on a paper basis. No coin had been in circulation during that period. All contracts had been made on the basis of the paper dollar. Banks had suspended specie payment in December, 1861, and from that time forward the only money used among the people was paper. The Government carried on the most expensive war in history without a dollar of coin. All its enormous contract debts were paid in Government notes. The Treasury transactions during the four war years amounted to over four thousand million dollars, and it was all done with paper money, except a mere fraction that was paid in coin by way of interest.

At a conference held in Paris in 1867 the monetary condition of the world, or, more properly speaking, the interests of the great moneyed agencies of the world, were considered, and several American gentlemen of note were present. That conference probably was the first of its kind to give impetus to the movement which in the following six years resulted in the establishment of the gold basis in Germany and the United States, and virtually the same thing in France and the other States of the Latin Union—Belgium, Switzerland, Italy, and Greece.

In this country the subject had not been discussed except among men interested in money as dealers, such as great bankers, brokers, and speculators. The gold corner which brought on the panic of 1873 was inaugurated and managed by men who were interested in establishing a gold basis. The subject had been considered at the Treasury Department, and Secretary Boutwell, who recommended the report of his Comptroller of the Currency, paving the way for unfriendly silver legislation, is, so far as I know, the only participant in that costly proceeding who is proud of the part he played.

There was nothing in the situation which required such legislation, nothing that could excuse the pressing of such a measure at such a time without public discussion before the people. We had long been accustomed to the use of paper money, and the general acquiescence of the people made the time appropriate for a quiet march upon them. While they slept one of their strongest outposts was captured by stealth.

WE ARE A BIMETALLIC PEOPLE.

Mr. President, we have been from the beginning a bimetallic people, supplementing our metal with paper money as our business necessities required. Paragraph 5 of section 8 of Article I of the Constitution of the United States provides that Congress shall have power "to coin money, regulate the value thereof, and of foreign coin." In pursuance of this authority Congress provided early for the coining of money out of gold and silver at a valuation named in the law, and all our subsequent legislation down to 1873 was enacted on the bimetallic basis. All political parties uniformly recognized the law of our monetary system. No party at any time would have dared to advocate a change. The alteration had to be done without the people's knowledge or it could not have been done at all.

Even now, while both of the great political parties practice gold monometallism through their members chosen to administer the laws, the parties in their national and State conventions declare in favor of bimetallism.

The Republican party in the last national platform asserted a well-known fact when declaring that "the American people from tradition and interest favor bimetallism." And the Democratic party declared the same idea. Nobody disputes that proposition. Our history is very clear on that point. But the bimetallism which the American people favor from "tradition and interest" is the bimetallism established by the fathers and continued by their descendants—the dollar to be the unit and its representative coin to be made of 371¼ grains of silver, with multiples made of gold at a proper ratio fixed by United States laws.

Every well-informed person knows that in 1873 silver bullion,

measured by gold coin, was worth 3 per cent more than gold. If the object of the financiers of that day had been to preserve and use the best money, as they now declare to be the safest policy, it would seem that they ought to have let the laws stand as they were; or, if an adjustment was necessary, and they had done as they now insist on doing, they ought to have legislated gold coins up to the silver standard by putting a little more gold in them. What is good doctrine now ought to have been equally good then touching the same matter. If the most valuable metal must be the basis, and if the parity must be attuned to that, then surely a great mistake was made in 1873 by making the cheaper metal the basis. If the modern theory be correct, a great many people were defrauded by putting off on them 97-cent dollars.

Although silver dollars had always been full tender, still, on account of their weight as compared with gold coins, they were not so desirable for making large payments. And it could not reasonably be expected that this relation would be materially altered in the future. Hence farseeing speculators could easily see that, with our national obligations all payable in coin and the great body of our currency being in paper which we had agreed to redeem in coin, if silver could be demonetized it would be a simple matter to get control of the basic money, the dearer metal, gold, and thus more surely control the financial affairs of the country.

And how wisely they calculated. The profits made on the refunding bonds of 1870 have not been less than 25 per cent, or about $450,000,000.

The act of 1873 would alone have accomplished all that was intended and desired by the money changers in their effort to limit the basic money to one metal, and that the dearer one. But Congress took the matter in hand, and early in 1878, in a joint resolution agreed to by a very large majority in each House, declared that gold and silver coin alike were the lawful coin of the United States, and that all our national obligations were payable in either or both of them. It was, however, impossible to pass a free-coinage law. The best that could be done was to compromise on the Bland-Allison Act, and that had to be passed over the President's veto.

A VICIOUS PROVISION.

One vicious provision was incorporated in that law which did not attract any attention at the time, and it has not had the attention its importance justifies at any time. I refer to these words, found in section 3:

That any holder of the coin authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States, in sums not less than $10, and receive therefor certificates of not less than $10 corresponding with the denomination of United States notes. The coin deposited for or representing the certificates shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when so received may be reissued.

WHAT FREE COINAGE MEANS.

In order that the intent and purpose of this section may be readily perceived, it must be remembered that the whole act is a scheme to defeat the free-coinage bill originally introduced by Mr. Bland. It is necessary, also, to understand just what free coinage is and how it affects the currency.

Free coinage is clearly expressed in the original mint act, April 2, 1792, section 14, in these words:

That it shall be lawful for any person or persons to bring to the said mint gold and silver bullion, in order to their being coined; and that the bullion so brought shall be there assayed and coined as speedily as may be after the receipt thereof, and that free of expense to the person or persons by whom the same shall have been brought.

The proceeding is still more tersely and briefly expressed in section 14 of the act of 1837:

That gold and silver bullion brought to the mint for coinage, shall be received and coined by the proper officers for the benefit of the depositor.

Free and unlimited coinage means the coining without charge of all gold and silver bullion brought to the mint, and delivering the coin to the owner of the bullion as soon as it is coined. It is exactly the same kind of a transaction as taking a grist of wheat or corn to the mill and having it ground into flour or meal, except that the miller exacts toll, while the mint makes no charge.

There is another thing about free coinage that is especially important and must not be overlooked. The owner of bullion takes bullion to the mint and takes coin away with him. It is the owner of the bullion and not the Treasury of the United States that gets the coin. And he wants it because it is coin, something that he can use anywhere and everywhere in the country in the transaction of business and in the forwarding of enterprises in which he wishes to engage. In short, he wants it because it is money. And it is of no benefit to him without use. Its use is circulating among the people, performing the functions of money. It pays for labor, it purchases materials, it pays debts, it stimulates industry, and it infuses life into trade. These coins which have been fashioned from the bullion are charged with the highest and most exalted attributes of sovereignty. They are authorized and empowered to effect exchanges of property and of values among the people, and they are commissioned to cancel pecuniary obligations among citizens. They have a still higher prerogative than this. They may take the place of a specific performance of a contract which one or both parties has been unable to execute according to agreement. From the moment these coins go into the possession of their owner they are that much added to the stock of active money of the country, for their owner got them for that purpose, and he will see to it that they get into active circulation as soon as possible.

But when the Government purchases bullion and piles the coin in the Treasury it does not get into circulation at all. And herein lies one advantage of free coinage to the people. In the latter case the coin goes out at once among them. It is the chief business of its owner to get it into circulation, for it is of no benefit to him until he does. When it lies in treasury vaults it is of no use to any person, unless it is represented by certificates or notes that are out circulating as money. But the certificates do not affect the value of gold unless they are made lawful tender in payment of debts to private creditors.

SILVER CERTIFICATES NOT MONEY.

The Bland-Allison Act provides that the bullion purchased shall be coined into standard dollars, which shall be full legal tender except where otherwise expressly stipulated in the contract. It will be seen that notwithstanding the title of the act, which is "An act to authorize the coinage of the standard silver dollar, and to restore its legal-tender character," in effect in practice the legal-tender character of the coin is not restored; for, by inserting the words "gold coin" in a note or other contract, the law may be nullified and its purpose defeated. However, passing over that point for the present, the act provides that holders of these silver coins may deposit them with the Treasurer or any assistant treasurer of the United States in sums of $10 at a time and receive one ten-dollar certificate for them, and the coins will be held for him subject to his order on surrender of the certificate. This certificate, however, is not money. Its holder can not pay a debt with it unless the creditor is willing to accept it. He can pay taxes due the General Government with it, but not taxes due his own school district, township, county, city or State; nor can he discharge a judgment against him in court with silver certificates. The Government will receive them, but they are not legal tender for any purpose among the people in their business affairs.

This is not all. The coin not going out among the people in the first instance, but into the Treasury where it is under control of the Treasurer, and the certificates being usable to pay customs and Government taxes, importers, brewers, and distillers could use large amounts of them for that purpose quite as well as they could use silver dollars, and they are much more convenient. So, instead of paying out the new coins in the first instance to contractors and public officers, who would always prefer the paper rather than the heavy silver coin, the certificates were prepared in advance, and, as matter of fact, much the greater portion of the coins were not paid out at all to anybody; nor were they, to any considerable extent, ever even offered to be paid, and nobody ever deposited them. It was not intended that they should be paid out, because in that case they would have served the uses of money as well as gold coin and lessened the value of gold accordingly.

With a vast amount of silver coined, it has been so managed that but little of it gets out among the people except the subsidiary pieces. Most of the dollars, which are legal tender, are kept in the Treasury and are represented by silver certificates, which are not legal tender, and therefore are not competitors of gold in the money market; and although there is about $140,000,000 worth of uncovered silver coin and bullion in the Treasury belonging to the Government, it is not paid out in redemption of Government paper, nor for interest on the public debt, nor for any other purpose. Hence, when the bankers of Wall street find business dull in ordinary times, they prey on the people at large by presenting Treasury notes for redemption and receiving gold coin in exchange for them. As soon as gold enough is withdrawn in this way from the Treasury to "destroy confidence," then the Treasury offers bonds for sale, and a syndicate is at hand with the gold ready to pay for the bonds—the same gold that they had just drawn from the Treasury. The notes soon get into circulation again; they are again presented for redemption, gold is paid for them as before, and the gold is again sold back for bonds, and so the work of spoliation goes on. These bonds run many years, bearing interest payable semiannually, all of which, both principal and interest, to be paid in gold, according to the official construction of the laws. And the bonds and coupons are not subject to taxation by any power, domestic or foreign.

This is one of the subjects that the act of 1873 was intended to accomplish. And it has succeeded admirably. In 1869 we promised to pay all our debts with coin; in 1870 we refunded our debt, so as to make sure work of it, and authorized the issuance of $1,500,000,000 in bonds payable in coin. (Next year the amount was increased to $1,800,000,000.) In 1873 we arranged to discontinue the coinage of legal-tender silver, so as to have gold only as

our money of final payment. In 1875 we agreed to resume specie payment and authorized the sale of coin bonds for that purpose if need be. In 1882 the bonds had been worked up to a high premium, and the banks during the next eight years sold bonds and withdrew circulating notes to the amount of near $240,000,000. In 1890 Wall street made its first effective raid on the Treasury, and in 1894 demonstrated its power over the Government and the people of the country by compelling the issue of vast amounts of bonds, without either law or necessity, to buy gold with.

SCHEME TO KEEP SILVER COIN IN THE TREASURY.

The object of putting section 3, which is the last section, in the Bland-Allison Act was to keep as much of the silver coin in the Treasury as possible, letting it be represented among the people by paper certificates that are not legal tender, and thus preserve the ascendency of gold as our full legal-tender money. It matters not to the men who control our finances how much paper money or subsidiary coin is out, so long as they can keep gold the basic coin, the money of final payment. And even though our silver coin be full lawful tender, as long as it lies in the Treasury and is represented by certificates that are not money at all, any more than bank notes are, that long the silver is out of the way for all monetary purposes and gold still has the field.

Another effort to procure a free-coinage law was made in 1890, and another defeat was suffered. The Sherman law provides for the purchase and coinage of silver bullion; but by the insertion of the "parity" clause coinage of the bullion is rendered discretionary; for while the law provides that enough of the bullion shall be coined to redeem the notes that were paid for it, the parity clause was intended as instruction to the Secretary to redeem the notes with gold, an instruction which that officer has sedulously followed. The final act of demonetization which signalized the victory of speculators over the people was consummated by the repeal of the purchasing clause of the Sherman law in 1893, to the national disgrace and at a cost already of nearly $165,000,000 of interest-bearing bonds, running from ten to thirty years. And now the Government and people of the United States are at the mercy of a syndicate of gold speculators in New York and London.

NOT COIN ENOUGH IN THE WORLD.

There is not coin enough in the world to transact the ordinary business of the people, and in our own country we are now buying gold to maintain a coin basis for our monetary system.

WE NEED COIN TO PAY OUR COIN OBLIGATIONS.

We shall need a great deal more coin than we now have or can procure unless we go into our mines and dig the metal there to manufacture the coin out of. We have an immense outstanding indebtedness that we have promised to pay in coin, and this obligation must be provided for if we do not wish to play Micawber and pay our debts with new notes.

The total amount of bonds authorized by the refunding act of July 14, 1870, as amended by the act of January 20, 1871, was $1,800,000,000, $500,000,000 redeemable in ten years, $300,000,000 in fifteen years, $1,000,000,000 in thirty years. All of them have been redeemed except about $25,000,000 of the fifteen-year issue and nearly $600,000,000 of the thirty-year issue. In 1894 and 1895 three separate issues were made, two of them redeemable in ten years and one in thirty years, all redeemable in coin, according to the terms of the refunding act of 1870.

AMOUNT OF OUR BONDED DEBT.

Our bonded debt now amounts to nearly $750,000,000, made up of these items:

Payable at any time	$25,364,500
Payable July 1, 1907	559,595,300
Payable February 1, 1904	100,000,000
Payable ——, 1925	62,317,500
	747,277,300

Here is a sum equal to one-fourth of the national debt at the close of the late war, and we have no gold that we can rely upon to pay this debt as long as the present policy of the Treasury is continued. Within a period of little over twelve months we sold more than $162,000,000 worth of bonds for gold—not to pay debts with, for no debts were then due that we did not have gold enough to pay, but to defray current expenses of the Government.

Nearly six months were required and allowed on the last of these bond transactions to collect and deliver the gold, only about 25 per cent of it coming from abroad, and we have now in the Treasury less than one-third of the year's purchases.

At this rate we shall be bonding ourselves at the rate of $162,000,000 a year and never have more than $100,000,000 on hand. Where is the gold to come from to pay this $747,000,000 as it becomes due? It can not be procured at all in all probability. Our only resource will then be to refund the debt and mortgage the country for another fifty or a hundred years, and that is just what the gold syndicate is working for. So long as they can levy tribute on the labor of the people and feel sure that it will be collected at the cannon's mouth if need be, they can "laugh and grow fat," while the country lies prostrate at their feet.

But this is not all. By the credit-strengthening act of March 18, 1869, we promised to pay our Government notes in coin. The greenbacks now out amount to $346,681,016; and under the provisions of the Sherman Act of July 14, 1890, there have been issued and are now out $143,666,280, a total for both classes of notes of $490,347,296. This amount—nearly $500,000,000—is redeemable on demand in coin. If the people could have their way, these notes would never be presented for redemption; they would remain in active circulation until they were worn out and would then be replaced by new notes. But the people do not have their way. The speculators are in the saddle, and if we may judge by their conduct during the past two or three years, these notes will be presented for redemption fast enough to keep the brokers in profitable employment.

Thursday, January 16, 1896.

TREASURY MUST BE PROTECTED AGAINST MARAUDERS.

Mr. PEFFER. Mr. President, yesterday when I was interrupted by the Senate going into executive session, I was discussing the proposition that we need more coin with which to pay our coin obligations, and was giving that as one reason why I am in favor of and insist upon the coinage of silver upon equal terms with gold. Having reached that point, I continue that under existing conditions, if we would protect the Treasury against these marauders we must follow one or the other of two lines of policy with respect to the Government notes. We must either take them in at once, and we can do that only by funding them in coin bonds, for we have no gold to pay them with, or we must sell bonds to purchase gold enough to not only redeem the notes as fast as they are presented, but also to keep up a successful contest with the combined financial agencies of the great trade centers of the world. In either case we are at the mercy of the most dangerous and the most powerful combination of men on earth. Without changing our financial methods and our monetary system we shall never again be a free people. We shall always be subject to the rule of the money power.

But even when we do make this needful change, if the work were to be done to-morrow, here is this existing coin debt facing us, and that must be paid in good faith, according to the contract, in coin.

Bonds running ten to thirty years, amounting to $747,277,300; notes payable on demand and to be reissued and kept in circulation, to be again redeemed and again reissued, and so on interminably—$490,347,296 of them. Bonds and notes, total debt, $1,237,624.596, all payable in coin of silver and gold, and our stock on hand is utterly inadequate.

COIN OF THE PRESENT STANDARD VALUE—1870.

All our outstanding bonds were issued under or subject to the provisions of the refunding act of July 14, 1870. That provides that the bonds therein authorized shall be "redeemable in coin of the present standard value." The language of the law is:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized to issue, in a sum or sums not exceeding in the aggregate $200,000,000, coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of $50 or some multiple of that sum, redeemable in coin of the present standard value, etc.

The act provides for $1,500,000.000 of bonds in all, and the next year the amount was increased by $300,000,000, all payable in "coin of the present standard value."

I have here a copy of the reading matter placed on a one-thousand-dollar bond that was issued under the provisions of the refunding act of 1870. I addressed a letter to the Secretary of the Treasury asking for this matter. My letter was referred to the Treasurer, and through him to the Register, and I have here this certificate:

TREASURY DEPARTMENT, OFFICE OF THE REGISTER,
Washington, D. C., January 4, 1896.

SIR: Your letter of the 27th of December, 1895, addressed to the Treasurer of the United States, having been referred to this office by the honorable Secretary of the Treasury, I have the honor, in compliance with your request, of transmitting herewith "a certified copy of the reading matter appearing on the face and on the back of a United States bond issued under provisions of the refunding act of 1870."

You will observe I have copied the text of a $1,000 bond. The only difference to be found between this text and that of other denominations of the same loan, lies in a change of the wording relative to the denomination of the bond. That is to say, on a $100 bond the words "one hundred dollars" would appear wherever the words "one thousand dollars" appear in the copy submitted.

Respectfully, yours, J. F. TILLMAN, *Register.*

Hon. W. A. PEFFER,
United States Senate.

(.....) (.....)

Are indebted to.....or assigns

In the sum of

ONE THOUSAND DOLLARS.

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt, approved July 14, 1870," amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States, after the first day of July, A. D. 1907, in coin of the standard value of the United States, on said July 14, 1870, with interest, in such coin, from the day of the date hereof, at the rate of four per centum per annum, payable quarterly, on the first day of October, January, April, and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form, by or under State, municipal, or local authority.

Register of the Treasury,

Act of July 14th, 1870.

What does that language mean? What was the coin of the country at that time and what was its standard value? It must be remembered that this law was enacted nearly three years before the act of 1873, which dropped the silver dollar out of the list of coins and changed the coin representing the unit of value from silver to gold. At the time the refunding act was passed, requiring the bonds to be paid in coin of the "present standard value," then and for eighty years prior thereto the lawful coin of the United States, and of Germany and France, of Belgium, Switzerland, Italy, and Greece, was silver and gold, and silver alone had been the monetary basis of more than two-thirds of all the people on earth during many centuries before. At the time the refunding act was passed every one of the leading nations, except only Great Britain, used gold and silver as their basic money metals. It was not until a year afterwards that Germany changed from silver to the gold basis, and not until some years later that France, Belgium, Switzerland, Italy, and Greece, constituting the Latin Union, discontinued the free coinage of standard silver coin.

In 1870, then, when we agreed and promised by solemn act of Congress that we would fund our public debt in bonds running ten, fifteen, and thirty years, redeemable, principal and interest, in "coin of the present standard value," the lawful coin—the legal-tender coin—not only of the United States, but, as I have just stated, of all the great nations except Great Britain only, was coin made of gold and silver. No steps had been taken at that time by any government to demonetize silver. What Great Britain had done was done more than fifty years before that time.

In order to provide means to pay what we have promised to pay, and in coin, according to the contract, and to avoid the further enslavement of the people through our inability to pay in gold coin, we must have silver coin to meet the demands as they fall due.

SILVER COINAGE IS NOT REPUDIATION.

Do you say this is repudiation? I answer it is not only not repudiation, but it is just what everybody knows we agreed to do, what our creditors contracted for, and what our legal and moral obligations require us to do.

"Sound money" advocates seem to have forgotten what the contract is. They utterly ignore the law and flaunt in our faces a false and fraudulent statement, proclaiming, "This is the contract! This is the contract!" This false and fraudulent misrepresentation is that our contract was and is that we shall pay our debts with gold coin.

Let us examine this matter carefully. The people are honest; they want to abide by their contracts, and they expect their public agents to deal fairly with them.

In the first place, our present national obligations to pay money arose out of indebtedness incurred during the great war beginning in 1861. Nearly all of that vast indebtedness was payable in paper; only the interest on bonds and notes was to be paid in coin. In 1869, in the act to strengthen the public credit, we voluntarily assumed to pay, "in coin or its equivalent," all the obligations of the United States not bearing interest, known as United States notes, and all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation had expressly provided that the same might be paid in lawful money or "other currency than gold and silver."

That was in 1869, March 18. Is it not perfectly plain and easily understood, from the language used, that both gold and silver were then included in the word "coin"? We agreed to pay in coin or its equivalent all our interest-bearing obligations—

except in cases where the law authorizing their issue expressly provided that they may be paid in currency other than gold and silver.

Could language be more plain? We promised to pay in coin every bond and interest-bearing note, excepting such as were payable in something else than "gold and silver." These are the words of the statute.

That much, then, is clear, that the coin we promised to pay included, and was intended to include, both gold coin and silver coin. And that is what was urged annually by the Secretaries of the Treasury during all the years of the war when we were daily issuing large amounts of paper money and bonds. Let me repeat the words of the law. The refunding act of July 14, 1870, begins with these words:

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized to issue, in a sum or sums not exceeding in the aggregate $200,000,000, coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of $50, or some multiple of that sum, redeemable in coin of the present standard value, etc.

At that time the coin of the United States was the same in all respects that it had been for nearly eighty years, except that in 1834 the weight of the gold coins had been reduced 6 per cent, and as to the silver coins the only changes were that of 1837, diminishing the amount of alloy, and that of 1853, reducing the legal-tender function of coins less than the dollar to payments of $5. So far as the weight of pure silver in the dollar is concerned, that has never been altered—not even to this day. Our legal coin when the acts of 1869 and 1870 were approved was the same as it had been seventy-five years as to silver and thirty-five years as to gold. During all of that time any debt of any amount was payable in either silver coin or gold coin or both, as the debtor chose, and when we said in the law of July 14, 1870, that the Secretary of the Treasury should issue bonds to refund the national debt and that we would pay the bonds "in coin of the present standard value" we simply agreed to pay in the coin which was our lawful tender coin at that time. The law of 1834 put the value of the gold piece of 258 grains at $10, while the law of 1792 had put the value of the dollar or unit at the same as that of the "Spanish milled dollar" then current, and at those values and proportions gold coins and silver dollars were made a lawful tender in payment of debts of any and all amounts.

It is clear, then, that we may, at our option, pay all our national interest-bearing obligations in gold coin or silver coin or either, for we have no such obligations outstanding except such as were issued under the provisions of the refunding act of 1870. The late issues are conceded on all hands to be governed by that act, if there is any authority for their issue.

OFFICIAL INTERPRETATION OF THE WORDS "COIN OF THE PRESENT STANDARD VALUE."

It seems strange that there can be now, or that there ever should have been, any question on this point. But because there seems to be now some doubt about it, I have dwelt upon the subject more at length than it would otherwise warrant. And I have not done with it. There is some official interpretation of the language and some authoritative construction of the law relating to the subject.

The present senior Senator from Ohio [Mr. SHERMAN], when he was Secretary of the Treasury, raised the point, and asked the opinion of the Attorney-General of the United States as to whether the coinage act of 1873 in any way affected the terms of our contract to pay the bonds in coin. I read his letter:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., April 21, 1877.

SIR: I beg leave to call your attention to, and ask your opinion upon, the following questions growing out of the refunding act of July 14, 1870, to wit: Can I stipulate in the body of the 4 per cent bonds about to be issued that they shall be redeemable in coin of the present standard value—that is, the standard value at the date of their issue, or must it be the date of the law?

I submit a statement, prepared by the Hon. H. M. French, Assistant Secretary, having reference to the laws.

It may become important to the public interests to make the new bonds payable in coin of the present standard—that is, gold coin. Some doubts have been expressed upon whether previous bonds issued under acts passed prior to 1873 are not legally payable in silver coin. This question may become important, as any doubt upon the legal terms of a public security affects its value.

Very respectfully, JOHN SHERMAN, *Secretary.*

Hon. CHARLES DEVENS,
Attorney-General.

In answer, the Attorney-General wrote this letter:

DEPARTMENT OF JUSTICE, *Washington, April 26, 1877.*

SIR: In answer to your letter of the 21st instant requesting my opinion upon the following question growing out of the refunding act of July 14, 1870, to wit, "Can I stipulate in the body of the 4 per cent bonds about to be issued that they shall be redeemable in coin of the present value, that is, the standard value at the date of their issue, or must it be the date of the law?" I have the honor to reply:

The act provides for the issue of bonds "redeemable in coin of the present standard value." The word "present" undoubtedly refers as a matter of date to the time when the act was passed, and not to the time when the bonds were thereafter issued. It contemplated that a long period would elapse before it would finally be carried into effect, and that changes in the coinage of the country might occur during that period.

Whatever changes in the coinage should occur, these bonds, were, however, to be redeemed in coin of the standard value as it existed at the date of the act. By this provision the holder was guarded against any depreciation that might take place in the value of the coin, and the Government would not be compelled to pay the additional value should the coinage be appreciated. All the bonds issued under the act were to stand alike, no matter what was the date when such bonds were issued. Each was to be redeemable in coin which was included in the authorized coinage of the country at the date referred to, it being of the standard value as it then existed. Since the law was passed no change has taken place in the standard value of the coin. It is understood that there has been a certain change in the coinage of the country, and that silver dollars have now ceased to exist practically as coin.

It has been further provided by the statute of February 12, 1873 (Revised Statutes, sections 3585, 3586), that "the silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment."

Notwithstanding this practical change in the coinage of the country and the passage of this act in regard to legal tenders, the form of bond to be issued by you should not be changed so far as the mode in which it is to be redeemed is concerned. It was not intended that this should be varied according to the changes which might be made in the coinage, because a definite rule was given by reference to the coin of a particular date. That which will pay the bonds heretofore issued under this act will pay the bonds which you may hereafter issue.

It can not be authoritatively said that the words "payable in coin" or "payable in gold" are equivalent to the words used by the statute. Even if this leaves open for discussion the question whether bonds issued under this act are or are not redeemable in silver coin of the character and standard which existed July 14, 1870, it is not a doubt which it is in your power to remedy by the use of words in the bond other than those which this statute provides.

While I comprehend the difficulty suggested in your letter and the convenience that there might be in removing any question upon this matter, I am, therefore, of opinion that it would not be safe to issue the bonds, except as redeemable in coin of the standard value of July 14, 1870.

Very respectfully, your obedient servant,

CHAS. DEVENS, *Attorney-General.*

Hon. JOHN SHERMAN,
Secretary of the Treasury.

This correspondence took place during April, 1877. Mr. Secretary Sherman, seeing that the law officer of the Government construed coin the same as it had always been construed in the United States, and desiring to make the bonds more salable by making them a more desirable investment for men who make a business of lending money in large amounts, asked Congress to authorize him to make the bonds redeemable in gold coin. The request is in the form of a recommendation in his report under date December 3, 1877, in these words:

If, therefore, the public interests demand the issue of silver dollars—a subject hereafter discussed—it is respectfully submitted to Congress that an express exception be made requiring that gold coin alone shall be paid for principal or interest on bonds issued to public creditors since February 12, 1873, the amount of which is $502,930,700. These bonds have entered into the markets of the world. If the market value of the silver in the new coin is less than the gold dollar, a forced payment in the new coin is a repudiation of a part of this debt.

The point that was suggested by the then Secretary of the Treasury, Mr. Sherman, was that in case at the time the bonds were to be paid the amount of silver in the silver dollar should be of less value than its coin value, and creditors were forced to take it, it would be to that extent the repudiation of the debt.

Congress did not act on this recommendation. One would suppose this fact to be notice, if any were necessary, to the officials of the United States that Congress did not agree with the Secretary in his interpretation of the case, whether upon the law or the facts. Congress did not see that either the law or the equities required any readjustment. Congress knew, as all men knew, that the bondholders had taken very good care of themselves already, and had in 1870 provided for full, and more than full, payment by the passage of the provision for payment in coin of either metal.

Quoting from page 260 of Senator JONES'S admirable speech of 1893—

People who buy bonds do not buy them from altruistic motives. They buy them for their own profit and advantage. They buy bonds of the United States as they buy all bonds, only after careful scrutiny of the terms on the face of the bonds, and of the laws by authority of which these bonds have been issued—

And I have read the words printed on the face of the bonds—

They look sharply to the figures which show the dates of payment of principal and interest, but above all, and rising beyond all other considerations, they look to the medium, or as they term it, the standard in which the payment is, by the terms of the bond, to be made.

To suppose that such a feature is neglected would be to suppose that public creditors, the keenest of men, had lost their cunning. Every bond ever issued has, in plain terms, stated on its face the authority for its existence. It contains a clear citation of the law or laws which constitute the reason for its being. These laws are open to public inspection. No class of persons better than public creditors so well understand the limitations which the laws of all civilized nations place upon the functions of executive officers with respect to issuing bonds or incurring debts or obligations on behalf of their country. They know that the duties of those officers in connection with loans are specified in the laws by which the loans are authorized to be effected. Hence these loans are examined as with a mental microscope to see that no doubt exists as to the authority of the officer who executes the securities, and as to all other particulars concerning payment of the obligation. If they did not observe on the bond the plain printed statement that it was payable in the standard coin of the United States of July 14, 1870, they must have been blind indeed.

I have never heard a denial by anyone having knowledge of the legislation under which the bonds were issued that it is the legal right of the United States to pay those bonds in either gold or silver coin. It is said that at the time of the negotiation of the bonds silver money was out of use in this country. The sufficient answer to that is that gold was equally out of use. It is said that the bonds were sold to citizens or subjects of countries in which silver was not recognized as money. This was certainly not true of Germany, in which country early and considerable sales were made.

Germany was on the silver standard until December, 1871, and had considerable silver in its coin for a long time after that. Besides, our bonds were not, either by their terms or by implication, payable in foreign countries or in the money of those countries. They were payable within the United States, and it was distinctly affirmed on their face that they were payable in dollars of the United States.

While Congress took no action on the recommendation of Mr. Secretary Sherman, it did take action of its own motion. In order to place the matter beyond possibility of doubt or peradventure, this whole question as to whether the bonds of the United States were lawfully payable in either gold or silver at the option of the United States was thoroughly discussed by the representatives of the people in both Houses of Congress in 1878, prior to the passage of the silver-purchase law of that year. On the 16th of January, 1878, the Hon. Stanley Matthews, then a Senator from the State of Ohio, in view of the claims of the bondholders and their representatives in Congress that the bonds were legally payable in gold alone, submitted to the Senate a concurrent resolution designed to call forth the views of the members of the House and Senate nine years after the passage of the act of March 18, 1869. That was time enough for second thought. The preamble of the resolution recites the condition of existing laws relating to the payment of United States bonds. I read it just as it was presented:

Whereas by an act entitled "An act to strengthen the public credit," approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of such obligations had previously provided that the same might be paid in lawful money or other currency than gold or silver; and

Whereas all the bonds of the United States authorized to be issued by the act entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, by the terms of said act were declared to be redeemable in coin of the then present standard value, bearing interest payable semi-annually in such coin; and

Whereas all bonds of the United States authorized to be issued under an act entitled "An act to provide for the resumption of specie payments," approved January 14, 1875, are required to be of the description of bonds of the United States described in the said act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt"; and

Whereas at the date of the passage of the said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of 412½ grains each, declared by the act approved January 13, 1837, entitled "An act supplementary to the act entitled 'An act establishing a mint and regulating the coins of the United States,'" to be a legal tender of payment, according to their nominal value, for any sums whatever: Therefore,

Be it resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.

An effort was made by Senator Edmunds, of Vermont, to have the resolution modified in favor of gold payments when demanded by the creditor, but the amendment was voted down—yeas 18, nays 48—and the resolution passed the Senate by a large majority. It was at once sent to the House, where in like manner similar amendments were defeated, and the original resolution passed by 189 yeas to 79 nays.

It surely must be clear now that "coin" in the United States in 1870, when the refunding act was passed, meant and was universally understood to mean just what it always had meant since the formation of the Government, namely, gold and silver in coin.

It is equally clear that the coin which we promised in 1869 to redeem the greenbacks with was the same gold and silver coin. Hence, if we do pay or redeem in that kind of coin we shall have faithfully and honestly complied with our promise.

THE WORD "DOLLAR" HAS A WELL-UNDERSTOOD MEANING.

The objection that this amounts to repudiation is not well taken, for there is nothing in the contract or in the intention of the parties to it that makes us insure our creditors against a fall in the

market value of gold or silver bullion. The word dollar in monetary language has a well-understood meaning. The law says that a certain amount in weight of pure gold or of pure silver, when fashioned in certain ways, shall be regarded as the representative of a dollar, and that it shall be lawful tender for that amount in payment of all debts to any amount whatever. That is the value of the full-weight coin; it is less in proportion when the coin is not full weight. But as long as it is coin it is lawful money to the extent of its weight at the legal proportion in its own country. It is always valued at its coin value in the money market except in foreign countries. There it is nothing but bullion. Light-weight coin is not thrown away as bullion but passes as coin, and is valued according to the standard weight of coin. For example, if a gold eagle is found to be 2 per cent light, it would pass at $9.80, even though gold bullion might be above the par of coin. So, if a silver dollar be 2 per cent light, it would pass at 98 cents, though silver bullion might be 25 per cent or 50 per cent below the par of coin.

STATES PROHIBITED FROM COINING MONEY.

Coin has a legal value. The Constitution of the United States authorizes Congress to "coin money and regulate the value thereof," and it prohibits the several States from coining money and from making "anything but gold and silver coin a tender in payment of debts."

Coin authorized and valued by Congress may and does circulate in every State in the Union, and has done so from the beginning. No State could prohibit such circulation. Coin is made of both gold bullion and silver bullion, and as coin it is a tender everywhere within the territory and jurisdiction of the United States; but no State can make gold bullion or silver bullion a lawful tender. It is coin, not bullion, that is money. This does not deprive Congress of authority and power to coin money out of any substance other than gold and silver; but it does wholly prevent the States from coining money out of any substance whatever, and also prevents them from making anything but coin made of gold and silver a tender in payment of debts.

BULLION A MARKETABLE COMMODITY.

And every student of finance knows that bullion of the precious metals has always been a marketable commodity, subject to fluctuations the same as other articles of commerce. These metals having long been used for monetary purposes in commerce, in order to insure greater steadiness in the monetary value of the coins, the laws of different countries have provided for the making of metallic coins of certain weights and dimension, giving to each a certain legal value expressed in a unit that the people understand, and in multiples or subdivisions of the unit. For centuries the people of Great Britain were accustomed to use the words "pound," "shilling," "pence," and "farthing" in estimating or counting or recording values. The "pound" was their unit. Silver had been their principal money metal, and a pound of it had a well-understood value when exchanging it for other articles. In 1816 that nation changed from a silver to a gold basis and a new arrangement of values became necessary. The latest announcement in that respect was made in 1844, when the laws concerning the Bank of England were revised and amended. By the provisions of that act the bank is required to pay £3 17s. 9d. per ounce troy for all the fine (pure) gold that may be presented. The gold is coined into pieces known as sovereigns, because a representation of the sovereign's head is impressed upon it. It is made of 125.5 grains of pure gold, and always passes at the legal valuation of what in our money is equal to $4.866. Fluctuations in market price of gold bullion are set off by a rise or fall in the rate of discount at the Bank of England. It must be remembered that coin is only bullion in every country except that to which it belongs.

So, in the United States gold coins and silver coins at certain weights of pure metal are given certain legal values estimated in the unit (dollar), which has always had a well-understood meaning and value among the people. And that value is retained in all our dealings with one another, without regard to the market value of bullion, though our coin is weighed and valued as so much bullion of equal fineness when it is used in foreign countries.

MONEY TAKES THE PLACE OF BARTER.

It is quite necessary that a legal value be given to money. It is the law only which gives it its value as money. If men were required to buy and sell exchange the same as they do corn and potatoes, our trade would be but the barter of 3,000 years ago, and we should have a hard time of it in transacting business according to modern methods. Money relieves us of all that trouble. That is what it is made for. When a citizen sees the Government coin or paper he knows what it represents without further ado. He values his cow at $25, and he receives twenty-five dollar coins, or five five-dollar coins in exchange, and the trade is passed. He does not have to "weigh" out the money as Abraham did when he bought a burial place for Sarah.

Money is used in place of the old and cumbrous barter of the long ago; and the only way we can do this successfully is to affix values in terms that all understand to certain tokens or coins fashioned so that their genuineness is known and recognized by everybody. These coins pass at that value, no matter what the market value of metal is.

WHAT AN HONEST PAYMENT IS.

Without stopping now to discuss what constitutes an honest dollar, it may be safely assumed that what is fair and just between man and man is not dishonest. If I promise to pay to Grover Cleveland a bushel of wheat at a certain time, he and everybody else knows just what he has a right to expect. The law has predetermined what a bushel of wheat is. Ordinarily I might take a bushel measure full of the grain and deliver that, but Mr. Cleveland is entitled to know that the wheat is of standard weight and quality. Hence if I deliver to him 60 pounds of good, merchantable wheat the debt is paid, honorably and honestly paid. And this is true, even though during the interval between the time of promise and the time of payment the market price of wheat has fallen or risen.

So it is with our metallic dollars. Paul promises to pay Peter one dollar at a certain time. The law has provided that a dollar may be made of silver in a coin of a certain weight and quality. Metallic money always goes by weight. As shown by sections of laws to which I have made reference, our legal-tender coins when of full weight shall pass at their full legal value, and for proportional amounts when worn by abrasion so as to be below the lawful standard of weight. There is nothing in the law now, and there never has been anything in the law, which requires or authorizes any deduction from the face value of a coin because of any changes or fluctuations in the market price of bullion. So, the law having determined that 412½ grains of standard silver, when fashioned in a coin of particular dimensions and with certain devices on it, shall be a dollar and lawful tender for any and all debts and amounts, if Paul delivers a dollar of that kind to Peter on the day named in the contract, he has paid the debt honorably and honestly.

This proposition is surely self-evident. And, as in the case of wheat, it matters not that the market price of silver bullion has fallen or risen in the meantime. A case in point is that of the gold coins made under the act of 1834, which were 6 per cent lighter than those that had been coined under the act of 1792. These lighter coins paid debts the same as the heavier coins had done and continued to do, for the law provided that both weights, as long as the heavier ones remained in circulation, should be lawful money and legal tender.

There is nothing, then, in the cry that coins of standard weight and fineness are dishonest money simply because bullion has fallen in the market.

THE COPPERHEAD IN POLITICS.

But it is said the parity between the metals must be maintained. A new kind of bimetallism has become popular in certain quarters lately; and with this coming, it may be mentioned that a new kind of politician has come. He may properly be called the "copperhead" in modern politics. We all remember that during the great war, in the Northern and Eastern portion of the country there was a considerable class of men who gave us some trouble in the rear. They manifested their most earnest and continuous sympathy with the people who were in rebellion against the authority of the Government, at the same time pretending to be friendly with those of us who were waging war in order to suppress the rebellion aforesaid. We gave them the name of "copperheads." These modern bimetallists are of exactly the same class with reference to this almost universal demand of the common people of the country that we have the old coinage law of 1837 restored to us. They are giving all their encouragement and all their sympathy and all their votes to our enemies, while they are pretending to be friendly with us.

The Republican party defines bimetallism in this way:

The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with restrictions, and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers, and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

The party does not demand that the act of 1873 be repealed and that the former coinage laws be restored; nor does it encourage the belief that it is not wholly given over to the doctrine of gold monometallism as advocated by the British gold mongers.

The Democratic party favors the same sort of bimetallism that its great adversary declares for, as will be seen by its last official utterance:

We hold to the use of both gold and silver as the standard money of the

country, and to the coinage of both gold and silver, without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

And in order to leave no doubt concerning the good faith of the party touching this matter, the party platform was attached to the law repealing the purchasing clause of the Sherman law. Two-thirds of the Republicans of the Senate and House voted for this declaration of policy. It is only a more verbose way of putting the words that gave to the act of 1890 the title of "Sherman law." Those words declared it to be—

the established policy of the United States to maintain the parity between the two metals—

and they were incorporated in the act of 1890 at the suggestion of the senior Senator from Ohio [Mr. SHERMAN], with the intent and purpose that the notes should be redeemed, not with silver coin, but with gold coin. And that distinguished gentleman still holds to the view thus covertly incorporated in the act which bears his name. In a newspaper report of his remarks at the Zanesville convention last summer I find these words:

I believe that the policy of the United States adopted in 1853, of coining fractional silver coins in limited quantities from silver bullion purchased at market price and making them legal tender for small sums, is the only way to preserve the parity of gold and silver coins at a fixed ratio. This is properly called bimetallic money.

Nothing could be plainer than that—certainly not the Republican platform. The distinguished Senator has been at the head of his party for many, many years, so far as all questions relating to finance are concerned; and this is the way the veteran legislator and the honored Republican defines bimetallism:

I believe that the policy of the United States adopted in 1853 is the best way to preserve the parity between the metals.

And he repeated this opinion when his attention was called to some criticisms of his speech by the Senater from New York [Mr. HILL]. In reply he said:

At all the conventions in Ohio we have declared we are in favor of the use of both gold and silver, maintained at par with each other. To the extent that we can maintain the silver at par with gold we coin it at the present ratio.

Under the old laws we made the parity between the two metals hinge on the silver basis. Silver was made the unit; silver was the basis; silver was the standard; and the gold coin had to be brought to correspond with the silver.

PARITY COVERS A MULTITUDE OF SINS.

Mr. President, that little word "parity," used in this connection, like charity, covers a multitude of sins. It is a cloak for hypocrisy; it is a shield for ignorance; it is an excuse for fraud, deceit, and plunder.

Note the language of the party platform of 1892 and of the law of 1893. I read the deceitful attachment to the law repealing the purchase clause of the Sherman Act:

And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

That is intended to convey the thought that the framers of the law desired to pledge the Government to see that paper dollars and silver dollars shall be quite as good as gold dollars for all purposes; and it is intended, further, to convey the impression that the friends of that bill—the "sound-money men," as they are pleased to call themselves—desire that all our dollars shall be alike valuable and have at all times equal power in the markets and in the payment of debts; yet if Senators will turn to the proceedings of the Senate when I proposed an amendment to make good this party declaration by giving the legal-tender function to each and all our dollars—gold, silver, and paper alike—I could not procure friends enough for my amendment to get a yea-and-nay vote on it, and my bill, introduced for a like purpose, was reported adversely. The bill was S. 1178, Fifty-third Congress, second session, and entitled "A bill to regulate the value of certain coins and pieces of money; to give to all sorts of current money equal qualities of legal tender, and to prohibit and prevent discriminations in favor of gold coin or bullion as money." And notwithstanding the noise and clamor that has been made since that time by the sound-money people, I submit now in this presence that among the members of the Senate who rank themselves as sound-money men, not one of them would vote for such a law as was proposed in that amendment. If there is such a Senator present it will afford me much pleasure to give him an opportunity to assert the fact here and now.

And as to the word "parity," it is not parity that the sound-money people want. They care nothing about maintaining the parity between the metals. What they want is to maintain our monetary system on a gold basis, and to keep and maintain gold as the money and the only money of redemption and final payment. They are not willing that silver shall be restored to its old place beside gold unless the gold-using nations shall agree to it. This is a subterfuge; or, if the language be more elegant, I will borrow words from the Democratic national platform, and say it is a "cowardly makeshift," intended to deceive the people. They tell us that parity can only be maintained by preserving the equal market value of the metals, as we would keep the market prices of wheat and corn the same continuously and forever. They say supply and demand regulates such matters, and that inasmuch as supply and demand are constantly varying it will be impossible to maintain the parity without legislation, and this legislation must be international. They also tell us that value can not be legislated into anything. Their champions say that gold has a certain fixed value given by the Great Creator, who intended that it should be used for money; that it was created for that special purpose; that it is the only article that was so made; but even though none but the Creator can put intrinsic value to any definite amount in any given article, still an international agreement, they insist, will add 100 per cent of intrinsic value to silver.

All this, however, is to maintain the parity. That is to say, all the parity work is to be done on silver. Gold is full of permanent intrinsic value; it was so ordained by almighty power, and there is no need to meddle with the gold basis. It is silver that must be doctored and made over by an agreement among the money changers of foreign nations. Why do they not do as our fathers did sixty years ago—change the gold coins to the silver basis?

SILVER THE BASIC MONEY OF THE WORLD TILL LATELY.

It would seem that a great many people have not yet learned that silver was the basic money of the world ever since the dawn of history until 1873, with the exception of Great Britain, that changed her basis in 1816, and Portugal later. I am not quite sure but that for a brief period Rome maintained a monetary system based on gold alone. But speaking generally, silver has been the world's basic money until within twenty-five years last past, and now there is more silver than gold used for money among the nations.

I submit a table showing the amount of gold and silver estimated to have been in use in 1891, and there has been but little change since:

Total gold and silver used as money of the world, in form of coin and bullion, and amount per capita.

Mr. Leech, Director of the United States Mint, prepared for the Congressional Committee on Coinage a series of tables showing the estimated and officially reported amounts of gold, silver, and paper in circulation as money in different parts of the world. The following table comprises the portions of the statement in reference to gold and silver:

SPECIE.

Country.	Gold.	Silver.
United States	$702,018,869	$482,071,346
United Kingdom	550,000,000	100,000,000
France	900,000,000	700,000,000
Germany	500,000,000	145,000,000
Belgium	65,000,000	55,000,000
Italy	140,000,000	60,000,000
Switzerland	15,000,000	15,000,000
Greece	2,000,000	4,000,000
Spain	100,000,000	125,000,000
Portugal	40,000,000	10,000,000
Austria-Hungary	40,000,000	90,000,000
Netherlands	25,000,000	65,000,000
Scandinavian Union	32,000,000	10,000,000
Russia	190,000,000	60,000,000
Turkey	50,000,000	45,000,000
Australia	100,000,000	7,000,000
Egypt	100,000,000	15,000,000
Mexico	5,000,000	50,000,000
Central America		500,000
South America	45,000,000	25,000,000
Japan	90,000,000	50,000,000
India		900,000,000
China		700,000,000
The Straits		100,000,000
Canada	16,000,000	5,000,000
Cuba, Haiti, etc	20,000,000	2,000,000
Totals	3,727,018,869	3,820,571,346

POPULATION OF THE EARTH.

Europe	357,379,000
Asia	825,954,000
Africa	163,953,000
America	121,713,000
Australia	3,230,000
Oceanic islands	7,420,000
Polar regions	80,400
Total	1,479,729,400

The total gold of the world in coin and bullion used as money amounts to $2.51 per capita.

The total silver of the world in coin and bullion used as money amounts to $2.58 per capita.

The total gold and silver of the world in coin and bullion used as money amounts to $5.09 per capita.

If the whole world is reduced to a gold basis, $2.51 per capita will be our money of redemption, instead of $5.09 under a bimetallic system.

If proof be demanded that the friends of so-called sound money

are really gold monometallists, it need only be pointed out that ever since the change of base in 1873 the Government has treated gold as the only legal coin the country. It has not paid any other coin on Government obligations and does not do so now. With $140,000,000 worth of uncovered silver coin and bullion in the Treasury in 1894 the Secretary purchased gold to meet even current expenses of the Government; and that officer during all the years since 1878 has persistently paid only gold coin in redemption of Treasury notes. It is not denied anywhere that all our national obligations are payable in silver coin as well as in gold coin, yet the Treasury pays only gold, except in cases where silver is requested. And in the last bond transaction the syndicate informed the President, and that officer transmitted the intelligence to Congress, that in case the bonds were made payable in gold they would be worth a trifle more to the purchasers and that trifle would be paid. Congress not authorizing such a stipulation, the bonds were issued, as all others have been issued, payable in coin. This is a conclusive acknowledgment on all sides, and the syndicate concedes that these bonds are payable in silver and gold, both or either.

MARKET VALUE OF BULLION DOES NOT GOVERN MONEY VALUE OF COIN.

The proposition that the market value of bullion governs the money value of the coin is not tenable. There is no law in any country, as far as I know, certainly not in the United States, that has any reference to such a rule. It is not incorporated in any law. Congress has no power to regulate the value of bullion, and it has never undertaken to do so. Its authority extends only to regulating the value of money. The language of the Constitution is: "Congress shall have power to 'coin' money and regulate the value thereof." The word "coin" in this place is a verb—to coin money, to make or manufacture money. The thing which Congress may regulate is the value of the money that it coins. It is valne that is to be regulated, but not the value of bullion. Nor is it the bullion value of coins. It is the money value of the coins, or the amount of money which is represented by the coins. Briefly, Congress is authorized to prepare coins to represent value, and every coin so made shall have its value expressed by act of Congress.

Congress never enacted that 371¼ grains of silver shall be worth a dollar or that 232.2 grains of gold shall be worth $10. Nor has Congress ever said what ratio shall exist between the values of gold bullion and silver bullion. Section 11 of the act of 1792, before quoted, says:

The proportional value of gold to silver, in all coins which shall by law be current as money within the United States, shall be as 15 to 1, according to quantity in weight, etc.

It is only the metal in coin that the law applies to. The pure gold in $15 worth of gold coins shall be of the same weight as the pure silver in one silver dollar coin, and 1 pound of gold in coins shall be of equal value as money with 15 pounds of silver in coins. To quote the law:

Every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion as to any greater or less quantities of the respective metals.

It is only the metal used in coins that the law makes any provision for. It is declared that in preparing coins to be used as money, and making payments with these coins, the value of gold shall be taken to be fifteen times as much as that of silver, in quantities by weight. But the value of the coins, which Congress is authorized to regulate, is their money value. Coins can have no value in that form and for that use, except what the law imparts to them.

Recurring to the standard value of our coin when the refunding act of July 14, 1870, was passed, our lawful tender coins consisted of the silver dollar, the eagle, the half eagle, and the quarter eagle, and their values were:

	Value.
GOLD COIN.	
Eagle	$10.00
Half eagle	5.00
Quarter eagle	2.50
SILVER COIN.	
Dollar	1.00

The weight of the coins was (standard nine-tenths fine):

	Weight.
GOLD.	*Grains.*
Eagle	258
Half eagle	129
Quarter eagle	64½
SILVER.	
Dollar	412½

It is perfectly clear that whatever we may understand to be the value of a dollar—and I shall discuss that later—Congress, acting under the plenary and unquestioned authority of the Constitution, enacted that a silver coin made of a certain form and dimensions, with certain devices and letters and words on it, shall, for all money purposes, be of the value of a dollar; that gold coins of certain forms and dimensions, with certain devices and lettering, should be of the value of ten dollars, five dollars, and two and a half dollars, as the case may be; and the coins whose weights and values I have just given were the coin of the country and the value at the time the bonds were authorized. The "present standard value" of the eagle was ten dollars; that of the half eagle, five dollars; that of the quarter eagle, two and a half dollars, and that of the dollar piece, one dollar. Our promise was to pay in coin of the value of coin at that time. No matter when the bonds should be issued or when they should fall due, they were redeemable in coin of the value of our coin at the time the act was passed. We did not agree to pay in bullion, nor did we promise to pay in coin at its bullion value, when the bonds should be payable. The contract is not ambiguous; its terms are brief and plain. Its words are, "redeemable in coin of the present standard value."

And the reason for this plainness is apparent. If we had agreed to pay in any other way there would not have been certainty as to what would be the value of our payment when it should be made. We might have to pay more, or our creditors might have to accept less in money value than our coin possessed at the time the law was approved. In one case we might lose; in the other our creditors might lose. But the contract was not left open to doubt. Everybody knew the value of our coins at that time, for it was expressed in dollars and was marked on their faces. There could then be no mistaking the meaning of the promise. We authorized the issuance and sale of eighteen hundred million dollars in bonds for the purpose of refunding the national debt, and stipulated in the act that when the bonds should be issued they should express on their face that they were redeemable in coin of the value of our coin at the time the act was passed.

SUPPOSE GOLD LEAVES THE COUNTRY, WHAT OF IT?

It is said by some timid persons that if we should readopt the policy of paying our obligations in silver and gold the gold coin will all leave the country. Well, suppose it does. What of it? Who will be injured by the movement? The farmers? They have no gold. One year's crop of Kansas corn is worth more than all the gold produced in our mines during the same year. The mechanics? The wage earners? The plain people? They have no gold. They receive all their dues in paper, and they constitute 90 per cent of the people. Who has the gold that is going to leave and where is it? The Government has, say, $50,000,000; the national banks (October 3, 1893) $182,342,948; State banks, private banks, loan and trust companies, whose aggregate capital (about October 1, 1893) was $406,000,000—say they have $100,000,000, which is about the same proportion to capital as that held by national banks. This gives us a total of about $382,000,000 belonging to banks, which they hold as reserves. The rest of whatever gold is in the country is in State and municipal treasuries and in the hands of a few people.

Suppose all this goes out of the country, what will replace it? Will bankers sell their gold? And what will they get in exchange for it? They will not part with gold because they are obliged to do so. There is no compulsion about it. If they let it go at all it will be because they can gain a profit by the exchange, and they will not sell it without receiving its full value in return. And they must maintain their reserves, which can be done only with coin or other lawful money. If they sell their gold coin reserves because gold coin is at a premium above silver coin (and they would not dispose of it for any other reason), they would receive as many dollars in silver as they sell in gold, and with them as much more in silver or other money or property as would be equal to the premium, hence neither they nor the country will lose anything.

If it be said that the exodus of gold would contract the currency, that can not amount to much, because there is but little gold in circulation. Not more than 1 per cent of the business done over bank counters is done with gold coin.

But the vacuum would soon be filled with coin made of silver bullion now belonging to the Government and not covered by certificates or notes outstanding.

Free coinage of silver would probably have the effect of advancing the market value of silver bullion. But say it does not. Let the price remain where it is, and for argument sake we will put it at 32 to 1 of gold. That would leave us with the 50-cent dollars so much talked about. Our bankers, wanting to profit by the operation of the new law, exchange their $382,000,000 of gold for $382,000,000 in silver and $382,000,000 worth of other property. That would preserve the equilibrium, or the "parity," if our sound-money friends do not object to this use of the word in that connection. Where is the loss? There is no need of anxiety lest bankers will rush into the bullion exchange business without as-

surance of gain. They are not doing business in order that others may profit by their blunders. If they are philanthropists, it is not during business hours.

AFTER COIN THEN PAPER.

Mr. President, I now approach a proposition which is to me more interesting than the field which I have just passed over, because, if for no other reason, it has not been so much discussed. I believe that as soon as Congress shall have provided for the accumulation of coin enough to pay all our national obligations which are payable in coin, provision should be made for the establishment of a permanent paper currency that will eventually take the place of all other kinds of money except for small transactions.

I do not wish to be misunderstood in making this proposition. I believe in the coinage of both gold and silver, but not as an original proposition. If we were just setting out to establish a new monetary system, having had no experience with metallic coins, I should not favor the use of any material that is very costly, any material which speculators and money changers could corner and thus force oppressive financial legislation upon the people. I would choose some material out of which to make our coins that had of itself very little value, but suitable in every way for the purpose, so that a small quantity of it, as much as would be used in one piece or one coin, to represent $1, or $5, or $10, would be so small that there would be no inducement to speculate in it.

I believe in the coinage of gold and silver, first, because our people have long been accustomed to it. The people of the entire world have been accustomed to it. It is part of the financial policy of all civilized and enlightened men everywhere, descended to us from the far distant past.

I favor the coinage of gold and silver for another reason. At this time gold alone is being coined, and there is not one hundredth part enough of gold and silver combined to perform the monetary functions required among the people. I favor the restoration of the coinage of silver for still another reason, that we may, as soon as possible, out of our own mines or mines in other portions of the world secure the coin we need for the purpose of paying our coin obligations. Having all that done, then comes the proposition I have announced.

I regard a correct system of money as among the most important agencies in human development. Commerce has uniformly opened the way for advancing civilization, and money in one form or another has been the handmaid of trade. Fairs afforded opportunities during the Dark Ages for people to exchange property by barter; but ships and railways and banks and telegraphs have brought a new citizenship to the nations and have established a new kingdom on the earth. Rapid communication, ready exchange, quick returns, and the massing of capital make new agencies of effort to be among the necessary accompaniments of these new conditions. The Phœnicians and the Romans propelled their ships with oars; now we drive great ocean steamers across the Atlantic in five days. The Britons and the Anglo-Saxons, the Normans and the Gauls carried their produce on the backs of animals or in rude carts on heavy roads; but the modern railway train has reached a speed of 80 miles an hour. All the machinery of life and labor has been changed and the world seems to have been created anew.

We have made some progress in the development of devices to be used as money, and in our experience we have produced some wonderful implements in exchange. Banks, as places of deposit; banks as places to buy and sell money—places to exchange exchange, if the expression is allowable, are highly wrought contrivances to aid commerce, and with but little improvement in their constitution, object, and management, they could be made mighty instruments of power for good in the best direction of human endeavor. But banks, like all other public agencies, being intended for the good of the people at large, ought to be conducted as public institutions. The money they use ought to be of only one kind, and that created and supplied by the General Government. No private concern of any character ought to be permitted to issue its notes to be used as money, and interest ought to be abolished. All the money required in a legitimate transaction of the people's business ought to be supplied by the Government through its own agents at a charge sufficient to cover only the operating expenses of the business.

Holding these opinions, I believe that among the things required of us, and what, in self-defense, we must sooner or later do is, after providing for the accumulation of coin enough to meet our coin obligations, to reconstruct our monetary system so that the money function shall be discharged in a natural way.

USES AND FUNCTIONS OF MONEY.

Let us open the discussion by a consideration of the uses and functions of money.

Producers and consumers require some means of effecting their exchanges other than mere barter, which is the giving of one article of produce for another.

There must be vehicles, as wagons, cars, and ships, to move articles of property from place to place; and they frequently have to be taken long distances, as wheat from Kansas to England, tea from China to Illinois, coffee from Brazil to Massachusetts, cloth from South Carolina to Japan, beef from Chicago to London, etc. And there must be some means to convey values of property as well as means to transport it, for the merchant may not have just what his customer wants and must therefore give him something with which he can procure what he does want from some other merchant. Paul raises corn, Silas makes shoes, and Peter produces cloth. In order to exchange their surplus productions for other supplies that they need, they each sell of their surplus what they have to spare and buy what else they desire. The exchange is effected through Barnabas, the merchant, who buys the surplus corn and shoes and cloth from the persons who produce them and sells them to persons who wish to buy them, paying cash to the sellers and receiving cash from the buyers. This cash is money.

Exchanges of property many times have to be effected through merchants who live far apart. Money serves as an order from the merchant who buys surplus products to the merchant who has the things that the producer wants. And because the second merchant does not know anything about the financial responsibility of the first merchant, so as to feel safe in accepting the order, it is necessary that the Government shall declare such orders to be money, exchangeable at their face value for any and all property that anybody has to sell. Then everybody understands that money is always good for its face in property that is for sale.

From these considerations it is evident that what people need money for is to assist them in the exchange of their surplus products. Now, in what do these surplus products consist? See what the farmers of our own country are doing. Put together their corn, their cotton, their wheat, oats, potatoes, hay, and the other crops they raise, with their fruits and vegetables and live stock, amounting in value to nearly four thousand million dollars annually. Add to this nine thousand million dollars as the output of our manufacturing establishments for one year, and $587,000,000, the value of our mineral products, a total of thirteen thousand million dollars, and you approximate the worth of the property we are handling now, and we shall have to buy and sell more and more every year.

MONEY NECESSARY IN EXCHANGING SURPLUS PROPERTY.

Extending the thought somewhat, I quote a few sentences from an article over my name in a work entitled "Silver and gold," published last summer, as showing what money is needed for and why it is used:

"Money is necessary only because individual men and women produce more of some kinds of property and not as much of some other kinds as they need for their own use, and they desire to exchange their surplus for what they require of the surplus of other producers.

"And because the two factors—producer and consumer—live and work far apart, it is a great convenience to have home traders and merchants to collect the surplus from those who produced it and distribute it among those who wish to consume it. A very large number of the people are engaged in this work of collection and distribution as exporters, importers, carriers, commission men, brokers, bankers, merchants, salesmen, etc. This is commerce. It would, however, be an impossible thing for men to carry on the traffic of the world if they had no means of representing the value of property dealt in, and some means of transporting the values as well as for moving the commodities. Such means is found in what we call money and in certain forms of paper often used in place of money.

"The amount of this surplus property which is being moved from place to place in order to take it from the persons who wish to sell it and get it to those that want to use it is beyond our comprehension, and the character and number of vehicles employed in transportation are too many for enumeration. It is officially stated that the property carried over American railroads and canals and on our river boats and coasting vessels is greater in tonnage and value than that of the combined foreign commerce of all the great nations of Europe.

"It is to procure part of this enormous surplus that much of the labor of the world is performed. The greatest problem of life is to live, to procure the means of subsistence; and what of our needs we can not supply from that which we ourselves produce we must supply out of what others have to spare. To effect these exchanges money is imperatively required."

The early use of the precious metals in commerce was as commodities, paid out by weight. In course of time it was found convenient to mark copper, silver, and gold in such manner as to indicate their weight. This being done officially, traders were saved the trouble in weighing for themselves. Long periods of trading finally established certain recognized relations of value among commodities, among themselves and with respect to the precious metals as well, and in time some of the nations began to

express values in coins. Copper was first used for this purpose, and the Chinese are credited with the first use of money as represented by coins. Silver was first used for coins in Greece. Gold coinage can not be definitely traced beyond the time of Julius Cæsar.

Metal coins do now pass by weight outside their own country. They are so used in every part of the civilized world. Coins are made of certain weights prescribed by law. The English "pound sterling" originated in the use of a pound of silver. Our silver dollar must contain 371¼ grains of pure silver and the eagle must have 258 grains of standard gold.

PRECIOUS METALS NOT THE EQUIVALENT OF ALL OTHER PROPERTY VALUES.

But the use of the precious metals for money implies that they are the equivalent in value of all other property. That was once the general belief, and a great many people of more than average intelligence in other respects do now hold to that opinion. Men who hold to what is popularly known as the "sound-money" doctrine believe in the universal equivalency of gold, or they would not regard it as the only safe material for coin.

But the doctrine was never true, and its falsity is painfully apparent in modern times. The annual production of the gold mines of the world is not worth as much, even at its mint value, as the corn and wheat crop of a single year in Kansas at the market price on the farm, and all the gold coin now in existence is not equal in its money value to that of the yearly surplus productions of American farmers.

The great disturber of values or prices was war, which was always in progress somewhere. It is well established that most of the great wars of antiquity were undertaken or prosecuted in order to procure the precious metals. Darius plundered the regions west of him and carried the treasure with him back to Persia. Afterwards Alexander plundered Persia and restored to Macedon the stolen wares. The Punic wars, covering nearly a hundred years, were waged on the part of Rome to get possession of the silver mines of Spain. And the wars, vandalism, brigandage, and piracy in modern times are much of the same character. The discovery of America by Columbus was the opening chapter in a series of the most barbaric and atrocious wars since history began. It is computed that the conquest of Mexico, Central and South America cost 30,000,000 lives and the extinction of a race, and all to get the gold and silver in their mines. Napoleon I, in the glamour of his military glory, conceals the grandest robber since the times of Pizarro and Cortez.

While all the world has been fighting for gold and silver, and while these two metals, with copper, have been used for coinage time out of mind, yet modern commerce is so vast and the necessary exchanges so enormous that all there is of the precious metals to be found outside the mines is not enough at their present valuation to supply one hundredth part of the money required in the transaction of the world's business. In the United States, in Great Britain, and in all the great nations, only about 1 per cent of the business is done with metallic money. And the proportion will grow less from year to year as business increases.

In our own country we find the products of our farms, factories, and mines amounts to thirteen thousand million dollars a year, while our gold product amounts to only $35,000,000, which bears a proportion to the other property of 1 to 370, which is as much as to say that $1 in gold is equal to $370 in other property; or, what is the same thing in another form, $1 is enough to perform all the money functions required in exchanging $370 worth of other property in addition to the payment of debts and taxes.

And it must be remembered that this thirteen thousand million dollars is only one-fifth part of the estimated value of all the property of the people of the United States, which in 1890 was put at sixty-five thousand million dollars. That gives us $1,857 worth of property to be handled with $1 in gold, and our debts and taxes reach at least twenty-five thousand millions.

It must be evident to all persons, when the subject is presented to them, that such a system of finance can not be justly maintained. It makes the dollar too valuable and other property too cheap. No people could long prosper under an arrangement of that kind. Producers would become poor, while money owners would grow rich.

So insufficient have the metals become in their capacity as money, that every nation on the globe is compelled to use substitutes of different kinds, as government paper and different forms of private credit. Not more than 1 per cent of the total business transactions of enlightened men are done with gold and silver. In our own country we have had banks from the second year of our national history. And now, with a 10 per cent tax on State banks, we have more than a thousand million dollars of paper money out—greenbacks about $346,000,000, Treasury notes about $145,000,000, national-bank notes about $200,000,000, and silver certificates about $325,000,000. If gold were sufficient, or if gold and silver together were enough, why use anything else? And why did banks of issue always keep out three to five dollars in paper for $1 in specie for redemption?

METALLIC MONEY WRONG IN PRINCIPLE.

But aside from the insufficiency of the metals, the custom of using metallic money is wrong in principle. It is unsatisfactory in practice, ruinous to the common interests, and unscientific. As a currency it is unstable, unsafe, unreliable. In time of public peril, like other cowards, it slinks away and hides. And when it is in use, like the pirate that it is, it demands tribute from every other form of property.

Why should we use any one article or form of merchandise for money, making it and it only a legal tender in payment of debts and as currency, passing from hand to hand in exchanges and in payment of taxes? Why select one article, give it a fictitious value, and measure all other values by that? Is it possible to assign one good and sufficient reason for such a one-sided policy? None but a gold broker could consistently undertake the task.

I have shown that money is required for use in effecting exchanges of values of property—all property, not gold and silver only, but all property, including the precious metals; and that these exchanges affect an infinite variety of transactions every day and hour of our existence. Think of the ceaseless tide of commerce and of the numberless items of property constantly being moved from the people who produce them to the people who want to use them or consume them. All these things have a market value. And this is true of gold as well as of cotton and corn. Then why single out that metal, give it a legal value, and require all men to gauge their property by this measure? Why not use some suitable substance that of itself has no appreciable value, and let that represent the unit of value?

HOW TO ASCERTAIN THE UNIT OF VALUE.

But how shall we ascertain the unit of value? We need borrow no trouble on that account. The unit has been found; it has been in use many years, and is understood. It was legalized by Congress more than a hundred years ago and named a dollar. Not a coin, not a piece of metal, or of paper, but an ideal thing, an indefinable entity, a something attached to things by people who make them or use them—a thing called value, a quality, or rather a relation that may be represented by a tangible substance. A dollar may be represented by a coin of metal, a bit of paper, a shell, or a fish.

How is this unit of value ascertained? Let us see. With only one commodity used for money, and that commodity scarce and hard to procure, a few shrewd and daring men have always had control of it, demanding exorbitant rates of usury from persons whose necessities compelled them to borrow it or exchange for it. The use of metal money has always kept men and nations prostrate before the money changers, and while I speak 90 per cent of civilized men the world over are paying interest for the use of money that is redeemable in silver or gold. More than one-half the dwellings of our own people are occupied by renters, and a syndicate of stockbrokers have control of the public Treasury, holding at arm's length a nation of nearly 70,000,000 people supposed to be free, compelling them, at will, to mortgage their country for gold which the brokers only have to sell.

It is the scarcity and dearness of our basic money metal that has enabled gold speculators to charge rates of interest that transfer the property of the people from their hands into those of the money changers about once every generation. On the average, in our great cities 75 per cent of the people are without homes of their own and are paying a few other people for the right to live on the earth.

If all that has been lost to the people of the world during the last twenty years by reason of the use of gold only as money could be stated in dollars the amount would bewilder the imagination. It is worse than war, pestilence, and famine. The use of metallic money has cost the people of the United States since our Government was established in 1789 two hundred thousand million dollars more than they have saved out of their earnings. This is demonstrated by placing at 6 per cent compound interest for one hundred years a sum of money equal to the assessed valuation of our taxable property in 1790 and compare the amount with our assessed property valuation in 1890.

Besides, the relative production of gold and the increase of coin falls rapidly behind the increase of population and the growth of commerce. This enhances the value of gold and diminishes the market value of all other property in like proportion; and this process must continue as long as the present monetary policy continues. It will be but a short time, comparatively, when the great bankers will have virtual control of all the business and own all the property of the people, through the increased value of gold, if this system is to be perpetuated. The only certain relief will come through the establishment of a system that will be just in its operation.

MONEY IS AN INVENTION.

It was in the development of commerce that money was invented. Money is an invention, the fruit of discovery, just as machines are invented in order to apply certain mechanical prin-

ciples which have been discovered. In the beginning of trade there was no money. All exchanges of property were made for other property—article for article. It was early discovered that certain metals, because of their beauty in the pure state, and because of their fineness of substance, their indestructibility, and their susceptibility to high and brilliant polish, were peculiarly well adapted to use in ornamenting the person, the home, the temple, the palace, and all resorts of pleasure and passion. Early it became common to adorn public buildings with articles made of gold and silver. Temples of worship were, and still are, rich in golden ornaments, vases, statuary, and the like. These metals were articles of commerce exchanged for other things; and because of their peculiar properties and uses they were universally sought. They were special objects of prey on the part of invading armies. It is a truth of history that—

In the search for gold whole races of people have been put to the sword, continents subjugated, religions and civilizations destroyed.

It is equally true that men and women of wealth and fashion have sacrificed honor and fame, even life itself, for the possession of the precious metals.

These considerations have made silver and gold objects greatly to be desired by all classes of people, and we find that in the earliest periods of history they were sought by traders as articles of merchandise. History, sacred and profane, is full of commercial transactions showing that gold and silver were always in demand for trade. Abraham "weighed" out 400 shekels of silver, "current money with the merchant," and Joseph was sold for "twenty pieces of silver."

And in that way the precious metals became money, "current money with the merchant." They came to have a commercial value, the same as other articles of merchandise; and because a small quantity of them by weight would exchange for much greater quantities by weight of other articles, and because goods had to be transported by caravans long distances between trading points, these metals, when they could be procured, served well as a sort of medium by means whereof trade in other things was always profitable.

In time rulers of nations undertook to regulate trade in the precious metals by impressing on them certain marks to show officially their weight, so that in making exchanges for other property all parties might be apprised of the weight of the metal, and then they could put their own value on it as measured by values of other things. They were exchanged by weight in one form or other and their value in relation to other articles, and the value of other articles in relation to the metals, came to be more and more distinct and regular as commerce spread among the nations, until at length certain values were assigned by law to certain weights of the metals.

How men would act were they without any form of money and without knowledge of money functions, should they set about to establish a money system, we can not tell. But we know what has been done in this direction by those who have come and gone before we came; and we are blindly, and at great loss, practicing day by day the things which, when studied and their principles applied in improved methods, will suggest to us machinery that will save money as well as labor.

But how shall we study and how shall we improve our present methods? The first step is to comprehend the principle involved in the proper use of money. The circulation of money is the exercise of a public function. The proper function of money is to serve a public use. A piece of money carries with it a commission from the people to aid them in effecting cash exchanges, to pay debts and taxes, to serve as orders from one person to another for property that is for sale, and as receipts for debts and dues paid. But money must represent what we call value, and value must be computed, estimated, and exchanged according to a system or arrangement of monetary units.

GOLD IS NOT MONEY.

I ask close attention of Senators who do me the honor to listen to the analysis I am about to make in searching for a unit of value.

In the first place, we must understand what is meant by the word "value." If I am asked what is the value of my horse and I answer, "One hundred dollars," and you agree to take him at that price, we say the bargain is made. But when you come to pay for him, this being a gold-basis country, you take your nicely adjusted balance and weigh out $4\frac{8}{5}$ ounces of fine gold and tender that to me. I refuse to take the gold. I sold the horse for money, not for gold. It is a hundred dollars I want, not $4\frac{8}{5}$ ounces or any other number of ounces of gold or of anything else. I do not need gold; have no use for it; give me money.

Then you offer me ten eagles and I accept them at once. You explain to me that the law requires 232 grains of pure gold to be put into an eagle; that in ten eagles there are 2,320 grains of fine gold, which is equal to $4\frac{8}{5}$ ounces. But I reply, "We do business with dollars, not with gold. Our standard is the dollar, not the ounce or the pennyweight or the grain. To trade my horse for gold is barter; and how do I know what is the value of your gold with respect to the value of my horse or other property? The law fixes a certain value to gold when it is coined and stamped, but the value is given in dollars, not in measures of weight. Besides, how am I to know what is the real value of gold as a commodity so long as the Government coins all that comes to the mint at a certain valuation, thus giving it a mint price and not a commodity price? If I am to accept gold and not money for my property, then take away the protection which the law gives to gold and throw it on the open market to find its price level there, in fair competition with corn and pork and tobacco and other species of property. These coins you gave me may contain just as much fine gold as you weighed out in payment for the horse, but the gold is not money, while the coin is money, and it is money that I want."

This simple illustration brings plainly into view the proposition that value and money are not equivalent terms. Whatever they mean, they do not mean the same thing. Money is readily definable, and its uses are easily understood. But value is indefinable. It may be said to be a relation which articles of property bear to one another as regards the extent or the intensity of demand for them. Things which are in demand in trade have what we call a market value, while things that are not in demand have no market value.

PRICES NOT FIXED BY PRODUCERS OF PROPERTY.

But the value of what is in demand is not what the producer or the seller may fix upon it. The shoemaker does not fix the value of the shoes he makes, any more than the farmer fixes the price of his wheat or beef or cotton or corn. (For the purposes of this illustration, I use the words "value" and "price" as synonymous.) The price or market value of commodities is not determined by the will or desire or opinion of the person who produced them. The farmer can, at any time, tell you what he thinks he ought to get for his grain or stock, but he can never tell what he will get for it until he learns from the dealer what the market price is. Liverpool, England, is the great world's market for wheat, cotton, and wool, and the market prices for these articles the world over are fixed at that place, from whence dealers in all countries are informed daily.

The merchant does not regulate the prices of his goods; the manufacturer does not control the price of his wares. Prices are determined by the relative valuation which exists among articles of property with respect to the demand for them, and the cost of supplying that demand largely governs the price. This relation is affected by a great many influences operating from and toward different directions. They are usually merged and harmonized at the great trade centers, and then, as property goes out to retail dealers who distribute it among the people, interest, freight, commission, insurance, profit, etc., add in different degrees to what was the original price at the collecting port.

Now, the unit of value is ascertained by a general comparison of property values. It is commonly asserted by sound-money people that the value of property is measured by gold. But it is nothing of the kind. Repeal all coinage laws, and the honest-money delusion will soon become apparent even to the victims of these golden dreams. The thought is illustrated in the case of silver. During all the centuries while the nations in their laws put a certain price on silver for coinage purposes and coined all that came to the mints, the market value of silver bullion never fell below the mint price. Since 1873, when the coinage laws of the leading nations were repealed so far as the making of legal-tender silver coins is concerned, silver bullion has fallen in the market fully 50 per cent. But the silver coins still retain their money value. With a silver dollar one may purchase 2 bushels of 50-cent wheat; but the market price of as much fine silver bullion as is contained in the coin, is worth only the value of 1 bushel of wheat.

MEASURING VALUES BY COMPARISON.

Then value is not measured by gold, but by the relation existing among all articles that are bought and sold and that are said to be worth something. We may make a comparison in this way: We will go out among traders and learn how things are valued in the market places when we measure them by one another and not by dollars. But, instead of comparing all the articles of trade, the subject can be illustrated as well by a few comparisons as by many thousands. Let us take, say, eleven articles of property, and measure their values by the values of one another, as follows:

One bushel wheat equals ten pounds cotton; one pound cotton equals five pounds salt; one ton salt equals one horse; two horses equal one piano; one pair men's shoes equal thirty pounds cotton; fifteen bushels corn equal ten bushels wheat; five pigs equal twenty-five pounds cotton; two sheep equal ten pigs; eight sheep equal one suit men's clothes; five pounds salt equal one pound pig iron; sixteen sheep equal one cow; five cows equal one pound gold; one spade equals one hundred pounds salt; fifty spades equal one wagon; one cow equals one dress pattern; twenty cows

equal one carriage; seven hundred pounds pig iron equal one dress suit; two pounds gold equal five bicycles, and so on, indefinitely.

Now, can we find any one article among the number we have compared whose value, when taken singly, or when multiplied or divided, will serve as a common measure of the values of all the rest? In our school days we learned how to find the greatest common divisor of certain given numbers. Let us find, if we can, a common divisor of these values. We will take the value of a bushel of wheat as a divisor and try that. We find, to begin with, that 1 bushel of wheat is worth 10 pounds of cotton, and that the values of all the other articles mentioned have such relation to one another that we can easily trace the connections from this starting point.

It appears that the value of horses, pianos, clothing, sheep, cows, gold, wagons, dress patterns, carriages, and bicycles can be measured by the value of a bushel of wheat when it is multiplied; and that the value of cotton, salt, pigs, pig iron, and corn can be measured by the same standard when it is divided.

When put in practical form the table would be something like this:

One pound cotton equals one-tenth bushel wheat; one pound salt equals one one-hundredth bushel wheat; one pound pig iron equals five one-hundredths bushel wheat; one horse equals two hundred bushels wheat; one piano equals four hundred bushels wheat; one bushel corn equals sixty-six one-hundredths bushel wheat; one pair men's shoes equals three bushels wheat; one pig equals fifty one-hundredths bushel wheat; one sheep equals two and fifty one-hundredths bushels wheat; one cow equals forty bushels wheat; one spade equals one bushel wheat; one wagon equals fifty bushels wheat; one carriage equals eight hundred bushels wheat; one bicycle equals eighty bushels wheat; one pound gold equals two hundred bushels wheat.

With this standard, we must multiply it if we would purchase a horse, a piano, a pair of shoes, a suit of clothes, a sheep, a cow, a wagon, a carriage, a bicycle, or a pound of gold; and we must divide the standard if we would buy a pound of cotton, or of salt, or of pig iron, or a pig, or a bushel of corn.

But, while we have found a standard to estimate values with, we have not ascertained the value of the standard, only as it is measured by values of other articles in the market.

It would not be convenient in practice to use wheat for the standard, for, even if it were not too bulky and too heavy and too inconvenient in every way, there is not enough wheat produced to use it for money. Besides, the value of wheat may not always be the same. We can, however, easily get rid of this difficulty. After we have agreed on the value of a standard measure, we may use that value as a common measure, and give it (the value) a name to be regarded as the unit; and after having become accustomed to the name, we may estimate the values of all our property of every description, including the precious metals, by that standard unit, though its value be purely imaginary and indefinable. In France the value of the unit is named "franc"; in Germany the name "mark" is used; in the United States we use the name "dollar."

Taking our own case as an example, we call a certain coin of metal or a piece of printed paper money a dollar; but it is not because of the value of the material in the particular piece of metal or paper, for their individual values are not the same. But both of them alike represent a certain well-understood value in things that are bought and sold among men, and it is that value that we call a dollar. The bit of paper has no value; that is to say, its value as a separate slip of paper is so trifling as to be not worth reckoning among values. Yet we willingly take it in exchange for a dollar's worth of property of any kind we have to sell; we accept it in payment for labor, in settlement of a debt, and we procure it when we want money to pay our taxes with. We can always procure a dollars' worth of anything that is for sale for it.

MONEY IS NOT VALUE; IT REPRESENTS VALUE.

Value, then, is something that relates to the desire of men to possess, use, or enjoy property, and after we have conceived the idea of value, we find that it applies to all property alike, though in varying degrees. But there is no value in money, though there is value or worth in everything else that men trade in, and it is the value in other things that money is intended to represent. Money is not value, it does not possess value; it only represents value.

Now, going back to our unit—the value of a bushel of wheat; for, remember, it is the value of the wheat, and not the wheat itself, that is the unit. If we give the unit of value a name, and then prepare a device to represent the value, we have securely taken the first step in our journey toward a natural and just system of money.

Let us agree to accept the word now in use which expresses the unit of value in our monetary vocabulary—a "dollar." We all understand what a dollar means. We can not define its value any more than we can trace the Arctic circle by a line on the earth; but we perceive a certain value or worth relation among the multitudinous articles of property dealt in by men, and we can easily comprehend that there must be, in the nature of things, a unit from which we may ascend or descend in computing values. Again, I ask it to be remembered that the value of our property is not estimated and measured by its relation to gold or to any other one article of merchandise. It is the relation that its worth bears to the worth of all other property, including the precious metals.

We do not need to determine the value of the unit, for if we can agree upon some word, term, or expression that may be used to represent that value, we have found a common standard that all men can easily understand, one that is in every way convenient, a unit found by comparing the values of commodities when measured by one another.

Let us christen and baptize the unit, and we have a standard forever. We will name it "Dollar," and call its one-hundredth part a cent, and we have a simple standard of value by which we can express any and all values in dollars and cents.

ADVANTAGES OF A PERFECT PAPER-MONEY SYSTEM.

Among the advantages of this system of money may be mentioned—

First. It would be just to all the people alike in its use. It would be the only money of the country, except coins that would better serve the purposes of small transactions, and would be full legal tender everywhere, thus saving to the people everything that is now lost by reason of using a small amount of metal coin as the only legal-tender money.

Mr. CHANDLER. If the Senator will allow me, I ask whether before he finishes he is going to tell us how much of this ideal money of his he would have in circulation at any given time?

Mr. PEFFER. If the Senator will wait a few moments I shall be very much pleased to answer his question.

Mr. CHANDLER. Very well.

Mr. PEFFER. Second. It would do away with usury, for it would develop a system of public banking through which money would be circulated at cost of the business.

Third. It would reduce rents to a reasonable level, so that common people could procure and hold their homes.

Fourth. It would bring about a simpler, a juster, and more natural system of taxation, for (*a*) it would teach the people that personal property—the things which men and women produce by their labor—ought not to be taxed; and (*b*) this would lead to the taxation of the rental value of lands, without regard to improvements, which would afford sufficient public revenue and leave the people free to work and earn money for themselves and not for others.

Fifth. It would terminate the rule of the money power. The quantity of paper required for all the money needed by the people from year to year would be too small and the profit on its manufacture too little to tempt any speculator to corner the paper market. And the rate of interest that could be procured for the use of private money would not justify any person on his own individual account to engage in the business of money lending. This could be done only in cases of enormous aggregations of wealth, for it would have to be done in competition with Government banking, through which charges for the use of borrowed money would be only what would defray expenses of doing the work.

It is not my purpose at this time to discuss these suggested advantages. That will be left for another occasion when banking and taxation are being considered.

CONCLUSION.

I have to add but a single thought as it was expressed in the conclusion of a speech I had the honor to deliver in this Chamber on the 12th day of May, 1892.

"Mr. President, standing as we do in the evening of the most fruitful century of human progress, looking backward over achievements grand in their scope, astounding in their numbers, and bewildering in their effects, discovery, invention, development in all departments of effort, change and improvement everywhere, and looking forward toward the dawn of a higher and broader civilization, with fresh discoveries of genius and nobler reaches of mind, when we shall have happier conditions, with larger liberty, purer pleasures, and the enjoyment of more abundant leisure, strange it is that we are just beginning to study one of the most subtle and cunning agencies of human activity.

"How strange that this should be true; that while we have changed our methods in all departments of industry, and are now searching for new and better ways along every avenue of growth, we hold with an almost desperate grip to a money system that descended to us from the barbarism of the past. The time is at hand when we need improvement in our methods of providing

and distributing this most convenient repository of values. The things which are bound up in the one word "money" are an innumerable host that no man can number, involving endless development of mind and thought and energy, perpetual progress and growth. Like the rod of Moses, money brings forth water from nature's rock. As healthy blood imparts vigor and strength to the human body, so money in active circulation quickens the pulses of trade, encourages the toiling poor, gives employment to willing hands, and brings prosperity and peace to the people."

In answer to the Senator from New Hampshire, I will now say it would be, I think, not only impracticable but imprudent for me or for anyone to undertake to determine in advance what particular quantity of money would be required to be used by the people. I have thought it all out in my own mind. The first thing is to establish the system, to get rid of this idea of barter, of using for all exchanges one or two articles that a few men can control, a few articles which are very scarce and difficult to procure, and are very valuable when procured on account of the necessary labor performed in their manufacture—get rid of that idea, and establish the foundation principle upon which money ought to be based and upon which it must be based in time. In self-defense the people can not afford this spoliation that is being practiced upon them from day to day, whereby they are losing their homes now more rapidly than was ever known before. I say to the Senator that I do not pretend to forecast what would be the amount of money required. I am satisfied that the business interests of the people, the common sense of the people, would determine for them what amount of money ought to be in circulation.

Mr. CHANDLER. Mr. President, it seems to me that the Senator from Kansas has left off where he should have begun in the consideration and discussion of the proposition that there should be some substitute for gold and silver money. Gold and silver have been the instruments of money with which exchanges have been made since the dawn of creation. Now the Senator says they are unsatisfactory, that they result in oppressing mankind, that they should be dispensed with, that the dollar should not be based upon either gold or silver, but that a different dollar, a unit of value, should be made use of in the commercial exchanges of mankind to take its place, and the Senator does not tell us what that dollar should be.

The Senator certainly will not advocate—he refrains from advocating—the starting of the printing presses and the printing by the Government of unlimited quantities of paper money called dollars to take the place of gold and silver; and yet I am unable to see where the Senator proposes to stop. He has at the end of a long speech on this subject brought us to the destruction of gold and silver money; he has taken away our faith in metal money and given us nothing in its place. The Senator has not spoken long enough, and I trust when he comes to discuss this subject again, as he gives us notice that he will do in connection with banking and taxation, he will be prepared to say what should take the place of gold and silver as money and as the basis of paper money, and if that substitute is to be a paper dollar, that he will tell us how many of them we are to issue and how this issue is to be regulated and controlled.

Mr. President, it has been the dream of political economists that some substitute might be found for gold and silver money. Amid all this denunciation, which we hear not only from Populists but from Democrats and Republicans, of slavery to the money metal, it seems to me we ought to have one ray of light thrown upon the question of what the substitute for the money of the fathers and the money of the centuries should be.

Mr. PEFFER. Mr. President, if the Senator from New Hampshire had honored me with his attention about an hour ago, and say half an hour before that and half an hour afterwards, as he has done for the last fifteen minutes, he would know more than he does now about the answer to the question he has asked me.

I entered upon the discussion of this subject, I will say to the Senator from New Hampshire, with the proposition that there was not gold and silver enough in the country to perform the monetary functions required by the people, and that, therefore, I favored the coinage of all the silver we could get at our mints in addition to all the gold that is brought there, so as to procure coin enough with which to pay our coin debts. After having discussed that phase of the subject, I stated distinctly that after we had procured coin enough for these purposes I thought Congress ought to devise some better monetary system; and I also stated what kind of a system I proposed, a permanent paper-money system, a system based on the values of all the property of the people—a coinage, if you please, of their lands, their houses, and all their lawful possessions; and this system to take the place of all metallic money except only for small business transactions.

The amount of money in circulation ought at all times to be what the people need in the transaction of their legitimate business.

Abolition of the Fee System in the United States Courts.

SPEECH
OF
HON. CLAUDE A. SWANSON,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, January 21, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 4321) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1896, and for prior years, and for other purposes—

Mr. SWANSON said:

Mr. CHAIRMAN: I have listened with much pleasure to the gentlemen who have preceded me. It brings good promise for the abolition of the present vicious fee system.

The people of no section are more interested in the abolition of the fee system by which United States officials are paid than are those whom I have the honor to represent upon this floor.

Few questions affect them more than this one. Few reforms are demanded more earnestly by them than this one.

I have proposed and submitted a bill which abolishes the fee system absolutely and entirely. It provides specific salaries for the United States district attorneys, marshals, clerks, and commissioners. It does not leave a vestige of the fee system. It inaugurates a system better for the officers, better for the people, and better for the Government.

It is better for the officers, because under this bill every United States officer will receive a definite and fixed salary. He knows when he accepts the office what his compensation will be. His salary will not be, as now, uncertain and dependent upon the work which might arise.

It will elevate and dignify all these positions. It will remove all these officers from the temptation of using their position and power, not for the good of the Government, but to increase their own pay and emolument. It will inspire the people with more confidence in all these officers, since they will no longer be liable to the accusations of inciting and continuing prosecutions simply for fees and self-enrichment. Thus the service would be elevated and the officials held in higher esteem and regard. The officers would be paid promptly, like other officials of the Government, and would not have to wait months, and sometimes years, before receiving their pay.

It would be better for the people, because they would no longer be harassed by petty and frivolous suits incited by mean spies and informers for the rewards and encouraged by officers and witnesses for the fees and money made.

It would be a protection of the people against worry, annoyance, and frivolous prosecutions to which, in the past, they have been much subjected. It would save them the expense and trouble, which have become immense, of defending suits and prosecutions instituted for the sole purpose of making money and getting fees. The intense friction and harshness witnessed in the past in the administration of the law would disappear, and suits would be instituted and prosecuted for the sole purpose of the public good. The people would no longer feel that they were made by law subjects to be preyed upon by officials who received fees and riches in proportion to the people's ills and misfortunes. The people would have a security that they would be unmolested so long as they observed the substantial spirit and intention of the law. It would result in great benefits and savings to the Government. The Government would no longer be scandalized by giving premiums and rewards so as to create an immense class of professional witnesses, spies, and informers, who have done much to bring the administration of the law into disgrace and disrepute. Having removed all temptation to incite or encourage prosecutions from its own officers, it would have the assurance that all its officials, as sworn officers, would be guided by their duty and the public good. It would destroy this system which makes the interests of the officer and of the Government distinct and separate. Having made the interest of the officer and of the Government identical, it would have the assurance that the law would be administered solely for the public good. It would result in a great saving of public money.

Nothing shows more clearly the necessity for the great reforms contained in my bill than the records of the Department of Justice. The expense and cost which this fee system has brought upon the Government is immense and amazing. Last year United States marshals were paid $1,339,640.51; United States commissioners were paid $452,867.59; United States clerks were paid $298,961.72; United States district attorneys were paid $427,126,67; United States jurors were paid $932,170.27; United States

witnesses were paid $1,713,162.17; thus making a total paid for these of $5,163,928.93. For this vast expenditure the Government received back in money, as a return, only $37,647.61, paid as compromise of criminal suits, and $132,050.53 realized from fines and forfeitures from criminal suits, and from all civil suits during the year $121,696.97. Thus the Government, for the immense expenditure of about $5,164,000, received returns in money of less than $255,000. This is an amazing difference between expenditures and returns.

The pernicious effect of this fee system is further disclosed by the results of the suits instituted in the United States courts. The records of the courts disclose that last year 2,751 civil suits were terminated to which the United States was a party. Of these 1,691 were decided in favor of the United States and 1,060 were decided against the United States or dismissed or discontinued. This clearly shows that about 40 per cent of these civil suits should never have been instituted. Last year 25,949 criminal suits were terminated in the United States courts, and out of these 10,521 were acquitted, dismissed, or discontinued. This shows that over 40 per cent of the indictments in the United States courts should not have been found or prosecuted. Many of those convicted were for petty and frivolous offenses, where the ends of justice would have been better answered by an acquittal than a conviction. They were convictions where no benefits could accrue to the Government.

This does not include the great number that the United States commissioners dismissed, nor those in which the grand jury refused to prefer indictments. If these were included, it would be safe to say that more than half the suits and prosecutions were such that should never have been brought. They would never have been instituted but for the vicious fee system. These frivolous and unjust suits and prosecutions last year cost the Government over $2,000,000. The abolition of this system, as proposed by my bill, would save each year this vast amount of money to the poor, overtaxed, and overburdened people of this country. Besides, its saving to the people would be far greater than this. It would save them from the worry and annoyance, great expense, and losses entailed in the defense of these frivolous and unjust prosecutions.

My vision stretches far beyond the dry figures here disclosed, and I see a state of facts which excites my deepest sympathy and greatest indignation. I see that the property and the liberty of the best citizens are at the mercy of miserable wretches, who, for greed, become spies, informers, and professional witnesses. I see, through their perjury, innocent citizens dragged like criminals before the court, incarcerated in jail, and subjected to all manner of hardships and humiliations. I see poor, innocent children deprived of the protecting and providing hand of their father. I see good, loving wives immersed in tears and terrified in heart, as they see their husbands torn from them on account of some petty and frivolous charge. I see homes, once happy and prosperous, transferred into the abode of want and wretchedness because the occupants had to surrender their all to make defense in court against charges of which they were innocent and were acquitted. I see a reign of terror, doubt, apprehension, and suspicion among neighbors and communities. I see the infamous spies and informers holding high carnival. I see prosecutions inspired only for malice and hatred. I see the good, conscientious officer, an honor to his position and a credit to the Government, giving no encouragement to this and hence making few fees and little money, while the grasping and greedy lend a willing ear, and make large fees and reap harvests. These dry figures bespeak all this. My own knowledge and experience, in addition to the court record, can bear evidence of the existence of such conditions. These conditions are but the natural results of this vicious fee system.

Destroy a tree and you destroy its fruits. Destroy this system and you will destroy all these, which are but its natural products. The Attorney-General, in his last report, earnestly recommends the abolition of this fee system and the substitution in its place of salaries. He says that arrests and prosecutions on frivolous charges and flimsy proofs, and the great expense incident thereto, will be prevented only when this system has been abolished, which makes the fees of commissioners, marshals, and clerks the source of their compensation, and thus presenting a constant inducement to unnecessary arrests and litigation. He says, besides the great annual expense entailed by the Government on account of these unnecessary prosecutions, great annoyance and loss of time are inflicted upon the parties and witnesses, which work both material and moral injury to the public, and that it has created a class of professional witnesses and informers, to the scandal of the administration of justice. Attorney-General Olney, in 1893, in making his report, says:

The system by which United States district attorneys, marshals, clerks, and commissioners are paid by fees has been so often and so emphatically condemned, is so indefensible in principle, and works such gross injustice in practice that its survival to this time is nothing less than a wonder and a reproach.

The President, in two messages to Congress, has earnestly and emphatically recommended its abolition.

Judge Brawley, of the United States district court of South Carolina, in a recent charge to the grand jury, vigorously and forcibly points out this evil. He said to the grand jury:

Your findings have demonstrated that nine-tenths of the prosecutions under section 3242 have no merit in them; that they have not been inspired by the proper desire to advance the cause of justice, but by the greed of miserable wretches who have sought to make money out of them. Some of these men have already been brought to trial and convicted of perjury, and others doubtless will be. But this evil, which has reached the proportions of a gross public scandal, can not be eradicated by the punishment of a few obscure rascals. A new crop will undoubtedly spring up, unless some means can be devised for reaching the root of it. This lies in the fee system.

All who have given time and thought to this matter and have investigated it are convinced that no substantial or permanent reform will accrue in this direction until the entire fee system is destroyed. When this is destroyed the infamous class of informers, spies, and professional witnesses will disappear. Arrests on frivolous charges and insufficient evidence will cease. The people will no longer be watched, harassed, and terrified by persons greedy for fees and rewards. The officers, all receiving fixed and stated salaries, will confine themselves, in the discharge of their duty, to what they conceive the public good alone requires. Quiet, peace, and satisfaction will again reign in places where there are now only fear, discord, and bitterness. These are great reforms, and improvements to be desired. I shall earnestly devote all my efforts so long as I have a seat in this House to the accomplishment of this great end. I know how the people whom I have the honor to represent have suffered from the prevalence of this vicious system. I shall fight it until it is destroyed and relief is brought to the people and to the Government. The officers, the people, and the Government will all be greatly benefited when the last vestige of it is swept away. This bill, which I have proposed and offered, accomplishes all this. I hope that it may be the pleasure of this Congress to enact this bill into law and thus abolish all these evils. [Applause.]

Coin Redemption Fund—New Method to Break the "Endless Chain" and Relieve the United States Treasury.

SPEECH

OF

HON. WM. ALDEN SMITH.

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 5, 1896.

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. SMITH of Michigan said:

Mr. SPEAKER: Upon the 20th of December, when the members of this House were planning their holiday vacation and while many of them were en route to their homes, the President sent a special message to Congress, advising the legislative department of the serious and threatening condition of the Government's credit and the general apprehension existing in financial circles, saying that the gold reserve, so recently replenished by a bond issue, amounting to $160,000,000, was fast being depleted, and that for a single period—the three weeks preceding the assembling of Congress—$16,000,000 had been withdrawn and the reserve was again below the required amount, standing at $79,000,000. He concluded this special message by saying:

I ask at the hands of Congress such prompt aid as it alone has the power to give to prevent in time of fear and apprehension any sacrifice of the peoples' interests and the public funds or the impairment of our public credit.

This House remained in session under the wise and patriotic leadership of those who have won their spurs by faithfulness to public duty, and who, by reason of their wisdom and experience, were able to meet the grave responsibility so suddenly thrust upon them in a manner to challenge and receive the approval of the business world, which tireless and unflagging fidelity favorably inaugurated the legislation for which the Republican party are responsible. The work of that historical week was not perfect. Legislation never is. The measures were creations of necessity and only calculated to meet an emergency in national affairs, for which I am glad to say the Republican party were in no manner responsible. This can not be truthfully said now. From the moment of the organization of this House we are corespondents before the American people with the other Departments of the Government, and will be required to answer for any dereliction of duty. The first measure passed enabled the Secretary of the Treasury to avoid much of the severity of the bonding clause of the resumption act of 1875, lessening the period of the loan and

the rate of interest and providing that such bonds as were necessary to issue should be offered to the people for popular subscription first. If bonds must be issued, was this not a desirable measure?

My esteemed friend from California [Mr. JOHNSON], in his eloquent remarks upon Thursday, took occasion to pay tribute to the American people who had responded so generously to the needs of the Government and subscribed nearly $600,000,000 for the proposed loan of one hundred million, saying that if he ever felt proud in his life it was when he had read in the morning journals of this unprecedented achievement, and with equal earnestness declared in the next breath that the pauperized condition of the people was woeful to contemplate. It is useless to deny that distress is widespread; that the people are hard pressed. But, Mr. Speaker, this immense volume of money to-day seeking investment in national securities from every State of the Union argues that public confidence is only necessary when it will find its way into remunerative channels of industry, when labor can be steadily and profitably employed, when gladness and prosperity shall again dwell in the cottage and darkness and gloom disappear.

The House bill was directed to that end, and, standing upon its merits, it has passed. Can as much be said of the irrelevant and untimely substitute? No matter what its merits, standing as an independent proposition, there has never been a moment during the entire discussion in both Houses when there was the slightest expectation that it could become law. The Presidential hostility would defeat it, and we are now met with the startling proposition that while discussion has been winding its endless trail around the Treasury over $30,000,000 have escaped from its strong box and instead of the gold reserve remaining at $79,000,000, as when the debate began, it is now $43,000,000, and sinking lower every hour. And while the economic enlightenment was going on at this end of the avenue last week the Government was obliged to pledge itself for an additional 1 per cent on the loan being made, which at the time of its maturity will cost the people over $20,000,000. This would not be a burdensome sum, perhaps, if anything could be accomplished, but the discussion opened with the proposition that it was futile in this emergency. Many fervent prayers have been uttered, but the same lips acknowledge that the Republican party are now powerless to formulate and pass laws which do not meet the favor of the Executive.

The last national platform of the Republican party declared for bimetallism as an underlying party principle. I have seen no disposition to retract from that position or avoid it. The Minneapolis platform did not point out the way, and with no power to execute, why should our disagreements be so taunting and sharp? Perhaps the aggregated wisdom duly accredited of our next national convention may blaze the way broad and straight whereby we may unitedly act. What loyal Republican is not willing to pause and give ear? Emergency legislation is all we can hope for now. The bond bill is such, and the revenue bill is such. The former is to lighten the burdens of the people; the latter is to lessen the burdens of the Government now by providing in the least onerous and burdensome manner for increasing its revenues about $40,000,000 a year. Neither measure is perfect or wholly satisfactory. Both are, however, creditable to the time and place, and should be insisted upon by the originating body without modification or delay.

Legislators should minimize the difficulties in the way of useful government, and when a serious situation confronts the people the best and most vigorous thought should be devoted to its solution. The remedy may not lie along fixed and well-recognized lines; still if the idea does not involve any dangerous or doubtful method and seems to touch one of the vital causes of business apprehension and alarm, regularly constituted authority should be willing to measure its standard by the usual methods of adaptation and practicability.

The gold reserve of $100,000,000 was, at a critical time in our monetary affairs, considered necessary to the establishment of confidence among the people in the ability of the Government to redeem its promises and establish resumption. For many years, while the revenues exceeded the expenses of the Government and its credit was never questioned, this fund was of little importance and its function not generally understood. When, however, the expenditures exceeded the income and the fund, so long maintained, is encroached upon and melts away by reason of the necessary demands made upon it, and speculators find in it a profitable means of influencing governmental action, its diminishing volume may well excite fear and apprehension. To stop this fear of possible repudiation and turn the eyes of the people from the gold-reserve barometer to their usual business pursuits, to check, if possible, the cause and break the "endless chain" now forming such a convenient method of draining the Treasury of its gold, prompted me, in the discharge of public duty, to introduce a bill calculated to open the way whereby much of the difficulty under which the country is struggling can be arrested. It is very simple, in that it changes but two words of the present national banking law. Section 5191 of the Revised Statutes provides that—

> National banking associations shall have on hand at all times, in lawful money of the United States, an amount equal to at least 25 per cent of the aggregate amount of their deposits in reserve cities, and 15 per cent of their aggregate deposits in nonreserve cities—

thus creating a large cash fund, aggregating between $250,000,000 and $300,000,000, presumably for the partial protection of depositors.

The bill which I had the honor to suggest strikes the words "lawful money" out of the section referred to and inserts in their place "United States notes (greenbacks) and Treasury notes," thus making it obligatory upon national banks to carry their lawful reserve in the demand notes of the Government, which have for several years so annoyed the National Treasury, obliging the Government to bond itself to the extent of $260,000,000 of principal, and interest amounting ultimately to nearly as much, for the purpose of maintaining the gold reserve at the required amount. There are outstanding greenbacks and Treasury notes redeemable in gold aggregating $496,681,016, of which the Treasury of the United States holds $128,038,271. The national banks, on the 13th of December, 1895, held $99,209,423 and $31,440,000 in United States certificates of deposit for legal tender, the balance of such notes, $237,993,322, being in circulation among the people.

It has for some time been a matter of considerable speculation how many of these notes have been lost and destroyed since their issuance. Of one thing we can be reasonably sure, that if the national banks were required to hold their entire lawful reserve in greenbacks and Treasury notes, it would be impossible for individuals or combinations of capital to obtain sufficient of them in excess of what would be lawfully required by the banks to give any annoyance to the Treasury Department. Will these demand notes not meet the banks' requirements as well as any other money? With the Treasury reserve standing unimpaired at $100,000,000 in gold for the final redemption of the greenback and Treasury note, with the promise of the Government that it will redeem these notes in gold, whereto its faith and credit is unquestionably pledged, making these notes in every respect as good as Government bonds, I am unable to see any good reason why this class of money should not for the time being constitute the required reserve of national banks and the $168,000,000 in gold now carried in such bank reserves liberated for purposes of exchange and general commercial use.

A careful examination of the reports made to the Comptroller of the Currency December 13, 1895, discloses the fact that the national banks of the city of New York had on hand at the close of business that day as their "lawful money" reserve $15,311,453 in gold coin, $9,320,830 in gold Treasury certificates, $27,195,000 in gold clearing-house certificates, and $35,576,962 in legal-tender notes, while the national banks of Chicago had at the close of business the same day as their "lawful reserve" $15,097,127 in gold coin, $2,261,240 in gold Treasury certificates, and $7,371,565 in legal-tender notes.

The national banks in the State of New York, exclusive of New York City, Albany, and Brooklyn, had on hand at the close of business on the same day in their lawful reserve $4,068,002.86 in gold coin, $569,890 in gold Treasury certificates, and $2,828,014 in legal-tender notes.

The national banks of the city of Boston had on hand at the close of business the same day in lawful reserve $6,966,870.86 in gold coin, $1,974,850 in gold Treasury certificates, and $5,127,395 in legal-tender notes, while the national banks of Massachusetts, exclusive of Boston, on the same day had in their lawful reserve $3,323,269.73 in gold coin, $237,700 in gold Treasury certificates, and $2,000,347 in legal-tender notes.

The national banks of the city of Detroit at the close of business on the same day had on hand in lawful reserve $1,072,982.50 in gold coin, $12,500 in gold Treasury certificates, and $693,777 in legal-tender notes, while the national banks of the State of Michigan, outside of Detroit, at the close of business on the same day had on hand in their lawful reserve $1,565,064.47 in gold coin, $48,930 in gold Treasury certificates, and $643,584 in legal-tender notes.

The national banks of the city of Grand Rapids, my home, had on hand at the close of business the same day $547,625.84 in gold coin and but $72,100 in legal-tender notes.

The national banks of California, exclusive of San Francisco, had on hand at the close of business the same day in their lawful reserve $1,743,496 in gold coin, $13,870 in gold Treasury certificates, and $163,540 in legal-tender notes, while the national banks in the city of San Francisco upon the same day had in their lawful reserve $1,620,392.50 in gold coin and $113,930 in legal-tender notes.

The national banks of the city of Milwaukee had at the close of

business the same day in awful reserve $2,027,773.73 in gold coin, and $719,345 in legal-tender notes.

The national banks of the city of St. Paul on the same day had in their lawful reserve $2,198,118.41 in gold coin, $20,300 in gold Treasury certificates, and $181,417 in legal-tender notes.

I cite these instances for the purpose of showing the extent to which banks in different sections of the country avail themselves of greenbacks as part of their lawful reserve at present.

It will be noticed from an examination of these reports that Eastern banks carry by far the largest amount of legal-tender notes in their reserve, while Western and Southern banks have less greenbacks in their reserves and more gold.

The purpose of my bill is to distribute these legal-tender notes throughout the entire 3,706 national banks in the United States, after which I believe it will be impossible to gather sufficient of them outside of the reserves required to further deplete the National Treasury of the gold, necessitating new bond issues.

According to this report, the national banks of the United States had on hand, as a part of their lawful reserve, at the close of business December 13, 1895, $168,244,430.97 in gold coin and coin certificates, $99,209,423 in legal-tender notes, and $31,440,000 in United States certificates of deposit for legal-tender notes. Is there any good reason why this large amount of gold should not be released for commercial purposes and greenbacks put in its place, especially if such course would obviate the necessity of periodically bonding the Government in time of peace? The large number of banks doing business in the United States and the immense amount of capital employed depend for their success upon healthful business conditions. There is nearly $700,000,000 represented in the capital stock of our national banks, owned by nearly 300,000 shareholders, all of whom, it may be safely stated, are also interested in business other than that of banking.

There is every incentive to this large number of people to assist in restoring confidence in the business world. If the gold reserve is the bugaboo responsible for much of this concern, these shareholders should be willing to throw every safeguard around it. There are nearly two million depositors in these national banks whose daily vocation and prosperity depends in a great measure on the prosperity of the country. To restore confidence and give employment to this large army of contributors to national-bank prosperity should be a matter of the deepest solicitude upon their part. National banks are the creatures of the Federal Government. They depend for their existence upon national law, and as they have been patriotic and public-spirited in the past, when the country was passing through great trials, so they should be ready and willing now when emergency requires the adoption of new expedients.

We may be asked, what will become of the gold now carried in bank reserves when released? My answer is that the bank reserve required under the present law, amounting to $406,271,726, now voluntarily amounts to $571,476,854, according to the last annual report of the Comptroller of the Currency, leaving a wide latitude for the exercise of this right, if desired; or it could profitably be invested in the bonds of the Government now offered for sale, the possession of bonds enabling the bank in times of currency famine to augment its circulation as occasion may require, by depositing the bonds with the Government and issuing national-bank currency.

I have not considered the situation from the standpoint of the banker, but from the standpoint of the legislator, whose only solicitude is the welfare of the Government, representing, as he does, the entire people, and any plan which will relieve it from the necessity of issuing bonds to replenish the gold reserve will, in my judgment, correct one of the evils now existing and do much to reestablish confidence in the ability of the Government to meet its obligations. It is absolutely useless to talk of retiring the greenback from our monetary system, even though it may have cost the Government $2,000,000,000, according to the figures of Edward Atkinson, or $486,886,666 in principal and interest to maintain the reserve required for their redemption, as stated by Comptroller Eckels in his article in the Forum last year. The people do not favor their cancellation, and such a proposition finds no favor in the present Congress. My plan avoids the necessity for either expense or retirement, and has met with general favor.

In this connection, it may not be inappropriate for me to add that I do not believe our financial difficulties are the outgrowth of any unwise system upon the part of the Government, but that much of our present distress is due to inadequate revenues and increasing obligations. I would correct the one by imposing a sufficient duty upon imports to meet the expenses of the Government, and the other by an economic administration thereof. But as a temporary measure of relief I will, at the proper time, urge the adoption of the bill introduced by me for the immediate relief of the Treasury of the United States. It is my hope that such a plain, simple plan, having, as I believe, unquestioned efficacy, can, with patriotic cooperation, readily be incorporated into law.

Coin Redemption Fund.

REMARKS
OF
HON. WINFIELD S. KERR,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 5, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. KERR said:

Mr. SPEAKER: I do not rise with the expectation of adding anything new to this discussion, nor of saying nearly as well those things which have been said by gentlemen preceding me, but I do desire to emphasize a little the vote I shall cast against this bill.

I am one of those who voted against the original proposition, but not upon any ground important in the consideration of the present question. I am not blessed with prophetic vision, but I voted against the bond bill very largely in anticipation of the very situation with which we are now confronted. It was perfectly apparent that that bill, if it should pass the Senate, would meet the Presidential veto. It was sure, however, to meet death in the Senate. This being clear—at least it seemed so to me—I could see no reason why a Republican of the strictest sect should commit himself to an unrepublican measure when even the possibility of justification by results was absolutely precluded by the situation. But this, Mr. Speaker, is ancient history; we are already written down in that chapter; let us address ourselves to the duty of the present hour and to an attempt to solve this most difficult and important problem.

The arguments of the free-coinage apostles never convinced my judgment and I never believed their prophecies. But if, like Agrippa when under the spell of Paul's logic and eloquence, I was almost persuaded, the recent extraordinary arguments of these gentlemen in the House would have rendered me very suspicious of a shibboleth which attempted to sustain itself by such uncommon illustrations and by such contradictory evidence.

The other day a Senator, speaking to this question, ended an elongated speech with a peroration in which he pictured the gathering of the commune. A heated brain and a disordered imagination may see the beginning of an attempt to destroy law and order, life and property, but no man will ever see a right vindicated nor a wrong redressed by such an instrumentality. No principle or movement can ever have my allegiance which is to be established or enforced by a commune. That kind of material makes very impressive perorations and ends speeches with great eclat, but they do not light the dark places nor pour sunshine into the hearts and homes of the poor and oppressed.

Another gentleman, a member of this House and occupying a seat on this side, called Washington, and Jefferson, and Jackson, and Webster, and Lincoln from their graves to testify in favor of the free coinage of silver at the 16 to 1 ratio. The witnesses are unimpeachable, but he might as well have called Mark Antony or Julius Cæsar. If the witnesses antedate twenty-five or thirty years you might as well call Confucius or Aristotle. At least it is proper to ask the gentleman when it was and where it was that Washington, Jefferson, Jackson, Webster, and Lincoln, upon a situation such as we are now confronted with, in an environment such as now surrounds us, expressed themselves as being in favor of the free and unlimited coinage of silver at the present ratio. From Washington to Lincoln the commercial value of gold and silver did not vary sufficiently from this coinage ratio to the most remotely suggest the difficulties with which we have now to deal.

Another gentleman laid before us an elaborate calculation by which to show that God Almighty had laid these metals in the broad bosom of mother earth at the ratio of 16 to 1, and that their production has been substantially at that ratio. I admire the energy and industry of an individual who would undertake a task of this kind. The calculation, so far as it went, was mathematical, and its only deficiency was his omission to take account of the metals yet in the ground. I would suggest that he revise his calculation by putting in that important factor, and if then the conclusion is not changed we shall all bow to the divine purpose.

But now the scene changes. The statistical and analytical member from Minnesota appears and with one mighty blow destroys not only the divine plan, but as well his collaborator from Colorado. He finds that for long stretches, during which time the parity was maintained, the production of silver averaged more than 30 ounces to 1 ounce of gold.

Then the eloquent member from California charged the "mullein stalk." His speech was very entertaining—a little weak, perhaps,

in argument, but making up in good round measure in rare and classic illustrations and references. He ran the gamut from the literature of the last patent-medicine circular to the destroyer of Jerusalem. From "I was well, I wanted to be better, I took this, and here I lie," to Titus Andronicus is a mighty leap, but he took it as bravely as his State, California, demands silver for everybody except herself.

After these days of discussion the atmosphere is heavy with mist and we are intoxicated with eloquence. The air is full of contending propositions, and figures fight like warriors on the battlements. Party lines are broken and internecine strife disturbs both sides of the Chamber. In this situation we meekly lay aside pride of party and opinion, and humbly grope toward the light.

What is the question presented in this substitute? Its details are of no moment—its importance is in the fact that it precipitates the old, yet apparently the ever new, battle between sound and fiat money. The apparently wide difference between the sound-money men, so called, and the silver men is upon questions of fact rather than upon principles. We all agree that there should be free coinage of both gold and silver if the latter metal was, by reason of its intrinsic or commercial value, on a parity with the former. We all agree that if merely stamping 412.5 grains of standard silver will make it the equal in value of 25.8 grains of standard gold, the Government ought to do it. We all agree that if by law silver can be yoked to gold and made its equal as money of final redemption that law should be passed.

Upon all these propositions the advocates of the free and unlimited coinage of silver have the affirmative, and upon them rests the burden of proof. Fixing the responsibility for the alleged demonetization of silver in the United States, or in the world, will not extricate us from the situation. The silver men have fixed that responsibility many times to their satisfaction, and yet they still cry for relief, and the gap between the metals is not closed.

The individual who fails to note a condition divests his argument of all its force. We must deal with these conditions. First, in the last twenty-two years silver as a commodity has lost substantially half its value, and, second, within that period every great commercial nation has given silver a subordinate place in its monetary system.

On the one side it is alleged that the commercial value fell because silver was demonetized or given this subordinate position, while on the other side it is contended that the depreciation in value rendered necessary its demonetization. In this connection it may be proper to notice one argument that is and must be put in the front of all others, because upon it all others must stand or fall, and that is that the United States alone can by opening her mints to the free coinage of silver restore it to its old place as primary money.

Let us see about that, and at the same time investigate the cause of the depreciation of silver. If we as one nation against the world can maintain silver on a parity with gold by its free coinage, then the action of one nation or a dozen other nations would not influence the matter in the nation thus undertaking the free coinage. That is, if a free-coinage system in the United States would hold silver up to a parity with gold, notwithstanding the fact that other nations did not so coin it, then the systems of the other countries would not be regarded as influential or important. If this be true, and the free-silver men must assume it, then the converse of the proposition is true, namely, that the demonetization of silver in one country would not affect its commercial value in a country which continued its unlimited coinage.

We know that all countries did not limit the coinage of silver at the same time. We then come to this point, that each country must have been influenced more by domestic reasons than by those operating from outside.

No one can claim with any reason that the change in the monetary system of Great Britain in 1816 whereby silver became subsidiary money had any effect upon the value of silver, either for money or commerce, because its value remained substantially unchanged for more than half a century thereafter.

The United States did not drop the silver dollar from the coinage in 1873 because silver had fallen in value, but on the contrary, because it was practically demonetized by reason of its superior value; because a cheaper dollar was in use and circulation. Here we have the two greatest commercial and monetary nations at times a half a century apart, and for wholly different reasons changing their monetary system regarding silver.

The commercial ratio and the money ratio between gold and silver did not vary a point in two hundred years, and the divergence began when the equilibrium between them was disturbed by the excessive production of silver. In 1870 in the United States the production of the precious metals was $12,000,000 of silver to $50,000,000 of gold, or a little more than four of gold to one of silver. In six years thereafter the production of the latter had so increased upon the former that they were substantially equal, and in twenty-two years thereafter there were nearly three of silver to one of gold produced.

The world's product shows nearly the same disproportion in the same time. In 1870 there was produced of gold $129,000,000 and in silver $55,000,000, a little more than two of gold to one of silver. From 1891 to 1894 there was about one and a half of silver to one of gold produced. The production exceeded the demand, and inevitably the price decreased.

Every nation, I think, except the United States, Great Britain, and Germany limited the coinage or the money quality of silver after it had been so reduced in value commercially as to make it, if not impossible, inexpedient to continue its free coinage.

The Latin Union, from which many arguments are drawn, was compelled to limit the coinage or money quality of silver, and in 1885, in effect and by conventional arrangement between the powers composing the Union, did what we are now successfully doing, namely, holding a limited quantity of silver at par by redeeming it in money worth intrinsically and commercially its full face denomination.

But whatever may have caused the depreciation in the value of silver, whoever may be responsible for this decline, the condition confronts us and legislation must recognize that condition and be governed by it. We have two money metals and a law establishing a ratio between them. This ratio is 412.5 grains of standard silver to 25.8 grains of standard gold. When this ratio was fixed it was upon a calculation of the commercial value of the metals and purposed to make the quantity of metal in the unit of one equal in value to the quantity in the unit of the other. It is proper to suggest in this connection that whenever the ratio has been changed it has been done to correct a divergence between the coinage and commercial value. The necessity of having an agreement, as nearly as practicable, between the coinage and commercial ratio has always been recognized. The commercial ratio is now about 33 of silver to 1 of gold, or, in other words, the 412.5 grains of silver are now worth about 52 cents or substantially 48 cents less than its coinage value.

Can we close up this gap by law? Free-silver men say, "Yes; if the Government will restore to silver its place and function as money the difference in value will disappear." Upon them rest the burden of proof. They have not produced the evidence—at least, they have not satisfied me—that the law, by merely stamping a thing, can give it value, unless the stamp impresses upon the thing a promise, and in such case it is the promise and not the stamp which gives the value. The choicest flowers of rhetoric have been gathered and fashioned into bouquets of beauty, the world has been explored for illustrations and references, and for days we have breathed the atmosphere of eloquence, yet through it all no word of proof has been submitted showing that this wide difference between the values of gold and silver can be closed by law. We might try the experiment were it not that if the experiment should fail the results would be so irretrievable and disastrous.

Suppose we should try free coinage of silver and the silver dollar continue to be depreciated as it is now, what would be the result? As soon as the silver money and the silver certificates issued thereon should be sufficient to do the business of the country we should be on a silver basis, and probably long before that amount was in circulation. Then what? Gold and every form of paper redeemable in gold would leave the circulation, and a most dangerous contraction of the currency would ensue. And then, instead of having more money, we should have less.

We might stand this for a time if thereby we should secure ultimate relief; but once on a silver basis—once disconnected from the great commercial nations of the world—when shall we again march in the forefront of the majestic procession of the nations? Never. Commerce is the great promoter of civilization, and if we do not maintain ourselves as one of the great factors in commerce we shall not lead in civilization.

Can a plan be devised whereby a 52-cent dollar and a dollar of full value can be circulated side by side in the same country or monetary system? If so, the wisdom of man has not hit upon it. Every country affords an illustration of the operation of Gresham's law. Whenever there are two kinds of money, one cheaper than the other and the cheaper one is full legal tender, the cheap money always drives out of circulation the dearer money. It is the law of selfishness—that is, a man will always keep the better money when he can use a cheaper or poorer money to discharge the same debt or to secure the same advantage as with the better.

The present system is the best that can be devised under existing conditions. I am in favor of the largest coinage of silver consistent with maintaining the parity between it and gold. As it is now, silver is a full legal tender for all debts, public and private. The certificates issued upon the coined dollars are receivable for customs and other public dues, thus affording a substantial equivalent to gold redemption. Added to this, the nation's faith is plighted to maintain the gold and silver money at a parity.

Under this system we keep in use and circulation, either in coined silver or certificates, nearly $500,000,000, every dollar of

which is as good as any other dollar in the country; and all of this has been supplied since the act of 1873—more silver by $350,000,000 than was used before in all the years of the Republic.

The free coinage of silver would permit the owners of silver bullion to bring it to the mint and for every 53 cents' worth of silver receive a dollar. Why the Government purchase or turn into money the product of the mine owner and not the products of farms and factories? If by law silver can be doubled in value by the nation taking it, why not provide the same disposition for wheat at a dollar a bushel?

Sincerely believing that no man would be benefited by this act except the silver mine owner, and that it would entail distress, disaster, and ruin upon millions, I must vote against it.

Coin Redemption Fund.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. GROSVENOR said:

Mr. CHAIRMAN: I had not intended, when the report of the Committee on Ways and Means was brought into the House recommending that the House disagree to the substitute of the Senate, to participate in the debate. All that could be said, all that it was necessary to say, in support of the position of the majority of the committee was said in the opening remarks by the distinguished chairman of that committee; and had the debate taken no wider range than the mere bill itself, and the mere relevant questions here, I should not have occupied any portion of the time of the committee. But there has been injected into this debate—and properly enough; I make no criticism in that respect—a large amount of discussion which has spread out over the whole domain of American politics, and which necessarily must have some effect upon the judgment of the people—our constituents at home. Therefore I propose to address myself for a few moments to the discussion of this question in its effect upon the constituency that I have the honor to represent.

I listened to the cry of the distinguished and able gentleman from California [Mr. JOHNSON] with a great deal of interest, and it may be summarized, for the purpose of this debate, as being an appeal to Congress to do something for silver. "Give us something, do something, for the benefit of silver!" That is the underlying principle, the entire motive spring, of the speech of the distinguished gentleman. And when so able a man as he finds himself driven to a single appeal, an appeal for some special legislation that will be of some special benefit to some special interest, the American statesman may very well turn aside his thoughts and reflect and gather from that sort of argument that it is an appeal—as it was, in fact, an appeal—for the benefit of a single interest and nothing else, and has no proper home, no proper lodgment, in the domain of American statesmanship. However right it may be for the representatives of a single special interest to seek advantage by special legislation for that particular interest, it is nevertheless our duty to see to it that the whole people shall be benefited, and not a few people.

"Do something for silver! Give silver something! Don't close your eyes to the suffering condition of silver! Give silver something!" We propose to "do something" for the American people, and all the people; and the cry comes, "Don't do that, but do something for silver!" We say give to the American farmer a market for his surplus products and a fair, remunerative price for the proceeds of his labor; and the answer comes from the auriferous sands of California, "Do something for silver!" We say, let us remove the barrier that has been placed by the action of the Fifty-third Congress upon the prosperity of a million woolgrowers in this country, and the response comes, "Do something for silver!" Do something for a hundred men—the greatest monopoly on God's earth—a monopoly of wealth and a monopoly that God has made! The sheerest band of monopolists on this earth is the banded silver producers.

I protest against legislation favoring the single interest of silver production, and I demand legislation for the benefit of all the industrial and productive interests of the United States.

My distinguished colleague from Ohio [Mr. DANFORD], in a speech which I did not have the pleasure to hear, but which I am delighted to find has made so early an appearance in the RECORD, pointed out one single fact that, if it can be taken and understood and digested by the American people, is a stronger argument than all the appeals that can come here in behalf of a single interest. The whole situation is clearly illustrated by one remark that my colleague made. The seigniorage is now understood to be about $65,000,000. Whether that means $65,000,000 if coined into dollars or whether it is the original cost of the seigniorage I do not know and do not care; it exemplifies the whole of this argument. Whose money is that? Whom does that belong to? What right has somebody to stand here and say that 100 corporate or individual owners of all the silver produced in the United States shall have the benefit of that condition of legislation in this country? This seigniorage is the difference between the coined value of the silver dollars and the market value of the silver therein. Under our system the Government undertook to maintain the parity of these silver dollars with the gold dollar and the greenback dollar, and this sum of money was the profit to the Government and enables the Government to thus guarantee the parity. I defend and stand by the rights of the people of the United States to this profit and protest that the monopolists of the silver-producing States do not be thus enriched.

Whose mints are these in the United States? Who built the mint in California, the mint in Philadelphia, and the other mints? Whose money paid for them? Were they paid for out of the pockets of the constituents of these advocates of special legislation, or were they in point of fact builded and paid for by the money of your constituents and my constituents—by the people of the whole United States of America? Who pays the expense of running them? It is a tax upon the people of the United States. The cost of their construction and their maintenance in all possible forms appears in the appropriation bills of the House of Representatives, and the money comes from taxes levied upon all of the people.

The Constitution of our country confers upon Congress the right to provide for the coinage of money; and from time immemorial the process has been a very simple one. The weight of the pure silver in the dollar has been fixed by law; the degree of alloy has been fixed in the same way; and the ingredients of the silver dollar are also defined by legislation. Then the silver is purchased by the Government just exactly as the Government buys the wheat and the flour, and the leather and the timber, and the iron and the steel, and the woolen goods with which it equips its Army and to furnish its Navy and to provide for all the machinery of the Government. One commodity bought from the citizen is coined into money, and the other commodity bought from the citizen is used for the other purposes of the Government. And the profit upon the wheat and the pork and the beef that is bought from my constituents becomes a profit in favor of the people of the whole country; the profit upon the silver bought from the constituents of the gentleman from California becomes the property of the people of the country.

Here we have an accumulation in the Treasury of $65,000,000 constituting this seigniorage. If these gentlemen could have had their way, that money would to-day be in the pockets of 100 people of the United States; and if I can have my way, it shall be the property of all the people of the United States. That is all there is of it. Therefore the gentleman from California can very well cry out, "Do something for silver; give silver something!" Have we given silver nothing in this country? We have coined more than $600,000,000 of silver; and there is in the Treasury to-day, as the gentleman from Maine clearly showed, only $7,000,000 of free silver—only $7,000,000 that by any honest proposition can be used for any other purpose than that for which it was solemnly hypothecated and pledged. There is in the circulation of this country this vast outstanding body of silver certificates. In authorizing and issuing those certificates were we doing anything for silver? Did we do anything for silver when we bought four and a half million ounces of silver every month at the market price? What right has the gentleman from California or any other gentleman to ask that the producers of silver among his constituency shall have a price above the market price, while my constituents are compelled to sell their labor—their coal, their farm products—in competition with all the people of the United States, and without any adequate protection at the hands of Congress from the competition abroad. [Applause.]

Mr. JOHNSON of California. Will the gentleman from Ohio pardon me for a moment?

Mr. GROSVENOR. Certainly.

Mr. JOHNSON of California. I possibly misunderstood the gentleman, but I understood him to use some expression as to "my constituents" just now.

Mr. GROSVENOR. Very well; I very likely did; I referred to your constituents and mine, too, possibly.

Mr. JOHNSON of California. I thought you alluded to my constituents in connection with silver producing. Now, so far as I am advised, and I think I know the facts, there is not a single silver mine in the State of California.

Mr. GROSVENOR. I understand that quite well——

Mr. JOHNSON of California. Therefore the influences that the gentleman seems to suggest as having weight upon this question do not apply to my constituents.

Mr. GROSVENOR (continuing). And I understand also that there is no State of this Union, nor any country on earth, that is more exclusively, proscriptively, and absolutely upon a gold standard than the State of California. [Applause.] Now, the gentleman from California made a good speech, and I hope he will stand upon it until he sees fit to retract it.

Mr. JOHNSON of California. I never retract. [Laughter.]

Mr. GROSVENOR. Mr. Chairman, we have outstanding $350,000,000, in round numbers, of silver certificates. They had their origin in the statute that authorized the purchase of the bullion which is deposited in the Treasury and without waiting for its coinage the issuance of the silver certificates, which became at once a part of the circulating medium of this country. It was practically that much addition to our silver currency. Have we done nothing for silver? There is in existence in the United States between six and seven hundred million dollars of silver, every dollar of which, thanks to the intelligence of the Republican party in its great body and not in its factions, is worth as much as any gold dollar in the Treasury of the United States of America. Is that doing nothing for silver? Silver is a legal tender. Gentlemen use the sadly, almost fraudulently, always misleading statement that silver has been demonetized in this country. What do you mean by "demonetization?" Why, that silver has ceased to be money. But is that true? There are nearly $700,000,000 in the United States of silver and its representative, just as much money as you have of gold that is so cautiously and carefully hoarded in the banks of the State the gentleman from California in part represents.

Mr. HYDE. Will the gentleman from Ohio permit a question?

Mr. GROSVENOR. Certainly.

Mr. HYDE. Does the gentleman regard the silver certificates in circulation as standard money?

Mr. GROSVENOR. Well, I am not a philosopher; I know something of standard-bred horses and things of that kind, but as to the other——

Mr. HYDE. Permit me a moment. Do you know the meaning of "standard" as used in the Republican platform in 1892?

Mr. WALKER of Massachusetts. Mr. Chairman, I rise to a question of order.

The CHAIRMAN. The gentleman will state it.

Mr. WALKER of Massachusetts. That it is contrary to the rules of the House to ask private questions of a member occupying the floor. I claim that such questions should be spoken loud enough for all the members to hear and understand the course of the debate, and that no member should address another who is occupying the floor without the permission of the Chair.

The CHAIRMAN. The gentleman was strictly in order, as the gentleman from Ohio yielded to him.

Mr. WALKER of Massachusetts. But I make the point of order that the gentleman from Ohio had no right to yield for a question which is not spoken in the ear of the whole House.

Mr. HYDE. Well, I have perhaps not as good lungs as the gentleman from Massachusetts, but I am a Republican, and have been since I first voted for Abraham Lincoln. When the gentleman from Ohio who was occupying the floor yielded to me I supposed that I had the right to ask a question. [Laughter and applause.] I believe this is the second time that I have asked one since I have been here.

Mr. GROSVENOR. I hope the gentleman will ask more of them. I am very much obliged to the gentleman from Massachusetts, and think I can say, without arrogating to myself any great power, that I generally take care of myself in a fairly satisfactory manner to myself. [Laughter.]

Mr. WALKER of Massachusetts. Mr. Chairman——

The CHAIRMAN. Does the gentleman from Ohio yield?

Mr. WALKER of Massachusetts. I do not rise to ask a question, but in my own right as a Representative on this floor, to a question of personal privilege.

Mr. GROSVENOR. I hope the Chair will keep account of my time.

Mr. WALKER of Massachusetts. It is this——

Mr. GROSVENOR. The gentleman from Washington asked a perfectly respectful and pertinent question. I had been speaking of the silver currency of the country as the money of the country, and not a demonetized or discredited money; for he who to-day talks of the "crime of 1873" simply writes down the men who are so claiming as incapable, incompetent to be members of this House, unfit to be members of the Senate, unfit to be anything. For a man who sits in the Senate of the United States and hears, or ought to hear, sixty pages of the CONGRESSIONAL RECORD sounded in his ear, and is not aware of what is being said, ought to go home and never come back again. [Laughter.]

Mr. BARTLETT of Georgia. I should like to ask the gentleman if no less a person than James G. Blaine, who at the time was Speaker of the House of Representatives, did not, in 1878, in a speech made in the Senate, say that he was not aware at the time of its passage that the act which demonetized silver contained that provision.

Mr. GROSVENOR. I do not take back anything that I said.

Mr. BARTLETT of Georgia. I ask the gentleman if Mr. Blaine did not declare that he did not know it?

Mr. GROSVENOR. I reiterate my former statement and stand by it.

Mr. BARTLETT of Georgia. You do not answer my question, then?

Mr. GROSVENOR. There is no need to answer it further. That answers it.

Mr. BARTLETT of Georgia. I do not understand the gentleman.

Mr. GROSVENOR. That is the answer. I do not yield my original proposition. Ignorance of that which a member of Congress ought to know, and easily could know if he gave attention to the public business, is no excuse for his failure to know, and no defense to the charge that he neglected public business.

Mr. BARTLETT of Georgia. What?

Mr. GROSVENOR. What I said before. [Laughter.]

Mr. BARTLETT of Georgia. Let me ask you another question?

Mr. GROSVENOR. No; I guess you had better not. [Laughter.]

Mr. BARTLETT of Georgia. I do not think the gentleman can answer it.

Mr. GROSVENOR. I do not think the gentleman from Georgia wants to ask any question that can throw any light on that subject. The gentleman from Washington, if I understood him, asked me what was the meaning of the word "standard" in the platform of 1892. I think the use of that word in that connection was, that it should be money of the value of other money—standard money. Money of the standard of the money of the country. I do not think that it intended to mean that it was a kind of money that could control the action and discretion of the Treasury Department. I am one of those Republicans who believe that every dollar of the national debt is, as matter of law, redeemable in gold or silver, the money of the Constitution, at the option of the person who pays out the money. I think anything short of that would be simply absurd.

That is the position of the Republican party; that is the position of the party that is now threatened with destruction because it has not done enough for silver. It has made silver a legal tender for every debt; it has made it receivable for public debts; it is circulating it to the utmost capacity of the Treasury Department; it has put millions upon millions of dollars into the pockets of the monopolists who hold it; and to-day it stands demanding that such legislation shall be had and such treaties shall be made as to ultimately fit it—not make it by law, but make it fit—to be the money of redemption. I take it there is a good deal of difference between a statute and a public declaration that makes a currency standard money and a declaration that compels the use of it as the money of ultimate redemption of the promises of the Government. The one is a statute, the other is a practice of the Department; and while the civilized nations of this world, all of them, the great commercial nations, use gold as the money of ultimate redemption, the United States must do it or the United States must lose its position among the people of the world.

Now, Mr. Chairman, we are told that unless this thing be done and done speedily—what thing? "Something for silver; give silver something"—we are told this morning that if that is not done the Republican party shall die.

I hold in my hand a special telegram to the New York Herald of this morning, purporting to give the substance of a political platform issued in this city on yesterday, not made as a public declaration of these Senators in the Senate of the United States, and therefore when I speak about it I am not criticising any coordinate branch of the legislative part of the Government; but they have sent it out, it is said, to form a rallying cry, a demand, and I have no doubt of the truth of this statement, so far as the attitude of a few, at least, of the men named in this statement is concerned, because it is in keeping with the whole conduct of the gentlemen composing a part of this list in the Senate itself. I will put the entire abstract, a very brief one, into my speech. The substance of it is a declaration that you must indorse the platform of 16 to 1 as the ultimate policy of the Republican party or

"there will be no Republican party." That is the declaration, and it is signed by a number of Senators, whose names I will read:

LEE MANTLE, GEORGE L. SHOUP, EDWARD O. WOLCOTT, JOHN H. MITCHELL, FRANK J. CANNON, H. M. TELLER, FRANCIS E. WARREN, H. C. HANSBROUGH, T. H. CARTER, GEORGE C. PERKINS, J. D. CAMERON, C. D. CLARK, ARTHUR BROWN, R. F. PETTIGREW, and FRED T. DUBOIS.

I do not believe the statement published in the press heretofore alluded to correctly stated the position of a number of the gentlemen named, but it shows the desperate character of the men who are holding the Republican party by the throat and threatening to bolt in advance of its platform.

The following is the special dispatch referred to:

SILVER MEN'S ULTIMATUM—SIXTEEN SENATORS AGREE TO PREVENT PROTECTIVE LEGISLATION UNTIL SILVER WINS.

[By telegraph to the Herald.]

PHILADELPHIA, PA., *February 7, 1896.*

Wharton Barker, as one of the foremost leaders of the silver forces, has secured the indorsement of sixteen Republican members of the United States Senate pledging them to a policy of bimetallism and protection.

Armed with the document containing the original signatures of the sixteen Senators in question Barker to-day issued an open letter to the manufacturers containing a declaration of principles, in which he makes the bold assertion that no more protective tariff bills will be allowed to pass Congress until the protectionists of the East consent to have silver coupled with protection.

He further states that the responsibility rests with the manufacturers of the East to force the Republican party to adopt his (Barker's) platform, and that by so doing alone can they save the protective system. To ignore his platform means, he says, the disruption of the Republican party, and it will lose the sympathy and alienate the support of those who put bimetallism before protection, and without whose support the passage of any further tariff measures is impossible, thus making the defeat of the Republican party inevitable.

In his letter he says: "You must indorse such a platform and force its adoption by the Republican party or there will be no Republican party."

The Senators who signed the agreement are LEE MANTLE, GEORGE L. SHOUP, EDWARD O. WOLCOTT, JOHN H. MITCHELL, FRANK J. CANNON, H. M. TELLER, FRANCIS E. WARREN, H. C. HANSBROUGH, T. H. CARTER, GEORGE C. PERKINS, J. D. CAMERON, C. D. CLARK, ARTHUR BROWN, R. F. PETTIGREW, and FRED T. DUBOIS.

Mr. TELLER indorses it, but says he prefers a ratio of 15½ to 1.

In this connection it may be stated that these gentlemen representing entire States, two Senators to a State, will represent in this coming election in an electoral college of 460 votes the enormous power of 16 electoral votes. "We, the tailors of Tooley street!"—"We, the people of England!" [Laughter.] Then we have Oregon, represented in part by one Senator. I undertake to say that the old Republican State of Oregon will next June testify, and her voice will be heard ringing, as it has always been heard, across this continent in the early days of the summer, protesting against that declaration. North Dakota in part, California in part, North Carolina in part, and Pennsylvania in nothing—nothing, absolutely nothing.

I want to refer now in detail, and I have taken some care to prepare the statement, and I want these gentlemen who send out their messages that "there shall be no Republican party" unless the Republican party shall indorse the doctrine of the free and unlimited coinage of silver at the ratio of 16 to 1—I want every one of these gentlemen to study this, and let each one, when he is through with these figures and sees no opening to criticise, answer the question whether he is representing a party or a faction, whether his presence inside or outside the party is really indispensable to party success.

THE DEMANDS OF THE FREE-SILVER REPUBLICANS.

Threats of political apostasy, menaces of bolts from party nominations, and indications of party division are important and potential only in view of two conditions:

First. That it is the deliberate purpose of the persons or factions making such demonstrations to carry into execution their threats or menaces.

Second. That it is in their power to execute, as a last resort, their threats.

The Republican party of the United States, looking forward to the contest of 1896, can not avoid taking into consideration certain utterances of Republicans purporting to speak on behalf of the advocates of free and unlimited coinage of silver. However earnestly we may advocate the theory of duty and obligation to principle, the question of success obtrudes itself upon our consideration at all points, and so, when distinguished men, claiming to represent, and probably to some extent actually representing, an important sentiment upon an important question of American politics, threaten to overthrow the party in the coming battle if their peculiar notions are not embodied in the platform and their peculiar views are not fully represented in the candidates, it is the part of wisdom to duly consider the situation in the light of the two propositions which I have suggested.

Recently, and especially during the fall prior to the meeting of Congress, there were utterances by certain gentlemen claiming to be members of the Republican party indicative of a purpose on behalf of a certain interest to demand that that interest shall write the platform and nominate the candidate of the Republican party; or failing in both these demands the defeat of the party is decreed. One gentleman used the following language:

Let the Republicans of the East beware. We will submit to a fair presentment of our case before the voters of the United States and be reconciled to their decision, but our influence can never be stifled by political legerdemain or gold-bug intrigue.

Many more such declarations would leave Western Republicans without hope and drive them out of the party. I would also point to the fact that such a result would likely throw the election next year into Congress and, if this should occur, it would be impossible to elect a Republican President on a gold platform, each State having but one vote, thus giving 13 out of the 45 to the silver States.

In this connection it may be pointed out with propriety that the honorable Senator from South Dakota [Mr. PETTIGREW], in a recent interview in the city of New York, said:

If the silver men are ignored and a gold bug is nominated upon a gold platform, seven or eight of the Republican States of the Northwest will be lost to the Republicans.

When asked about the effect of the bolt of "seven or eight of the Republican States of the Northwest," he said that it would have the effect to prevent an election by the people. Then he said that in that event there would probably be a combination of Southern Democrats with Northwestern silver States, and in Congress their candidate might prevail. It is due to the distinguished Senator to state in this connection that he disavowed making a threat in this way and uttered the following exceedingly sensible sentence: "Threats are very silly among men." How they are among women I do not know. [Laughter.] These two declarations were made prior to the recent election, and doubtless if the gentlemen who made them were to revise the statements referred to, there would be modification of these utterances if not wholesale repudiation of the sentiment.

But however that may be, the important consideration is what weight is to be given to these menaces of danger. The next electoral college will consist, as appears now, of 446 electors, a majority of whom will be 224, and that number will be required to elect a President. Assuming now that the seven or eight States referred to by Mr. PETTIGREW should bolt and stand ready to join with the Democratic faction as threatened, and then assume that this defection took place, as it would have to in order to be powerful before the election in November, it is safe to say that beyond all reasonable doubt the following States would elect Republican Presidential electors: Connecticut, 6; Illinois, 24; Indiana, 15; Iowa, 13; Kansas, 10; Maine, 6; Maryland, 8; Massachusetts, 15; Michigan, 14; Minnesota, 9; Nebraska, 8; New Hampshire, 4; New Jersey, 10; New York, 36; Ohio, 23; Oregon, 4; Pennsylvania, 32; Rhode Island, 4; Vermont, 4; West Virginia, 6, and Wisconsin, 12. Here are 263 electoral votes, or a majority of 38. A careful inspection of this list of States will satisfy anyone that there is not a weak spot in that line, nor is it reasonable to believe that there will not be added to that column the vote of California and Washington, making 13 in addition; and that is not all. Upon this issue pressed upon the people we have the States of Delaware, Kentucky, Tennessee, and Louisiana, with 37 electoral votes, more likely to be Republican than Democratic.

Mr. TAWNEY. If the gentleman will allow me, why do you propose to exclude Minnesota?

Mr. GROSVENOR. I have her in here. Perish the proposition!

Mr. GAMBLE. I would respectfully ask the distinguished gentleman from Ohio upon what ground and his reasons for excluding South Dakota from the list of Republican States. I challenge the accuracy of such a statement. The Republicans of my State are now and always have been loyal to the principles of that party, believe in its policies, and are proud of its history. It has never yet suffered defeat at the polls in asserting Republican principles before as intelligent and patriotic a body of electors as reside within the confines of the nation. I state here and now that South Dakota will be found at the next election in the Republican column upon the platform that will be promulgated at the St. Louis convention, which, I believe, will treat fairly and justly this great subject now under discussion. The Republican party of South Dakota is in favor of bimetallism, and such has always been the uniform declaration by the party in its national platforms. I believe it will not depart from that policy now.

To the criticisms indulged in by the gentleman, as far as they relate to the senior Senator from my State, I do not care to reply. I prefer rather to allow him, if he sees fit, to answer in his own time and in his own way.

Mr. GROSVENOR. I was only showing what there was certain without reference to what the Senator said. I must treat the Senator with perfect respect while he is Senator.

The "seven or eight Republican States of the Northwest," to which the distinguished Senator from South Dakota doubtless

refers, are Colorado 4, Idaho 3, Montana 3, Nevada 3, Wyoming 3, Utah 3, South Dakota 4, and Washington 4, with 27 electoral votes. Now add these to the Southern votes, Alabama 11, Arkansas 8, Florida 4, Georgia 13, Mississippi 9, South Carolina 9, Texas 15, Virginia 12, making 84 votes; and then add these to the 27 votes, and you have 111, and there remains not disposed of North Dakota 4, Delaware 3, Missouri 17, and North Carolina 11. Of these 35 votes upon the plain issue of free silver and Democracy, against sound finance and protection, I think no intelligent man will doubt that there is more likelihood that Delaware, Missouri, and North Carolina, with 31 electoral votes, would vote for the Republican candidates than for the free-silver candidates. So much for the election before the people in November, 1896.

Now, assuming that the unlikely, and indeed almost impossible, shall happen and the election be thrown into the House. It must be borne in mind that each State in such a contingency has one vote, and that vote is controlled by the majority of its delegation in the House. If a State is evenly divided she does not vote. In this case Maryland, Tennessee, Kentucky, and North Carolina would be silent. The only contingency upon which this suggestion would be erroneous would be the possibility, if not probability, that Judge Denny will be successful in his contest with OWENS of Kentucky, in which case the vote of Kentucky would be for the Republican candidate, but without that the four States would be deducted from the 45 States, leaving 41 votes to be cast, and 21 would be a majority. Where will these 21 votes come from? Here is the list that is as certain as anything in politics to vote for the Republican candidates: California, Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, Washington, West Virginia, and Wisconsin, 24 votes.

Assume that the unholy alliance suggested between the Democracy of the South and the free-silver States of the Northwest could be consummated, a result that it is impossible to believe can be brought about. In that event we should have for a mongrel candidate, whoever he might be, Idaho, Montana, North Dakota, Colorado, Nevada, South Dakota, Wyoming, Utah, Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, South Carolina, Texas, and Virginia. The suggestion that all these States could be brought into a harmonious organization through the present delegations in Congress is too absurd to be seriously contemplated, I admit; but that is the worst that can happen; and that is not all of it, for in the Constitution of the United States, in Article XII, appears the following, referring to the conditions spoken of by Senator PETTIGREW, where neither candidate has a majority of the electors:

> And if no person have such majority, then from the persons having the highest numbers, not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately by ballot.

Thus it will be seen that from the regular nominee of the Republican party, the regular nominee of the Democratic party, and the regular nominee of the Populistic party the candidate must come upon whom can be concentrated the vote of 21 States.

It will take a mighty change in conditions to bring about a situation in which the State of Louisiana or Virginia or even Georgia, not to mention Alabama and Texas, could be induced to cast its vote in the House of Representatives for Coxey, of Ohio, or Debs, of Indiana. It may be pointed out in criticism of this article that Tennessee is not properly assigned a position as a State which would divide its vote. Assuming that no contest will be decided in favor of the Republicans—and I do not know that one is pending—I do assume that under no conditions which can possibly arise will the distinguished Representative from the Memphis district [Mr. PATTERSON] join in making it possible that the vote of Tennessee shall be cast for a free-silver man for President of the United States, and driven as he will be in such an emergency to vote for a Republican, he is certain to divide that State and lift it out of the contest. [Laughter.]

These considerations result in an inevitable conclusion, and that is that the Republican party in the formation of its platform and the selection of its candidates for 1896 need not cater to any element in politics which would be injurious to the high plane upon which it has always stood as a party of conservatism and integrity; nor yet will it be called upon, even if, under any contingency, such a course would be justified, to lower the standard of its high position upon the subject of a sound currency, a dollar of equal value, the promoter and defender of the commercial and financial honor of the United States. Nor will it be necessary or desirable that it shall modify any position it has hitherto occupied upon any of the great questions of American politics, for it has an assurance that upon a platform in substance and effect the platform of 1892 it can carry the country by an overwhelming majority in the popular elections in November. And if by any mutation of political conditions the elections should be thrown into the House of Representatives, the party and the country can rest in serene confidence that the House of Representatives will select without delay the candidate who had been voted for as the regular Republican candidate at the November election.

So it will be seen by this analysis that the threats of bolters and the menaces of factions need not and will not deter the Republican party from the course it has adopted. The path of duty and honor is the path of safety and leads to success. [Loud applause.]

Mr. ALLEN of Mississippi. Will the gentleman yield for a question?

Mr. PATTERSON. I trust the gentleman from Ohio will allow me a single word.

Mr. GROSVENOR. I yield first to the gentleman from Mississippi.

Mr. ALLEN of Mississippi. I wanted to ask the gentleman from Ohio in all fairness whether he thinks the remarks he has just submitted are carrying out an agreement entered into by himself and myself to keep down all partisan feeling in this House. [Laughter.] Does he not think that this speech of his, while not directly a partisan speech, is calculated to appeal to partisan feeling? [Laughter.]

Mr. GROSVENOR. I think not. I think this is a plane upon which all the intelligent, patriotic people of the country can stand. Now I will hear the gentleman from Tennessee.

Mr. PATTERSON. Mr. Chairman, my friend from Ohio has singled me out and surmised what my action would be in a certain contingency. I wish to say to this House in general terms that I fondly look forward to the day when the Democratic party, as in the past, will be distinctively the sound-money party of the the country. And I do not expect ever to see the day—I do not contemplate ever seeing the hour—when I shall not stand with the Democratic organization in any and every contingency. [Applause on the Democratic side.]

Mr. GROSVENOR. Well, Mr. Chairman, there are so many "contingencies" in American politics that I thought I might speak about one which possibly might invade the peaceful domain of the gentleman's mind at an early day. [Laughter and applause.]

Mr. MCCLEARY of Minnesota. May I interrupt the gentleman a moment? I want to ask him why he puts North Dakota in the doubtful column after listening to that magnificent address delivered the other day by one of the Representatives from that State [Mr. JOHNSON]?

Mr. GROSVENOR. I wanted to be intensely respectful to the distinguished Senator from that State. I do not believe that one of those States will forsake the banner of the Republican party [applause]; the banner of the party that has made us what we are; the banner of the party that has made the dollar in the pocket of my friend from California all that it is worth to-day; the party that refused to go, upon the demand of the "sand-lot" champion of California, into the mire and filth of irredeemable paper money; that party that gave to this country a standing among the financial states of the world. Men may come and men may go, but these States will not secede from the party to follow the dictation of a faction or the suggestion of local speculative interests.

Mr. OWENS. May I ask the gentleman is that the same party that a few weeks ago retailed its national convention to the highest bidder?

Mr. GROSVENOR.—

> Great God! on what a slender thread
> Hang everlasting things!

[Laughter and applause.]

Mr. MILES. Is it the same party that has just made a deal with the Populists at the other end of the Capitol in order to get control of a few offices?

Mr. GROSVENOR. I think it is the party that at the other end of the Capitol has been compelled to take possession of a machine which your party has been smashing for the last year and a half. [Laughter and applause.]

Mr. OWENS again rose.

Mr. GROSVENOR. I decline to be further interrupted.

The CHAIRMAN. The gentleman from Ohio declines to yield further.

Mr. GROSVENOR. I do not want to have my time occupied by frivolous matters.

Mr. OWENS. I want to ask the gentleman——

The CHAIRMAN. The gentleman from Ohio declines to yield.

Mr. GROSVENOR. I shall be glad to hear the gentleman from Kentucky; he is such a fine-looking man.

Mr. OWENS. I just wanted to ask the gentleman whether this is the same party that signalized its return to power in the Senate by sending us the free-coinage bill which we are now considering?

Mr. GROSVENOR. Well, I have just been talking about that party, and I think I have characterized it as well as the gentleman from Kentucky could. If not, he can get some time and do it for himself. If there is anything in the action of the Senate, when you come to look over the yea-and-nay lists, that gives any comfort to any honest-money Democrat, he is welcome to get that list and read it. The Republican party stands to-day offering to this country a remedy for its troubles. It stands to-day assuring

the people that the party which has made our country what it is is willing to utilize every dollar of silver that can be made and kept equal in value to the gold dollar of the country. Our Democratic friends are shouting that good times are coming, and the harbinger of good times is demonstrated by the fact, as they claim, that some five hundred and odd millions of dollars were subscribed at the Treasury for the loan of $100,000,000 of bonds.

I have not very much time to speak of that branch of the question, but I desire to caution my friends on the other side not to get excited or overjubilant at that outlook. Men invest their money in this country in the best enterprises that they can find, and at a time when the industries of the country are prostrate—I pronounce without hesitation the whole proposition that there are good times among the masses of the people as a fallacy, a false statement, and a delusion. In times like these when labor is unemployed, when prices have gone down, when foreign trade has been substantially abandoned, when confidence has failed in the matters connected with our ordinary industrial system, then money is subscribed at low rates of interest for Government securities, and the highest evidence in my mind that the great moneyed interests of the country have gloomy forebodings for the future and entertain a feeling of grave doubt and uncertainty as to the outcome is the enormous rush that was made to bid for and purchase these 3 per cent securities of the Government.

Mr. Chairman, if you had made that offer to the people of this country in the fall of 1892 you could not have gotten that amount of money for a 3 per cent loan under any circumstances. And why? Because they had something to do with their money. There was something that labor could do. There was hope in the minds of the people; there were ambition and prosperity all over the land. To-day the banks come forward, men of large means and even in some instances of small means, small holders of money, now come and subscribe to the interest industry that will yield them a return of 3 per cent on their money because there is nothing else in the country to which their money can be applied.

There never was a time in the history of the United States when there was greater demand for Republican statesmanship than there is now. Whether this Congress shall be able to achieve anything or not I do not know, but I do know that the House of Representatives, with its great Republican majority, has already made an impression upon the business of the country. I do know that by the passage of the bond bill, which you now want to destroy, and by the introduction of the resolution of similar import in the Senate, and by the protests that came as a response to our declaration, the Administration abandoned the star-chamber process of loaning the money of the people, and upon that $100,000,000 of loan that is now to be floated, the difference between the sum reached last winter by the secret process of selling the bonds and the process prescribed by the bill passed by the House of Representatives this winter, a difference of something like ten or twelve million dollars would be secured to the Treasury [applause], and every dollar of it is due to the protest of the Republican House of Representatives against the demand of the Administration of the Government. And I say now, with all due deliberation, that he of the Republican party who stands here to-day and votes for that chimerical proposition, the free and unlimited coinage of silver, thereby giving license to the Administration to enter into another combination or star-chamber process to loan the money in the dark, will be held responsible by his constituents when there comes a return of the patriotic sense of the common people of the nation. [Applause.]

Vote for free silver if you see fit; vote for the mistaken dogma, as I look upon it, if you believe it to be right, or if in your honest judgment you believe in the principle, but do not do so by protesting that you are against the principle of borrowing the money of the country in a star chamber of a Treasury conspiracy.

Mr. Chairman, let us reject this proposition and send it back to to the other end of the Capitol, and if the Senate wants to encumber the tariff bill we passed with free coinage let them do so. I take it for granted that if to-morrow the trump of the Angel Gabriel should blow, and the sheeted dead be called to judgment, there would spring up some members and ex-members of that body and hundreds of men who would shout to Gabriel to suspend procedure until they could offer an amendment to the call of judgment at the ratio of 16 to 1. [Laughter and applause.] The whole business is a mere attempt by party revolution to obstruct legislation and block the wheels of Government and force the views of an unimportant minority upon an overwhelming majority, and this in the interest of a local production. I appeal to the Republicans of this House, as I appeal to the Democrats who favor a return to the time-honored principles of that great party, and who hope for the future in American politics, that we shall all stand together for the interests of the whole country and not of a section, and that in the election of 1896 we take such a position as will once and forever settle this question in the interests of all of the people, and the great party that has done so much for the country will take care of subsidiary questions as they arise along the future pathway of the nation. [Applause.]

Silver Restoration—The Duty of the Republican Party.

SPEECH
OF
HON. CHARLES A. TOWNE,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue, with Senate amendments—

Mr. TOWNE said:

Mr. CHAIRMAN: If it were not for a profound, an almost overpowering, sense of duty, I should not on this occasion vex the ear of the House nor venture to do violence to that feeling of embarrassment which I assure you is most oppressive to myself and, I fear, all too evident to my auditors; particularly when I must follow the distinguished and eloquent gentleman from Iowa [Mr. HEPBURN], whom the House is always glad to hear. Under these circumstances I am reminded of those familiar lines of Shakespeare,

> As in a theater the eyes of men,
> When a well-graced actor leaves the stage,
> Are idly bent on him that enters next.

But, sir, I conceive that the general subject which is brought before this House by the pending measure is by all odds the most important one that will engage or has engaged the attention of this body at this session of Congress. The eminent gentleman who opened the discussion upon this measure [Mr. DINGLEY], following a metaphor that had its origin, I believe, with Aristotle, and which has had frequent employment since, well likened the money of the commercial nations of the world to the lifeblood of the physical body. Sir, the comparison is most apt; for not more do the health and efficiency and happiness of the physical organism depend upon the quantity and condition of the blood, than do the welfare, the prosperity, and the progress of society depend upon the volume and character of the money that flows in the channels of its commercial circulation. This it is which gives importance and special emphasis to the question now pending; because there are hundreds of thousands of men in the United States and elsewhere in the world to-day who believe that there is a studied effort on the part of certain interests by subtle surgery to abstract from the blood of the body politic its white corpuscles [applause], and to allow to atrophy one of the ventricles of its great central heart whose harmonious pulsations give power and energy and movement to its organization. [Applause.]

The question, sir, is an imminent one. It is a question that, like Banquo's ghost, will not down. "Avaunt and quit my sight" will not banish it. Gentlemen may cry, "Peace, peace;" but there is no peace. Politicians may say, "We will make this thing or that thing or the other thing the issue." But, sirs, it is issues that make parties, not parties that make issues. [Applause.] Some gentlemen say, "Let it alone; let the question settle itself; do not agitate it." Sir, that is not the language of brave men; that is not the language of statesmen; that is not the language of the whilom and customary leadership of the grand old Republican party. [Applause.] Its constant reiteration shows a decline in the ancient and salutary standards of self-government.

Our institutions are founded upon and presuppose the fullest investigation, the genuineness of opinions, fair, free, and fearless discussion. Had men in the past neglected to exemplify these requirements and to insist upon their guaranty, what would have been the history of liberty? To what unhappy condition would not mankind have been reduced had John Hampden been afraid to arraign his king for the unconstitutional exactions of ship money; had Sam Adams and Patrick Henry been obsequiously silent as to the stamp duty, or hesitated to affirm the great principle of "no taxation without representation;" had Thomas Jefferson permitted himself to entertain politic doubts whether "all men are created equal;" had Washington deemed it safer to submit to British tyranny than to defy it; had Garrison, Lovejoy, and Phillips been frightened from their high purpose by the calling of hard names and threats of personal violence; had Sumner, Seward, and Lincoln thought it indiscreet to denounce the treatment of Kansas as a crime, to assert that the conflict between freedom and slavery was "irrepressible," and to make a new application of the old proverb that "a house divided against itself can not stand." [Applause.]

No, sir; let us not abandon our duty. Let us stand to it like men. Said Daniel Webster, in answer to a similar argument sixty years ago:

> If any evil arises to destroy or endanger this medium or this currency, our duty is to meet it, not to retreat from it—to remedy it, not to let it alone. We are to control and correct the mischief, not submit to it.

Moreover, a question of this magnitude and significance ought to be discussed in a spirit and manner appropriate to so high a theme. To treat it as if it were the claim of a small private interest seeking

an avenue for self-aggrandizement at the expense of the general good, is to show a grave incompetence to weigh and handle the momentous concerns of the people. That so many in this House are unable to grasp the higher and only real issues involved, is not complimentary to the standard of American statesmanship. Similar but much severer strictures must be drawn upon a considerable part of the public press. To call one's opponent in an argument "fool," "crank," "lunatic," "traitor," is as unprofitable as it is impolite. People are apt to suspect one who "doth protest too much." Better answer your antagonist's argument than abuse him; and if he really be a fool his argument ought to be easily answered. Nor can you escape the ordeal of critical examination by merely pasting a label on your faith. Calling it "honest" and "sound" does not by any means make it so. It only begs the question. Nobody contends for unsound and dishonest money. I will permit no man to call me dishonest, nor shall he affix such a brand upon any proposal of mine.

The people can not be deceived. They are studying this question as never before. Epithets can not deter them from penetrating to its mystery. The "craze" may have passed, but the era of sober and deliberate investigation has begun, nay, is already far advanced; and I warn gentlemen that there never has been so much interest in this great question as there is now. "What is 'honest money'?" men are asking. "Have we it now? If not, how shall we obtain it?" These questions must be answered by arguments, not by adjectives.

Nor, sir, on the other hand, does this discussion give proper place to wild talk of revolution, secession, and bloodshed. Sir, that kind of declaration has no justification in this forum or in any other in the United States. This is a government of the people. It is the highest form yet known of that kind of government which a great commentator has called "a government by discussion;" and it is by orderly, sane, passionless, though earnest, discussion in the presence of the intelligent public opinion of the United States that we must settle all large questions of policy. Duclos said in reference to public opinion, "the man in power commands, but the intelligent govern, because in time they form public opinion, and that sooner or later subjugates every kind of despotism." We bow to the reign of law, and he who advocates any other way of settling differences is preaching anarchy and will find no sympathy in this country.

In the discussion of this question, the first line of demarcation should be plainly drawn between the advocates of the single gold standard upon the one side and the advocates of bimetallism upon the other. In this matter there is great confusion of terms. It has been noticeable in the discussions on this floor, it is noticeable in similar discussions everywhere among those who take part in this controversy. Men call themselves bimetallists, men have to-day upon this floor called themselves bimetallists, who believe in a monetary system having one metal as a basis and another metal practically redeemable in it or resting upon it.

That is not bimetallism. That, I repeat, is not bimetallism. Nothing can be gained by a false use of terms. Everybody ought to favor the removal of all uncertainty in the meaning of the terms employed in this argument. If a man actually believes in the continuance of the present system, and I concede that there are two sides to the question, and that a man may rationally contend for the one or the other; but if a man honestly believes that gold should be the sole measure of value in the world, why can not he say so, and stand boldly and bravely up to his declaration? [Applause.] I have no patience with the believer in the gold standard who exhausts all the resources of ingenuity in an attempt to avoid stating his real position. Such evasion bespeaks a lack of confidence either in his own conclusions or in their acceptability to the country.

Now, sir, a man who is honestly a bimetallist, who believes in the use of both gold and silver as standard money, as money of ultimate redemption, the final basis of all token and representative currency, can not consistently stand up here and deny the evils of the single gold standard. It amazes me to hear gentlemen upon this floor loudly proclaim themselves bimetallists, and then launch themselves into tedious argument to prove that the gold standard is wholly satisfactory. They are bimetallists, yet gold is a stable measure of values! They are bimetallists, yet there is no appreciation of gold! They are bimetallists, yet prices have not fallen! They are bimetallists, yet prices *have* fallen, and entirely because of cheapened cost of production! They are bimetallists, yet the restoration of silver is impossible! They are bimetallists, yet the present system must continue indefinitely! They are bimetallists, but the single gold standard is good enough for them! Why, sir, this is the very acme of inconsistency. I know not which is the more pitiable, that such folly should be tolerated, or that so many who commit it should be so unconscious of it.

It may be thought, sir, that I am spending too much time upon this matter. But in the forum where this discussion is soon to be taken, I mean the great tribunal of the public opinion of the United States, it is of the utmost importance to both sides that we agree upon the meaning of the terms used in the inquiry, and that men honest in their convictions shall boldly take their places under the banners they mean to follow.

Mr. Maurice L. Muhleman, deputy assistant treasurer of the United States at New York, in his recent book, Monetary Systems of the World, page 12, says:

> By bimetallism, strictly defined, is meant the free and unlimited coinage of both gold and silver into coins of full debt-paying power.

I refer to Mr. Muhleman's definition because he speaks with authority upon matters of fact, and because his book aims not at theoretical discussion, but at a clear statement of settled and existing conditions.

Let me cite another authority: The royal commission appointed in 1886 by Queen Victoria "to inquire into the causes of the recent changes in the values of the precious metals," reported in 1888, and the report was published by our Government in 1889. I quote from page 59 of that report, section 116:

> A bimetallic system of currency, to be completely effective, must, in the view of those who advocate it, include two essential features: (*a*) An open mint ready to coin any quantity of either gold or silver which may be brought to it. (*b*) The right on the part of a debtor to discharge his liabilities, at his option, in either of the two metals at a ratio fixed by law.

That, sir, is bimetallism; and if a man do not believe in it let him say so, but let him not believe in something else and label it "bimetallism" for purposes of deception. [Applause.] The statement that the present system is bimetallic, if not ignorant is not candid. The attempt to substitute for the well-understood meaning of bimetallism a new definition, whereby it is applied to any monetary system in which both gold and silver are "used," without reference to the manner of the use, is a subterfuge unworthy of the honesty and dignity of American political discussion, and one that will not impose upon the aroused intelligence of the American people. [Applause.] If their final judgment is for gold monometallism, it will not be pronounced under any mistake or delusion. You can not promise them both silver and gold and satisfy them with gold alone.

Until recently it never entered into anybody's head since the word bimetallism was coined to have a doubt about what it meant. There can be no question as to the meaning of the word. Bimetallism means Two-metallism. It was coined to mean, and does mean, a money system where the two metals, gold and silver, are treated alike. It never has meant anything else. It signifies the equal access of gold and silver to the mints at a fixed ratio, and the option by the debtor as to the coin in which he shall discharge his debt. This matter is important. Gentlemen here and elsewhere constantly misapply this word. I do not propose to permit it any longer, to the extent to which my little influence may go. I here and now challenge any gentleman upon this floor or anywhere else—and this is not a mere rhetorical defiance, but is intended to bring this confusion to an end—to produce a definition of bimetallism by any publicist or economist of authority or any statesman of standing, made prior to 1895, which is not in substantial accord with the definition I have given. Let no gentleman who may do me the honor to reply to this speech neglect this point. Let him be either for the single gold standard or for bimetallism, and if for bimetallism let him discuss the means of reaching the end and frankly concede that the present system cannot be permitted to last.

It has been, sir, only since the great parties of the United States have been every one of them unequivocably pledged to bimetallism, and that fact conflicted with the desires of certain people, that they have sought to make a new definition of bimetallism, and under that new definition to hold the pledgors to the letter of their ancient pledge without its spirit. [Applause.] Why can not men who do believe in the gold standard be honest and say so? I do not impute now, when I use the word "honest," any moral obliquity to any gentleman. I should perhaps rather phrase it in this way: Why shall not a man have the open and manly courage of his convictions and stand up and be counted? Why let him not say as the New York Evening Post said? That great representative of English opposition to the Monroe doctrine, protection, and bimetallism, and every other form of Americanism, said, not long ago:

> There are some people (a diminishing number, however) who hesitate to avow themselves in favor of the single gold standard, although they are opposed to any change from the present system. There are others (also a diminishing number) who think that because a certain limited number of silver dollars are in circulation we have bimetallism or the double standard in this country. This is a totally false conception, as false as it would be to assume that we have a paper standard because a limited number of greenbacks are afloat. * * * The "gold bugs" have no change of standard in contemplation. They are satisfied with the present posture of affairs, so far as that goes. The "expulsion of everything but gold as real money" took place in 1873, and continues unabated.

Let every man who believes with the Post imitate its frankness and say so. Let him say so along with the distinguished gentleman from Massachusetts [Mr. WALKER], chairman of the Committee on Banking and Currency, who declared in his speech yesterday—I do not pretend to quote him exactly, but I remember perfectly the substance of the statement—

> That if all the nations of the world were to come together and agree upon a ratio for the free coinage of gold and silver, it could not be maintained beyond a very brief space of time in face of the inevitable laws of trade.

Perhaps he believes it, sir. If he says so, I have no doubt he does, strange and incredible as it may seem to my poor faculties. But, sir, if he does believe it, then I undertake to say he can not remain in the Republican party unless, when the Republican party next proclaims its doctrine in a national convention, it shall change its platform. [Applause.]

Now, Mr. Chairman, I am not using the words of excess and incaution. I say that the Republican platform uses unmistakable language. It may not have said what the convention meant. If anybody wants to assume the burden of proving that the Republican party in national convention assembled solemnly declared what it did not mean, he is welcome to do it; but for my own part, I have never yet found it necessary to charge the grand old Republican party of these United States with deliberate misrepresentation. [Applause.] And that party in convention assembled proclaimed, in the last authoritative national utterance that we have from that organization:

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money.

I care not what restrictions, limitations, or qualifications were added to that sentence to complete the plank, they never could get away from that initial pronouncement pledging the party to the restoration of the full money functions of silver so as to clothe it with every dignity bestowed on gold. "Tradition" refers to some ancient system, not the present. "Standard money" is not token money.

I am not now discussing the *means* of reaching it, but I defy any man on the top of this earth to say that the Republican party is not by its platform pledged to achieve bimetallism in some way, and I affirm that you must change that platform before a man who believes in a single gold standard can consistently stand upon it. If I am wrong on this point, let some subsequent participant in this debate set me right.

Now, Mr. Chairman, if bimetallists are opposed to the single gold standard, what is the reason for their opposition? It must be because in some respects the single gold standard is wrong, because in some way it is an evil, because in some way it injuriously affects the people of the United States or the people of the world. Bimetallists contend that such is the fact. They contend that the single gold standard is and has been since its adoption by the leading commercial nations an appreciating standard, whose unit has rapidly increased in general purchasing power, and must continue so to increase; that this appreciation is evidenced by a progressive fall of prices throughout the gold-standard world, not accounted for by diminishing cost of production, and that the inevitable result must be to augment the burden of all debts and fixed charges, to discourage investments and enterprise, and to undermine the productive forces of the countries where it prevails. And they affirm that if these things are so, the evil is so tremendous and pressing as to call for some immediate remedial action.

Now, sir, in order to proceed intelligibly along the line of argument I have laid out for myself, it becomes necessary to get a clear conception of certain words used in the terminology of this discussion. Standard and unit are examples, occurring in the expressions "standard of value" and "unit of value." By the Century Dictionary standard is defined as "a weight, measure, or instrument by comparison with which the accuracy of others is determined;" and unit as "any standard quantity by the repetition and subdivision of which any other quantity of the same kind is measured." Thus by the expressions referred to the mind is centered on the thought of weight, dimension, and quantity, and thus some persons are led to the notion that a "dollar," or "pound sterling," or "franc" means something as absolute and definite as to value as "ton," "yard," and "quart" are as to weight, length, and capacity. But value is neither "so heavy," "so long," or "of such-and-such contents." You can not see it. Value is nothing absolute. Value is a relation. It is the ratio at which one thing exchanges for another. One thing may be worth as much as another thing, more than another thing, or less than another thing; that is, of equal, greater, or less value. But it takes two things to express value; one is compared with the other. And the relation between exchanged commodities is perfectly reciprocal. When I pay $100 for a horse, as in the illustration used by the gentleman from Virginia [Mr. TUCKER] the other day, the horse buys the $100 just as certainly as the $100 buys the horse; and if it be true to say that horses are high if they cost $150, it is equally true to say that money is high when you have to give two horses for $100. [Applause.]

Gentlemen here have much to say of "intrinsic value," and declare their willingness to vote for bimetallism when somebody shall show them how to make a gold dollar and a silver dollar equal in "intrinsic value." I should like to hear some of these gentlemen define "intrinsic value." They confuse, it seems to me, the meaning of value and utility. Things may possess qualities that make them useful, and hence will have utility, but the measure of their *value* is what they will exchange for. You pick up a piece of iron. It is useful for many purposes; but you can not tell how much it is worth, that is to say, what its value is, until you find what you can get for it. Value in exchange is the only value with which political economy has to deal.

Originally exchange was by barter. Commodities were traded one for another. The cost of production and the relation of supply and demand regulated the ratios at which they mutually interchanged. Convenience necessitated the selection of some common medium into which all commodities could be converted, and with which any of them could be procured. This medium was money, and its invention marked an advance of inconceivable importance in the development of society. Gold and silver, by reason of their special fitness, finally displaced all other things in the performance of this function. As a consequence the demand for them for money purposes, being equal to the sum total of the values of all commodities seeking to be exchanged, became so vastly more important than the demand for them for any other purpose that cost of production ceased to be a large factor in determining their value as expressed in commodities, but that value practically became the ratio between all the goods seeking exchange and the quantity of gold and silver in existence to perform the exchanges. Men carried about with them acid to test the purity of the metals and scales for weighing out the requisite amounts of them called for by numerous and various transactions. The exchange relation between a certain unit number of grains of gold or of silver and a given commodity being once determined, there was established in the minds of those who came to market the idea of its value, which, when expressed in terms of money, was its *price;* but when for any reason the number of grains of metal out of which those units could be formed grew greater or grew less, other conditions remaining unchanged, then the value of those grains of gold or silver—that is, their power to command the products which were there to be exchanged for them—became relatively smaller or greater, and prices rose or fell accordingly. And no change was made in this principle when society began to put its stamp upon those grains of gold or silver to show authoritatively the quantity and fineness of the metal. After the coin is stamped, whatever may be its name, what it is worth depends, at any given time, upon what it will buy; in other words, upon what is required to buy it. Commodity demand and supply remaining constant, an increase or decrease of the substance out of which the coins are made must correspondingly lower or raise the power of each coin; must raise or lower prices.

These observations, which seem to me to be conformable to reason, and in precise accord with what history teaches us, are sustained by practically all economists of recognized authority. The following citations will illustrate. Said Adam Smith, the father of English political economy:

Gold and silver, however, like every other commodity, vary in their value, are sometimes cheaper and sometimes dearer, sometimes of easier and sometimes of more difficult purchase. * * * The discovery of the mines of America diminished the value of gold and silver in Europe.—*Wealth of Nations.* Worthington ed., pages 24 and 26.

John Locke, the great philosopher, in his treatise on The Value of Money, said:

By which means it comes to pass that the intrinsic value (of gold and silver) * * * is nothing but the quantity which men give or receive of them. For they having, as money, no other value but as pledges to procure what one wants or desires, and they procuring what we want or desire only by their quantity, it is evident that the intrinsic value of silver and gold used in commerce is nothing but their quantity.—*Principles of Political Economy*, by McColloch, and *Essay on Interest and Value of Money*, by John Locke, edition of Ward, Lock & Co., page 233.

The same writer declares in another place (Works, Volume V, page 49):

For the value of money in general is the quantity of all the money in the world in proportion to all the trade.

In his Principles of Political Economy (Appleton edition, 1880, Volume II, pages 26-30), John Stuart Mill declares:

The value or purchasing power of money depends * * * on demand and supply. * * * Money is bought and sold like other things, whenever other things are bought and sold for money. * * * The supply of money * * * is all the money in circulation at the time. * * * If the whole money in circulation was doubled, prices would be doubled. * * * If there were less money in the hands of the community, and the same amount of goods to be sold, less money altogether would be given for them, and they would be sold at lower prices.

Robert Giffen, the ablest champion of the gold monometallists, holds this language in his Chapter on Standard Money:

In this sense, to say that the quantity of money regulates prices is only the same thing as to say of any article that is bought or sold, that its quantity is a material factor in determining its value.—*Case Against Bimetallism* page 218.

It is no answer to the quantitative argument to show, as some do, that the per capita circulation in Turkey is only a small proportion of that in France and that prices in the two countries are not widely variant. Money is a world substance and adjusts itself to the amount of business, and the method of doing it, in each country. Let the person smitten with this Turko-Frankish fancy answer the question whether, demand for goods remaining unchanged, prices would alter if suddenly the amount of money in each country were multiplied by ten. To answer "no" would be foolish, and to answer "yes" is to kill his argument.

Thus, sir, attention is strongly drawn to the function of money as a measure of value. Nearly all who discuss this general subject from the standpoint of the gold monometallist treat of money almost wholly as a medium of exchange only; but they miss entirely the philosophy of the question. The inequity and cruelty of the single gold standard lie principally in its operation as a measure of values and criterion of deferred payments.

I find, Mr. Chairman, that my time has flown away almost unobservedly——

Mr. HARTMAN. Mr. Chairman, I ask unanimous consent of the House that the time of the gentleman from Minnesota be extended

for twenty minutes. He is making one of the ablest arguments that has been presented to this House, and I ask that his time be extended.

Mr. WILLIAMS. I second the request.

A MEMBER. Make it thirty minutes. Let him finish his argument.

Mr. HARTMAN. Then I ask unanimous consent that the gentleman's time be extended for thirty minutes in addition to the ten minutes which he has remaining.

There was no objection.

Mr. TOWNE. Mr. Chairman and gentlemen, I am under very great obligation for your kindness. I will endeavor to requite it in the directness and closeness of my remarks.

Now, Mr. Chairman, after this somewhat inadequate and very hasty examination of the way in which value arises, and of the way in which price arises, price being simply the value of an article reckoned in money, and a comparison of the worth of the material in the unit of money with the worth of the article against which it is exchanged, I come to the proposition which is made by those who are opposed to the single gold standard.

That proposition is that there has been and is going on an appreciation—that is to say, a rise in value—in this standard of gold which the major portion of the commercial nations of the world has adopted; in other words, sir, it is affirmed that the quantity of all commodities, on the average, required to buy a given number of grains of gold has been and is increasing, and that from that fact there follows a train of woes from which the world has been suffering in an increasing measure ever since the mistake was made, in 1873, and thereabouts, of going to that standard. How shall we ascertain whether there has been this rise in value? There is only one way, and that is to examine the general price level of commodities. When one thing is used as a common denominator of all other things, to tell whether it rises or falls you must look at the average level of those other things and find whether they fall or rise, for the relations of the two are entirely and necessarily reciprocal.

Now, sir, a general law of this kind—and I ask the attention of the House to this proposition—a general law of this kind as to the course of prices is determinable only by a very broad generalization from observed facts. The commercial world is a complex one. The causes that affect the rise and fall, the demand and supply, and the cost of production of the infinite variety of articles that make up the modern market are difficult of investigation. A rise in the price of one commodity may accompany a fall in the price of another; as was shown by the gentleman from North Dakota [Mr. JOHNSON] the other day, who told us, as I remember, that there was a time when hay went up as wheat and corn went down; though what that fact scientifically signified is hidden in the inner consciousness of brother JOHNSON. [Laughter.] I mean no disrespect, for I know the gentleman from North Dakota as a scholarly man of distinguished ability and entire honesty in his opinions. But, I say that when you undertake to deduce a general law from the course, up and down, of two or three articles for two or three years, you are proceeding absolutely outside of the approved method of science, and a generalization of that kind has no value whatever.

But, Mr. Chairman, the scientific world has determined a way of investigating the general course of prices. It proceeds upon the selection of a large number of commodities of such character as to indicate the essential condition of the market, and extends over a number of years. Thus special causes, whether of time or of product, are largely neutralized and general results are obtained having value as indicative of the underlying law controlling the movement of prices. This method of inquiry is by means of a system of "index numbers." Thus, the price of each commodity chosen is averaged for a certain number of years, and that average is called 100. If, as is done by the London Economist newspaper, 22 commodities be used, the sum of these averages is, of course, 2,200. Then for any other year with which comparison is sought, the price of each commodity is ascertained and is set down at so many points above or below 100, according to the percentage of its rise or fall, as the case may be. These are then added and if the total exceeds 2,200 prices are higher than in the years used as the standard; if the total is less than 2,200 prices are lower. By dividing the total by the number of commodities an expression is obtained on the scale of 100, which is conveniently used in investigation. Under normal conditions various causes make temporary fluctuations in the prices of different commodities, some rising and others falling in the same period, without special significance. But when, after allowing for all such variations and offsets, general prices—the average of the whole market—have fallen, then the conclusion is unavoidable that some general cause has operated on all alike; and, as we have seen, such a fall would mean an increase in the measure of values, a dollar that had grown larger and which would require more of all commodities to buy it.

The authoritative figures for Germany are those of Dr. Adolf Soetbeer, a famous economic writer, as continued by Heinz, statistician for Hamburg. They take as 100, or the par for comparison, the average prices from 1847 to 1850 of 100 articles in the Hamburg market and 14 of British export. In England two sets of data enjoy great repute—those of the London Economist and, especially, those of Augustus Sauerbeck, of the London Statistical Society. The former are based on the prices of 22 leading commodities in the London market, using the average prices of 1845 to 1850 as 100. Mr. Sauerbeck's tables use as the par of comparison the average prices of 45 representative commodities on the London market for the years 1867 to 1877. In the United States no such scientific and exhaustive study of this subject has been made as in Germany and England. Practically, the only attempt in this direction was that undertaken in 1891 by a committee of the United States Senate, and whose results are embodied in the voluminous report which is customarily cited as the "Aldrich Report," after Senator ALDRICH, of Rhode Island, who was chairman of the committee.

This document deals with the prices of 223 articles, and uses as its par or 100 mark the prices of 1860. Although hastily compiled and based on the prices of only one year, and that year one of exceptionally low prices, and although allowing the same influence to a mass of nonstaple and unimportant articles as to the controlling and significant commodities, and notwithstanding that the operation of our protective tariff, by keeping out foreign competition and by stimulating home consumption, has tended during all the period covered by the report to maintain prices above the European level and to withstand to the utmost the influence tending to lower them, yet the results of that investigation are among the most instructive that we have. They confirm in a most emphatic way the lesson that primary money is a world substance, like the atmosphere, and that the law of an appreciating standard and measure of values is as inexorable as fate. Ingenuity may for a time postpone the catastrophe or mitigate the hardships that signal its approach, but the end is inevitable and a common ruin waits on all nations that mistakenly submit themselves to the control of such a system.

By Dr. Soetbeer's tables it appears that prices in Germany fell about 22 per cent from 1873 to 1891. Since 1891 the fall there, as elsewhere in Europe, has been very much more than in the same proportion, unquestionably exceeding 30 per cent by 1895. This means that the purchasing power of gold in Germany has increased more than 40 per cent since 1872.

In England, by the Economist tables, the fall of prices from 1873 to 1893 was 30 per cent; and the last two years have witnessed a much greater fall in proportion, showing an increase in the purchasing power of gold to have been at least 45 per cent from 1873 to 1895.

I give here the very careful and reliable figures of Mr. Sauerbeck, from 1818 to 1875. His standard, it will be recalled, is the average prices in London of forty-five principal commodities for the period 1867–1877, which is also the average for 1853–1877. The arrangement below is by continuous ten-year periods, thus equalizing merely temporary fluctuations and clearly showing the law controlling the fall of prices:

Ten-year periods and average index number.

1818–27	111	1842–51	83	1866–75	101
1819–28	106	1843–52	82	1867–76	101
1820–29	103	1844–53	83	1868–77	100
1821–30	101	1845–54	85	1869–78	99
1822–31	100	1846–55	86	1870–79	97
1823–32	98	1847–56	88	1871–80	96
1824–33	97	1848–57	89	1872–81	95
1825–34	96	1849–58	90	1873–82	93
1826–35	93	1850–59	92	1874–83	90
1827–36	93	1851–60	94	1875–84	87
1828–37	93	1852–61	96	1876–85	85
1829–38	93	1853–62	99	1877–86	82
1830–39	94	1854–63	100	1878–87	79
1831–40	95	1855–64	100	1879–88	78
1832–41	96	1856–65	100	1880–89	76
1833–42	96	1857–66	100	1881–90	75
1834–43	96	1858–67	99	1882–91	74
1835–44	95	1859–68	100	1883–92	72
1836–45	95	1860–69	101	1884–93	71
1837–46	93	1861–70	100	1885–94	69
1838–47	93	1862–71	100	Year 1894	63
1839–48	91	1863–72	101	February, 1895	60
1840–49	88	1864–73	102	Year 1873	111
1841–50	86	1865–74	102		

Thus, by these authoritative data, prices fell in England, between 1873 and February of 1895, 46 per cent. In other words, the purchasing power of gold rose more than 85 per cent. Even comparing the 1895 prices with the average of 1864–1873, the fall has been more than 41 per cent, and the increase in the power of gold more than 69 per cent.

These results, as well as others to which I shall later advert, are impressively represented by the charts to which I will ask the attention of the House. [At this point a large chart, A and B, was placed before the Clerk's desk.]

[For Charts A and B see page 91.]

The CHAIRMAN. The Chair suggests that if gentlemen will retain their seats a better view of the chart or diagram can be obtained by members generally.

Mr. TOWNE. I think the chart will be quite visible from every part of the House. After the speech of the gentleman from North Dakota the other day, I happened to think of my charts at home, so I sent for them and they arrived here about an hour ago. [Applause.]

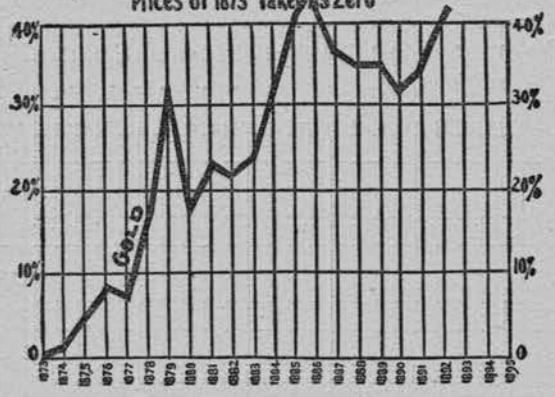
Now, gentlemen, I call your attention to the fact that the lines of

CHART A.

APPRECIATION OF GOLD

Measured By Its Purchasing Power On The Basis Of The Economist Index Numbers (England 22 Commodities)

Prices Of 1873 Taken As Zero



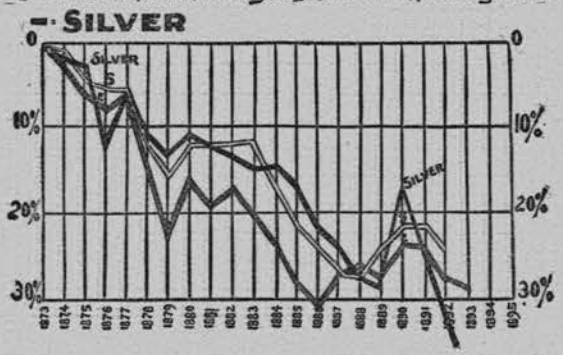


CHART B.

Fluctuation In The Price of Silver & Commodities Measured by Gold

Prices of 1873 Taken As Zero. E = Economist Index Numbers, Wholesale Prices, 22 Principal Commodities, London Market, Average Prices 1845-1850 Taken As 100

S = Soetbeers Index Numbers, 100 Hamburg Articles Also 14 British Exports Average Prices 1847-1850 Taken As 100

the two halves of the chart are continuous. Really these are two diagrams representing one idea. They indicate the reciprocal relation of the prices of commodities and the price of gold. For example, starting with 1873 as the zero point, the upper chart shows how gold has with few exceptions gone constantly up until it climbs off at the top of the chart [laughter], and how the prices of commodities and of silver have, as a necessary and reciprocal fact connected with the rise of gold, gone relatively down since 1872 in the percentages indicated in my remarks. Upon the lower chart you will find the course of prices as shown by the Economist index numbers upon the London market indicated by the line marked E; the line showing the course of prices in the German market is indicated by the letter S, standing for Soetbeer; and the course of silver is shown by the heavy black line.

Asking you to bear in mind, as before stated, that no general law in economics can be learned except by studying broad and large results over considerable periods of time, I ask you to note how beautifully this chart exemplifies to the eye the effects of the rise of gold. The line of gold is not uniform, but its general direction is upward. The lines of silver and commodities are not entirely regular, but their general tendency is downward. The correspondence between the values of commodities and silver is very remarkable and ought to be very interesting to gentlemen who deny the appreciation of gold and declare that there is no parallel between the prices of commodities in general and silver. You will notice that in 1890, for example, there was a sudden rise of silver and of these commodities. Naturally silver rose in a more pronounced degree than the other commodities, because in that year there was pending in Congress a proposition to rehabilitate the white metal and make it as good as gold. [Applause.] As soon as there was a likelihood of the restoration of its full money functions, it began to mount toward the point of parity, and as a necessary consequence gold began to fall. [Applause.]

Mr. FOWLER. Will the gentleman allow me to ask him if he has a line on his chart to show the rise and fall of wages at that time?

Mr. TOWNE. Oh, I will come to the wage question later on.

Mr. BRUMM. That was the year, was it not, when wheat was so high, as was shown by our friend the other day?

Mr. TOWNE. I believe so. Everything naturally rose at that time.

[For Chart C see page 92.]

Chart C exhibits upon one diagram the course of prices in England as shown by the Economist and Sauerbeck tables, and in the United States as shown by the Aldrich report already referred to. The prices are in gold, of course. The United States prices are shown in the heavy dark lines marked A, and the two English lines are indicated by their appropriate letters. The general correspondence of the three is very striking. American prices started higher than English prices and have remained so. The action of our protective tariff in stimulating production, restricting competition very largely to our own producers and upon our own standard of living, and keeping our own markets for those producers, has justified the policy of its advocates, of whom I claim to be as faithful as any; but it has not availed to withstand the constricting influence of the gold standard, whose sway is as "broad and general as the air." Prices had fallen in the United States about 28 per cent by 1891, and by 1895 the fall was certainly 33⅓ per cent or more, so that the purchasing power of gold in this country is fully 50 per cent greater than it was in 1872-73.

In this connection, I append the following extracts from The American, of Philadelphia, edited by Mr. Wharton Barker, whom I regard as without exception the ablest writer on economics in the periodical literature of the United States.

The first is from the number of January 25, 1896:

The fluctuations in prices since January 1, 1891, are of much interest. The figures representing the index numbers may be considered to represent the number of dollars that it would require to purchase at various dates the same quantity of goods as $100 on January 1, 1891. Thus, $59.59 would buy the same amount of the six breadstuffs—wheat, corn, oats, barley, rye, and flour in equal proportions—as $100 January 1, 1891.

CHART C.

Fall of Prices in England and the United States Since 1872

UNITED STATES A— Based On Senate Report No 1394 52d Congress 2d Session, Commonly Called The Aldrich Report 223 Commodities See Part I P. 91. (Gold Prices)
ENGLAND S— " " Sauerbecks Tables Adjusted To Aldrich Plan. See Report, Part I. P. 225 45 "
E— " " Economists " " " " " " " " 226 22 "

Summary of index numbers.

	Silver.	Breadstuffs, 6 articles.	Live stock, 4.	Provisions, 24 articles.	Hides and leather, 4 articles.	Raw and manufactured textiles, 11 articles.	Metals, 12 articles.	Coal and coke, 4 articles.	Mineral and vegetable oils, 7 articles.	Naval stores, 3 articles.	Building materials, 7 articles.	Chemicals, 11 articles.	Miscellaneous, 7 articles.	General index number, 100 articles.

These index numbers give much food for thought. In the first place, the general index number shows that while prices in general are 6 per cent higher than on the 1st of January a year ago, they are 14.72 per cent lower than five years ago. It is also obvious that this index number does not indicate the full extent of the fall in prices, as, leaving out the advance in the prices of mineral and vegetable oils and of chemicals and some other comparatively unimportant commodities, the index number would be much lower. It is an instance where a fall in the price of the most important articles is offset to some extent by a rise in the price of less important.

The marked and continuous fall in breadstuffs which is quite equal to the fall in silver is especially noteworthy. While general prices have fallen less than 15 per cent as compared to prices ruling January 1, 1891, breadstuffs have fallen over 40 per cent. This fall is not due to overproduction, for the increase of production has not kept pace with the increase of population, and it can not be accounted for by the cheapening of production, because, as we pointed out last week, there has been little improvement in agricultural methods during the past five years, and the introduction of labor-saving machinery and economies has been much more marked in the factory than on the farm, yet farm products have fallen in price further than the products of the factory. The coincident fall between breadstuffs and silver is evidence that with the depreciation of silver our silver competitors can lay down grain in Europe at proportionately lower rates.

The second is from the American of January 18, 1896:

For the fact that agricultural products have fallen much more rapidly than manufactured articles, there is only one explanation, and that is, our agricultural products were the first to come into direct competition with the products of silver-using countries. The appreciation of gold, of the money which silver-using peoples receive in payment for what they sell to gold-using peoples, and which they can exchange for double the amount of silver that they could twenty years ago, has greatly encouraged production and stimulated exports from silver to gold-using countries. To increase the area devoted to raising wheat and cotton was the work of a season; gathering experience and knowledge and building the factories to make manufactured goods the work of a decade or more. The result is that, while our farmers and planters have suffered from the competition of silver-using countries for years, our manufacturers are only now beginning to feel Asiatic competition. This is the explanation of the fall in prices that has been more marked in agricultural than manufacturing articles.

The enormous fall of prices in the gold-standard world I have proved. Gentlemen in this debate may hereafter seek some other explanation for the fact than that which I offer as chiefly accounting for it; but nobody will deny the fact. It is an open and notorious fact whose significance, if preponderantly due to the single gold standard, challenges the intellect, the conscience, and the patriotism of this nation. [Applause.] Contrast it for a moment with this: The purchasing power of silver in silver-using countries is to-day almost the same as in 1873. Consul Wetmore, at Shanghai, shows this by the following index numbers based on twenty staple commodities on the Chinese markets:

Year.	Aggregate value of 20 commodities, in silver.	Silver value of gold.	Year.	Aggregate value of 20 commodities, in silver.	Silver value of gold.
1873	2,000	2,000	1883	1,916	2,336
1874	1,814	2,029	1884	1,883	2,376
1875	1,787	2,078	1885	1,854	2,425
1876	1,930	2,160	1886	1,858	2,571
1877	2,031	2,159	1887	1,774	2,648
1878	2,102	2,215	1888	1,761	2,730
1879	2,023	2,301	1889	1,803	2,746
1880	1,925	2,275	1890	1,808	2,539
1881	1,940	2,322	1891	1,748	2,621
1882	1,986	2,307	1892	1,761	2,950

And the royal commission of 1888 declared that the purchasing power of silver in India had not fallen.

Sir, there is ample reason why prices began falling about the year 1873 and have kept falling with more or less regularity ever since. Down to that period gold and silver shared together the functions of ultimate money among the great commercial nations of the world. Together they formed one vast money reservoir, whose aggregated contents measured all exchange values and constituted the ultimate solution of all representative and credit money. England's action in going upon the gold standard in 1816 had not impaired this relation, but the sudden and nearly contemporaneous adoption of that standard about 1873 by several leading governments, followed at frequent intervals by others, made a sudden and tremendous lessening of the mint demand for silver, and threw upon the volume of gold the double burden of sustaining the credits and the redemption functions formerly borne by both metals jointly. This added enormously to the strain upon gold, rendering it relatively scarcer and more difficult to obtain, increasing almost beyond conception the demand for it, while its supply did not materially alter. The inevitable result was to raise the value of gold, to make it constantly necessary to give more and more of all commodities, on the average, to get gold. The full effect was not felt all at once in 1873. The steps in the process were progressive, and the effects were correspondingly so. Prices began falling with the cause, and have fallen and are falling as the cause continues and intensifies. The following is a fairly good statement of these successive stages in the process of squeezing the expanding energies of the nineteenth century down to the narrowing measure of the gold standard:

1872. Norway and Sweden substitute the gold standard for the silver standard.

1873. The United States, while on a paper basis and looking longingly toward resumption of specie payments, adopts the gold standard, although silver at the time is worth more in the market than gold, and although there has been no public demand for such action, the people and nearly every man in public life being ignorant of the real scope and object of the act, no amendment to which striking the standard silver dollar from our coinage can to this day be found of record. Thus on resuming specie payments in 1879 we became an aggressive scrambler for a share of the gold in the world, which was now becoming more and more the object of the eager pursuit of nations. Between 1877 and 1879 we absorbed over $560,000,000 of gold, as against about $55,000,000 in the preceding eleven years.

1873. Germany changes from the silver standard to the single gold standard; making a great demand for gold, so that by May, 1881, she had coined over $414,000,000 worth of it, and throwing upon the market for sale as bullion large masses of her worn and demonetized silver coin, selling, by 1879, more than seven million one hundred thousand pounds weight of fine silver.

1873. Belgian Parliament authorizes the Government to suspend the free coinage of silver.

1873–1874. France and the Latin Union (Italy, Switzerland, Belgium, and Greece, besides France) suspend the free coinage of silver, and France substitutes the gold standard for the double standard.

1875. Holland formally demonetizes silver, having suspended its free coinage in 1873, and adopts the single gold standard for herself and her East India colonies.

1873–1875. The Bank of France retires $350,000,000 worth of paper and adds greatly to its gold reserve.

1878. The United States enacts the Bland law, compelling the Government to purchase from $2,000,000 to $4,000,000 worth of silver monthly, but to add it to the money stock not as primary money, but, under the construction placed on it by our Government, virtually as a token coinage measurable in gold, thus increasing enormously the strain on gold. This law, moreover, completely nullified the main principle of bimetallism, which depends upon the right of the debtor to elect in which metal he will pay, by enacting that silver should be legal tender *except where otherwise provided in the contract.* This gave the creditor the determination of the metal of payment and virtually completed the demonetization of silver.

1879. The United States resumes specie payments and on a single metal, gold.

1879. Austria-Hungary suspends the free coinage of silver.

1883. Italy resumes specie payments on a gold basis, and borrows $86,000,000 in gold to do it with.

1890. The United States passes the Sherman silver purchase law, continuing the vicious principle of the Bland Act.

1890–1892. The Imperial Bank of Russia increases its gold reserve by $120,000,000, and begins a policy of hoarding gold, which has gone on ever since.

1891–1892. Austria-Hungary adopts the gold standard and becomes a borrower of gold to an enormous amount.

1892. Roumania adopts the gold standard.

1893. India closes her mints to the coinage of silver.

1894–1895. Chile and Brazil adopt the single gold standard and join the ever fiercer struggle for the lessening supply of real money.

1895. February. The United States begins the unhappy and humiliating procedure, apparently become chronic if we are to preserve the single gold standard, of borrowing millions in times of peace wherewith to pay tribute to the despotism of gold.

Why will gentlemen persist in shutting their eyes to the plainest evidence? The great fall of prices in the gold-standard world since 1873 is as indisputable as any physical fact in nature, and that it is chiefly due to the appreciation of gold seems to me as conclusively established as the law of gravitation. In England, where the gold standard was born and where its operation is to fill her creditor coffers with unearned increments of the wealth of all debtor countries, no mystery is made of it. Thus simply does Mr. Giffen, her greatest monometallist, dispose of it in his "Case against bimetallism," pages 218-219:

If we were told that copper or iron or wheat were rising because there was a deficiency of the supply of them to meet all the demands we should accept the statement as a matter of course. But what is true of copper or iron or wheat must equally be true of any commodity which happens to be the standard monetary substance. If gold or silver is that substance, and gold or silver is increasing in demand without any corresponding increase in supply, then people who want gold or silver for any purpose must give more for them. And this—

He says—

will be described as a fall of prices. * * * We see, then, how widely mistaken those monometallists have been, who, in their dislike of bimetallism, have denied that the recent—

He is writing in 1890—

great demand for gold in relation to its supply were likely to have caused a rise in its exchange value for other things. Looked at in this way, the fall of prices is itself a proof that gold, in relation to all the demands for it, has been relatively scarcer than it was. Everybody who has wanted it has had to give more for it. If everybody who wanted coal or pig iron was giving more for it than before, we should not hesitate to say that coal or pig iron were relatively more in demand than they had been; but what we should say of coal and pig iron we must also say of gold or silver in a like case.

Moreover, so clearly are the observed effects of the gold standard conformable to the economic law I have tried to state, that they have been foretold at different times by men learned in the science. Many years ago, before the nations had become crazed by the misunderstood example of England and had not so generally gone to work to subdue the world to a money bondage, Jevons wrote as follows:

I am far from denying that if the Italian Government decide to carry into effect M. Luzzatti's threat of buying gold at all hazards, and if the like course be taken by the United States and France, not to speak of Germany, there might be considerable disturbance of values for the time. But is it likely that such proceedings will be taken by rational statesmen and rational parliaments? It is really too absurd to suppose that any country will insist upon having a gold currency at any cost.

Alas! for the fallibility of genius. Even Jevons could not foresee that so many parliaments would prove irrational and that great countries should be so smitten of the gold standard he advocated as to pay their lifeblood for it.

But no prophecy of economic effects from observed causes has probably ever been made so unique and startling in its insight and accuracy as that of Ernest Seyd, the famous bimetallist, who in 1871 wrote: "It is a great mistake to suppose that the adoption of the gold valuation by other states besides England will be beneficial. It will only lead to the destruction of the monetary equilibrium hitherto existing, and cause a fall in the value of silver, from which England's trade and the Indian silver valuation will suffer more than all other interests, grievous as the general decline of prosperity all over the world will be. The strong doctrinism existing in England as regards the gold valuation is so blind that when the time of depression sets in there will be this special feature, the economical authorities of the country will refuse to listen to the cause here foreshadowed; every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters. The workman and his strikes will be the first convenient target; then speculation and overtrading will have their turn. Later on, when foreign nations, unable to pay in silver, have recourse to protection, when a number of other secondary causes develop themselves, then many would-be wise men will have the opportunity of pointing to specific reasons which in their eyes account for the falling off in every branch of trade. Many other allegations will be made, totally irrelevant to the main issue, but satisfactory to the moralizing tendency of financial writers. The great danger of the time will then be that among all this confusion and strife England's supremacy in commerce and manufactures may go backward to an extent which can not be redressed when the real cause becomes recognized and the natural remedy is applied."

Nothing could better show on what just philosophical principles bimetallism rests than this picture in 1871 of events to begin with demonetization in 1873 and continue until now and as much longer as we shall permit. If the test of science is prediction and verification, surely the evils of gold monometallism are scientifically condemned.

Just before the monetary conference at Brussels in 1892 the late Dr. Soetbeer, the eminent German philosopher, wrote, foretelling, the cataclysm of the year 1893 and subsequent evils:

I fear that if the English Government, on the occasion of the forthcoming International Monetary Conference, should refuse to submit or support practicable propositions destined to extend considerably the use of silver as legal tender, there will probably result a further incalculable depreciation in the value of the metal and a very serious appreciation of gold, followed by disastrous consequences.

Yet, sir, men will persist in referring the fall of prices since 1873 to the multiplication of inventions and to cheapened cost of production. It is no impugnment of my argument to admit that this may account for a relatively small proportion of the fall. But, sir, it is a very small proportion. Between 1850 and 1873 prices gradually and generally rose, a fact nobody will dispute; and yet I assert with perfect confidence that between those dates greater improvements in productive processes, compared with the condition at the beginning of the period, were made than between 1873 and the present time.

Gentlemen can not have forgotten the marvelous mechanical exhibit at the Centennial Exposition, practically all of which related to the period in question. In 1876 Harper & Bros. published a monumental work called First Century of the Republic, summarizing the course of progress in this country. It covered practically every department of activity, and was written by a carefully selected body of specialists. I quote from the preface, which is dated July 20, 1876:

An unusually large amount of space was given to the department of mechanical progress, but not disproportionately, when it is considered how characteristic of the century has been the advance in this field and how largely other progress has depended upon it. The same consideration justifies the elaborate and extended treatise on scientific progress.

By far the greatest amount of this accomplishment belongs, so far as its commercial and productive aspect is concerned, to the period from about 1850. By that time the steam engine had been perfected; the old Newcomen engine of 1769 with a "duty" of 5,500,000 foot-pounds per one bushel of Welsh coal had developed into the improved Cornish engine of 1850 with a "duty" of 60,000,000 foot-pounds; the factory system had come into systematic operation—the greatest revolution in production in the history of industry; so that when England, about 1850, changed the tariff policy under which she had grown great, and started out to impose free trade upon the world, it is estimated that her labor-saving machinery represented the capacity of 450,000,000 pairs of human hands.

In agriculture the period in question saw the perfection of the plow, the seeding machine, the grain drill, and the mowing machine. The first successful reaper was McCormick's, invented in 1834, improved in 1847, and first attracting general attention at the London World's Fair of 1851, where it took the gold medal, and from which time it came rapidly into use. Between 1851 and 1876 nearly 3,000 patents were taken out in this country alone for harvesters and their attachments. The thrashing machine was brought to perfection in 1853. The self-binder belongs to a later period, but its effect and that of improvements on the inventions named had nothing like the significance for agriculture which the devices that came in from 1850 to 1873 had. To this period also belongs the beginning of scientific agriculture and the use of imported and manufactured fertilizers on a large scale, the systematic and general breeding of cattle, horses, and sheep, and the inauguration and considerable development of the cheese-factory system.

In manufactures it is sufficient to name the leading processes and machines that had become commercially effective in this period; the cotton gin and spinning jenny, with their principal attachments and improvements; the power loom, calico printing, and color weaving; the hot blast in iron manufacture, perfected by 1845, by which many previously refractory ores were rendered reducible, and the cost of smelting was diminished nearly half; the steam hammer, rolling mill, and turning lathe; the Bessemer steel process and the chief improvements in producing and refining iron, the casting, forging, and rolling of the heated metal, and the turning and planing of the cold metal; the jack, the slotting, key-grooving, milling, and shaping machines; the process of assembling, or the making of interchangeable parts of machines, permitting the vastly cheaper manufacture of articles like watches, clocks, and firearms; the sewing machine, dating effectively from about 1850, between when and 1876 about 2,000 patents connected with it were granted in the United States; the pneumatic caisson in engineering, the centrifugal pump, tunneling and drilling machinery, and the use of compressed air in connection with them; scales and elevator machinery, gang and circular saws and sawmill machinery generally, about the only new departure dating from since that time being the use of the band saw on a large scale; turning machinery, particularly Blanchard's spoke lathe for turning irregular forms; general woodworking machinery for planing mills and furniture factories, washing machines and knitting machines, the principal kinds of boot and shoe machinery, especially the McKay sewing machine, which, between 1861, when it was perfected, and 1876, had made 225,000,000 pairs of shoes in the United States alone; the Westinghouse air brake and its various adaptations, electroplating, lithography, and photolithography, optical instruments, musical instruments, ice machines, the growth of india rubber manufacture, the Goodyear vulcanizing process dating from 1844; machinery used in sugar refining and in paper, porcelain and glass manufacture, stereotyping and electrotyping processes, Bruce's and other type-casting machines, folding and addressing machines, the Gordon job press, and the Adams, Campbell, Walter, Bullock, and Hoe perfecting printing presses.

In this connection, remember that there is no branch of industry where production has cheapened in any degree approaching that of the mining of gold in recent years. But cheapened gold mining does not seem to have cheapened gold compared with other commodities, to any alarming extent.

The method of operation and the effect of a changing money standard are not sufficiently understood. Any convenient medium of exchange to which prices had once accommodated themselves would discharge sufficiently well the mere function of a medium of exchange. But when viewed as a *measure of the values* of all other things it is of the very greatest importance that the money unit remain as nearly unvarying as possible in value over long periods of time. When a man loans another a sum of money he loans a certain quantity of purchasing power, for that is what money is. Now, absolute justice would require that when the loan is repaid it should stand for the same purchasing power as before. But if, meantime, money has depreciated—that is, if prices have risen—the same nominal sum when repaid has less purchasing power than when borrowed and the lender or creditor really receives less than he loaned, the borrower or debtor profiting by the difference. On the other hand, if money rises in purchasing power between the making of the loan and the repayment, so that the borrower has to find more commodities with which to buy the money to pay back than the money would buy for him when he borrowed it, then he loses the difference and the money lender makes it.

Now, in either case, the changing standard takes something from one man without his deserving to lose it and gives it to another who has no right to it. In either case it is a silent robbery. The ideal standard would preserve the rights of both debtors and creditors. But if a deliberate choice had to be made between a gradually falling and a gradually rising standard, all writers of authority

agree, and it is consonant with common sense that morally, economically, politically, and socially the falling standard would be preferable. Its inevitable losses fall on the creditor, the lender, who can better than the debtor endure its effects, and it encourages enterprise; while the certain hardships of the rising standard fall on the borrower, the debtor, the investor, the captain of industry, who can not so well sustain the burden, who has no surplus, but is most frequently wiped from the face of the industrial world by the vanishing of the margin between his property and the automatically enlarging lien upon it.

In the latter case the absolutely unavoidable result must be, if the evil is permitted to run, that all property will eventually belong to those who shall control the ultimate money of the world; and thrift and enterprise, if enterprise and thrift can belong to a race of slaves, would plan and save and toil to further fatten the overfed fatness of their masters. This is no exaggeration of language. It is the speech of truth and soberness. Said Sir Arthur James Balfour, the real head of the present Conservative Government of England, an earnest bimetallist and one of the profoundest thinkers in Europe, in a speech at Manchester, October 27, 1892:

> But of all conceivable systems of currency, that system is assuredly the worst which gives you a standard steadily, continuously, indefinitely appreciating, and which, by that very fact, throws a burden upon every man of enterprise, upon every man who desires to promote the agricultural or the industrial resources of the country, and benefits no human being whatever but the owner of fixed debts in gold.

Falling prices of agricultural products deprive the farmer of the means of buying his usual conveniences and necessities, and these accumulate on the hands of the manufacturer and retailer, who in turn curtail expenses to the uttermost, discharging labor, which then loses its power to consume, and limiting their own consumption to the barest needs. Thus farmer, manufacturer, tradesman, transporter, laborer, all lose patronage and employment, while taxes, interest and principal of mortgages, fixed charges, bonded indebtedness, and rents are constantly and remorselessly measuring off increasing equivalences in all human products. Under such circumstances there is no inducement to enterprise or to investment in producing industries. No man wants to borrow money to use in a business in which the fall of prices is sure to eat up his profits. On the other hand, the man with money for the same reason does not want to put it into business, but prefers either to invest it in gilt-edge securities or to let it lie idle and grow. This collects the money in the large financial centers and emphasizes the absolute power of the money-lender, who must be sought in his lair and who can make his own terms with borrowers. It is a bad symptom when "breeding" money, to use Shylock's phrase, is regarded as better business policy than embarking it in productive industry. [Applause.]

The results of an appreciating standard are so hidden in the very processes of ordinary business that until we stop to look carefully for them we are not aware how serious—nay, how fatal—they may become. My time will permit only a few illustrations. Between 1874 and 1885 gold appreciated so that the holders of the public debt of England could buy in the latter year £200,000,000 worth more of all commodities on the average with the principal of the debt as it was in 1874 than they could have bought with it in 1874. In other words, the property and industry of England were robbed of $1,000,000,000 in eleven years and a present made of it to the holders of her bonds.

The Manufacturer, of February 1, 1896, shows that the gold standard has presented English trade since 1890 with a gratuity of nearly $250,000,000; also, that the value of farm live stock in the United States has fallen in three years $622,000,000.

The United States paid off about $750,000,000 of her debt between 1870 and 1884. Yet, as President Andrews has shown, if we reckon it in the eight commodities, beef, corn, wheat, oats, pork, cotton, coal, and bar iron, the debt was nearly 50 per cent larger afterwards than before.

It is said that in 1866 we could have paid the national debt of this country with 14,000,000 bales of cotton. In 1894 it would have taken 51,000,000 bales to pay what remained due, although meantime we had paid 94,000,000 bales on it in principal and interest. In 1866 we could have paid it with 1,000,000,000 bushels of wheat. Last fall we still owed 2,000,000,000 bushels, after paying 5,000,000,000 bushels in principal and interest.

The burden of the gold standard on the world could be fully measured only in blood and sweat and tears.

It is pertinent to this discussion, sir, to answer briefly a contention constantly repeated by the opponents of the restoration of silver, that silver has fallen because of its enormous overproduction. I do not wish to appear dogmatic, but I do say that this argument is absolutely without foundation. It has been a thousand times refuted, but continues to reappear in every discussion as fresh as ever and apparently unconscious of its discredit. The famous senior Senator from Ohio [Mr. SHERMAN,] in a public speech in his State a year ago, lent the support of his high name to this profound error, and in substance it was restated by the distinguished gentleman from Maine [Mr. DINGLEY] in opening this debate. I can not hope to stop the circulation of this convenient and serviceable assertion, but I can easily show that it is utterly without foundation.

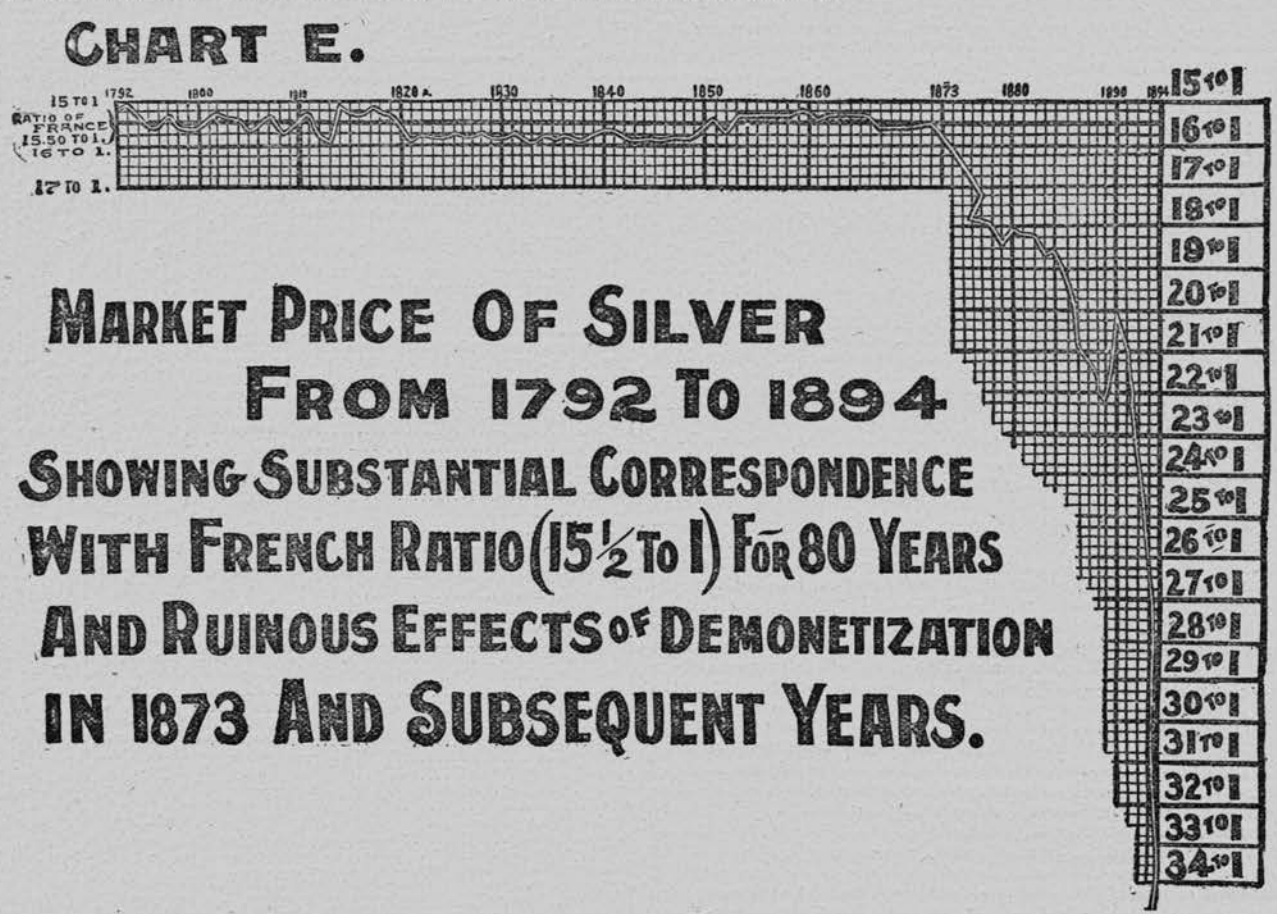
The following table shows the world's production of gold and silver (coinage value) since 1792. I have added to the table as cited the correct figures for 1893 and 1894:

Production of gold and silver in the world, 1792 to 1892, copied from United States Senate Report No. 235, page 103, Coinage Laws of the United States, 1792 to 1894.

Calendar years.	Gold.	Silver (coining value).
1792–1800	$106,407,000	$328,860,000
1801–1810	118,152,000	371,677,000
1811–1820	76,063,000	224,786,000
1821–1830	94,479,000	191,444,000
1831–1840	134,841,000	247,930,000
1841–1848	291,144,000	259,520,000
1849	37,000,000	30,000,000
1850	44,450,000	29,000,000
1851	67,600,000	40,000,000
1852	132,750,000	40,600,000
1853	155,450,000	40,600,000
1854	127,450,000	40,600,000
1855	135,075,000	40,600,000
1856	147,600,000	40,650,000
1857	133,275,000	40,650,000
1858	124,650,000	40,650,000
1859	124,850,000	40,750,000
1860	119,250,000	40,800,000
1861	113,800,000	44,700,000
1862	107,750,000	45,200,000
1863	106,950,000	49,200,000
1864	113,000,000	51,700,000
1865	120,200,000	51,950,000
1866	121,100,000	50,750,000
1867	104,025,000	54,225,000
1868	109,025,000	50,225,000
1869	106,225,000	47,500,000
1870	106,850,000	51,575,000
1871	107,000,000	61,050,000
1872	99,600,000	65,250,000
1873	96,200,000	81,800,000
1874	90,750,000	71,500,000
1875	97,500,000	80,500,000
1876	103,700,000	87,600,000
1877	114,000,000	81,000,000
1878	119,000,000	93,000,000
1879	109,000,000	96,000,000
1880	106,500,000	96,700,000
1881	103,000,000	102,000,000
1882	102,000,000	111,800,000
1883	95,400,000	115,300,000
1884	101,700,000	105,500,000
1885	108,400,000	118,500,000
1886	106,000,000	120,600,000
1887	105,775,000	124,281,000
1888	110,197,000	140,706,000
1889	123,489,000	162,159,000
1890	118,849,000	172,235,000
1891	126,184,000	186,447,000
1892	138,860,000	196,459,000
1893	157,228,000	209,165,000
1894	181,510,000	214,381,000
Totals	6,001,254,000	5,501,075,000

Thus in the 103 years ending in 1894 the production of gold has exceeded that of silver by half a billion of dollars.

It must be borne in mind that a disproportionate production for any one year or a few successive years in the case of the precious metals is far less significant as affecting relative value than would a similar disproportion be in any other kind of commodities. The metals are so durable and their existing mass so large compared to the production of any one year, that the value of the whole will show little variation. *The disproportionate production, to have any visible effect, must continue long enough to change materially the relative bulk or mass of the whole supply in existence.*



The following table shows how barren must be the attempt to connect the fall of silver with an alleged disproportionate production:

Period.	Production of gold.	Production of silver.	Highest and lowest variations in market ratio.
1792–1848	$821,086,000	$1,624,217,000	16.25 to 1—15 to 1
1849–1862	1,570,950,000	573,800,000	15.78 to 1—15.19 to 1
1863–1873	1,190,175,000	615,225,000	15.92 to 1—15.37 to 1
1874–1894	2,419,043,000	2,687,833,000	32.56 to 1—16.17 to 1

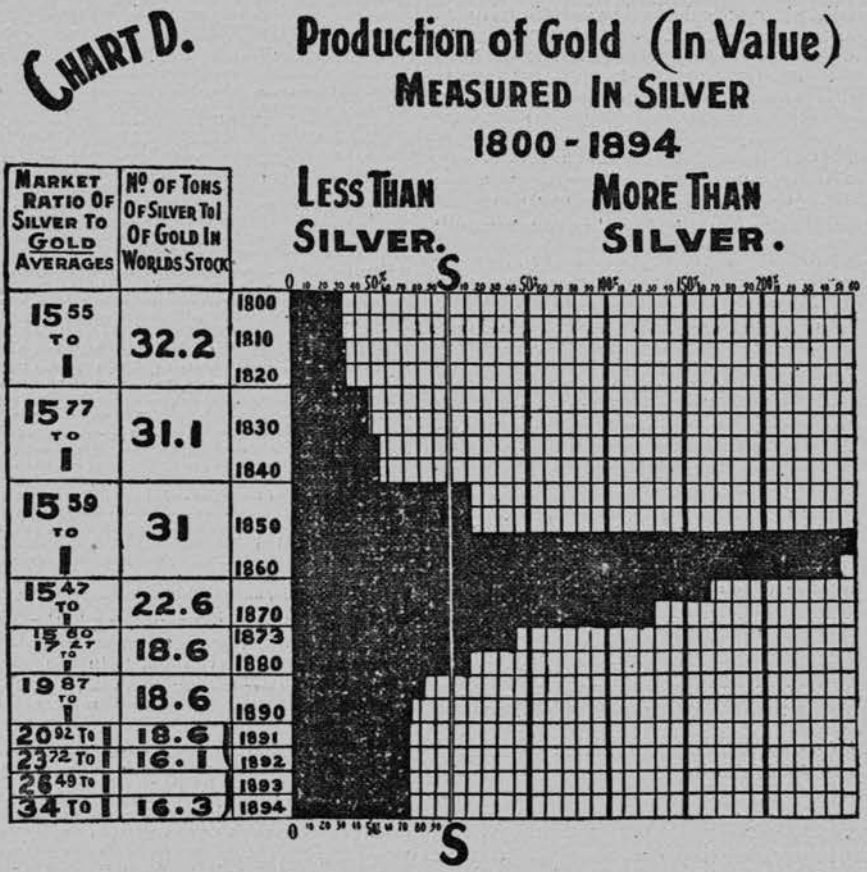
In the first period twice as much silver as gold was produced; in the second, three times as much gold as silver; in the third, twice as much gold as silver; in the fourth, only 10 per cent more silver than gold. Yet during the enormously disproportionate production of the first three periods all the variations in the market ratio are embraced within a point and a quarter, while in the last period, when production was almost identical in both metals, the ratio sank more than sixteen points. To say that this 10 per cent difference caused such vast disturbance, while differences hundreds of times greater caused no disturbance at all, is to do violence to the primary

suggestions of the reason. Note upon the following chart (to which I shall hereafter refer for another purpose) how the fall of silver began with the concerted legislative assaults upon it and continued by precipitous decline as those assaults were repeated; and consider, for example, how steep the decline was between 1873 and 1880, although between those years the gold production was $830,650,000 and the silver production only $690,100,000.

[N. B.—There is a slight error in the tracing of this chart *circum* 1875–76, as will be seen at a glance. It does not, however, affect its general character.]

Now, sir, I ask the attention of gentlemen to Chart D, which is the last one I shall exhibit. It is a chart which in my judgment is absolutely unanswerable on the single gold standard theory. Some of its arrangement is original, but the main idea is drawn from a document many will recognize. I do not know whether I am correctly informed, but I understand that a distinguished gentleman is to follow me with the purpose of answering this argument. I hope he can. I do not say that it is unanswerable; I simply say that I am stating propositions which seem to me like axioms, and that if the gentleman who follows me can show I am wrong, he will at least have made one convert from a most pernicious error.

[For Chart D see page 97.]



On this chart the production of silver in any given period covered by it is taken as the space between the zero line and the silver line (marked S), and the production of gold during the same period is indicated by the colored ground. From this it will appear that from 1800 to 1810 about 32 per cent as much gold as silver was produced; from 1810 to 1820 about 34 per cent as much gold as silver; from 1820 to 1830 about 49 per cent as much gold as silver; from 1830 to 1840 about 55 per cent as much gold as silver; from 1840 to 1850 about 12½ per cent more gold than silver; from 1850 to 1855 about 260 per cent more gold than silver; from 1855 to 1860 about 250 per cent more gold than silver; from 1860 to 1865 about 166⅔ per cent more gold than silver; from 1865 to 1870 about 130 per cent more gold than silver; from 1870 to 1875 about 41 per cent more gold than silver; from 1875 to 1880 about 11 per cent more gold than silver; from 1880 to 1885 about 83 per cent as much gold as silver, and from 1885 to the present time about 75 per cent as much gold as silver.

This table also shows that from 1800 to 1820, when about one-third as much gold as silver was produced, but while there were in the world of coin and bullion from 32 to 33 tons (ounces would do as well) of silver to one ton of gold, you could go into the market and buy an ounce of gold for 15.55 ounces of silver; and that from 1820 to 1872 while production oscillated as we have seen, and while the relative number of tons of silver in the world's stock was all the time becoming less in proportion to the stock of gold, falling from 31.1 tons of silver to 1 of gold to about 22 tons of silver to 1 of gold, still the market price remained closely by the ratio established by the open mints of France; but that when the onslaught on silver was commenced in 1873, and the mints were shut in its face, notwithstanding that production has continued from that day to this nearer equal than at any time in a hundred years, and though the bulk of the world's stock of silver in tons has for years been almost exactly the old mint and market ratio, namely, from 18.6 to 16.1 tons of silver to 1 ton of gold, yet the market price of silver as measured in gold has constantly fallen until in December, 1894, you could have bought for 1 ounce of gold 34 ounces of silver, and the market price to-day is about 32 to 1. No man can look that chart in the face and then say that it is the "enormous overproduction of silver that has lowered the price." It is legislation, foolish, almost criminal legislation that has done this thing. [Applause.]

I undertake to say that if this chart is true there should be an explanation forthcoming from the gentlemen who have declared that the overproduction of silver is the reason of its fall in price. [Applause.] And there is no explanation of this fact, of this colossal fact, of this to me inexplicable fact (except on one basis, which I shall next mention) that, during the period when the bulk ratio between silver and gold was rising from 32 to 1 to 16 to 1, the market price fell from 16 to 1 to 34 to 1.

The only explanation that I can give is this: That the open mints of France afforded a channel through which the two metals could and did equably flow, according to the demands of trade, in this ultimate money, the one metal or the other predominating according to the demands of commerce and exchange, making of the two metals one ultimate money substance of final redemption.

Now, one word more and I shall sit down, for I have abused your patience. [Cries of "Go on!"] I wish to say only this in conclusion, that the condition in which the suffering gold-standard world to-day finds itself, is one that in my opinion calls loudly for remedy, calls loudly upon the statemanship of this country, calls loudly and I pray not hopelessly upon the patriotism, upon the intelligence, upon the courage of the splendid leaders of the grand old Republican party, if we have such left, and I believe we have. [Applause.] Sir, if a man denies that these things are true, then he may believe in the perpetuation of the present system, but if he believes that this picture which I have endeavored to show, of the continual fall of commodities and of the rise in gold, and the ruinous effects of it,

are due to the fact that part of the ultimate money substance of the world has been taken away by law, he can not believe in its perpetuation. He can not supinely submit to its continuance. He will arise against it and help put it aside.

I must not forget, sir, that I promised to say something about wages. I am prompt to admit that the great Republican policy of protection [applause] has vastly benefited the laboring man in the United States. Sir, nobody upon a fit occasion can speak upon that great policy with more enthusiastic encomium or more intense conviction than myself. But it can not do everything. Handicapped by the single gold standard it can work out only a portion of its proper results. When I plead for bimetallism I plead for the other half of protection. [Applause.] Free trade and the gold standard both aim at low prices; are both embodiments of British aggression upon the industrial independence of my country. I will resist them both to the utmost. [Applause.]

I do not question the fact that protection has had a beneficial effect upon wages; but, sir, organized labor is also largely to be credited for the maintenance of wages. Diminishing the number of hours of labor, lessening the number of apprentices, organizing against proposed reductions, they have fought their way by one method and another and have succeeded to a large degree in warding off the natural effects of an appreciating money. Let me add that if you will consider the number of men who have been out of employment and the diminished labor of those who have had employment the statistics of the rise in wages will appear far less imposing than they do now. [Applause.] The laboring man's interests are precisely the same as the manufacturer's, the tradesman's, and the farmer's in this respect. And the policy that is sure to wreck all employers in productive industry, if continued, can not fail to ruin also the men who work for them. *Profits can not disappear and leave wages untouched.* When men that hire labor become bankrupt, the man who works is very apt to be out of a job. The voluminous evidence gathered by the English Parliamentary Commission on the depression of trade and industry shows conclusively that wages in England have been long falling and continue to fall. In the United States various conditions have prevented the full operation of the same cause as yet, but many of its effects are already visible and the ultimate result is clearly foreseen by intelligent laboring men all over the country. Their attitude is not uncertain. They are and will be for a money system that is favorable to industry and that deals justly between man and man.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARTMAN. Mr. Chairman, I am going to ask again that the time of the gentleman from Minnesota be extended for fifteen minutes.

Several MEMBERS. Let him have time to conclude his remarks.

There was no objection, and it was so ordered.

Mr. TOWNE. Again, sir, am I most grateful to the House and most sensible of its kindness.

Frequent reference is made in this discussion to the experience of France in the early part of this century. Now, that Government, from 1803 to 1865, and the Latin Union (France, Italy, Greece, Belgium, and Switzerland) from 1865 to 1873, did maintain the bimetallic system, with mints open to both gold and silver, and keep them practically at par at her mint ratio of 15½ to 1. This great fact is of such conclusive significance that the advocates of the gold standard have not hesitated to fly in the face of history and flatly to deny one of the most notorious accomplishments on record. Such denials have been made in the course of this debate, and for that reason I propose to say a few words upon that subject.

Soetbeer gives the following as the extreme variations of the market ratio of gold to silver in each decade from 1803 to 1873:

1803	1:15.41	1849	1:15.78
1808*	1:16.08	1850	1:15.78
1813*	1:16.25	1859	1:15.70
1814*	1:15.04	1861	1:15.19
1820	1:15.62	1862	1:15.35
1830	1:15.95	1869	1:15.60
1832	1:15.72	1871	1:15.57
1833	1:15.93	1873	1:15.92
1843	1:15.93		

*Extremes during Napoleonic wars.

An examination of Chart E will confirm the lesson of these figures. For eighty years the line of market value of silver as compared with gold runs almost coincidently with the line representing the ratio on which the metals were coined at the mint of France.

Mr. WILLIAMS. I want to ask the gentleman a question for information. That, as I understand it, is the price of silver bullion in the London market?

Mr. TOWNE. In the London market.

Mr. WILLIAMS. It did not vary at all in the French market.

Mr. TOWNE. The gentleman from Mississippi is right. Sir Henry Hucks Gibbs, for forty years a director of the Bank of England, some time its governor, a monometallic gold delegate to the international convention of 1878, and a bimetallist now and for the remainder of his life, declares—and he had personal knowledge for many years—that from 1803 to 1873, notwithstanding the fact that the law requires nothing of the sort to be done, there was not a day when any person could not go to the Bank of France and get either gold or silver for the other at the mint ratio.

And here it occurs to me to call attention to the fact that mints do not, under systems of free coinage, purchase bullion, nor do they exchange, necessarily, coin of one metal for bullion of the other. I have seen on this floor indications that some gentlemen appear to think that one way we should lose our gold—if we opened the mints

to silver—would be in handing it over to designing individuals who should bring silver bullion to the mint and "demand" gold. The open mint exists merely to coin the bullion brought to it and pass it back in coin to the owner. The Government stamp can not create value. Whether a coin when stamped shall be effectual to pass at the value it claims to represent will depend upon the use it can command. In this respect I agree wholly with the honorable gentleman from Maine [Mr. DINGLEY], who opened this debate and who now does me the honor of listening to me. The whole question of maintaining freely coined silver at a parity with gold is one simply of giving it enough to do—subjecting it to large enough demand. [Applause.]

But to return to the French coinage. The figures above given are authoritative. In considering them it must be remembered that they are London market quotations, and that coinage in France was free but not gratuitous; all gold and silver brought to the mint was coined as desired, but a charge was made for expense of coinage of three-tenths of 1 per cent on gold and and 1½ per cent on silver. The total transportation cost on coin and bullion during the most of that time must have been somewhere about 1½ per cent. In addition to this, interest was lost on the value of the bullion while at the mint for coinage. These considerations are entirely adequate to explain the small variations in the bullion market in London. Indeed, these variations show that gold and silver *must* have circulated side by side in France.

The following table, on the authority of the distinguished economist, J. Barr Robertson, shows, in five-year periods, the French coinage during the time in question, of both gold and silver. It is given in English money because taken from an English document:

	Gold (average per annum).	Silver (average per annum).
1806-1810	£1,201,136	£1,184,737
1811-1815	3,299,503	5,208,029
1816-1820	1,951,604	993,111
1821-1825	465,748	3,526,432
1826-1830	293,976	5,032,004
1831-1835	826,149	6,576,120
1836-1840	589,857	3,048,189
1841-1845	159,326	3,033,286
1846-1850	1,294,337	4,311,276
1851-1855	12,669,263	1,431,755
1856-1860	21,605,465	666,651
1861-1865	7,667,357	175,008
1866-1870	9,546,561	3,402,020
1871-1875	2,475,213	2,742,776
Total coined	322,993,410	217,640,234

Silver was tendered and coined every year, and gold every year but 1833 and 1872. When England in 1821 resumed specie payments after a long paper régime, the coinage of gold in France, as will be noticed in the table, fell off very much; and when, in 1850 and following years, the great increased production of gold came into the world's supply, it was tendered and coined in immense quantities. But all this time the mints were coining both metals, and the open mint of France, like a pipe between two reservoirs, maintained the level of the two masses of metal and was the equalizer of their variations.

Nothing could more beautifully or triumphantly illustrate the fundamental principle of bimetallism. The two metals became in effect one metal, one primary money mass, to respond to the demands of debts and business and to support with broader basis the credit fabric of the world. Said Mr. Cernuschi, French delegate at the monetary conference of 1881:

> The law by placing the yellow metal and the white metal on the same footing, by establishing a fixed and invariable ratio between them, has made them really a single money.

Thus, fellow-citizens, they must be considered. Thus treated they become such a money; and if so, we can regard with perfect equanimity, when the system is once established, the going out of one and the coming in of the other metal. The ebb and flow would be a perfectly natural and healthful movement, marking the frictionless adjustment of the money volume to the demands of trade and of localities. If gold starts to leave us to-day we have nothing to take its place; and so we keep hanging on to it, the amount of our desire to keep it, the measure of our necessities for it, being registered in the fall of the prices of all we produce or make. This is the greatest and heaviest premium money can command. If silver were also primary money, when gold wanted to go so badly it might go, temporarily, and satisfy the wants of somebody who would give more for it for the time being than we would. Under present conditions we pay more than it is worth to keep it. A premium of 50 per cent paid in all our commodities is to-day the premium on gold in the United States. It isn't worth the sacrifice.

In this connection I draw your attention to the following extract from the final report of the English commission before mentioned. This portion is signed by the twelve members of the commission, gold monometallists and all, comprising the greatest specialists in England:

> SEC. 189. Looking then to the vast changes which occurred prior to 1873 in the relative production of the two metals without any corresponding disturbance in their market value, it appears to us difficult to resist the conclusion that some influence was then at work tending to steady the price of silver and to keep the ratio which it bore to gold approximately stable.
>
> Section 192. These considerations seem to suggest the existence of some steadying influence in former periods, which has now been removed, and which has left the silver market subject to the influence of causes, the full effect of which was previously kept in check. The question, therefore, forces itself upon us: Is there any other circumstance calculated to effect the relation of silver to gold which distinguishes the latter from the earlier?
>
> Now, undoubtedly the date which forms the dividing line between an epoch of approximate fixity in the relative value of gold and silver and one of marked instability, is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation; and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative values of the two metals.
>
> So long as that system was in force we think that, notwithstanding the changes in the production and the use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1.
>
> Section 193. Nor does it appear to us a priori unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1 fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.
>
> The view that it could only affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of those countries, is, we think, fallacious.
>
> The fact that the owner of silver could in the last resort, take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point.

The situation in France, and the nature and theory of the bimetallic adjustment, are admirably set forth in the following eloquent words of Cernuschi in the monetary conference of 1881:

> Until 1874 a clear and sonorous voice was always heard resounding from the banks of the Seine. It said: "I am France, rich in gold and rich in silver. I can arrange that in the entire world the two metals form but one money. Peoples and nations, bring to Paris all the gold and silver you like; I take it all. For a hundredweight of gold, or for 15½ hundredweights of silver, I will always give you the same quantity of francs. Let the production of one metal or the other be more or less abundant, more or less costly, it will be immaterial to me. Peoples and nations, do you want gold? bring silver; do you want silver? bring gold. As bimetallist, the French have no preference for one metal or the other; they will always make exchange for you, if you know how to ask it, of one metal for the other on the basis of 15½, and in the two hemispheres the relative value of the two metals will always and everywhere be the same.

The reason why France was able to do this was that her commerce was great enough and varied enough to give employment and exchange to all the metals of either kind that were offered for coinage. As I have before said, the test of ability to maintain a parity between the metals is the power, founded on extent and variety of uses for money, to absorb them in commerce. Whether the United States could independently achieve this result is not, perhaps, absolutely demonstrable. It is a question of judgment. My own opinion is that the task is not beyond us, and that, though some international concert is preferable, independent action is much to be preferred to the indefinite continuance of the present system. In this connection I wish merely to call attention, in passing, to the fact that it was the powerful influence of the French mint that caused, first the gold (when our mint ratio was 15 to 1 and France's 15½ to 1) and then the silver (when we had changed to 16 to 1) to leave the United States and go to France. It was exactly as if a commodity were to seek the highest market. But if she took our gold she sent us her silver, and *vice versa*. The process was natural and not harmful. *Both metals were somewhere performing full money functions for all the world.*

When asked whether England could successfully alone undertake the maintenance of the parity of gold and silver with open mints, Sir Henry Hucks Gibbs said:

> Any great commercial nation can do it.

We do not sufficiently realize what a powerful nation we are and what we can do if we set about it. We need a little of the spirit of 1776. [Applause.] Why, we are more afraid of England now, after we have grown big enough to whip all creation, than our fathers were when they could count no more population than the State of Ohio has now. So long as we want her to do it England will manage our money system for us, and we may depend on her having an eye on England's interests while she is at it.

I make the assertion that, in nearly every respect, the conditions enabling a nation to support a system of bimetallism are to-day more favorable to the United States than they were to France from 1803 to 1873.

To begin with (see Chart D), from 1803 to 1870 the average number of ounces of silver in the world in coin and available for coinage was thirty times as great as the number of ounces of gold. Yet she made it possible during all that time to go into the market and buy as much with 15½ ounces of silver as could be bought with one ounce of gold. To-day there are only 16 times as many ounces of silver in the world's stock as of gold. Our ratio of coinage, 16 to 1, would, to commence with, almost exactly correspond to the natural ratio by weight. Ought it not to be very much easier to float two

metals at 16 to 1 when the relative amounts of them are practically just that than to do it when there were twice as many ounces of silver to one of gold as the ratio called for?

Again, if the demand for the *use* of a metal is the test of ability to maintain it at parity, the case is still stronger. In extent and variety of power to give employment to money, the United States to-day is immeasurably greater in respect to the general capacity of the world than was France twenty-five and more years ago. Says Mulhall, the world's greatest statistician:

If we take a survey of mankind in ancient or modern times as regards the physical, mechanical, and intellectual force of nations, we find nothing to compare with the United States in this present year of 1895. * * * The physical and mechanical power which has enabled a community of woodcutters and farmers to become in less than one hundred years the greatest nation in the world, is the aggregate of the strong arms of men and women, aided by horsepower, machinery, and steam power applied to the useful arts and sciences of everyday life. (North American Review, June, 1895.)

The relative extent to which a nation uses steam power illustrates, perhaps as well as any one thing can, the degree to which that nation is a factor in the world's business and can give money work to do. In 1870 the world's steam power, according to Mulhall's dictionary of statistics, was 18,460,000 horsepower. That of France was 1,850,000 horsepower, or little more that 10 per cent of the whole. In 1888 the total for the world was 50,150,000 horsepower, and of this the share of the United States was 14,400,000, or nearly 29 per cent. Our share to-day is 16,940,000, almost as great as that of all the world in 1870, and fully three times as great in proportion to the whole as was that of France in 1870. Here we see, says Mulhall—

that the United States possesses almost as much energy as Great Britain, Germany, and France collectively.

In comparing the two countries in respect to commerce, a most important point is this: In proportion as the foreign commerce of a nation is small relatively to the entire bulk of trade, it is easy to maintain a money system possessing independent features. In 1870 the total exports and imports of the world were, approximately, $11,000,000,000, and those of France a little more than $1,100,000,000, or about 10 per cent of the whole. In 1889 the world's total was nearly $17,000,000,000, and the share of the United States was about $1,600,000,000, or nearly 10 per cent. While it is impossible to obtain data as to the internal commerce of various countries with completeness and accuracy, enough exists to show us that a very much greater percentage of the total commerce of France in 1870 was foreign than the percentage of the foreign commerce in the total trade of this country to-day. It is commonly considered that not more than 4 per cent of our trade is with foreign countries, while it is safe to say that in France in 1870 fully three times that proportion of her trade was of that character.

In agriculture I have not at hand the figures for 1870, but Mulhall gives the total value of the world's principal agricultural products for 1887 at about $19,740,000,000, of which the share of France was $2,300,000,000, or somewhat less than 12 per cent, and that of the United States $3,880,000,000, or nearly 20 per cent. There is no doubt that the statistics of 1870 and 1895 would show even a much greater relative advantage on our part than this.

In manufactures France in 1860 produced approximately $1,900,000,000 worth out of the world's total of $12,000,000,000, or about 16 per cent; in 1888, $2,425,000,000 out of $23,000,000,000, or less than 10 per cent. If her share for 1870 be taken as the average of these two years, she would that year have produced about 13 per cent of the world's manufactures. The United States in 1888 had about $7,215,000,000 worth of manufactures, or over 31 per cent of the world's entire product. In 1870 the railway mileage of France was 9,770, and that of the world 128,235, the percentage of France being 7⅝. In 1895, of the world's 370,281 miles of railway the United States had 163,597, being about 44 per cent of the mileage of the entire world, and 26,732 miles more than all Europe combined.

In 1870 the railway freight tonnage of Europe was 401,000,000 tons, of which the proportion of France was 52,000,000 tons, or about 13 per cent. In 1888 her share was 78,000,000 out of 765,000,000 tons, or 10$\frac{3}{10}$ per cent; while the tonnage of the United States was 590,000,000 tons, or nearly eight times as much as that of France and three-quarters as much as that of all Europe. Of a like significance is the comparative tonnage carried on canals and rivers, being in France 14,500,000 tons in 1870 and 24,500,000 in 1885, as against 51,000,000 tons in the United States in the latter year. The total canal and river mileage of France is 7,730, and of the United States 51,834, or 30 per cent of the world's mileage of that character. Add to this the enormous capacity of our great lake system, and the unequaled facilities for the development of internal commerce can be partially realized.

But the most convincing comparison as a basis of judgment of the matter in hand, is as to the relative banking power of France in 1870 and the United States in 1890 (the statistics for 1895 not being at my present command), in proportion to the total banking power of the world at those respective dates. In 1870 the world's banking power was about $8,000,000,000, and that of France was $320,000,000, or 4 per cent. In 1890, and the proportion is still more favorable to us in 1895, the world's banking power was nearly $16,000,000,000, and that of the United States was 32 per cent of that tremendous aggregate, or $5,150,000,000. Of course the gold-standard men will point to the doubling of the banking capacity of the world in the last twenty odd years as proof of the diminished need of money, and will cite the very exceptional equipment of this country in that respect as an argument that we can not use any more primary money. But it is too plain for dispute that this great growth in the world's means of economizing gold, coinciding, as it does, so closely with the steps by which the volume of ultimate money has been deliberately curtailed, gives convincing support to our position that more primary money is a crying need of the world. Credit has been expanded to the utmost, far beyond the safety limit; gold has appreciated beyond all precedent; and to try to meet the demands of business this banking power has been evolved. It is an exact index of the increased need for primary or real money, and shows conclusively that the capacity of the United States to-day to absorb a new supply of real money is almost incalculable. These considerations are much enforced by the fact that our vast territory of just touched possibilities, with its constantly multiplying population, affords incomparable scope for the operation and expansion of the energizing functions of an adequate supply of primary money.

Now, sir, as we have seen, there is a demand in the world for a large additional amount of primary money. The enormous appreciation of gold and the almost incalculable multiplication of credits are incontestable proofs of it. The supply of gold has not for many years come anywhere near keeping pace with the demand, so that even the increasing facilities for using it, of which our gold friends have so much to say, have not availed to keep it from rising ruinously. Dr. Soetbeer and others have exhibited the immense growth of the demand for gold in the arts and manufactures. He showed how the gold available for coinage averaged $92,000,000 a year from 1851 to 1870, and but $24,000,000 a year from 1871 to 1881. Mulhall says that during the fifty years, 1831–1880, the consumption of gold was 160 tons more than the production. In an article in the Nineteenth Century Magazine for November, 1889, the great statistician and gold monometallist, Giffen, said:

The precious metals, it is admitted on all sides, have an extensive nonmonetary use. They are merchandise as well as money. But few people realize that probably this nonmonetary use is preponderant over the monetary use itself. * * * About two-thirds of the gold annually produced is taken for the arts; and if the consumption of India is included, as being either for simple hoarding or for the arts, * * * then the demand for gold for nonmonetary purposes appears almost equal to the entire annual production.

Professor Bemis, the brilliant young economist of Chicago, has recently shown, from perfectly reliable sources, that during the nine years last past there has been available for addition to the world's stock of circulating gold money not over $15,000,000 of new gold all told.

Mr. WALKER of Massachusetts. Will the gentleman tell the House how much the economic power of gold in commerce has increased in the last fifty years? Has it not increased several thousand fold?

Mr. TOWNE. Mr. Chairman, I understand the gentleman's question to refer to the common argument of gold-standard theorists, that the conclusions drawn by all statesmen and economists down to recent years as to the limited ability of coin to discharge commercial functions have been abrogated and overthrown by modern inventions that have facilitated exchange, as checks, clearing-house certificates, book credits, and such things. Is that what the gentleman referred to in his question?

Mr. WALKER of Massachusetts. I made it as clear as I could. Give your own answer.

Mr. HARDY. Will the gentleman pardon me a moment?

Mr. TOWNE. I must decline to yield just now, Mr. Chairman, to the gentleman from Indiana. To the question of the gentleman from Massachusetts I have only to say this, that it implies one of the greatest fallacies with which the case for the single gold standard fairly teems, although I never heard this particular weakness so strongly stated as by the gentleman from Massachusetts. The idea is that, by reason of some modern hocus pocus you can compel a limited amount of real money to go on forever doing an unlimited amount or work. [Laughter and applause.] They say, "It does not make any difference how much ultimate money you have if you only have confidence." No word in their whole armory is so sadly overworked as this poor "confidence."

Confidence in what? I take it these gentlemen can not mean that childlike and bland and innocent reliance upon the established moral order of the universe which is sometimes implied in the word "confidence." No, sir; these gentlemen use it as a business word, in a practical sense, and so used it has reference entirely to the confidence which you must feel in the ability of a man or an institution that is making unlimited and multiplying promises, at some time to redeem those promises. [Laughter and applause.] That is what it means; and how such confidence operates is illustrated from time to time when under the spur and whip of this pernicious doctrine, credits are expanded on the basis of a few gold dollars, the gold itself constantly growing relatively less and the various forms of its credit representatives becoming constantly and absolutely greater, until finally you have a huge, distorted, swaying, inflated fabric of credit upon an ever-narrowing base of gold. And while

you stand there making your boast in the very face and eyes of the world of what a tremendous amount of business you are able to do upon an infinitesimal amount of gold, you ask men to have "confidence" in the operation. [Applause.] Ah, sir, let not gentlemen deceive themselves. The world has not outgrown either the obligations or the limitations of honesty. All these instruments of credit, Mr. Chairman, are themselves but the expression of the gold measure. If you extend credit to a man you extend so many *dollars* of credit; and if the stuff out of which the dollar is made is growing scarcer, the credit is correspondingly growing bigger, eating up more and more commodities, just as the gold dollar does that measures the credit. [Applause.]

Says the great English economist, Jevons:

Prices temporarily may rise or fall independently of the quantity of gold in the country. Credit gives a certain latitude without rendering prices ultimately independent of gold. (Investigations in Currency, page 32.)

And Huskisson, the famous British statesman and financier, in his pamphlet on the depreciation of the currency sustains the proposition:

Price, therefore, is the value of any given article in the currency with reference to which that article is measured, and must of course be varied by any variation in the quantity of gold and silver contained in such currency.

An acute writer, Dr. W. H. Smith, in a recent work says:

The volume of basic money fixes the volume of representative money (paper money issued by the Government). In turn the volume of both representative money and basic money controls the volume of credits that act as money, and the quantity of all these, with the exchanges to be made and payments to be met, fix prices. Thus indirectly the prices of commodities in a country are fixed and controlled by the volume of basic money.

Sir, under the stress and impulse of commercial development the world's need of money has overtaken and passed the supply of metal for the purpose long ago, and has for many years explored all the avenues of invention for substitutes and economies to eke out the inadequate amount of ultimate money. The limit was long since reached. I can not now take the time to prove, but I assert with no dread of contradiction that the actual proportionate use of money among the people to-day is very much greater than it was forty years ago. Says a great authority, Professor Kinley (Journal of Political Economy, March, 1895):

After a certain point of development in the use of credit instruments, there is no further relative increase, but rather, possibly, a slight decrease.

The true fiatist, Mr. Chairman, is your modern American gold-standard advocate. The logic of his argument leads to a money base so small and a credit top so large that "confidence" is to take the place of redemption; and confidence never realized is only another name for irredeemability. For "populism" that outpopulists your Populist, commend me to your gold-standard extremist.

Sir, I think I have heard the gentleman from Massachusetts speak of increasing the resources of the banks so as to permit them to enlarge their accommodations to customers. We are to assume, then, from these arguments, that the extent of accommodation is limited to the present rate of expansion, and that there must be some way of increasing the reserves in order to permit the piling on of additional credits at the rate of four or five dollars for one. Increasing the reserves means increasing the ultimate substance that must in the end make good every dollar of credit and every promise made by bank or Government in the nature of credit. It is more ultimate money that the world wants, and must have. [Applause.] And I warn gentlemen upon this floor—not as a prophet, but as one who has always lived near to the people, and by the grace of God means always to continue near the people—our duty must not be neglected. I tell you I know what the people are thinking and what they are feeling in this year of grace 1896. [Applause.] They know that the constricting gold standard is existing by the permission and growing at the cost of the manhood and the enterprise of the universe [applause], and that the time will come when a stop must be put to it.

Mr. HARDY. After your elaborate remarks, will you now state in a few words what you want the Republican party to do?

Mr. TOWNE. Mr. Chairman, it is to the great Republican party at such a crisis that the people turn with hopefulness, even as in times past, when the hour was heavy and the way was dark, they groped anxiously that they might find and clasp with their hands the hand of the Republican party, and thus be led again to the heights of peace and along the paths of prosperity. [Applause.] The Republican party has not yet declared for a single gold standard——

Mr. HARDY and others. And never will.

Mr. TOWNE. And I pray Heaven it never will. But what is expected now, Mr. Chairman, of the Republican party is a prompt and definite proposition as to what it intends to do.

Mr. HARDY rose.

Mr. TOWNE. No, I decline to yield further to the gentleman. Sir, I am not strenuous upon having my way. While I should infinitely prefer that the nations undertake this regeneration together, yet I believe that the United States of America, with its unlimited resources, with its manhood representing an energy that Mulhall says is quite equal to that of the Englishman, the German, and the Frenchman combined [applause], with a population of seventy millions, with an area equal to all Europe, and a large part of which is undeveloped and needs the quickening assistance of an affluent, ultimate money, with one-third of the banking power of Christendom, showing its absorptive capacity over the money of all the world that should seek employment here, with one-third of the steam power (which is the basis of industry and of business to-day) of all the earth, I believe the United States could, with all this marvelous energy, with its multiplicity and variety of commerce, a proper care for which would enable it to become the clearing house for this hemisphere, as Blaine fondly hoped it might become [applause], I say the Republican party might, by opening the mints of this Government and giving to silver the same privileges now bestowed upon gold, maintain the two metals at a parity at the old coinage ratio. [Applause.] It would be easier for us to do it than it was for France, because France had to do it and did it when the natural bulk ratio of silver to gold was 32 to 1, while with us it is proposed to make the ratio practically identical with that which the metals sustain to each other by bulk to-day. Nor, sir, is there anywhere any "flood of silver" to swamp the mint. I can not now pause to prove this, but it is absolutely true. Nearly all existing silver now circulates at a token-parity, or a virtual redemption parity, with gold, and would gain nothing by coming here. What we want is to take the silver from the top, and put it beside gold at the bottom, of the money structure.

If we can not do the work in an independent way—if I am deceived in thinking that we might—let us do it in some other way. If somebody proposes in this Congress to restore the ultimate money function to silver in any practicable way, he shall have my vote. The main thing is to take away from gold its universal and exclusive necessity, that keeps all the nations and all the men of the world in a scramble for it at the constantly growing cost of their happiness and their substance. [Applause.]

Restore the full money function to silver in some way, and do it speedily. Say even that you will do it three or four years from now, with such other nations as you may be able to induce to associate with you, and I will vote for the proposition. Say that you will tax incoming silver, and coin only the American product, and I will vote for it. Say that you will coin silver upon an international basis, without the consent of England (which you can never get so long as the Rothschilds have that country by the throat); say that you will do it in combination with France and Germany,—and there ought to be no question in the mind of any reasonable man that these three nations could sustain the parity of the metals,—say you will do that, and I will vote for it. I know that all legislation is a compromise, and even in this great matter I will compromise to almost any limit on the *means* if only the *end* be openly avowed and speedily sought.

But what I say, Mr. Chairman, is that the Republican party must at this time make up its mind to do *something*. The people of the United States have passed a vote of confidence in the Republican party; that is all. We must now justify that confidence by being equal to the emergencies that confront the people. Our platform pledges us explicitly to the rehabilitation of silver, to make it "standard money," even as gold is. The people want that done. They have not yet decided exactly how, perhaps, but that is what they elected us for—to find out how, to show them the way and lead therein. Be assured, sir, if we fail to do what they want done they are not so untrained in managing their affairs but that they will find somebody else to do it.

Mr. Chairman, I did not think to have spoken so long. I did not think that I could have abused the courtesy of the House to such an extent. But the question is most important and well-nigh exhaustless. Even now I am conscious of having omitted many things that ought to be said. I thank the House very much for extending my time and for the unusual compliment of its general and prolonged attention. I desire to express my gratitude for this indulgence, and shall endeavor not to be thus again a debtor during this session.

But, sir, I could not be silent. I love my country. I can not endure to see her suffer without relief when relief is within call. And the Republican party is dear to me. My ancestors were Federalists and Whigs of New England. My father followed the standard of Fremont and Dayton to the glorious defeat of 1856. The infancy of the Republican party rocked my own cradle. Since my youth I have treasured the deathless fame of its great leaders, studied and professed its doctrines, benefited by its policies, and wielded ceaselessly what little strength was mine in its strenuous contests for the confidence of the people. My anxiety that it shall now rise level with the emergency that meets us is greater than I can express.

Sir, we are told in an old German legend how a monster, Alberic, became possessed of a magic ring of gold which gave him unlimited power, which power he used in heaping up and hoarding all the gold and wealth of the world; and that he fashioned for himself a helmet of gold that enabled him at will to become invisible to men or to take upon himself any form he pleased. And the world, it is said, was at the mercy of that monster until the god Wotan appeared and took him captive while, in the insolence of his power, he was boastfully wearing his most odious shape. If, sir, there is in this country to-day a malevolent power, with ring and helmet of gold, now invisible and now terrible in aspect, as it either insidiously or openly undermines the foundations of liberty, could there be for the Republican party a more glorious destiny than, like the god in the story, to come to the relief of the people. [Loud and prolonged applause.]

Revenue.

SPEECH

OF

HON. ADOLPH MEYER,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. MEYER said:

Mr. SPEAKER: We are confronted with some of the greatest problems of government which can be presented to the attention of the American Congress. It was but the other day that we were called upon to deal with the question of reaffirming and maintaining the national principle of the Monroe doctrine, a principle essential to our safety, peace, and honor, endeared to the American mind and conscience by over seventy years of prescription and by the wisdom of a long roll of illustrious American statesmen, and confirmed to our own judgment by recent and signal examples of the partition of the continent of Africa by greedy foreign governments and by preparations for similar operations in the vast regions of Asia. Indeed some of these acts of spoliation and conquest have been accomplished during our own short session. I was glad to observe when this question came before Congress that the manly, wise, and, I may add, moderate action of the President of the United States found a general, cordial response in Congress and by the people, irrespective of sectional or party lines. It was a grand spectacle of a great and united people. The unanimity and firmness exhibited by all the departments of the Government, supported by the popular voice, has already had its effect abroad.

SALISBURY'S REPLY ON VENEZUELA BOUNDARY QUESTION.

The reply of Lord Salisbury to Secretary Olney, couched under diplomatic forms and phrases of politeness and courtesy, was yet full of thinly concealed disregard for the protest of this country. Its leading idea was to brush away with contempt, and in the last resort with violence, every barrier to the greed of England for further territory on this continent. The suggestion of arbitration, so kindly and earnestly made by the United States Government, was firmly repelled, and it was made obvious to us all that the plan was for the British Government, backed by powerful fleets and armies, to pursue its own will against a weak and unoffending American Republic. The message of the President and the speedy adoption of his recommendations by Congress have happily brought the British people to make a calm review of the whole subject. The attitude of the United States was eminently moderate and disinterested. I am rejoiced to note that the healthy common sense of the British people has compelled an entire change of tone on the part of their rulers. The Queen's speech to Parliament is courteous and pacific in its reference to this country, and the discussions of the Venezuelan question by Sir William Vernon Harcourt and by Balfour are not only friendly in tone, but they contain a substantial admission of the justice of our position and of the propriety of our methods in dealing with the subject. The final result, I rejoice to believe, will be peace—but peace with honor and justice both to England and Venezuela—and a better understanding throughout the world of our country as one of the foremost leaders in the cause of peace and fair dealing among all the nations. [Applause.]

NATIONAL HONOR AND INTERESTS MUST BE GUARDED.

But, sir, there are two thoughts that arise to my mind in this connection which, without taking time to elaborate them, I wish to impress upon this House. First, in order to perform our duty to ourselves and to future generations of Americans, to guard the national honor and interests, and, if need be, unfortunately, to cope in the last resort with a powerful wrongdoer, it is indispensable that we should at once carefully study our military and naval preparation in order to supply its manifest deficiencies. The latter arm of national defense should be steadily augmented, strengthened, and developed until our naval power shall be commensurate with our commercial marine, our vast and growing trade, and our just maritime aspirations, and our extended coast bordering the two greatest oceans of the globe for over 6,000 miles.

SECTIONAL POLITICS SHOULD BE BANISHED.

Another thought that I can not forbear to present is that sectional politics should be banished from our party contentions and from the American statute book. A great party has for long years past sought the political power of this country mainly on the idea of hatred and by the method of fomenting sectional prejudice against the South. In this last crisis in which, as if by fire in a crucible, the manhood and patriotism of all citizens were tested, the South stood forth more firm and resolute for the American position than any other section of this great Republic. It mattered not that her coasts and cities were more exposed than any other. The Southern people did not, in that trying hour, stop to consider whether the present system of taxation and expenditure was partial and unjust to the Sonth or not, or that there yet lingered in our statute book, thirty years after the war closed at Appomattox, a clause of disfranchisement, opprobrium, and insult to all ex-Confederates. They saw and would see only the flag of the common country, but the Republican who can now read that statute of proscription and not join promptly in its repeal ought to hang his head in shame when he reflects upon the devoted bearing of the Southern people in the hour when it was vital that we should all stand united as one man. The exceptions of a treasonable British spirit are all in the East.

FINANCE, TAXATION, AND REVENUE.

But, sir, I wish to speak very briefly to-day upon the great questions of finance, taxation, and revenue. These questions are not new. They have been debated for long months and years, and yet remain unsolved. They are serious, important, and difficult. Sir, you find a radical disagreement on the most important branches of these questions, both among Democrats and among Republicans. With such wide differences of opinion among honest, sincere, and able men, I need not say that hasty and merely partisan legislation upon them is unwise, if not criminal. The subject of an addition to our revenue, which I propose specially to consider, is not one to be disposed of by a secret clique or cabal of leaders gathered together in the hurried hours of the Christmas holidays, with one-half of Congress dispersed to their homes. It was not right to deny fair and full debate on such a grave question or the opportunity to members for a full and fair examination of the bill. The question of revenue, whether more revenue is needed or not, and if needed how it is to be raised, and the question of providing for the protection of the public credit whether upon this or that theory of finance, are topics too vast and momentous to be disposed of by a secret caucus of a dozen members, and forced through an uninformed or half-informed House of Representatives by whip and spur. It is not by such methods as this that this House can discharge its great duty to the tribunal of public opinion. Legislation thus hastily hatched and patched up is very apt to be unwise and unjust, and it is certain to be dangerous. It is an alarming violation of the very essence of free government.

Our Government rests on the principle borrowed from our English ancestors that all taxes shall be imposed by their representatives in Congress, aye, in this very House; but what is the value of this important and all-pervading constitutional provision if by the machinations of a small, secret, and self-constituted caucus all opportunity for proper examination of the proposed measure and for debate and amendment is substantially denied? It may be true that some shallow politicians may favor a crude measure thus devised as a good party maneuver, or as an aid to this or that man's ambition for a Presidential nomination, but, unless I greatly mistake their temper, a free people not ready to submit to tyranny will view such proceedings with alarm and disapproval. Even in time of war such hasty and despotic methods would not be justifiable. The illustrious men of our earlier history did not thus rashly legislate. But, sir, it has been well said that—

Fools rush in where angels fear to tread. [Applause.]

DEFICIT IN REVENUE NOT TO BE DIMINISHED BY REFUSAL TO CARRY OUT CONGRESSIONAL APPROPRIATIONS.

I had occasion, Mr. Speaker, on the 14th of February of last year, in the debate upon the gold bond bill, to submit some extended observations upon the public revenues and the public credit. The views I then expressed largely anticipated the crisis and the state of affairs at the beginning of this session. Time has only served to demonstrate the soundness of the suggestions which I then deemed it my duty to make. At that time the famous income-tax decision by the United States Supreme Court had not been rendered, and by hardly anyone was it even anticipated. The case was not argued before that august tribunal till some time afterwards, and it was the month of May before that important and far-reaching decision was rendered by which this court swept away some thirty-five millions of our revenue. I did not venture to anticipate, any more than others did, this decision and the consequent reduction of the public revenues. But, sir, I did anticipate a deficiency in the revenue, and I expressed my apprehension then with frankness and distinctness. It seemed to me that the estimates of the Secretary of the Treasury, however great his financial ability and opportunities for an accurate judgment, could not under all the circumstances be relied on. I said:

I need not point that the Secretary's estimates of an improved revenue

after the 1st of July next (July, 1895) are mainly predicated upon an improvement in business, which may or may not take place as soon as he expects, and as we all desire. It may be a long waiting before it occurs. If the deficiency lasts it must be met by increased taxation or by using the proceeds of bonds, carrying with it an increase of our bonded debt.

Under these circumstances and with the prospect that Congress will not meet before December, 1895, I think "it would be a wise precaution to do at once as was done in March, 1875, and to make a provision for an increase of $30,000,000 of additional revenue."

It has developed as I anticipated, although I did not then estimate for a deficiency based on the annulment of the income-tax revenue. Had I foreseen that decision, I should have felt it my duty to advise an increase of at least fifty or sixty millions of revenue instead of only thirty millions. I take no pleasure, sir, in the fulfillment of my anticipations and fears expressed a year since. I should rejoice if the return of general prosperity throughout the Union had brought with it expanding revenues and created the surplus expected by many to be the immediate fruit of the tariff bill of August, 1894.

What is our condition to-day? Does any man need to be told that it is by applying the proceeds of three separate bond sales, aggregating $162,000,000, which yielded some $182,171,195, to the current expenses of the Government that we had in the Treasury on December 1, 1895, a balance, according to the Secretary's report, of $98,072,420.30 in excess of the actual gold reserve on that day? For the fiscal year which ended June 30, 1895, the Secretary reports a deficit of $42,805,223.18, instead of the deficit of $20,000,000 as estimated in his report on the state of the finances for the year 1894. And how is it that this deficit was only $42,805,223?

COMPTROLLER BOWLER'S ARBITRARY ACTION.

I will not undertake to point out all the methods by which the deficit has been kept down to that mark, but I can not forbear in this connection to speak of the arbitrary, illegal, and unconstitutional act of the Comptroller of the Treasury Department in refusing to execute the law of March 2, 1895, making appropriations for the sundry civil expenses of the Government. This act appropriated some $238,289.08 to pay the producers of sugar who had complied with the bounty law contained in Schedule E of the tariff act of October 1, 1890. It was declared by law that the Secretary of the Treasury should pay the bounty stipulated for sugar produced and manufactured prior to August 28, 1894.

In the same statute of March 2, 1895, to which I have referred, it was further enacted that there should be paid to the producers of sugar who had complied with the bounty law, and who would have been entitled to receive a license, a bounty of eight-tenths of a cent per pound on the sugars testing not less than 80 per cent grown in the United States between the 28th of August, 1894, and the 30th of June, 1895, and for this purpose the sum of $5,000,000 was appropriated. These two sums aggregate $5,238,289, and if the law of Congress had been honestly executed, as this officer was sworn to do by his official oath, the money would have been paid and the deficit arising in the last or in the current fiscal year would have been larger by that sum of five millions than it now appears to be by the Secretary's statement. For the current year the Secretary estimates a deficiency of $17,000,000. I hope he may be right as to his estimates of increased revenues, and that this good result is not to be achieved by forcing a balance based on a refusal to carry out the appropriations made by the lawmaking power of the United States Government upon the singular pretense that in the opinion of a subordinate officer of the Treasury Department the appropriations are unconstitutional and that both the President and Congress have been guilty of gross usurpation. But, sir, waiving this point, it is clear to the simplest observation that without using the proceeds of bond sales our revenues are not equal to our usual and necessary expenditures. I do not propose now to discuss the causes of the deficiency any further than I did last February. Whatever may be the causes of the deficiency, I assert now, as I did many months ago, that instead of relying on the proceeds of bond sales to meet current expenses or supply deficiencies, we should proceed carefully and energetically to take such steps as will make the revenues of the Government equal to its expenditures. [Applause.]

RETRENCHMENT OF EXPENDITURES.

As for cutting down our expenditures, while I am generally favorable to economy, I can not see how the ordinary expenditures, outside of the great pension list bequeathed to us by the Republican Congress of 1890, can be retrenched to any considerable extent. Where, indeed, are we to begin our retrenchment? Our appropriation for foreign intercourse is a very small one, and truly insignificant for a great country. Our Army is smaller than many think it should be in time of peace, and would certainly be found pitifully small if we should have to engage in war. Our Navy is comparatively small. It is only the sixth or seventh in power upon the seas. Shall we be content with such a diminutive naval force as actually encourages second-rate powers to violate our national rights? Is a navy which is not one-fifth in fighting power that of Great Britain worthy of this great Republic, and are we to refuse adequate appropriations even for guns to man our ships and for seamen and dry docks? Ought we not, on the contrary, by steady and wise steps to increase our Navy promptly and liberally—not for purposes of war, aggression, and conquest, but as a measure of peace, by inspiring respect for our flag by foreign and distant powers? [Applause.]

Our Indian service can not well be reduced. Our postal service pays for itself. Our appropriations for rivers and harbors are now made biennially, and considering our great line of sea coast—aggregating some seven or eight thousand miles—and our numerous rivers and great chain of lakes, and the great increase of deep-draft vessels for the needs of modern commerce, are far smaller than some nations whose area and necessities for such public works are much inferior to our own. These appropriations are much below the positive and urgent needs of modern commerce. So far, therefore, from curtailing our ordinary expenditures, I hold that we ought to increase the sums expended in the past for river and harbor improvements and for the increase of the Navy and the fortifications required, in addition to the Navy, to protect our great cities in the event of war.

I am aware, sir, that some gentlemen think it a fine thing to insist on economy and to send very small appropriation bills over to the Senate, thus making a grand record of economy for the members of this body. This is an old dodge. It is a trick which the people will be quick to detect and resent. It may indeed help an individual here and there, but I would not recommend it to a political party or to a Presidential candidate to build their castles upon the assumed ignorance or incapacity of the American people.

HOW SHALL ADDITIONAL REVENUE BE RAISED?

If it be true, as I insist it is, that we need to keep up or to increase our appropriations, and will need additional revenue in order to square income and outgo, the question next arises, How shall this revenue be raised? In my remarks of February 14, 1895, I suggested an increase of one-half of a cent per pound on raw sugars. This would involve a tax of only 25 cents or less per head on the people of this country, but it would yield a revenue of at least fifteen to twenty million dollars and would not bear hardly on any class of people or on any section. I challenge anyone to name a tariff tax which would bear so lightly on the people and yet yield so much to the Government as this tax on sugars. I suggested also a tax on successions and a stamp tax on bank checks. I venture now to add to this a suggestion that a very large revenue might be raised by a small tax on the passenger receipts of the railroads of the country, a tax which would fall on a class well able to bear it. It would add the merest trifle to the cost of a traveler's journey, but the aggregate income would be very large.

Mr. Speaker, I doubt very much whether any considerable addition to the revenue could be secured by an increase of the existing tariff rates, except by the sugar tax which I now propose, and perhaps by some increase of the duties imposed in the act of 1894 on wines and spirits. There is danger that a tax on wool and an increase of the tax on woolen goods would really defeat revenue in the end, but I am willing to examine this question and to decide it dispassionately, with a view to raising the greatest revenue possible needed under our present conditions. We must not forget that in the present financial stringency, which began during President Harrison's Administration, the inability of the people to purchase and consume has had the effect to diminish importations, and thus defeat revenue. This happened in 1874 and 1875 under a Republican Administration; it will occur again.

Sir, there are other features in our internal-revenue system which might be studied with a view to a larger revenue.

I advocate, sir, an honest, faithful effort to raise additional revenue. I do not consider that the subject should be treated only from the standpoint of favoring manufacturers. Doubtless many of them are suffering from the existing stagnation in trade. They have my sincere and full sympathy. But their case is not near so bad as that of the farmer. The condition of the agricultural class has been very bad for years past. It is our duty to consider and study the causes of this general distress. No mere catchpenny contrivance of the party controlling this House will satisfy the people. This House must aim at something higher and better than the problem of securing the Presidential spoils of office, or it will merit and receive popular condemnation. [Applause.]

UNJUST DISCRIMINATION AGAINST THE SUGAR INTERESTS.

Holding these views, and deeply convinced as I am of their logic and correctness, I felt constrained to vote against the tariff bill which the House lately sent to the Senate. The discrimination so plainly and needlessly made in it against an article which forms the greatest industry of my State is so unfair, unjust, and illogical that I could not, even by implication, assent to it. I could not stultify myself by favoring a revenue bill which specially and by emphasis excludes from the increased duties an article which from the foundation of the Government has been regarded by all con-

siderate and great financial minds as the very best subject for providing revenue in large quantity with the least burden to the people. From the date of the very first tariff law, enacted under our Constitution July 1, 1789, until the passage of the act of October 1, 1890, or for more than one hundred years of our national history, sugar has been recognized by all parties and under all conditions as entitled to a high place on the list of revenue tariffs.

I go further and I assert that the recent position of the Republican leaders taking sugar out of their long list of protected articles is wholly indefensible in logic and against all precedent. The idea, the doctrine, of protection to American industries is not a new one. It did not begin with these modern lights, McKinley, ALLISON, and ALDRICH, or their associates in this Congress. I mean no disparagement to these gentlemen when I suggest that they are not to be compared to such great financiers and statesmen as Alexander Hamilton, John Adams, Daniel Webster, Henry Clay, George Evans, Thaddeus Stevens, and many others who, from 1789 until a few years ago, upheld the doctrine of protection. Be the dogma of protection wise or unwise, be it sound or unsound, none can deny that it has been upheld, championed, and expounded by some of the mightiest intellects of America. Not one of these great minds of the past ever proposed to exclude sugar from the list of dutiable or protected articles. How could they have done so logically with a great industry, employing hundreds of thousands of people? How could they speak in one breath of making this country independent of foreign nations and in the next breath so construct a tariff as to make this country depend for a great and necessary article of its food supply upon importations from Cuba, Demerara, and Germany? These great men may have, as some would say, espoused a false theory of government, but they were able, honorable, patriotic, and consistent. Their legislative projects in finance drew no inspiration from party or sectional malice. Their aims were lofty and aboveboard. [Applause.]

Now, sir, why is it that the Republican leaders have made this discrimination against sugar, increasing duties on the general tariff list 15 per cent of the existing duty, but carefully avoiding the article of raw sugar? It has been intimated that the fear of a gigantic trust and dread of its all powerful influence is the prime cause of this invidious discrimination in the bill. It will not be forgotten, sir, that in the first tariff bill in our whole history that ever put sugar on the free list, I mean the so-called McKinley bill of October, 1890, the famous sugar trust was carefully protected. They wanted cheap foreign sugar in order to refine and manufacture, and they got it. They wanted liberal, aye, prohibitory duties on foreign refined sugar, and the Republican leaders gave it to them with a free, generous hand. The sugar trust grew, flourished, abounded yet more and more until it is now a great power in our land and an object of profound reverence by a certain class of politicians. But, sir, I am reluctant to believe that the idea of pandering to this trust was the sole, dominating idea that led to the action of the framers of this bill on excluding American-grown sugar made from beets or cane from its benefits.

REPUBLICAN MOTIVES FOR ANTAGONISM TO SUGAR.

I am sorry to be forced to the conclusion that there is another motive for this war upon the sugar-producing interest of Louisiana which is hardly more creditable than the other. The Republican party has dealt with the State of Louisiana in the past with a cruel hand. The hideous recital of the epoch of reconstruction, military rule, carpet-bag pillage, for which they are responsible, will always stain the pages of American history. The heirs and successors of the party which perpetrated these foul crimes against civilization and humanity can not be made to learn that the way to win the confidence and good will of a people is by acts of kindness and generosity, gentleness and consideration. The attitude of the Republican party toward Louisiana and the whole South is one of insolent superiority, harshness, and lack of generous consideration. Their idea is that Louisiana is to be won to their political embrace by acts of invidious, discriminating legislation; by force bills; by telling the people there you must vote with us or we will starve you out. They have never read, or they have forgotten, Æsop's fable of the traveler and the cruel north wind, which only made the traveler hug his cloak more closely about his person. Their model for governmental policies is Legree, of Uncle Tom's Cabin, the Northern overseer, whose only method was the lash and abject submission instead of love. I assure you, gentlemen, you can not win the confidence of the people of Louisiana in this way. The last time you wielded power in this House you passed a force bill that was a disgrace to American legislation, and now in this tariff bill of yours it is not difficult to read that the spirit of sectional malice still survives, lingers in your breasts, and only waits opportunity for a fuller display and development. I fear that in the minds of Republican leaders this rancor and prejudice know no change or abatement, but my hope lies in the masses of the American people and in the growth of a noble, kindly, comprehensive, and national spirit by good citizens in all sections of the Union. [Applause.]

Silver and Wheat in India and America.

Generally speaking, it is strictly true that the price of wheat has never been higher in India than in America, except when there was either a famine to abnormally raise prices in India or a triumphant Democracy to abnormally depress prices in America. Instead of wasting time in trying to restore the conditions of 1873, let us pray God to deliver India from famine, and let us help the farmers of America to deliver themselves from "four years more of Grover" by undoing the blunder of 1892, and the "crime of 1873" can safely be left to work out its own salvation or condemnation.

SPEECH

OF

HON. MARTIN N. JOHNSON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. JOHNSON of North Dakota said:

Mr. CHAIRMAN: There was a short speech made here last night by the gentleman from Colorado [Mr. SHAFROTH] which was a typical speech for those who hold his views on this question, and I select it as the text for my remarks out of compliment to the gentleman because it was a fair, concise, correct, and able statement of the doctrines which he advocates. If I misrepresent the gentleman in laying down the premises from which I start, I hope he will correct me, but I do not think that will be necessary. I am sorry that his speech is not in the RECORD this morning, but I am sure that we shall not disagree about its substance. The gentleman started out with the statement that the trouble in arriving at an agreement upon this question is that the opposing sides can not agree as to the premises.

That is true, Mr. Chairman. The trouble with him and his associate is that they start out with false premises. His premises are wrong, his logic is correct, and his conclusions are wrong. His first false premise is based upon an inaccurate statement of the law of supply and demand. He assumes, and asks us to assume, as an axiom that if you reduce by one-half the supply of an article such as gold or silver, or money, you thereby double its purchasing power.

That I deny. I admit that by reducing the supply you increase the demand, but I deny that by halving the supply you double the demand. I do not deny the possibility of expressing the law of supply and demand by some arithmetic or algebraic formula, but I do most emphatically deny that the formula "Supply÷2=demand×2" expresses it. As to the extent to which you do increase the demand for any article by lessening the supply we can only say that that curve of probability has never yet been accurately located or scientifically determined; but we do know that it is far from being in a geometrical or even an arithmetical ratio. I have tried in vain for many years to find in scientific works some mathematically exact statement of the operation of the law of supply and demand. I believe it would vary with different articles, and even for the same article at different times and places. If the question were confined to this one subject of silver, and if all other causes which tended to influence the demand for silver except simply the one item of supply were eliminated from the calculation, then I could draw that curve with absolute arithmetical, scientific accuracy, as I have drawn the two curves representing the price and production of silver from 1873 to 1894, inclusive, on this chart which you see here before you.

[NOTE.—At this point the attendants brought into the Hall some charts, about 6 feet square each, mounted on an easel in such a manner as to be visible one at a time. The easel was placed in the area immediately in front of the Speaker's desk.]

[For Chart No. 1 see page 105.]

The figures from which this chart is drawn are found on pages 238 and 249 of the Annual Report of the Director of the Mint for 1895, supplemented by a table on page 45 of his 1894 report on production of gold and silver in the United States as to the production from 1873 to 1886.

As a result of the act of 1873, those who believe in free coinage assert that silver was "struck down," "destroyed," and "demonetized." Production increased from 63,000,000 ounces in 1873 to 167,000,000 ounces in 1894.

People who think that such words as "destroyed" and "struck down" fittingly describe such a growth in a great industry in twenty-two years can consistently use the word "demonetization" in describing the changed condition of silver when its use as a money metal was increased from practically nothing to about $500,000,000 in this country.

These men assert, and attempt to make people believe, that the law of 1873 caused the decline in price of silver. Is it not possible that other causes may have been at work? Is it not possible that by doubling the production of silver you might reduce its value either by one-half or by some other fraction? On that theory the lines on the chart ought to cross in the year 1890. They actually intersect in 1891.

PRICE OF WHEAT IN INDIA.

It has been assumed that under free coinage the price of wheat has remained steady in India. As a matter of fact the price of wheat has fluctuated up and down there about the same as here. The average price there has been nearly twice as high some years as others, ranging from 5.25 rupees per maund in 1879 to 2.76 rupees per maund in 1885.

By the courtesy of the Secretary of the Department of Agriculture I have obtained this table giving the price of wheat in eleven representative districts of India for every year from 1873 to 1893, inclusive.

UNITED STATES DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D. C., February 7, 1896.

DEAR SIR: In accordance with your request of this morning, I inclose herewith an exact copy of the statistics of wheat prices in India which formed the basis of the tabular statement transmitted to you on the 5th instant. The figures were taken from an official publication entitled Prices and Wages in India, compiled in the statistical branch of the finance and commerce department of the Indian Government. The values are given in terms of the silver rupee of India.

Respectfully, yours,

J. STERLING MORTON,
Secretary.

Hon. MARTIN N. JOHNSON,
238 Maryland avenue NE., Washington, D. C.

*Average annual price of wheat, first sort, per Indian maund, in selected districts of western India.**

[The figures represent rupees and decimals of a rupee.]

* From Prices and Wages in India, an official document compiled in the statistical branch of the finance and commerce department of India, Calcutta, 1894.

By adding the columns in the foregoing table and dividing by the number of districts we obtain the following averages:

1873	3.18	1880	4.02	1887	3.56
1874	2.85	1881	3.02	1888	3.53
1875	2.81	1882	3.03	1889	3.41
1876	2.88	1883	3.15	1890	3.17
1877	4.22	1884	2.87	1891	3.55
1878	4.94	1885	2.76	1892	3.99
1879	5.25	1886	3.06	1893	3.47

From these averages I have drawn Chart No. 5.

[For Chart No. 5 see page 106.]

This chart No. 5 proves to a mathematical demonstration that the price of wheat, measured in silver, has not remained steady in India. In fact, the extremes of fluctuation have been greater there than in the United States and in other gold-standard countries.

In order to make the lesson of the foregoing table and chart more easily understood, I have reduced the India rupees and maunds to the equivalents in United States gold dollars and bushels.

In making these calculations of equivalents I have availed myself of the extremely valuable and painstaking assistance of the accomplished officials of the Department of Agriculture, and take this occasion to express my just appreciation of their kindness.

UNITED STATES DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D. C., February 5, 1896.

DEAR SIR: Complying with your request of yesterday, I send to you herewith tabular statements showing the annual exports of wheat and wheat flour from Argentina and Russia since 1890. These figures can be used to supplement the tables which you will find on pages 101–102 and 160–161 of the bulletin handed to you yesterday entitled "Production and distribution of the principal agricultural products of the world."

I inclose also the tables you desired relative to wheat prices and agricultural wages in India. The reduction of the Indian denominations used in these tables to United States equivalents was more of a task than at first anticipated, and hence it was impossible to transmit the tables last night as hoped.

Respectfully, yours,

J. STERLING MORTON,
Secretary.

Hon. MARTIN N. JOHNSON,
238 Maryland avenue NE., Washington, D. C.

[From official blue-book prices and wages in India.]

Average annual prices of wheat (first sort) per bushel of 60 pounds in certain places of western India.

Places.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.

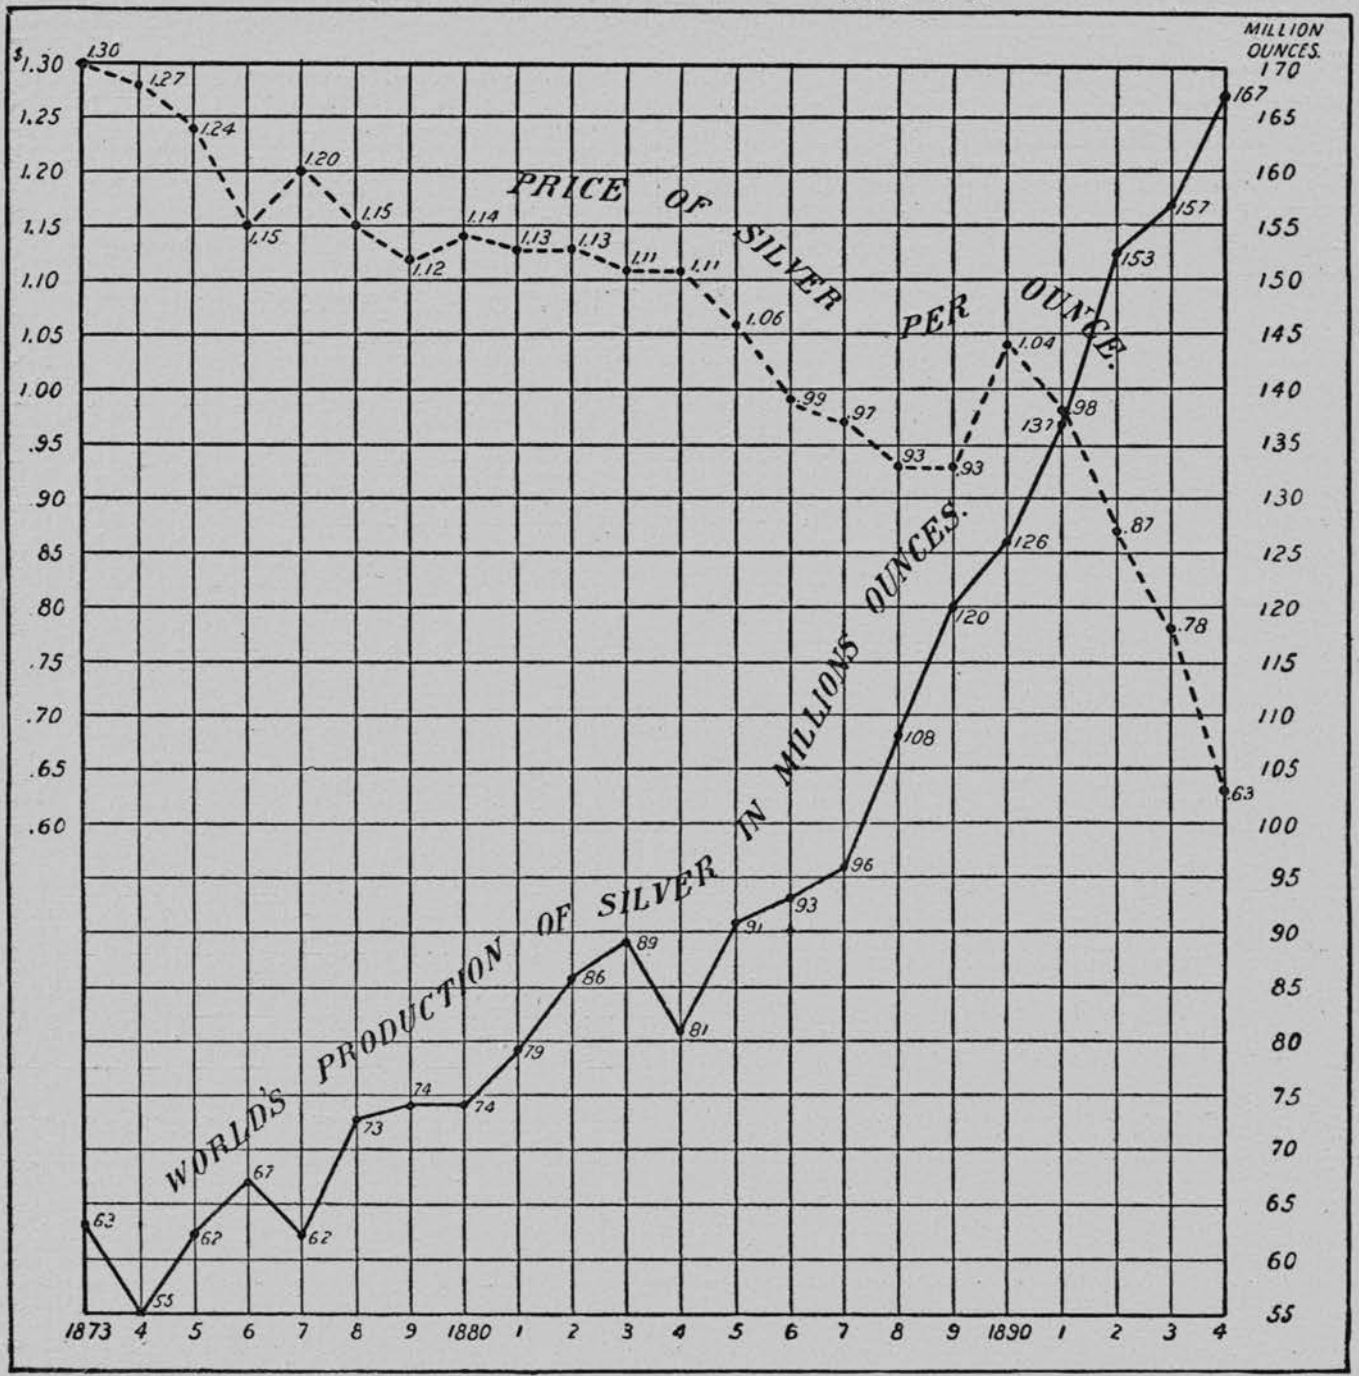
By adding the columns in the foregoing table and dividing by the number of districts we obtain the following averages:

Average price of wheat per bushel in India reduced to equivalents in United States gold coin.

1873	$1.05	1880	$1.14	1887	$0.90
1874	.92	1881	.86	1888	.85
1875	.86	1882	.86	1889	.80
1876	.89	1883	.88	1890	.76
1877	1.24	1884	.80	1891	.90
1878	1.47	1885	.76	1892	.89
1879	1.48	1886	.79	1893	.68



From these averages I have drawn the following chart, No. 2, and for the purpose of comparison I have also placed on the same chart the curve which appears on Chart No. 4, giving the price of wheat in the United States for the same period.

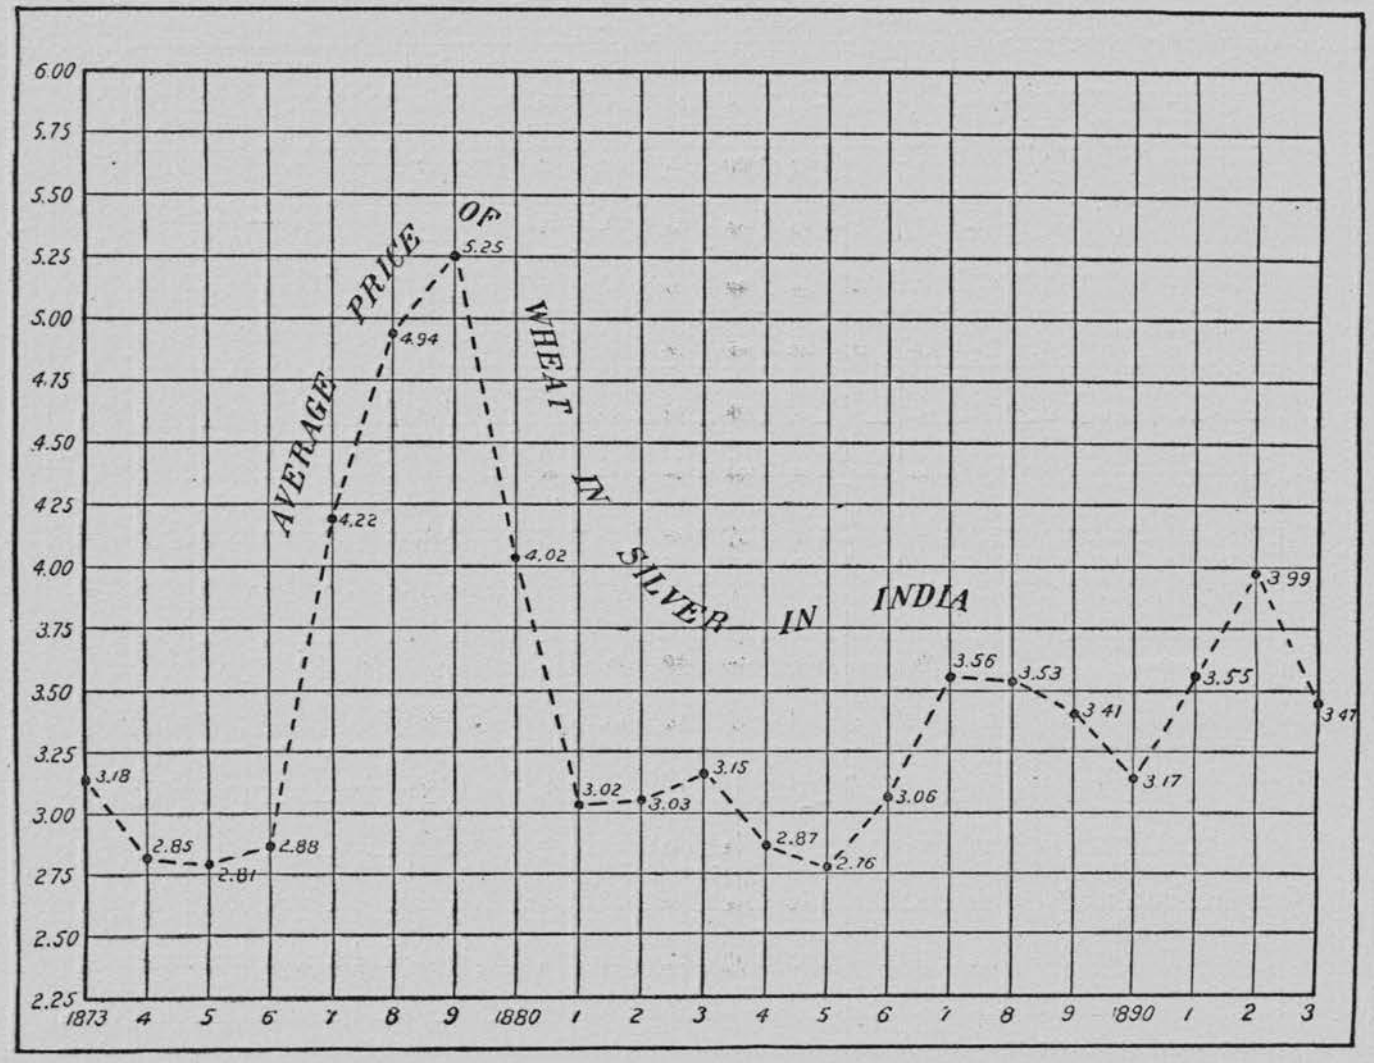
[For Chart No. 2 see page 107.]

Prices of wheat have sometimes been higher in India and sometimes in America.

The fact of these ups and downs admits of no dispute. The only room for disagreement is as to the causes which produced them.

CHART NO. 1.—Report of the Director of the Mint for 1895 (pages 238-249).

Our opponents teach and affect to believe that one cause, and only one cause, viz, the "crime of 1873," has produced all these ups and downs. We believe and teach that very many causes and forces may have combined to produce the resultant. Wheat was very high in India from 1877 to 1880. That is a fact. But the farmers of India had no wheat for sale during those four years of the "great famine," when in some instances they ate human flesh for want of wheat bread. In my judgment the famine was quite sufficient to account for the price of wheat.



Wheat was low in the United States from 1884 to 1888, and again these last three years of grace.

That is a fact. It is also a fact that Mr. Cleveland was President of the United States during those years. Generally speaking, it is strictly true that the price of wheat has never been higher in India than in America except when there was either a famine to abnormally raise prices in India or a triumphant Democracy to abnormally depress prices in America. [Applause.] Instead of wasting time trying to restore the conditions of 1873 let us pray God to deliver India from famine, and let us help the farmers of America to deliver themselves from "four years more of Grover" by undoing the blunder of 1892, and the "crime of 1873" can safely be left to work out its own salvation or condemnation. [Applause.]

If there were any substantial advantage to be gained by exchanging wheat for rupees or for cheap Mexican free-coinage silver dollars, the American farmer could easily exchange his good American gold dollars for any of these cheap coins, and he would get just as many rupees or Mexicans for a bushel of wheat as his competitors. Up to this point they would be on an equal footing. The only difference in final results would depend on relative smartness in getting rid of the rupees.

The farmer in India might be more successful in cheating the poor laboring man out of the just wages of honest toil than would be possible in America. That I admit. Depreciated money always

CHART NO. 5.—Silver rupees. Average annual price of wheat, first sort, per Indian maund, in selected districts of Western India. From "Prices and wages in India," an official document compiled in the statistical branch of the finance and commerce department of India. Calcutta, 1894.

hits the laborer first and hardest, and the more ignorant he is the more he is hit. But when it came to paying out the part that goes to the merchant, the banker, and the railroad man it is not very likely that the ordinary farmer, either in India or America, would rob the party of the second part in the transaction to any alarming extent. But enough of India. Let us turn now to matters nearer home.

It is extremely fashionable to assert that since 1873 it has gradually become harder and harder for the laboring man and the farmer to acquire gold or to pay debts. I admit that it has been harder to get gold or to pay debts now, since 1892, than it ever was before.

The same may also have been the case in a lesser degree during the first four years of Grover. But during the years of Republican supremacy exactly the reverse was true. The improvement was not regular and steady, but it was nevertheless a distinct advance.

Speaking now as a Republican and as a Representative, glad to render an account of my stewardship and the stewardship of my party during the thirty years when that party was charged with responsibility for the prosperity of the people and the glory of the Republic, I make the statement without fear of successful contradiction that the last and thirtieth year of the thirty years of Republican supremacy was the best year in all our history for the laborer and for the farmer, and that was the year of years, before or since, when it was easiest to get gold or pay debts.

That this was true in the case of the farmer I shall attempt to prove by a mathematical statistical demonstration. I have also gone over the figures in the case of the laborer and hope at some future time to have an opportunity of presenting them to the House. For the present I will content myself with making the claim and supporting my position by quoting a single authority—"unus, sed leonem."

On page 6 of the last annual message of President Harrison, sent to Congress December 5, 1892, you will find this statement:

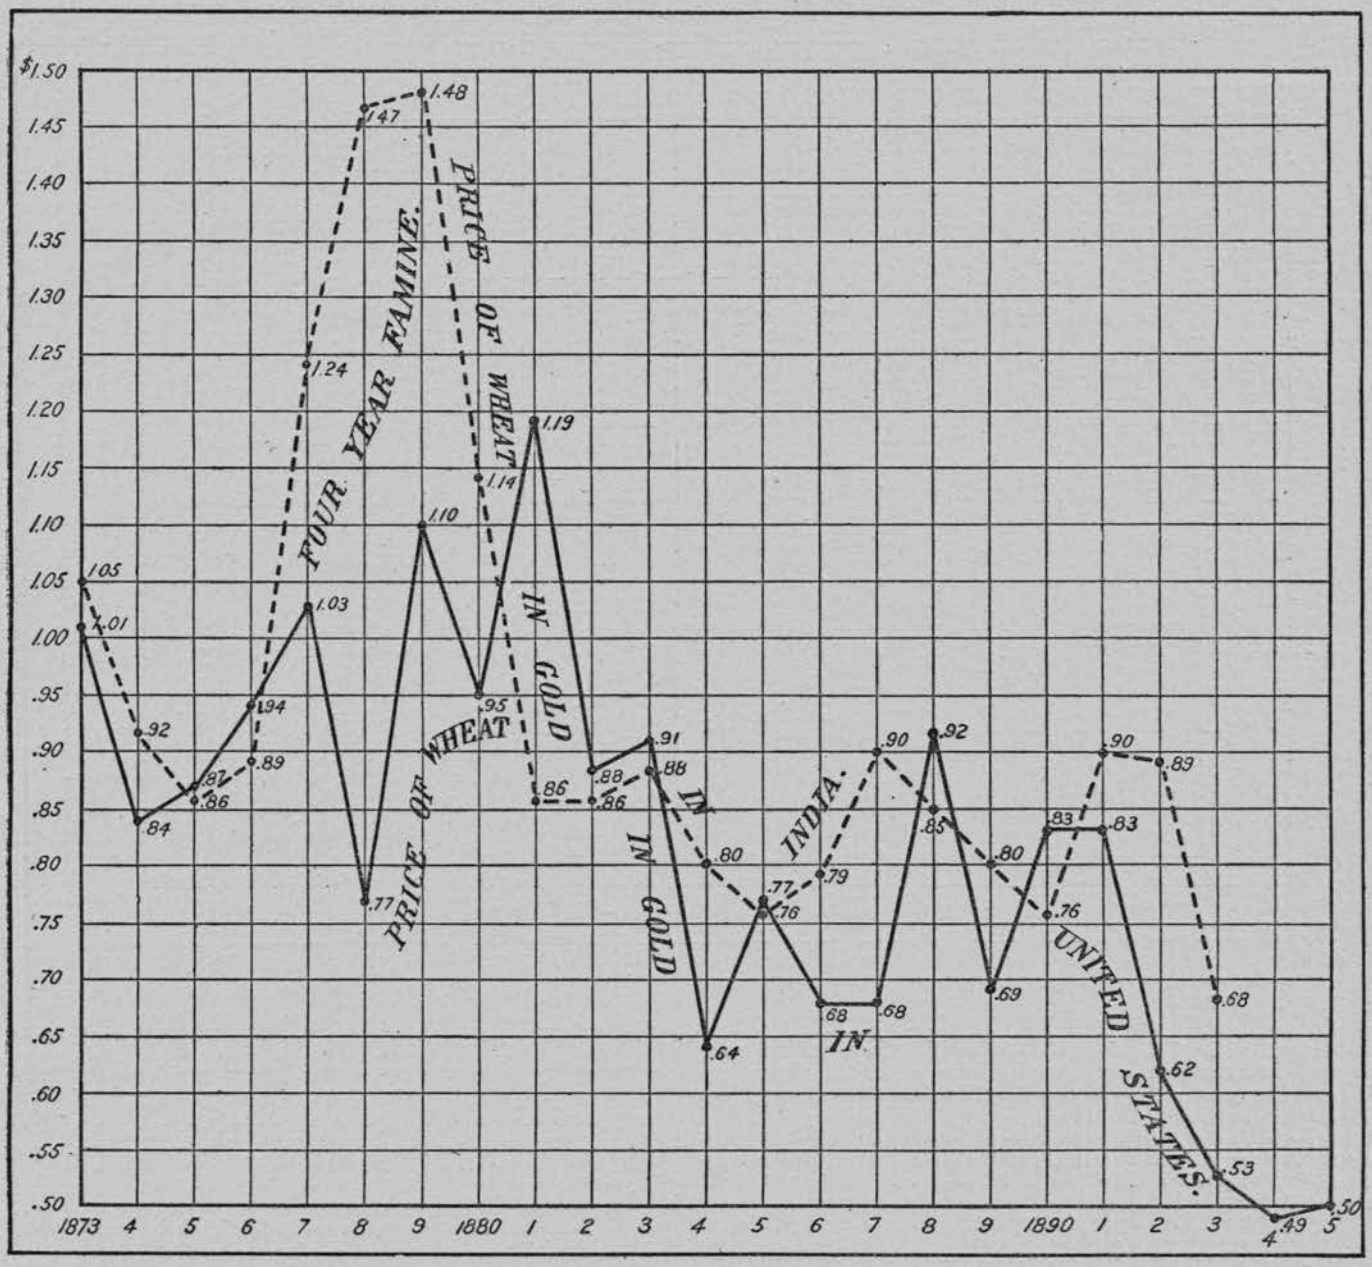
> There never has been a time in our history when work was so abundant or when wages were so high, whether measured by the currency in which they are paid or by their power to supply the necessaries and comforts of life.

We were more prosperous in 1892 than in 1872. We now have hard times and have had hard times for three years, but in casting about for the causes and remedies of all our ills it is utterly futile to compare the present with the less prosperous period of 1872 rather than with the more prosperous period ending in 1892. Whatever cause produced the present result commenced to operate and showed its effects after 1892 and not 1872.

WHEAT AND SILVER.

It is a favorite sophistry with our friends on the other side to say that "wheat is cheaper now than in 1873." "Silver was destroyed, struck down, and demonetized in 1873," "therefore the fall of silver caused the fall of wheat."

The trouble with that is, that the fall in price of wheat has all, or nearly all, taken place since 1891.



The average farm price of wheat was 83 cents in 1891 and the same in 1890, and 92 cents in 1888, in gold, while in 1874 it was 94 cents in paper currency, equal to 84 cents in gold. (See Chart No. 4.)

When was the wheat farmer most prosperous?

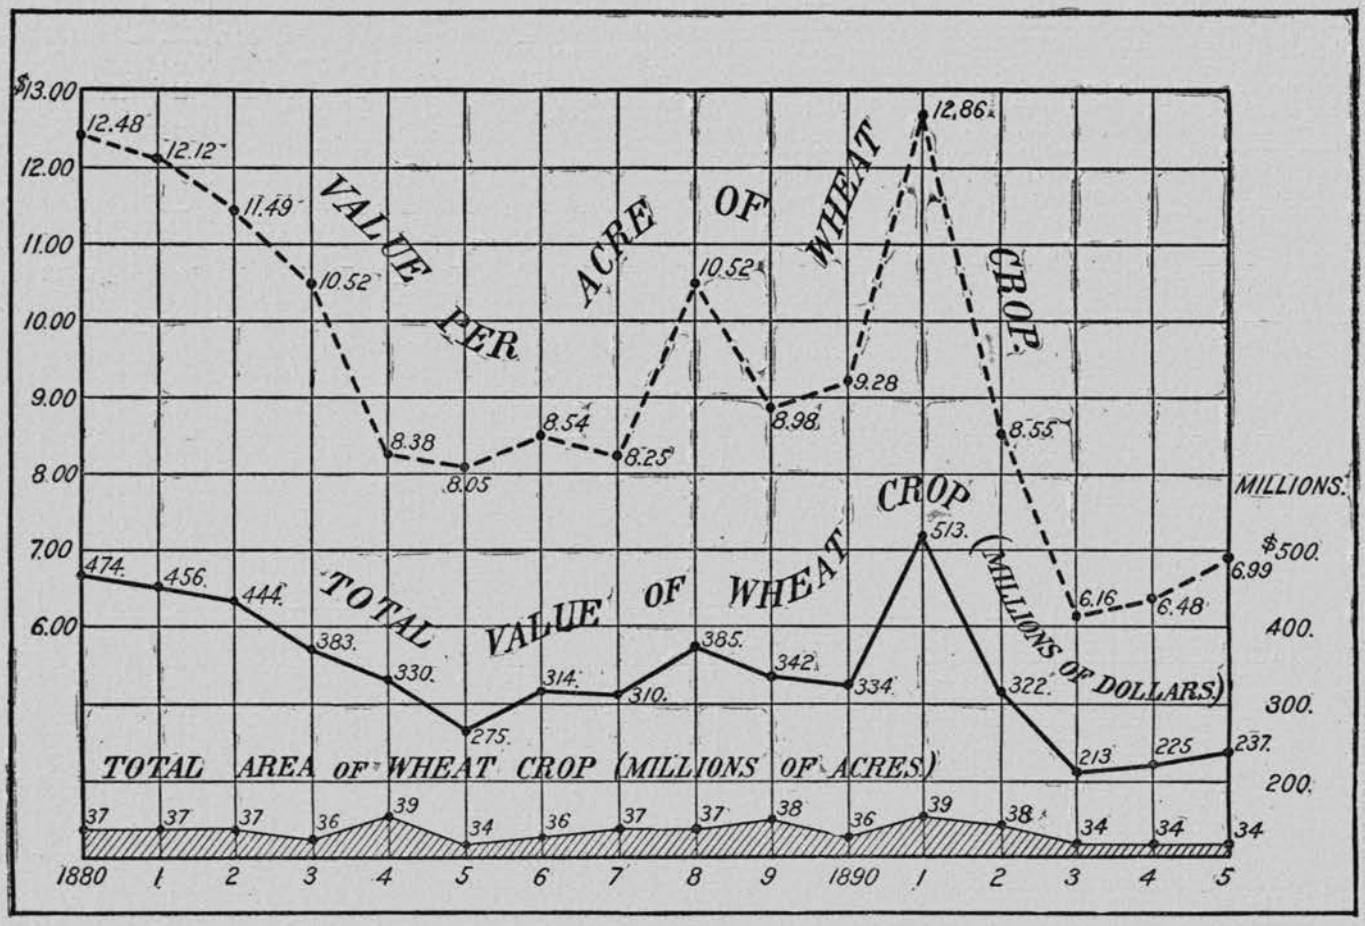
Answer.—He got the *biggest average price per bushel in 1881*, and the *biggest pile of gold per acre in 1891.*

In proof of the foregoing statement I submit the following table, found on page 6 of the Monthly Crop Report for December, 1895, United States Department of Agriculture.

CHART NO. 2.—Official British India Blue Book. Figures reduced to dollars and bushels by United States Department of Agriculture, February 5, 1896.

Production, value, price, and exports of wheat since 1830.

Years.	Total area of crop.	Total production.	Total value of crop.	Average value per bushel.	Average yield per acre.	Average value per acre.	Exports for fiscal years beginning July 1.	
	Acres.	*Bushels.*		*Cents.*	*Bushels.*		*Bushels.*	*Per cent.*
1880	37,986,717	498,549,868	$474,201,850	95.1	13.1	$12.48	186,321,514	37.4
1881	37,709,020	383,280,090	456,880,427	119.2	10.2	12.12	121,892,389	31.8
1882	37,067,194	504,185,470	444,602,125	88.2	13.6	11.99	147,811,316	29.3
1883	36,455,593	421,086,160	383,649,272	91.1	11.6	10.52	111,534,182	26.5
1884	39,475,885	512,765,000	330,862,290	64.5	13	8.38	132,570,367	25.9
1885	34,189,246	357,112,000	275,320,330	77.1	10.4	8.05	94,565,794	26.5
1886	36,806,184	457,218,000	314,226,020	68.7	12.4	8.54	153,804,970	33.6
1887	37,641,783	456,329,000	310,612,960	68.1	12.1	8.25	119,625,344	26.2
1888	37,336,138	415,868,000	385,248,030	92.6	11.1	10.32	88,600,743	21.3
1889	38,123,859	490,560,000	342,491,707	69.8	12.9	8.98	109,430,467	22.3
1890	36,087,154	399,262,000	334,773,678	83.8	11.1	9.28	106,181,316	26.6
1891	39,916,897	611,780,000	513,472,711	83.9	15.3	12.86	225,665,812	36.9
1892	38,554,430	515,949,000	322,111,881	62.4	13.4	8.35	191,912,635	37.2
1893	34,629,418	396,131,725	213,171,381	53.8	11.4	6.16	164,283,129	41.5
1894	34,882,436	460,267,416	225,902,025	49.1	13.2	6.48	144,812,718	31.5
1895	34,047,332	467,102,947	237,938,998	50.9	13.7	6.99		



[For Chart No. 3 see page 108.]

From the foregoing table I have drawn Chart No. 3. The figures in the table and on the chart are for December each year.

Notice the tremendous drop in December, 1884, and in December, 1892, immediately following each of Mr. Cleveland's elections. Notice the *dead level of low prices* during the first "four years" and present three years of Grover.

Notice the prompt response of the wheat market to the election

CHART NO. 3.—Crop Report, Agricultural Department, for December, 1895 (page 6).

of Mr. Harrison in 1888. The wheat market promptly discounted the future, as markets always do, without waiting for the ceremony of inauguration day.

These changes in the price of wheat followed immediately after elections in 1884, 1888, and 1892.

Unless God repeals the laws of nature and of economics, similar results may be looked for in December, 1896. That is the only hope of relief I know of for the wheat farmer.

All other ground
Is sinking sand.

Notice in the table and on the chart how remarkably even the area runs—between thirty-four and thirty-nine million acres.

The biggest pile of gold for the whole crop and the biggest pile of gold per acre was got in 1891.

Five crops under Grover (1884, 1885, 1886, 1887, and 1892) were marketed near the eight dollar per acre mark.

Only one crop (1889) was ever marketed under Republican auspices for less than $9 per acre, and that lacked only 2 cents of the nine-dollar mark.

The other three crops marketed under Grover (1893, 1894, and 1895) have gone glimmering at $6.16, $6.48, and $6.99 per acre, respectively.

The wheat farmers are not unreasonable. They do not expect to get rich out of one or two years' work, but they do expect to get a decent living and a moderate profit on their capital and labor. This they have not had for the last three years.

It is very difficult to compute the exact cost of raising an acre of wheat. It costs more in some States than in others, more on some farms than on others, and more on some fields than on others, even on the same farm.

But I think farmers of experience will generally agree that it can not be raised for less than $6 per acre. If so, there has been no profit on the average in raising wheat for the last three years. Some have gained, but others have lost. Last November I published the following table giving, as near as I could, the expense per acre of raising wheat in 1895 on three separate fields on my own farm:

	First field.	Second field.	Third field.
Plowing	$1.25	$1.25	$1.25
Seeding	.50	.50	.50
Dragging	.25	.25	.25
Seed	.75	.75	.75
Cutting and binding	.75	.75	.75
Twine	.25	.25	.25
Shocking	.50	.50	.50
Thrashing	3.24	2.70	4.14
Interest and taxes	1.00	.60	1.00
Total	8.49	7.55	9.39

Having a railway station on my farm, I allow nothing for hauling to the railroad. This item is often as high as a cent a mile per bushel. My lands range from $4 to $10 per acre in value, which makes the item for interest very much below the average.

There has been considerable discussion in the local papers of North Dakota on these figures. Some claim that they are altogether too low; but I think those who have given figures have, without exception, quoted lower costs, except in the two items of hauling and interest.

Without specifying items, one may safely say that it is very much cheaper to raise wheat now than in 1873, mainly on account of the invention of the self-binder.

It is also reasonable to assume that the farmer ought to get from $9 to $12 per acre for his wheat crop, as he always did under Republican rule, the lowest being $8.98, in 1889, and the highest being $12.86, in 1891. With that he would be prosperous and happy. The conditions of 1881 and 1891 can be restored. The conditions of 1873 can no more be restored than you can turn back the world in its history or the earth in its orbit.

"Turn the other way, boys," as Sheridan said. Victory and prosperity do not lie in the direction of stampeding people after

India rupees, Mexican 50-cent dollars, or any other kind of cheap free-coinage money. Especially do I appeal to you young, bright, and brave men of the Republican party not to concede as if it were true what is absolutely false as to the glorious achievements of the prosperity which took its flight not in 1873 but in 1892. Let not the G. O. P. discover you among the crowd of assassins and regretfully have to say, "Thou too!"

I have gone into this subject of wheat thus at length and in detail because it has been more than any other the favorite target for the silver lance. I have also had prepared at the Department of Agriculture a table giving the farm prices of corn, wheat, rye, oats, barley, buckwheat, potatoes, and hay in December of each year from 1870 to 1895.

UNITED STATES DEPARTMENT OF AGRICULTURE,
DIVISION OF STATISTICS,
Washington, D. C., February 4, 1896.

DEAR SIR: I have the honor to hand you statement of the farm prices of principal agricultural products, as promised in our conference of to-day.

Very respectfully,

HENRY FARQUHAR,
Acting Statistician.

Hon. M. N. JOHNSON,
House of Representatives.

Average farm price for the United States of corn, wheat, rye, oats, barley, buckwheat, potatoes, and hay in December of each year from 1870 to 1895, inclusive.

Year.	Corn, per bushel.	Wheat, per bushel.	Rye, per bushel.	Oats, per bushel.	Barley, per bushel.	Buckwheat, per bushel.	Hay, per ton.	Potatoes, per bushel.
1870	$0.549	$1.042	$0.815	$0.433	$0.845	$0.784	$13.82	$0.720
1871	.482	1.258	.790	.401	.806	.828	15.82	.596
1872	.398	1.240	.763	.336	.738	.829	14.53	.599
1873	.480	1.150	.762	.374	.915	.814	13.67	.....
1874	.647	.944	.858	.520	.921	.808	13.73	.677
1875	.420	1.000	.769	.365	.811	.710	12.27	.389
1876	.370	1.037	.669	.351	.664	.726	9.74	.655
1877	.358	1.082	.592	.292	.639	.687	8.60	.448
1878	.318	.777	.526	.246	.580	.527	7.21	.589
1879	.375	1.108	.656	.331	.589	.598	9.32	.436
1880	.396	.951	.756	.360	.666	.594	11.65	.483
1881	.636	1.193	.933	.464	.823	.865	11.82	.909
1882	.484	.882	.615	.375	.628	.729	9.70	.557
1883	.420	.910	.580	.330	.587	.820	8.19	.420
1884	.357	.645	.519	.280	.487	.589	8.17	.396
1885	.328	.771	.579	.285	.563	.559	8.71	.447
1886	.366	.687	.538	.298	.536	.545	8.46	.467
1887	.444	.681	.545	.304	.519	.565	9.97	.682
1888	.341	.926	.591	.278	.596	.636	8.76	.402
1889	.283	.698	.457	.230	.427	.518	7.88	.403
1890	.506	.838	.629	.424	.648	.577	7.74	.777
1891	.406	.839	.774	.315	.540	.579	8.39	.371
1892	.393	.624	.548	.317	.472	.534	8.49	.673
1893	.365	.538	.513	.294	.411	.583	8.68	.590
1894	.457	.491	.501	.324	.442	.556	8.54	.536
1895	.264	.509	.440	.199	.337	.452	8.35	.266

From the foregoing table I have selected wheat, corn, oats, and hay for representation on Chart No. 4.

[For Chart No. 4 see page 110.]

This chart proves that prices of these farm products did not fall from December, 1878, to December, 1891:

	1878.	1891.
Wheat.....bushel..	$0.77	$0.83
Corn.....do....	.31	.40
Oats.....do....	.24	.31
Hay.....ton..	7.21	8.39

Whatever injury was done to the farmer by falling prices was done either while we were under the spell of cheap paper money previous to December, 1878, or else after the Republicans lost control of the country, when the crop of 1892 went to market in December, 1892, under the shadows of tariff reform.

Those fourteen years from 1878 to 1892 cover the only period and the entire period in the history of our country when the *two cardinal doctrines of the Republican party*, viz—

First. *Protection to American industries;* and

Second. *Sound money*—

had a chance to do their perfect work. The record for those years is made up. They were the years of our greatest prosperity. The truths of history can not be obscured or obliterated.

Distort it as you will, the fact remains that the thirtieth year of the thirty years of Republican supremacy was the best year in all our country's history. That was the year when it was the easiest for the laborer and the wheat farmer to earn gold or to pay debts with the products of his toil. [Applause.]

Let me touch up one other feature of free coinage and I am done. Individual depositors have now on deposit in the United States—

In national banks	$1,701,653,521
In savings banks	1,801,597,023
In other banks	892,699,149
In loan and trust companies	546,652,657
Total	4,942,602,350

On January 1, 1894, there was in force in twenty-two leading American life-insurance companies liabilities amounting to	5,357,827,729
In all other companies (estimated)	3,000,000,000
Total	8,357,827,729

I have never seen a certificate of deposit or a policy of life insurance payable in gold coin. This blank certificate of deposit which I hold in my hand is in the usual form.

[Certificate of deposit.]

WASHINGTON, D. C., ——, *189–*. No. 102.

This certifies that ——, $——, has deposited with —— ——, bankers, —— dollars, payable to the order of —— —— on the return of this certificate properly indorsed.

—— ——, *Cashier.*

Not subject to check.

Without stopping to read it all, I will say that this is the usual form of life-insurance policy [holding up a copy], and the gist of it is in these words:

Does promise to pay to Mary Roe, if living; if not, then to her husband, William B. Roe, his executors, administrators, or assigns, at the office of the society in the city of New York, $100,000, upon satisfactory proofs of the death of said William B. Roe.

These two classes of liabilities add up $13,300,430,079.

Under free coinage of silver these banks and companies could set aside one-half of this sum as clear profits with which to start 600,000 brand-new millionaires in business, and with the other half they could buy enough silver bullion to make 13,300,430,079 brand-new silver dollars with which to pay in full all claims of widows, orphans, and depositors.

[Mr. JOHNSON of North Dakota declined all interruptions during the delivery of his speech, but promised if time would permit to answer questions at the close, when substantially the following quiz occurred:]

Mr. SHAFROTH. Since you have singled out my speech made last night as a text for your discourse, I would like to have about one minute to explain to members who were not present last evening.

Mr. JOHNSON of North Dakota. Oh, no; not for a speech. I refuse to yield even a minute for that.

Mr. OGDEN. May I ask the gentleman a question?

Mr. NEWLANDS. May I ask a question?

Mr. JOHNSON of North Dakota. One at a time, gentlemen. I promised to yield what time I could spare of my hour to the gentleman from Pennsylvania [Mr. CHARLES W. STONE] and to the gentleman from North Carolina [Mr. SETTLE]. Therefore, I must be brief, and do not wish to appear discourteous. [To Mr. SHAFROTH:] Ask your question and then sit down. [Laughter.]

Mr. SHAFROTH. Well, I will sit down when I care to. Now, in this table which you have here——

Mr. JOHNSON of North Dakota. Which table?

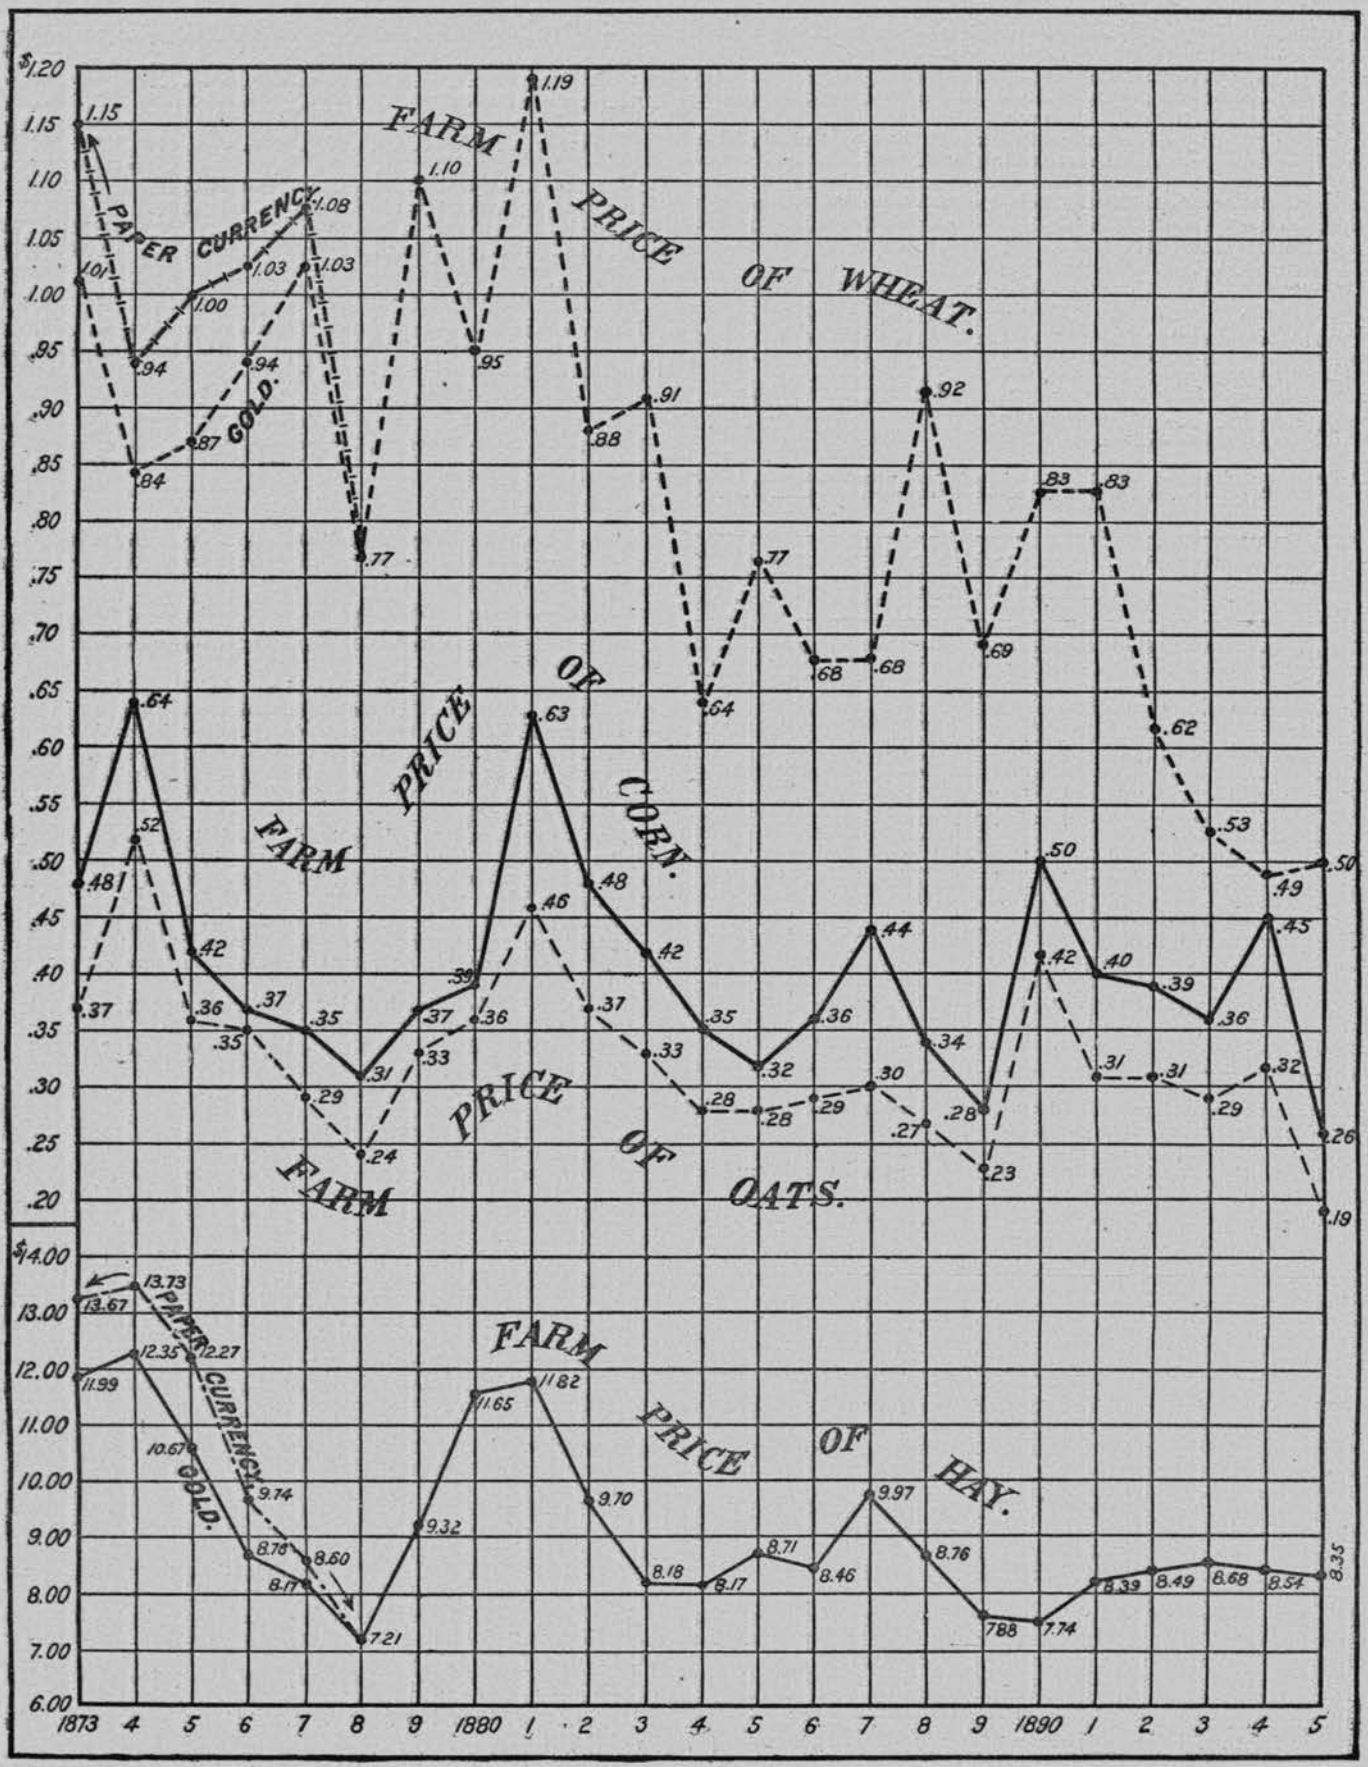
Mr. SHAFROTH. The table which you have marked "page 6 of the Crop Report of the Agricultural Department." This upper curve, as I understand, represents the gold value per acre of the wheat crop?

Mr. JOHNSON of North Dakota. Yes, sir.

Mr. SHAFROTH. And you say that the greatest price for wheat from 1880 down was obtained in 1881?

Mr. JOHNSON of North Dakota. That curve [indicating] is not the price. That curve shows the value per acre, not the price per bushel. These figures [indicating the other curve] give the total value of the crop. The greatest value per acre and also the greatest total value for the whole crop was obtained in 1891, while the highest price per bushel since 1880 was obtained in 1881, but that fact is shown on the other chart.

Mr. SHAFROTH. Can it be possible that the value per acre does not correspond with the price per bushel?



Mr. JOHNSON of North Dakota. Oh, I do not care to answer a question of that kind. The value per acre depends as much on the yield as on the price.

Mr. SHAFROTH. Then, you say that the price obtained for the total crop was $513,000,000?

Mr. JOHNSON of North Dakota. Let me make the matter plain.

Mr. SHAFROTH. Answer my question; you do not seem to care to answer me fairly.

CHART NO. 4.—Department of Agriculture, February 4, 1896.

Mr. JOHNSON of North Dakota. Your theory is that on account of the great yield——

Mr. SHAFROTH. No, sir.

Mr. JOHNSON of North Dakota. You hold that in accordance with the law of supply and demand the price, on account of the enormous yield in 1891, should have been reduced; but in spite of the enormous yield we still realized a handsome price, 83 cents, and the greatest amount of gold per acre that we ever had. The price kept up under Republican rule. My friend, when you come to study about what has caused the depreciation in the price of wheat just commence at the fall of 1892. You need not go back to 1873. [Applause.]

Mr. SHAFROTH. Is it not a fact that the best price obtained for wheat was when silver, by reason of the act of 1890, was appreciated to a very great extent?

Mr. JOHNSON of North Dakota. No, sir; the best price we ever got for wheat since 1873 was in 1881, when we got $1.19. [Applause.]

Mr. SHAFROTH. Is it not a fact that according to your chart in 1891 wheat rose from 69 cents a bushel to 83 cents a bushel because silver was given some recognition by this nation and some other nations? [Applause.]

Mr. JOHNSON of North Dakota. That is a matter of opinion, so far as the cause is concerned. The fact appears on the chart that wheat rose from 69 cents in December, 1889, to 83 cents in December, 1890.

Mr. SHAFROTH. Is it not a fact that the price of wheat in India is and always has been substantially 1 ounce of silver for 1 bushel of wheat? [Cries of "No!" "No!"]

Mr. JOHNSON of North Dakota. I do not see the pertinence of that question, and I do not care to spend time upon it. Here on this chart (No. 2) and also on Chart No. 5 are shown the prices of wheat in India from 1873 to 1893.

(Price of wheat in India is shown on gold basis on Chart No. 2 and on silver basis on Chart No. 5.)

Mr. JOHNSON of North Dakota. I promised to yield to the gentleman from Alabama [Mr. WHEELER] for a question.

Mr. WHEELER. Is it not true that since 1873 the price of wheat has fallen from $1.12 a bushel down to 62 cents?

Mr. JOHNSON of North Dakota. In December, 1873, the price was $1.15 in paper currency, equal to $1.01 in gold. The other price mentioned by you—62 cents—occurred in December, 1892, and the cause for the drop from 83 cents in December, 1891, I have fully explained.

Mr. WHEELER. And is it not true that the exports of wheat from the United States have fallen from 210,000,000 bushels down to, in recent years, 42,000,000 bushels?

Mr. JOHNSON of North Dakota. We never exported as much as 200,000,000 bushels of wheat any one year, except in 1891, and we never fell below 100,000,000 except twice, viz, 1885 and 1888. The table from which I drew Chart No. 3 gives the exports for every year since 1880, and I will insert it in the RECORD.

Mr. WHEELER. And is it not true that the failure of our exports to Europe has been filled up by exports from the silver countries, India increasing her exports from nothing up to some 60,000,000 bushels; the Argentine Republic from nothing up to about the same amount; Russia increasing hers to 100,000,000 bushels? In other words, have not the various silver countries taken the market which we have lost?

Mr. JOHNSON of North Dakota. The silver country India has not taken our market. Ten years ago there was a great scare, founded on the idea that India with her cheap labor was going to take our market. That idea failed to materialize. The Argentine Republic has to a great extent increased its exports of wheat; but not on account of silver. An overwhelming calamity has of late years befallen Argentina in the depreciation of its paper money. [Applause.] Russia is no more a silver country than the United States. They are on a paper basis there.

Mr. WHEELER. India exported 60,000,000 bushels. Where did that wheat go? Did it not go to Liverpool?

Mr. JOHNSON of North Dakota. I do not care where it went.

Mr. OGDEN. The gentleman has spoken of a "depreciated silver dollar." Will he show me any silver dollar ever coined by authority of the United States that has not been as good as a gold dollar or a paper dollar?

Mr. JOHNSON of North Dakota. No, sir; except trade dollars, and I hope we never shall see a silver dollar of the United States of America that is not worth as much as a gold dollar. But we shall do so if the gentleman's party succeeds. If this bill passes this House to-day and the White House to-morrow, then I can show you 500,000,000 silver dollars to-morrow that will be worth only 50 cents each. I can show you plenty of 50-cent silver dollars to-day in Mexico. If you want free coinage silver dollars, you can easily get Mexican dollars two to one in exchange for ours. If you are content to take Mexican dollars—heavier and purer silver than ours—you can easily have wheat at $1 a bushel measured in that kind of money.

Mr. HALL. Will the gentleman be kind enough to turn back to the map numbered 6?

Mr. JOHNSON of North Dakota. There are only five of them.

Mr. HALL. I think the last one, then. I believe it is numbered 6.

Mr. JOHNSON of North Dakota. No; it refers to page 6 of the Crop Report.

Mr. HALL. Very well. I would like to ask the gentleman if he has in the figures to which he has referred a statement to show the number of bushels of wheat raised in the United States during the given period covered by the table to which he refers?

Mr. JOHNSON of North Dakota. Oh, yes; it is here in the same table.

Mr. HALL. I hope the gentleman will publish that table with his remarks.

Mr. JOHNSON of North Dakota. I will do so. I will publish in the RECORD both the tables and the charts drawn from them.

Mr. HALL. I should be very much gratified if the gentleman would do so.

Coin Redemption Fund.

SPEECH

OF

HON. ASBURY C. LATIMER,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. LATIMER said:

Mr. SPEAKER: The subject under discussion has been so fully discussed during the pendency of this and other bills of like tenor that it would seem to be unnecessary for any further debate. Especially would it seem unnecessary for me, since I have on a previous occasion set forth my views fully upon it. But I could not properly represent the district which has honored me with a seat here were I to failto raise my voice in its favor. The people of that district have a right to be heard here in distinct tones upon every question, and as their exponent here for the time being, I am but registering their judgment.

True, it is hard to present any more forcible reasons for its passage than some we have heard during this debate, but I have a view to present which I hope will open the eyes of honest doubters and cause them to go over the question again from this point of view. For the reason that I have already discussed it at length, and for the additional reason that it is impossible for me in the short time allotted me to go over the whole ground again, I confine myself to the presentation of this single view.

We are a nation of gamblers, a Congress of gamblers, and even the National Government has recently been gambling on a very large scale. Does that sound like a wild assertion? If so, wait and see. All people admit that betting on cards and horse races and dealing in agricultural futures are gambling. There may be many other kinds, but these are enough for my present purposes.

What are the relations between A and B when A borrows $20 from B and gives his note due in twelve months for the repayment of a like sum with interest? We commonly say that A borrowed the money and gave his note, but that does not express the condition fully. As a matter of fact, A has sold a contract for the future delivery of money and B has bought a contract for the future delivery of money. This may be a legitimate transaction, and is not to be confused with the gambling future contracts in agricultural products, where no real delivery is intended on one side or expected on the other. If there is a change in the price of money during the time that intervenes between the sale of this future contract for money and delivery day, it will be a loss to one or the other of the parties to the contract. It is a self-evident fact that every note, mortgage, bond, or other written acknowledgment of debt, coupled with a promise to pay in the future, is a future contract for the delivery of money, and therefore a money future.

The Commissioner of Labor in his bulletin for November, 1895, shows that the minimum public and private debt of this kind is something over $20,000,000,000. This means that the General Government, the State governments, the cities, the corporations, the farmers, and other persons on the one hand have sold contracts for the future delivery of $20,000,000,000 in money; and, on the other hand, certain capitalists have bought contracts to that amount for the future delivery of money. Now, those who have sold these contracts can make delivery of the money only by ex-

changing the commodities they have for money, and in direct proportion as the value of money is enhanced, it will require more of these commodities to make delivery under the contract. It follows, naturally, that such capitalists are "bulls" on the money market—that is to say, that they want the price of money to go up—while those who have sold the contracts, if they are true to their own interest, would be "bears" on the money market to this extent: They want to hold the price of money at the same point that it was when these contracts were made. But, unfortunately, the "bulls" take an active part in dictating the policy of that portion of the "bears" represented by the governments and the corporations, and actually compel the governments and corporations, when they have sold money short, to pay in money that absorbs twice as much commodities as the contract calls for. Now, let me show in what way this has been done.

Perhaps there may be some within the sound of my voice who have heard of the great crime of 1873; if not, I am not going to tell you about it in detail now. I have not time; but I am going to give you what to my mind is a better reason why that action was taken, and to state more clearly the result than any other, perhaps, that has been presented in this connection. There was no gold or silver in circulation in 1873, and the act had no perceptible effect and would have passed unnoticed at the time but for the howl of the politicians who saw a chance to win office by agitation. The real cause for the demonetization of silver in 1873 was because the Government had authorized in 1871 the sale of $1,500,000,000 coin futures in the shape of coin bonds. A small per cent of these bonds were to run ten years, some twenty years, and the remainder thirty years. Silver was not in use, and the men who bought this $1,500,000,000 of Government coin futures expected that long before delivery day should arrive specie payment would be resumed; and in anticipation of that event they saw that by the demonetization of silver when it would not be noticed or felt their coin futures would become gold futures, and the people would not realize the wrong done them until the near approach of delivery day.

Delivery day is now rapidly approaching, and the moment we remonetize silver we rob it of half its terrors to the people. Let me show you why. The $20,000,000,000 of public and private debt is largely short-time paper, and we have in this country only about, say, in round numbers, $500,000,000 in gold. Twenty per cent of this is, by usage, to be kept locked up in the National Treasury as a reserve. At least 75 per cent of the balance is held by the large fiscal institutions that are also the largest purchasers of these money futures, leaving only about $100,000,000 of gold in existence to deliver on contracts for $20,000,000,000. This, in my mind, demonstrates the approach of the greatest "corner" ever made in the market. These men have laid their schemes for thirty years to corner the money of the nation. If we play into their hands they are sure to succeed; and success means that the entire wealth of this nation is absolutely at the mercy of this gold ring. If they do not take it all it will be simply and purely because they are too righteous.

But suppose we discharge our sworn duty to this Government by supporting its true interests and pass this free coinage of silver amendment, what will be the effect? We at once break the corner and rescue those who have sold these futures from distress and disaster; we bring happiness and prosperity to the land without working any injustice to the purchaser of the futures. He will get what he bought, with interest; whereas he now wants to extort a fine from the seller because the seller can not deliver what he (the buyer) has cornered. It is an act of simple justice and right to break up such gambling schemes.

Mr. Speaker, I do not wish to say anything unparliamentary, and I shall endeavor not to do so; but I have shown that this Government is a debtor, and it is well known that the debt has been largely increased in the last two years. It has over $700,000,000 of thirty-year contracts for the delivery of coin outstanding, which mature in the near future, and how any man who has been elected to a position in this honorable body can keep from feeling like a traitor to his country when he votes to strike down silver and meet these obligations with blood-bought, sweat-bought, and conscience-bought gold is more than I can understand.

The far-fetched pretext on which these recent issues of bonded debt have been predicated still exists, ready to the hand of an Executive who strangely insists upon viewing this whole question from the standpoint of the Government creditors rather than of the Government which he is supposed to represent. Under that pretext a thousand millions of debt will be added, we are told by the spokesman of the Administration on this floor. But when a thousand millions shall have been issued, this same pretext will still be at the hand of Wall street tools for successive issues of bonds without limit until the Government is bankrupt or an outraged people rise in their majesty and drive the money changers out of the temple of liberty. It requires nothing of prophetic power to foresee that it must come to this unless the people's representatives here and now break the fetters being forged upon the people's hands.

Silver—Free Coinage.

SPEECH
OF
HON. THOMAS G. LAWSON,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. LAWSON said:

Mr. SPEAKER: In the short time allotted to me I can not undertake a thorough and elaborate discussion of the pending bill in all its bearings, and will content myself, therefore, with the expression of a few general principles sufficient to define my position. I do not underrate the importance of the question; its right determination involves momentous consequences to the business and to the future prosperity and happiness of the people. The proposition is that our Government shall enter upon the free and unlimited coinage of gold and silver at the ratio of 16 to 1 without reference to what other countries may do, or, in other words, that we shall change our present financial system, which is in accord with the systems of the other great commercial countries, and adopt a new system exclusively for ourselves and entirely different from theirs. The statement of the question ought to suggest doubt as to its accomplishment and as to its propriety and value if accomplished, for in modern times nations are not isolated. Steamships, ocean cables, and reciprocal commercial intercourse have brought them into very close relations and sympathies; they are effectually a unit in commercial enterprises and monetary appliances.

I am in favor of neither gold monometallism nor silver monometallism, but of bimetallism, consisting of the standard of value that we have had for the past sixty years, with as much silver as we can possibly circulate on an equality of value with gold, and in addition thereto I favor a banking system that will enable all our people to use their capital and their credit in furnishing an adequate quantity of safe and sound paper money, convertible into the coins, for use of the people. It seems to me that the system of finance that I have described is the best system for this country, and I oppose the free, unlimited, and independent coinage of silver at the ratio of 16 to 1 because it will inevitably prevent the inauguration of that system. When in the early days of the Republic the free and unlimited coinage of gold and silver was provided for it was done as a means to an end, the end being the securement of sound money. The scheme was practicable then because the relative value of gold and silver at the mints was the same as their relative value in the markets; their coin value and their intrinsic value were approximately the same. Both Hamilton and Jefferson, the respective leaders of the diverging lines of political thought, were in thorough accord on this question, and both conceded that the mint ratio must be ascertained by a comparison of the relative value of gold and silver in the markets of those countries with which we sustained commercial relations, and having ascertained that the relative value of those metals in those countries was about 15 to 1, they established that ratio here. But conditions change in a hundred years; what was feasible and safe and wise then may be very dangerous now. For their system of coinage we substitute a system in conformity with the changed conditions just as we substitute steam cars, steamships, and telegraph lines for their wagons, sailing vessels, and pony expresses, and it would be just as wise for us to readopt their methods of transportation and transmission of intelligence as it would be to reestablish their coinage laws.

I believe as firmly as I believe anything that depends on the testimony of human experience and the dictates of common sense, that the free, unlimited, and independent coinage of silver at the ratio of 16 to 1, under modern conditions, would result in silver monometallism; that it would destroy the existing measure of value, expel gold and all money better than itself from the circulation, cut off at least one-half the circulation we now have, destroy credit and confidence, which are more essential to our progress and prosperity than either gold or silver, and produce such a chaotic condition of the finances as to bring upon the country more widespread and irretrievable ruin and distress than it has suffered in its entire history.

The history of all nations of modern times, those having the gold standard as well as those having the silver standard, conclusively demonstrates that it is impossible for gold and silver money to circulate concurrently when they are coined at a ratio of value different from the commercial value of the bullion. Governments do not add anything to the value of either metal by coining it;

they put them into convenient shape for use, and merely certify, for the convenience of those who use them, that the coins are of a given weight and fineness. None but Deity can create value from nothing. The United States, England, France, and Germany have, during their history, all engaged in the free and unlimited coinage of gold and silver at a fixed ratio, and neither one of them has ever succeeded in circulating both coins at the same time when there was a divergence between the mint ratio and the market ratio. Mexico and other free-coinage nations are attempting to do so now and are making wretched failures. I know it is said that France maintained the parity of the two metals seventy years by her coinage laws, but the statement is not true, as anyone may ascertain who will take the trouble to inform himself.

During that period France, just as we did, had a silver standard when silver was relatively cheaper than gold and a gold standard when gold was relatively cheaper than silver, and when she found in 1874 that, owing to the fluctuations in value of the two metals, the parity between them could not be maintained, she suspended the coinage of silver. The statistics of the operations of her mints, the importations and exportations of her gold and silver, the fluctuations of her exchanges, and the testimony of distinguished writers and of intelligent travelors all evidence her inability to maintain the parity of the metals. It is important to note also that while France was engaged in her efforts to maintain the equality of the two metals she had the assistance of other commercial nations, and yet their combined efforts proved abortive. When I consider the history of other great and powerful nations that have, either singly or combined, failed to maintain the parity of gold and silver when coined at a ratio different from the market ratio, I am forced to believe that the people who insist that the United States alone can maintain their parity by their free, unlimited, and independent coinage at the ratio of 16 to 1 when their market ratio is 32 to 1 are laboring under some delusion or hallucination, or that they are not fully informed as to the experiments of other nations on this line. And yet I know that many able and honest men do believe in the theory.

A brief résumé of the experiments of our own country it seems to me ought to convince any man of the fallacy and impracticability of free coinage of silver in the manner proposed. Our first experiment was at the legal ratio of 15 to 1, because that was at the time supposed to be its market ratio. Very soon afterwards the price of silver declined in the market, the gold coins left the country, and our commerce settled down upon a silver standard. To correct the evil Mr. Jefferson, in 1805, while he was President, suspended the coinage of silver, and it continued suspended until the year 1834. In the latter year Jackson, Calhoun, Benton, and other distinguished statesmen undertook to restore the circulation of gold in the country, and in 1837, to effect that object, aided in changing the ratio to 16 to 1.

Under the first ratio it was decreed that 1 pound of gold should be worth 15 pounds of silver at the mints, and under the last ratio it was decreed that 1 pound of gold should be worth 16 pounds of silver. I pause to ask why the change was made? If the Government could not maintain the equality of the coins when there was only about 2 cents difference in their value as bullion, how is it possible now to maintain their equality under free coinage when there is a difference of nearly fifty cents in their bullion value? It is evidently impossible; and any effort to do so would plunge us at once into silver monometallism. But a mistake was made in fixing the ratio at 16 to 1. Silver was undervalued, and consequently disappeared from the circulation, leaving gold, the cheaper metal at the mints, to take exclusive possession of the field, and to become our commercial standard of value. After the establishment of the last ratio silver change became so scarce in the country that Congress in 1853 found it necessary to reduce the quantity of silver in our fractional coins and so to cheapen them that they would not be sent to foreign lands. They debased the silver in these fractional coins so that two half dollars would contain 28¾ grains of standard silver less than a silver dollar. Such is the history of the establishment of the gold standard or measure of value in this country. It occurred under the Administration of General Jackson in 1837, and has continued to the present time, except during the war period. Notwithstanding the mints were open to the free and unlimited coinage of silver, very little silver sought the mints, and during the first eighty years of the history of the Republic less than nine millions of silver dollars were coined, and I doubt whether any person in my presence ever saw one of them outside the cabinet of a collector of curios.

Why? It was because silver was more valuable in the markets than it was at the mints; and for the same reason no gold would be coined now if we were to open the mints to the free coinage of silver at 16 to 1. Gold would be more valuable as a commodity than as money. Nearly all the silver in circulation from the year 1792 to 1878 were foreign coins, and they were, after the year 1857, a legal tender in small amounts only. Thus the coinage stood in 1873, when the act so much inveighed against was enacted. It did not originally establish the gold standard; it had been established by commerce more than thirty years prior to that time, and the act only enacted into law what already universally existed in this country by the laws of trade and custom. Silver was not demonetized by the act. It was only denied mint privileges; It is not demonetized now; the silver dollar is not redeemable in anything, and is a legal tender for all debts, public and private, and to any amount. If it is not now standard money, or money of ultimate payment, I do not understand what the terms mean. If there had been any purpose by the act of 1873 to distress the debtors of the country by compelling the payment of debts in money of a higher value than parties had reference to when contracts were made, I suppose that the silver standard would have been adopted, as silver was then of higher relative value than gold. But all debts existing at that time were contracted with the expectation of being paid in gold, inasmuch as legal-tender silver had not been in circulation for more than thirty years. But standards of value are not, in my judgment, created by legislation. Measures of value are evolved out of the processes of thought, conference, disputes, and arguments that occur among the millions of traders throughout the world. In intelligent and prosperous countries, where the contracts between citizens are large and commerce is extensive, gold as a measure of value is preferred, because it is a more suitable and efficacious instrument of exchange. And for the same reason silver, as a measure of value, is preferred in countries of meager and unimportant trade and commerce.

Money and vehicles of transportation are media of exchange and bear a close analogy. Enormous locomotives and trains of cars are required to transport the products and commerce of some countries, while camels and pack horses amply suffice for the carrying trade of others. Gold is necessary for the former class, while silver and copper more conveniently do the business of the latter class. As the measures of value are not enacted by legislation, they can not be safely interfered with by legislation. When a legislature steps in between citizens while engaged in mutual contention as to price of commodities which they are engaged in buying and selling, it is an interloper; it may say in what currency its taxes may be paid, or a debt be discharged, and that is as far as it can go. When it attempts to go further it antagonizes a law superior to itself, a law evolved from the self-interest of men, and which ordains that each man for himself shall determine what he shall pay for what he has to buy and what he shall accept for what he has to sell. Out of such processes measures of value are evolved, and no government is able to say what its standard shall be, and to enforce it, unless it be the standard thus evolved. So long as legislation coincides with natural laws we have no trouble, and we ought to remember that the laws or fixed principles established in finances are as fixed and stable as the law which regulates the ebb and flow of the tides of the ocean. The standard or measure of value, therefore, is fixed by buyer and seller, and not by debtor and creditor, and if the government attempts to fix a standard of a different kind it must inevitably fail. If, therefore, we attempt to make gold and silver both a measure of value, we must coin them at their commercial ratio, and not at an arbitrary ratio which disregards the relative value of the metals in the markets.

The standard everywhere fixed relates to equivalent. Where a man exchanges a commodity, he is entitled, under the first principles of justice and morality, to receive its exact equivalent in value in some other commodity. If a man exchange a quantity of wheat for a quantity of corn, the quantity of one ought to be exactly equal in value to the quantity of the other. If a man exchange a quantity of cotton for a quantity of silver, as a medium of exchange, the quantity of silver ought to be exactly equal in value to the quantity of cotton, or else it will not be equal in value to the quantity of wheat or other commodity which he expected to be able to buy with the proceeds of his cotton. Every purchase and sale is indirectly a barter, an exchange, a swap of one article for another. We use money solely for convenience, as a medium of exchange only, a vehicle to carry the article we sell to the purchaser and to bring back the articles which he has and which we desire to buy.

In contemplation of economic principles every purchase and sale is indirectly a barter. Therefore the money paid and received, in order to conform to the principles of justice and good morals, must, when valued as a commodity, as bullion, or as the representative of money, be exactly equal in value to the commodity for which it is exchanged. Unless it is so he who receives the money is cheated and the principles of justice and good morals are violated. The law may compel a creditor to accept a given kind of money in discharge of a debt, but it can not compel the owner of commodities to accept any kind of money against his will in the sale of them. Rather than sell on such terms he will prefer to keep his commodities. The Government may coin 50 cents' worth of silver and call it a dollar, and compel creditors to take it; but it will not be a dollar, and no man will sell his produce for it and

accept it as a dollar; and none but existing creditors can be thus defrauded, for care will be taken in all future contracts to provide against loss from the depreciated dollar.

Men engaged in the business of buying and selling, giving and receiving gold and silver in exchange for commodities, before any government undertook to coin either metal. Both gold and silver at the time had a commercial value, and each trader weighed and tested it for himself, and formed his own opinion as to its value in the market. Gold and silver were afterwards coined for the convenience of traders; the Government certified its weight and fineness in order to save the trader the trouble of weighing in every transaction. The quality of a legal tender was never affixed to it until arbitrary rulers conceived the idea of forcing their debased, clipped, and spurious coins upon their subjects. They succeeded in forcing them upon creditors, though they failed to circulate them, although they affixed a death penalty to every refusal to take them. No man had anything to sell when such money was offered him, and he thus avoided the penalty and the money too. The idea that any government can give a fictitious value to metal simply by coining it is of modern origin. I think it had its origin after the United States issued legal-tender paper money. It is certain that Washington, Hamilton, Jefferson, Madison, Jackson, Benton, and other great statesmen of the earlier days were never tainted with such fallacies.

It is argued now that if the mints of this country were opened to the free, unlimited, and independent coinage of gold and silver at the ratio of 16 to 1 that such a demand for silver would be created that all the silver in the world would immediately advance in price from its present market ratio of 32 to 1 to a ratio of 15 to 1; or, in other words, that all the silver in the world would be immediately doubled in value. Too many intelligent and honest gentlemen maintain this proposition for us to dismiss it by characterizing it as absurd. True, the proposition is contrary to the testimony of human experience as developed in the history, past and present, of all nations, civilized and barbarian, and true, also, that the advocates of the proposition do not advance a single fact in support of it, but ask us to accept their arbitrary assumption for proofs; yet it is supported by such an array of numbers as to merit some examination.

They speak only of a demand for silver and leave out altogether another great and necessary factor in determining the value of all things, namely, supply. To circulate gold and silver coins on an equality of value their relative value at the mints must be the same as their relative value in the markets. So the history of all nations teaches without a solitary exception. The value of a thing in the market depends on the supply of it and the demand for it. If these remain relatively the same without change of conditions the price will be steady; if they do not remain relatively the same prices will fluctuate. The mint demand for gold can not increase, for nearly all the mints in the world are already open to its free coinage. When there is an increased demand for anything there is increased production; the cupidity of mankind may always be depended on to produce everything that there is an increasing demand for.

Under the stimulus of a new demand the production of silver would increase, while there would be no increase in the demand for gold. The proposition of the free-silver advocates therefore involves the hypothesis that two articles without change in demand for them, yet constantly varying in the supply of each, will permanently sustain absolutely the same relative value. They must throw more light upon it before I can assent to a proposition so contradictory of all economic laws. But is the assumption true that an unlimited demand for silver will set in whenever it is allowed free coinage? The mints can not at once convert all the silver bullion into coin; indeed, there is enough bullion already in the Treasury of the United States to employ all the mints to their utmost capacity for several years. There must necessarily be a surplus somewhere that can not be readily coined, and such surplus will be valued in the markets independently of the potentiality of its coinage into money. Inasmuch as it can not be used as money in its bullion state, and can not be used in other countries as money, it must be rated at what the surplus will fetch in the market after it is coined. It will not stand on the same footing with gold bullion, for gold has a uniform market value throughout the world and is as valuable in its bullion state as it is when coined.

In point of fact there can not be an unlimited demand for anything except in a philosophical, speculative, or theoretical sense. To suppose an actual unlimited demand for anything is absurd, for a demand is always limited to certain needs or conditions to which it is responsive. When these are met and satisfied the demand ceases. Demand should not be confounded with desire. The demand for money is indefinite, but it has limitations that may be described. An individual demands money to carry on his business or to supply himself with comforts and luxuries, but his demand can not exceed the property and credit he has to give in exchange for it, though his desires may extend much further.

A nation's demand for money can not exceed the aggregate property and credit of its citizens. Its demand never equals these sources of wealth, and can not, in the nature of things, exceed them. The demand can not therefore be unlimited. But whatever the demand for silver might be, the time must soon come when the country would be so saturated with silver money that it could not be absorbed in business. The output of silver mines has increased from $81,000,000 in 1873 to more than $200,000,000, so that all the mints, and perhaps an increased number of them, would be kept in full operation turning out silver money that could only be used in this country. The time would come when we should need no more. What then? We must either continue to coin and pile it up while its value would decline, as the value of Confederate money declined from excessive issue, or the coinage must be stopped, in which event the silver taken from the mines afterwards must become a great surplus to drag down the value of all other silver, coined and uncoined. If we continue the coinage we shipwreck upon Scylla, and if we stop the coinage we shipwreck upon Charybdis. The argument in favor of free coinage, it seems to me, proceeds upon a misapprehension as to what creates a demand for money. What creates the demand for flour? Not mills, but hunger. What creates a demand for clothes? Not factories, but nakedness. What creates the demand for money?

Not mints, but business, commerce, wealth—something to sell. The only method for creating a demand for money is the increase of business and wealth. If all the silver in the world were coined it would remain in the hands of the original owner until evoked by the demands and necessities of business; it would not be given away. A demand for money implies that there is either property or credit to employ it, and those who get it must give something in exchange for it. If it were good money it would cost as much as it does now, and if it were cheap money it would do harm. Very little silver money is in demand now. Millions of it lie in the Treasury, and the Government is unable to force it into the circulation, though it offers to pay its way to the uttermost parts of the country. The people do not want it and will not have it. They reject it, not because they distrust its value as a circulating medium, but because it is too heavy, bulky, and inconvenient. True, the silver in the Treasury is represented in circulation by paper certificates, but this circumstance proves that the people prefer paper money to silver. The Government ought, therefore, to respond to the demand of the people for paper money, ought to modify its banking laws so as to allow the issue of a safe and sound paper currency, sufficiently abundant for all business requirements, rather than to further enrich the most gigantic moneyed monopoly of silver mine owners the world ever saw.

But, I repeat, the coinage of silver will not raise the bullion value. No one pretends that the coinage has any effect upon the value of gold bullion. It is worth as much in one form as another, and worth the same the world over. Because our silver now circulates on an equality of value with gold many people suppose that it would do so under the operation of a free-coinage law. But under free coinage the conditions would be vastly changed. Of the $500,000,000 of silver coins now in the country, every piece was coined on Government account. It bought the bullion at its market value, coined it at the ratio of 16 to 1, and paid it out as the equivalent of gold dollars. For every silver dollar parted with the Government has received the equivalent of a gold dollar. It is therefore bound by every principle of justice and sound morals to maintain its value on a gold basis. Recognizing that obligation, it has pledged itself to do so and does do so. Its value is maintained by its receipt every day for taxes and other dues to the Government. For the reason that the Government collects every year more taxes than there are silver dollars to pay them with, every silver dollar in the country may be redeemed, so to speak, at least once every year. Therefore no man hesitates to accept it, yet, strange to say, no man—not even a free-silver advocate—ever hoards it as other money is hoarded.

In my opinion, much more silver than we now have could be safely put in circulation, and I would cheerfully vote for the second and third sections of the bill, which provide for coining the silver bullion in the Treasury, were they severed from its obnoxious features. By means that I have stated, the Government has maintained a bimetallic circulation by fixing on the superior metal as a standard, and then coining the inferior metal under such limitations and conditions as will insure its parity with the superior metal, and in that way only can a bimetallic standard be maintained so long as there is any material divergence in the relative market value and mint value of the two metals. For the moment that the coins of the inferior metal exceed the demand for them for the payment of public dues they will depreciate. They do so in obedience to as forceful and as necessary a law of the business world as the law of gravitation in the physical world, and no human legislation can prevent it until it invents some device whereby the voluntary choice of mankind may be controlled.

The free, unlimited, and independent coinage of silver is an entirely different process from that now employed by the Government in the coinage of silver. Free coinage contemplates that any person, citizen or alien, may carry 52 cents' worth of silver, which is now the bullion value of a dollar, to the mints, and by some species of legerdemain or witchcraft have it converted into a dollar worth 100 cents. To a man uneducated in the sophistries of free-silver literature such an achievement would seem impossible, and so it is. It is admitted by many free-silver advocates that the stamp of the Government adds nothing to the coin. What then would be the obligation of the Government under free coinage? It would receive the silver bullion at the mints, coin it into dollar pieces, and return them to their owner, and assume no obligation respecting them whatsoever. The dollars would be worth just what they would exchange for in the market, no more and no less. They may serve as good dollars in the payment of existing debts, but in the purchase of property, which is the highest function of money, they will be worth only what the silver in them is worth. They would circulate just as greenbacks and Confederate money circulated during the war, namely, at a valuation fixed on them in the markets, and when received by the traders would be hurriedly passed off on someone else before they could go down on his hands, thus leading to general and gigantic speculation, to chaos in legitimate business, to the destruction of credit, and the prevention of all contracts depending on deferred payments. And in that event gold and all better money than silver would disappear from circulation in obedience to a natural law of money, which is as certain and inexorable as the diurnal revolutions of the earth.

And whom would free coinage benefit? Unless the collection of debts were enforced prior to its operation it would benefit existing debtors by enabling them to discharge their just obligations in depreciated money. And who are the principal debtors of the country? Not the poor people, for they have not the ability to contract debts of any considerable magnitude. The principal debtors are railroad companies, banks, savings banks, life insurance and fire-insurance companies, mining companies, trust companies, manufacturers, large mercantile companies, States, cities, corporations, etc. These companies and corporations owe the people of this country more than $10,000,000,000, and the payment of their debts in 52-cent dollars would result in a net gain to them and in a net loss to other people of more than $5,000,000,000. The very rich, then, would desire some temporary advantage from the free coinage of silver. Who are the creditors that would be injured? The moderately well-to-do people, widows and orphans, and the laboring classes, including in that class all people who are paid for their services in money. It is not generally known, and yet, if I am not mistaken in the statistics, it is true, that more money is annually paid for labor in this country than for all other commodities combined. They do not get their wages until their work is performed, and hence they are the largest class of creditors in the country, and are mainly made up of people who are least able to endure losses. It is an elementary fact that, under the stimulus of a depreciated currency, wages do not advance in price pari passu with advancing prices of other articles. The laborer must continue to work for the same wage, though it will not purchase in the market the same quantity of commodities as he formerly purchased when he received sound money. Anything, therefore, that tends to depreciate his wages is a calamity to him.

But it is argued that the suspension of the free coinage of silver has caused prices to fall throughout the world. If there is any truth at all in this contention it has been very much exaggerated. The decline in the price of silver is a coincidence, and not the cause of other declining prices. If the fall in the price of silver were the cause of the low prices of other articles, then the decline in prices ought to be uniform in degree and universal as to all commodities, neither of which is true. Silver has fallen nearly 50 per cent, while the prices of other articles have fallen in different degrees, both in their relation to silver and in their relation to each other. There is no uniformity whatever. They sometimes fall as silver rises, and rise as silver falls, and sometimes, as compared with each other, rise and fall inversely at different times and in different degrees. Among my constituents cotton is the chief commercial product, and it is claimed that the fall of silver, owing to its exclusion from the mints, has seriously affected its price.

An examination of its statistics for the last hundred years shows most conclusively that its price under ordinary conditions is determined by the quantity produced; that supply and demand are the controlling factors in settling the price. And if we examine the price during two monetary crises we find that from 1841 to 1850, inclusive, with a total production of 21,000,000 bales, the lowest average price in New York was 6⅞ cents per pound, and that from 1886 to 1895, with a total production of 75,000,000 bales, the lowest market price in New York was 8½ cents per pound, being a difference of $7.83 per bale in favor of the last ten years. Both these decades witnessed a great financial panic—the first decade under the free coinage of silver and the gold standard, and the last under a gold standard and without the free coinage of silver. We also find that from 1851 to 1860, which decade is considered the most prosperous period the country ever enjoyed prior to the war, the average price of cotton in New York was 11.31 cents per pound, and from 1875 to 1884, the most prosperous period since the suspension of silver coinage, the average price of cotton in New York was 11.86 cents per pound, being a difference in favor of the last decade of $2.75 per bale.

During the last decade mentioned the cost of producing and transporting cotton was much lower, and the planter received a relatively higher price than the figures indicate. Cotton is produced cheaper now than it ever was before; mules, plows, iron, wagons, guano, packing, ginning, transportation, food, clothing, labor (requiring less to feed and clothe it) are all cheaper, while the skill of the farmer is very much greater, and yet occasionally we sell our cotton below the cost of production. The figures which I have given prove conclusively that the price of silver, whether it enjoys free coinage or not, has not affected the price of cotton. I do not deny that prices of commodities have fallen everywhere; falling prices, arising from cheaper production and distribution, are a benefaction to the world. I am an advocate of cheap corn, pork, flour, clothing, etc., and I hope that the time is rapidly approaching when the cotton planter can produce and sell cotton profitably at 2 cents a pound. We could not contribute a greater boon to suffering humanity. But if it were conceded that falling prices were the direct sequence of the exclusion of silver from the mints the question would still recur: Can this country alone restore it to free coinage without descending to the ruinous silver standard? If the dozen countries engaged in free coinage prior to 1873 could not hold it on a level with gold when their relative value in the market only differed about 5 cents in the dollar, how can this country alone, being one of the dozen, raise it to a level with gold when their relative value differs about 50 cents on the dollar? The question answers itself. Everyone knows that if it requires the combined strength of twelve men to draw an object a given distance, the strength of neither one of them singly will suffice to draw it back again.

Falling prices may be largely accounted for by considerations disconnected with the free coinage of silver. Within the last thirty years the world, and especially our country, has marvelously advanced in intelligence, ingenuity, and inventions, and the area of production has enormously expanded. A Western man can produce as much wheat, it is said, as 400 persons, at a reasonable allowance, can consume. I presume that a Southern farmer can produce correspondingly as much cotton. Mulhall, the great English statistician, says that—

> An ordinary farm hand in the United States raises as much grain as 3 in England, 4 in France, 5 in Germany, or 6 in Austria, which shows what an enormous waste of labor occurs in Europe, because farmers are not possessed of the same mechanical appliances as in the United States.

And yet many of our people continually hold up France as a model of prosperity and happiness, that we ought to emulate. Such gentlemen ought to give more time to the study of the economic forces and conditions of the two countries.

We all know that as labor-saving devices have been invented all things to which they apply can be produced upon a cheaper scale, and we all know that the cost of transportation and distribution has been enormously cheapened. Although wheat is cheaper in the West and cotton cheaper in the South, the universal testimony is that the farmer in either section who manages his affairs upon sound business principles is a prosperous man. My observation is that the spirit of speculation, by which I mean the disposition to neglect the cultivation of other valuable crops and to stake all on cotton has wrought more injury to the cotton planter than the suspension of silver coinage can possibly do.

Again the advocates of free coinage say that the exclusion of silver has cut off one-half the primary money, or money of ultimate redemption, and by that means brought ruin and disaster upon the people. Suffice it to say that when the condition of finances is such as to inspire confidence very little primary money is needed. All that is really needed is to settle international balances of trade. Only 5 per cent of the business of the country depends on the actual payment of money, and but little of that is coin of any kind. The balance is done with credits of various kinds. Since reaching manhood I have been engaged in business for myself and others, and have perhaps witnessed the passing of several millions of money and credits, and I have never yet witnessed a demand for primary money. Furthermore, I have never heard of such an instance in Georgia.

These facts show how insignificant is the use of primary money in the transactions of ordinary business. But when a panic comes no financial system ever devised will escape unharmed and supply sufficient primary money; if all the gold and silver ever dug from the mines were coined into money it would not suffice for such crises. But, in point of fact, it is not true that the stock of primary money in the United States has been cut off. When the

coinage of silver was suspended in 1873 there was not a dollar of either gold or silver in general circulation, and yet the advocates of free silver say that that was the most prosperous period that the country ever enjoyed, and they date our downfall from that eventful epoch. If we were so prosperous then without any primary money why can we not prosper now without it? It should be remembered also that the circulation per capita then was much smaller than it is now. But since 1873 there have been added to our stock of primary money some six hundred millions of gold and four hundred millions of silver dollars, each one a legal tender in payment of all debts, public and private. If our prosperity depends on primary money we ought to be a hundred times more prosperous now than we were in 1873.

If the free coinage of silver at the ratio of 16 to 1 would bring us to a silver basis, as I confidently believe it would, no greater calamity, in my judgment, could befall the cotton raiser. His product commands gold in any market, and nearly two-thirds of it is sold in countries having the gold standard of values. No change in our monetary system, nor in our standard of value, would affect the value of his cotton in the foreign markets. The price of that portion sold and consumed in this country would continue to be fixed, as it now is, by the foreign price. Abroad he would receive gold, and at home the equivalent of the foreign price in silver, less charges that I will presently mention. How, then, would he be benefited in the price of his cotton by the change of the gold standard of sixty years' standing in this country to a silver standard? If, by reason of depreciated silver, the prices of all articles in this country were to be doubled he must still accept the foreign price for his cotton measured in silver at home.

What advantage would that be to him? Being a cotton planter myself, and otherwise having a large pecuniary interest in the success of other cotton planters, I am vitally interested in this question. While there is no advantage to him, beyond doubt there will be losses. While the price of cotton is fixed in the foreign market, very few planters sell in that market. They find it more profitable to sell in the nearest home market, and the buyer must in that event provide himself with either silver or silver certificates to make payments. He, the buyer, must exchange the gold that he receives, directly or indirectly, in the foreign market for this silver or paper. Does any sane man imagine that the cost of the brokerage charged for exchanging the money will not be discounted from the price of the farmer's cotton?

Again the buyer, paying in one currency and selling in another, if he be an intelligent business man, must take into the account the probable relation of the two currencies when he comes to sell. He must sell for as much as he paid, with a reasonable profit added, and if there is any probability of the fluctuation in value between gold and silver, as there always is, he must protect himself against any loss, and this anticipated loss will always be discounted in advance from the original price paid the farmer. In other words, the cotton producer must accept silver for his cotton, although it brings gold in the markets to which it is sent, and must also insure the buyer against any loss arising from the fluctuating value of gold and silver while the cotton is in transitu from his home to Liverpool.

The farmer pays both the cost of brokerage and the insurance described. Inevitably so, provided the buyer is a man who understands his business. Again, the same charges would fall on him if, impelled by his tastes or his necessities, he should purchase articles imported from a gold-standard country. The importer, wisely providing against loss, would include in the prices of his goods the cost of brokerage in converting the money received for them in this country into the money of his own country, and also any anticipated loss accruing from the fluctuations in the currency of the two countries from the time his goods left his country until their proceeds were received by him in his own country. No intelligent merchant would think of doing otherwise. His goods, owing to the different measures of value prevailing, would be, in effect, measured by one yardstick in his own country and by a yardstick of different length in this country, and to the farmer would fall the losing end of the bargain.

Again, the cotton producer must of necessity sell a large quantity of his cotton in foreign markets; we can not manufacture it all here. It is to his interest, therefore, to encourage foreigners to trade with us. They can not buy our cotton unless we buy their products, and such trading is to our mutual advantage. But the silver standard works a prohibition upon trade with nations on the gold standard. I will not pause to say why it is so, for everyone can see it for himself, but will simply cite the experience of existing silver-standard nations as proof of it. Señor Romero, the accomplished minister from Mexico to our Government, has, in a magazine article, candidly admitted that the silver standard has worked that effect in his own country. If we do not exchange our cotton for goods with England, France, and Germany, they will find a way to produce cotton in their own colonies and dependencies and take our markets from us, than which no greater calamity could befall the Southern States. It may be asked, if this be true, why the manufacturer who favors a protective tariff does not also favor the silver standard. He does not favor it because he knows that all persons who perform services for money wages, upon whom he chiefly relies as customers, will, when paid in silver, be able to purchase only one-half the quantity of goods that he buys now in good money, and that one-half the factories, or nearly so, must close up for want of customers.

Mr. Speaker, the arguments against the free coinage of silver at a ratio of 16 to 1 are inexhaustible, and I must forbear. It grieves me, however, to find so many of its advocates among my own people, a people heretofore remarkable for their broad intelligence and sturdy conservatism. The free coinage of silver as contended for is an event that none of them will ever live to see, yet they indulge in a useless and calamitous agitation of it. I can sympathize with the Western silver-mining States. I realize that they have a vast pecuniary interest in the question, and that self-interest probably dominates their reason and understandings; but the Southern people have no such reason to espouse it. They have recovered almost single handed from the unparalleled devastation of a dreadful civil war, and have taken their station in the front rank of the most intelligent and progressive people in the world. Nothing in human history equals their achievements in material progress, nor equals the sacrifices they have endured in their efforts to rehabilitate their local governments and institutions. Their country possesses unparalleled capabilities and resources. They can grow anything that is found outside the Tropics. Iron ore, lime, and coal, embedded in their hills, lie in close juxtaposition, and are sufficient in abundance to supply iron and steel and fuel to a thousand generations. Their fields are annually whitened with a fleecy staple of superior fineness to that of any clime, while their natural waterfalls contain power sufficient to turn every spindle in the world. Their enormous resources await only the touch of capital, skill, and intelligence to evolve their unrivaled munificence. Capital they have not. It perished in the hot breath of civil strife. They must secure capital from elsewhere, and every moment employed in free-silver agitation will postpone the day when capitalists can be induced to extend their friendly assistance. Men will not invest their money among a people whose opinions on finances are not in accord with sound and just business principles. They will not seek to make interest on their money where they have reason to fear that both interest and principal will be put in jeopardy.

The free coinage of the metals at a legal ratio widely different from the commercial ratio is adverse to the principles of the Democratic party, and I am opposed to it for that reason also. The Democratic party favors bimetallism and is opposed to monometallism. It never did at any period of its history favor the free coinage of silver and gold except at their commercial ratio. It was too wise to try experiments with the currency of the country. It favors bimetallism now; not that spurious bimetallism that masquerades under the flag of free silver, but that process which holds all our coins, gold, silver, nickel, and copper, wedded upon a scale of perfect equality in value. From the days of Jefferson to the present time it never advocated other than sound money. If the Government can take 50 cents' worth of silver and make a good dollar out of it it can do the same with the same number of grains of iron, nickel, or copper. If it can do that let us turn all gold and silver into jewels and ornaments and with the Populists insist upon fiat paper money altogether. If it is true that the Government can create value out of nothing the contention of the Populists is more tenable than ours. But I prefer to adhere to the Democratic faith in which I was born. I stand by the principle enunciated in its national platform. Gentlemen may call that platform a "straddle" if they wish, but they impeach their own intelligence when they do so. If, with the platform as a text, they have preached the free coinage of silver to their constituents it is not the fault of the platform. Its language is clear and explicit:

> We hold to the use of both gold and silver as the standard money of the country and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value and insure the equal power of every dollar at all times in the markets and in the payment of debts—

is a part of the language of that platform. We use both gold and silver as standard money now, and when conditions change so that we can make every dollar of equal intrinsic and exchangeable value and equally potential in the purchase of property as in the payment of debts, there will be no discrimination against either metal at the mints. If we enter upon the free coinage of the metals without regard to these conditions, we would destroy bimetallism and inaugurate the reign of monometallism. The cheaper coin would drive the other from the field and occupy it exclusively. Whatever may be said of the failures of the Democratic party or of the waywardness of individual Democrats, I am glad that it can not be charged that its principles are unsound; and, in my judgment, it will never deserve to be restored to power and the country will never enjoy prosperity commensurate with its enormous resources and enterprise until Democrats unite again in advocacy of these sound principles.

Coin Redemption Fund.

SPEECH

OF

HON. ISRAEL F. FISCHER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temperary deficiencies of revenue.

Mr. FISCHER said:

Mr. SPEAKER: While everyone will admit that the speeches delivered in these Halls by members on either side of this question change no votes, it must be admitted that they in part do some good. This good comes of the opportunity which men secure to scan and digest the arguments, and cull therefrom the reasonings which are offered in support of the theories advanced. This speechmaking machine has certainly ground out a remarkable lot of material, and because of a fear which I entertain that the country has possibly not had sufficient or can really stand more, I shall add a few words to the singsong and dingdong already heard.

I have been a patient listener throughout this whole discussion, living through it all in the hope that it would do me some good. I shall not attempt to give my opinion of the various efforts, but will content myself with the belief that I should say a few words which, though not weighty or of any great moment, are likely to be considered not below the standard set.

Now, as I digest these somewhat indigestible arguments presented by the advocates of the Senate amendments, they are as follows: "Kind sirs, you who believe in sound money, we beg your kind consideration in behalf of a people who produce from the mines in our section a metal known as silver to give us some legislation whereby we may be enabled to impose upon and defraud the confiding and patient people of this great country by passing upon them coin bearing the Government stamp, declaring it to be a dollar. Grant us this favor and you will oblige us ever so much."

And when it is charged that this silver which they wish us to declare to be a dollar is worth but 50 cents, they retort that that is only its intrinsic value, but that the Government stamp will make it go for more; that silver may become more valuable some day, and we should coin first and trust the rest to the sweet by and by. They say, furthermore, that silver was once worth more than par and may become so again. They have quoted every authority of ancient times in favor of silver, but fail to state that those expressions were based on the value of the metal at the time.

The quotations of past days on the market price of the metal certainly can not be quoted in support of any claim as to value at the present period. No more, Mr. Speaker, than can the quotation of a former price for any commodity fix a value for it to-day. It would be just as reasonable as an opposition to lighting by electricity because of the laudation of petroleum when it first came into use. There is but one guide, and that is the light of the present day. We must keep our financial car upon the commercial rail, otherwise we go to destruction. The silver advocates would have us discard the fundamental law, disregard all rules, defy every precaution, open wide the Treasury throttle, bid defiance to all conditions, and trust to luck.

They have sung their ditty so many times that they have really brought themselves to believe that we can get along without the rest of the world; that we should sink our ships, abandon commerce, and become dead to the world outside; do all this and yet prosper. Mr. Speaker, our country is certainly great; it is marvelous; but great and marvelous as it is, it is not sufficiently so to do this, or if it were it is not willing to adopt ancient Celestial methods by the erection of a Chinese wall. Our people as well as all the people of civilized countries wish to maintain commercial relations, and in order to do this we must have that which they are willing to accept in payment for the things they sell us. No make-believe currency will satisfy them; they will take only that which is recognized in their commercial circles as money.

We must not be carried away with the notion that because the Government shall say, "This is a dollar," that it is one and that it will be so accepted. This class of money would be "confidence" money in the sense used by that class of gentlemen of thrift who ply their game upon the unsuspecting rural gentlemen when he strikes the metropolis. It is not the money which has the confidence of the commercial world. Nay, more than that, it has not even the confidence of the gentlemen who so loudly demand its use, for, sir, should it be put in circulation it would find no friends among them. The much cursed gold is put aside by the banks of the Pacific Slope as a nest egg to provide the security which they know it affords and which they need. If silver were freely coined I fear their only friendship for it would be evidenced by their willingness to pay it out and not in accepting it.

Mr. Speaker, I have never found a simon pure silver man who would content himself with an adherence to a pertinent question propounded upon the subject. Generally you will be accorded the treatment practiced by the photographer, who asks you not to look at the instrument which is to do the work, but to kindly observe the interesting affair hung at one side.

The gentleman from California [Mr. JOHNSON], more frank than most of his praying band, said this:

> We should recognize silver as entitled to aid at our hands. * * * Why not support the Senate bill, Mr. Chairman? * * * It is for silver; it is a legal bill, and I favor it because it does something for one of our great industries. * * * Something should be done for silver. * * * I beg you to act for the interests of silver.

Here was a frank confession that silver is a commodity seeking and demanding most extraordinary relief from the Government. Not protection by way of duty as against foreign production, but demanding that the Government should certify a falsehood in the interest of silver producers, a certification upon a piece of silver worth about 50 cents that it is 100 cents. This act by an individual would be false representation and punished criminally. The prayer of the silver advocates is on a par with the Populistic dogma which calls for the issuance of money certificates by the Government for wheat or corn, fluctuations in price not to be considered.

The gentleman's cry was not for help for the country, not for legislation which should benefit all its people, but a cry for help for the silver producers. Sir, this money question must be settled for the good of the country's finances. It can not be turned into a silver-purchasing measure to aid a few men.

We can only issue that amount of silver which will preserve its value as money. That amount, so far as we can learn from the experiences of other great commercial countries, is in circulation to-day; and to this extent, upon a perfectly sound and safe basis, the Republican party is for bimetallism.

The cry that we are gold monometallists because of our refusal to permit the free and unlimited coinage of silver is a false one, and is intended to deceive. No advocate of free silver has ever dreamed that he could make his arguments upon the subject carry much weight among those who know, but seek to mislead their constituents by this talk.

Mr. Speaker, it is very plain to any person who will investigate that the free and unlimited coinage of silver is the surest way to bring about monometallism. Our neighbor, Mexico, has already placed herself in that column, and the lesson taught seems not sufficient to guide our friends, the silver men.

Mr. Speaker, what our country needs is not silver legislation. Low prices and unemployed men are not made so because of our refusal to grant free coinage. The cause of our present trouble is because of hostile tariff laws. We need a revision of these laws and nothing else. We should pass a tariff act which will restore our industries to their former prosperous condition, a law which will again open up our factories and provide employment for our mechanics and laborers and provide them with decent living wages, as was the case prior to the passage of the Wilson law. We should put our tariff in force once more, so that our expenses and debts may be met. It it is true that such an act can not become a law while the Government continues in the hands of the present Administration, but let us prepare the country for it; they expect it from us.

The people require us to restore them to the position they occupied before those inimicable to American industries struck them down. The people generally do not want free silver; they merely wish an enactment of Republican principles, which they know from experience will bring prosperity. They know that laws discriminating in favor of American industries mean the restoration of good times.

The gentleman from Arkansas [Mr. LITTLE] while advocating the adoption of the Senate amendment presented (possibly unintentionally) the case really as it is, and made clear what need be done to correct the evil which has seized and now holds us.

This is what he says, page 1503, of the RECORD:

> This gold is demanded to settle our balances of trade.

Again, he says:

> As long as we pay out to foreign countries more than we receive, so long will our condition grow more agitated and embarrassing.

These concise words from a Democrat and a free-silver advocate cover the case fully. Enact laws which will wipe out those on the statute books which tend to build up foreign industries, and give us instead laws which will build up our own and shut out the product of pauper-paid labor of other countries, laws which will compel importers to pay duties equal to the difference between wages here and abroad, and you will provide the medicine which will heal and settle this apparently ceaseless mouthing about silver.

The Senate Silver Bill—Silver Monometallism.

REMARKS

OF

HON. S. M. CLARK,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 10, 1896.

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. CLARK of Iowa said:

Mr. SPEAKER: If the Senate had chosen, it could have passed a bill for the free coinage of silver at the ratio of 16 to 1 and sent it to the House. The House could then have considered that bill upon its merits. The question is before the House in a wholly different manner. The House passed a bill reducing the rate of interest upon Government bonds, to be thereafter issued, to 3 per cent, with fifteen years instead of thirty as the maximum limit. I did not vote for that bill, because I was not willing that the Republican policy, which had steadily reduced the national burden of interest-bearing debt, should be reversed at the demand of a Democratic Administration. The bill provided also to supply the Treasury in case of any deficit by the issue of temporary certificates instead of by the issue of bonds. That bill comes back to us from the Senate with every word and syllable of it stricken out except the number of the bill and this measure for the coinage of silver at 16 to 1 substituted. The Senate has taken a similar course as to the bill passed by the House to increase the revenues by increasing the customs from the tariff.

The Senate has substituted this same silver bill in place of this second bill of the House, leaving nothing of that but its title. If the Senate can do this as to two measures passed by the House, it can do the same thing as to every bill the House passes. That is the reductio ad absurdum of the situation which the Senate makes. The question before the House is not the merits or demerits of free silver coinage or whether or not the House favors that, but whether or not the House will vote that the Senate shall nullify its legislative capacity and practically abolish it. Let no one mistake what the real issue is, as it has already been so well stated by the gentleman from Maine [Mr. DINGLEY], the distinguished chairman of the Committee on Ways and Means.

Any member who votes for the measure that has come to us from the Senate votes to abolish the legislative autonomy of the House; he votes that that part of Congress which represents the States shall suspend and abolish the legislative functions of that part of Congress which represents the people. There has been a good deal of debate and discussion among the people in recent years whether they would longer permit the existence of that part of Congress which represents the States. They have made grave question of its utility and whether it was consistent with democratic institutions; whether, in fact, instead of being useful, it is not hurtful as a legislative power. Whatever may come of that discussion, it may be taken for granted that the people will not consent to make the Senate the one supreme legislative body and permit it to displace that branch of Congress which represents the people.

If we take counsel of history, and especially take counsel of the deliberations of the Federal Convention of 1787 that framed the Constitution of the United States, we can familiarize ourselves with the evolution of the right of the people to make their own laws by their own representatives and through what pains and difficulties the people have attained to that fredom and to that benefit. The judgment they will form and which this House should form from the monitions of that history will make them and us resolute to maintain this House in that autonomous legislative power which the fathers of the Republic conferred upon it. There are some things that do not move backward. The right of the people to make their own laws by their own representatives is one of those things.

I pass from that to this further consideration of the real tendencies and implications of the Senate's action as it is related to present conditions. I do not want to attribute to any men motives for their action of which I can not be sure. In nothing, probably, are the principles of sound ethics more frequently violated than for one person to assume that he knows the motives of the other person. It was a large knowledge of the infirmities of human nature that led Christ to the utterance of the high wisdom, "Judge not, that ye be not judged." I do not want to fall under that condemnation, so I will state the case thus: The President and Secretary of the Treasury had given notice that they were resolute to issue one hundred millions at least of 4 per cent gold bonds, running for thirty years.

The House sent a bill to the Senate permitting the President, if he issued bonds, to make the interest rate 3 per cent and the time limited to fifteen years instead of thirty. By preventing the passage of that bill, the Democrats and those Republicans or Populists in the Senate who are the especial advocates of silver have, by their own act, given warrant to the President to issue a 4 per cent gold bond instead of a 3 per cent gold bond, and to mortgage thirty years of the future to gold as against silver instead of fifteen years of the future to be thus mortgaged. I impute no motives, but if those Democrats and those advocates and champions of the silver cause had desired to support the President and the Secretary of the Treasury in the issue of long-time, high-rate gold bonds, then they would have taken precisely the course they did, because they took the direct, rational, and efficient course to effect that result. If the Democrats and the other advocates for silver in this House sustain the action of the majority of the Senate, then they have given direct aid and support to the President and Secretary of the Treasury in the policy of the issue of 4 per cent gold bonds, running for thirty years. I impute no motive; I only say that if that be their covert or avowed purpose, the effective way to accomplish it is to support the Senate in its action.

I pass to another phase of the subject before us. The maintenance of silver money as a money of the United States is a distinctively protective measure and is pervaded by protection. It is the incarnation of the protective principle. In the earlier part of this century Thomas H. Benton, in discussing the financial question in the Senate of the United States, urged the use of more silver than was being used, because of the discovery of what it was hoped would prove to be valuable silver mines in the Carolinas.

During the recent years of this silver contention the silver advocates have demanded the establishment of their policy in the name of protection and because of their devotion to the protective principle. We now behold in the House in the consideration of this Senate bill a double inconsistency. We see the distinguished member from Georgia, ex-Speaker of the House and the leader of the Democratic party upon this floor, rallying with so much of that party as follows his standard now to the support of the distinctively protection cause of silver. How he and they reconcile their contention for free trade with this contention for protection I leave to his and their mastery of the casuistry of dialectics. On the other hand, every Republican who has turned to the support of this Sena te bill has strenuously championed the cause of protection and his constituents sent him here in the name and for the sake of protection, and now these gentlemen turn upon protection and rend it. They have joined the Senate in a policy which has displaced an increase of the revenues and an increase of protect tion. And they knew that their act was only efficient to strike down protection and could not at all serve the cause of silver. How they can harmonize this with their own profession and the desires of their constituents as to protection I leave them to settle.

I shall vote against this bill because it proposes to enable the Senate to nullify and abolish the House as a factor in national legislation, because it is accessory to the policy of the present Administration in issuing long-time gold bonds, and because it is used as an instrument to strike down protection and an adequate and desirable increase of the revenues of this Government necessary as a solution of our financial troubles. I shall vote against the bill because I am in favor of bimetallism and this bill would establish silver monometallism.

The question of the currency and of free silver coinage in the ratio of 16 to 1 is before the House, although brought in in a wholly improper way, and I will make a brief discussion of it. I shall not attempt to discuss the question in any extended way nor in its entirety nor by the use of any statistics. Whatever our opinions about this or any question, every question will finally stand upon fact and science. What will be about it will prove to be that which must be about it because of the supremacy of fact and science. Any opinion of mine or of any other person about this question not based upon fact, not based upon science, will prove a futility. It is not what any one of us might like should be, but what is inevitable in the nature of things that will be.

I shall state but a few of the elementary facts and principles of science as I understand them, and upon those facts and those principles of science I shall take my stand and cast my vote, and I am not concerned about the outcome. I know that the universe will stand by the man that stands by the universe; that natural law "whose throne is in the bosom of God" will control this and every matter of human affairs, and all opinions not coincident with that natural law have no permanency in the future. I shall try to enlarge my vision so as to be, not the partisan of a cause, but receptive simply of the truth. There must be a measure of truth in the views of all the different parties to this silver and money question, because no body of men are ever wholly irrational. But no fervor of advocacy can exalt nonsense into the dignity of sense or make practicable the impossible.

There is certainly a deep unrest and disquietude pervading at

once the people and the students of finance in both the Old World and the New upon the subject of money. There must be a cause or causes for that deep unrest and solicitude. It is so widespread that it is almost cosmic. It is so deep and earnest that it almost threatens the stable existence of governments. It certainly threatens the tenure and permanency of political parties and makes a very uncertain future to each and all of them.

The first step in any adequate and scientific study of this question is to ascertain if possible what are the real causes of that pervading discontent, and then adequate treatment of it by legislation and by government must depend upon comprehending all the causes and dealing with them adequately and wisely, instead of inadequately and unwisely. We must not be misled as to causes, nor must we misapply remedies. It is clear to me that many causes leading to popular discontent have been blended and confused in the public mind and in the minds of individuals, and that many ills are assigned to money that do not belong there at all, that it is a false assumption that something that could be done about money is the cure of these ills, when not being related to money, money could not possibly cure them.

One of the causes of discontent is the fall in prices. And it is alleged that the use of silver as money at the ratio of 16 to 1 would be a cure for that. The fall in prices is due to many things; it is due to the great increase of machinery; it is due to the increasing cooperative power of machinery under scientific extension and application—increasing the power of mechanical production in a geometric ratio; it is due to the close and intimate way in which by the appliances of modern civilization—of swift travel and intercommunication—the world has been made into one cooperative community so that wherever a field of demand for products or for labor exists the whole world furnishes an immediate source of supply of both products and labor to meet that demand.

Of course the general result of all this is beneficent. God makes no mistakes. Civilization is not a failure. The results that mankind are working out by its best efforts and progress are not hurtful to or destructive of its well being. That the needs of the world shall be supplied with cheapness and plenty is a high beneficence. It turns us away from the rude and barren ages behind us; from the pinch of cruel barbarism; from the hunger and want of the suffering people of the past to the condition of plenty, which is the coming of the new heavens and the new earth of saintly desire and apocalyptic vision where want shall be no more and the tree of life gives its fruitage without money and without price for the satisfying and healing of the nations. But our machinery of business, of trade—some of our methods in the business world—are not yet adjusted to deal speedily with these new conditions of constantly cheapening production and constantly cheaper supply. But it must be apparent that the remedy can not be to maintain that now defective business machinery and enable it to displace the beneficence of cheapness and plenty with dearness, want, and high prices. The remedy is to readjust the machinery of business and trade to these better conditions. No one can treat this question adequately or make a judgment or do a legislative act about it that will have permanency and adequateness unless the true relation of prices to this modern condition of prolific mechanical production shall be considered.

There are some who, seeing how utterly impracticable some of the things said by the advocates of silver and of more and cheap money are, are disposed to treat the whole matter as the whim and caprice of cranks. This is too narrow a view. The unquiet of the public mind and the pervading sense that the people are the victims of hurt now and of more and greater danger impending are too real to be a mere aberration. I think the public view can easily be accounted for, and that it is wholly reasonable, although it may not be well informed as to either causes or remedies. Causes and remedies probably involve an extent of knowledge, a profoundness of thought, beyond the attainment of people busy with the carking cares of life and of daily industry.

The people have been taught that prices depend upon the volume of money. The political economists and the political leaders and writers alike have united in teaching this doctrine. Let me cite some of the instruction of the public mind by eminent teachers upon this subject.

Adam Smith, in The Wealth of Nations, showing the relation between the volume of money and prices, said:

> The discovery of the mines of America diminished the value of gold and silver in Europe.

I summarize some of the principles stated by J. B. Say, the next greatest teacher of political economy in succession after Adam Smith:

> Should the aggregate of circulating specie be doubled, the prices of all goods would be doubled; twice the quantity of specie would go to the purchase of the same articles. We may judge of the depression of the value of silver by the increasing prices of any given commodity.

Bonamy Price, in his Banking and Currency, says:

> Less gold is produced and the demand for it continues; it rises in value; it exchanges in buying for a larger quantity of all other commodities; that is, the prices of everything sold fall. On the contrary, a rise in general prices indicates that gold has become cheaper and a larger quantity of it must be given for the same goods.

Amasa Walker, in his Science of Wealth, states the principle explicitly that—

> Prices depend on the quantity of currency in circulation.

John Stuart Mill, in his Principles of Political Economy, states the general doctrine to be:

> Prices would rise and the volume of money fall in the ratio in which the quantity of money had been increased. If the whole money in circulation were doubled, prices would be doubled. If it was only increased one-fourth, prices would rise one-fourth. If there was less money in the hands of the community and the same amount of goods to be sold, less money altogether would be given for them and they would be sold at lower prices—lower in the precise ratio in which the money was diminished. So that the value of money, other things being the same, varies inversely as its quantity, every increasing quantity lowering the value and every diminution raising it in a ratio exactly equivalent. That an increase in the quantity of money raises prices and a diminution lowers them is the most elementary proposition in the theory of currency, and without which we should have no key to any of the others.

Applying these doctrines to contemporary conditions, writers and public leaders have taught the people that a scarcity of money has been the source of baleful ills. Mr. W. H. Grenfall, a distinguished writer and economist of England, wrote not long ago that—

> To me it appears that the fluctuations of currency have had greater influence for good or for evil upon civilization than any other single cause. At the present time we are face to face with a momentous monetary crisis. An attempt is being made and has been partially carried out to make gold alone serve as a measure of value throughout the world and to perform the work that has hitherto from time immemorial been performed by gold and silver. This attempt can not but be attended by the most grave consequences. In the first place, as there is not sufficient gold to meet this extra demand it causes in gold-using countries an appreciation of gold which is ruinous to the trade, industry, and agriculture of the country; in the second place, it paralyzes the trade carried on between gold-standard and silver-standard countries.
>
> Though prices fall the fixed debts remain. Trade is carried on by means of borrowed money. However much gold may increase in value debts contracted in gold have to be repaid in gold, with no allowance for the appreciation which has taken place since the contraction of the debt. The debt and the interest remain the same, and the unfortunate borrower, the man of enterprise and activity, is obliged to struggle against falling markets with a weight around his neck which is constantly increasing. The quantitative theory of money is agreed to by all economic writers; if you increase the amount of money in a community, other things remaining the same, prices rise; if you decrease it, prices fall.

Professor Foxwell, who is the teacher of political economy in the University College of London, has written:

> Take, for example, the case of a man who in 1873 borrowed £142 ($710). Prices have fallen to such an extent that £92 ($460) will now buy what £142 ($710) would have bought in 1873. Yet the unfortunate debtor must pay the full nominal sum borrowed; that is to say, his debt is practically increased more than 50 per cent. Can a system which permits of such arbitrary revolutions in the distribution of wealth be rational or tolerable? I confess it seems to me in the highest degree barbarous and uncivilized. The very earliest economic writings we have were protests against the wrong and mischief caused by such changes.

Robert Giffen, the distinguished political economist and statistician of England, has written:

> The fall in prices in such a general way as to amount to what is known as a rise in the purchasing power of gold is generally, I might say universally, admitted.

M. Wolowski, member of the French Institute, said:

> The suppression of silver would be a veritable revolution. Gold would augment in value with a rapid and constant progress which would break the faith of contracts and aggravate the situation of all debtors, including the nation.

Public men as teachers of the public mind and leaders of public conduct have accepted these doctrines and applied them to the public judgment of conditions so as to shape and mold public opinion. James G. Blaine, who is still vital enough in his grave to be present to the thought of millions of his countrymen as a type of high statesmanship and admired leadership, said:

> I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in and throughout the commercial world. The destruction of silver as money and using gold as the sole unit of value must have a ruinous effect upon all forms of property, except those investments that yield a fixed return in money. These would be enormously enhanced in value and would gain a disproportionate and unfair advantage over every other species of property.

That very highest authority upon the subject of public finances, Senator JOHN SHERMAN, said:

> The contraction of the currency is a far more distressing operation than Senators suppose. Our own and other nations have gone through that operation before. It is not possible to take that voyage without the sorest distress. To every person except a capitalist out of debt and a salaried officer or annuitant it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprises, bankruptcy, and disaster.

Senator ROGER Q. MILLS, an eminent Democratic leader and public authority, said:

> The demonetization of silver will paralyze all the forces of production, shut out labor from all employment, increase the burden of debts and taxation, and send desolation and suffering to all the homes of the poor.

With the political economists and greatest leaders of Govern-

ment uttering these judgments, it is not surprising that their opinions have been voiced by a thousand smaller oracles until all the people have heard these utterances. Not only that, but public teachers have directly related these monetary principles to the existence of business depression and public distress and have proclaimed them as the causes. The Hon. HENRY G. TURNER, of Georgia, one of the most eminent and one of the very ablest members of this House, said:

> The pecuniary stringency which has existed for years at the South now infests the North in even a worse form. There is not in all the world at this time a single prosperous community. The sun in its course looks not down upon a single prosperous city, or State, or nation. Every industry is prostrated.

He found the cause in the demonetization of silver. Taught by the most eminent authorities of light and leading that depression of business and failure of employment throughout the world was caused by trying to shift upon gold the monetary burden that has in all the past centuries been borne by both gold and silver, is it any wonder that the people have accepted this teaching and that they are restive when in their view their legislators and rulers go on resolutely to establish gold as the only money? Bismarck, opposing gold monometallism, portrayed thus the condition of the modern world:

> We are all in one bed and the blanket is too narrow to reach; each nation is tugging at this blanket and pulling it off some one else.

That sturdy, common sense of the greatest of the statesmen of Europe has seemed to the people to be confirmed by the recent struggles of the nations to increase their stock of gold in order to maintain their financial existence. And the United States, the richest and the most prosperous country on the globe, had by the act of the present Democratic Administration to put a mortgage upon the future of its people for thirty years in order to procure, at high interest and for a large bonus, gold enough from a few bankers to maintain its struggling financial life and credit through part of one season. Percival Lowell, in some recent interesting essays, portrayed how the surface of the planet Mars appears to the enlarged vision of astronomers. There a planet which shows signs of having once been covered by an expanse of water ample enough to wash many shores and give the element of life to many people has gone through a process of the evaporation of its seas until but a narrow margin of water remains.

And we can conceive the inhabitants of that world, leaving myriads of dead behind them, perished from want while the remaining people crowd upon the receding shores, seeking precarious life from waters soon to be wholly exhausted. Lord Byron had a dream of darkness, where light gradually faded out of the universe and men were gathered around their blazing homes to look by that uncertain and fleeting light once more into each other's eyes. The instructions of the economists and their public men have brought the people to some such conception of the monetary situation. They have been taught that money is the lifeblood of prosperity; that its circulation through the body politic, freely and amply, is necessary to societary life.

When they see that one-half of the monetary volume is to go out of use, the volume of money contracting to gold alone, while the population of the world increases and there is immeasurable multiplication of business and employments and the needs of and demand for money, no wonder it seems to the people that the sources of their business life are being dried up by the monetary situation. No wonder that in the keen passions which pervade mankind in the struggle for survival they view the monetary situation with disquiet and unrest. History has no significance unless the world exists for the constant betterment of the condition of the masses of mankind—to give more and more of the boys and girls born into the world an opportunity to live out, at their best, life in the high divine image in which they were made. One of the elements of human betterment and progress has been the gaining of individual political freedom—the right to participate in government; the right to take government from the privilege of the few and make it the right of the many. But along with the betterment of condition brought by political liberty must be the right and privilege of the possession and accumulation of property. "You take my house when you do take the prop which doth sustain my house; you take my life when you do take the means whereby I live."

That wisdom of Shakespeare is a wisdom that has passed into the keen perception of all the people. Everyone knows now that unless one can get so much of the property which buys the necessities and the comforts of modern civilized life in their many relations and demands the individual is mere wreckage, that most pathetic of beings, a human creature passing up and down the busy streets of our cities covered with the advertisements of the business of his more fortunate fellows who enjoy the products and the opportunities of civilization by possessing its property while he is but a moving human sign of their prosperity and of his abject failure in the struggle for life.

The people being taught that their chance of getting property and the means of livelihood and the enlarged blessings of civilization is twice as large by having both gold and silver as money than if gold alone be money, no wonder that they grow almost revolutionary in their passionate demand that the gates of equal fortune shall be kept open for them, and their chance of success in life be not divided one-half against them by the contraction of the metal money of the country and the world one-half. Their passionate and revolutionary feeling is made keener and stronger by that condition of modern life which has lead to trusts and syndicates, the concentration of the forces of the commercial and business world into the hands of a few, so that a syndicate of individuals can take into their own hands and control more than the entire wealth of past generations. They have lately witnessed a syndicate of five men feeling sure that they had so cornered the gold supply of the country that the Government and 70,000,000 people alike must turn to these five men as the only possessors of the gold upon which the credit of the Government could be maintained.

I believe in the people. I repeat that I do not see any significance in history or in fact for which Government exists unless it be to better the condition of the people; to give them constantly greater and better opportunities in life; to lift them farther and higher toward that new heaven and earth where humanity at its best is to find its fruition; that takes an Abraham Lincoln out of a cabin and out of the utmost of privation and lifts him to the heights of human and divine achievement as an exemplar of the possibilities of mankind. So far as my best perception and highest judgment can gather from the study of this financial question, what financial policy it is that will best promote the welfare of all the people, to that policy am I committed by my own thought and by my duty as a representative of the people and a national lawmaker.

The survey of history shows that in the struggles of mankind to evolve into a better condition the people and their leaders have been again and again mistaken as to the usefulness of suggested measures and policies. I am very sure that many people and many of their leaders are mistaken now as to the value they attach to the free coinage of silver as a means of escape from business depression, and their fears and presentiments of the dangers arising in any way out of the question of money. I stand upon the declaration of the last national Republican platform, that of 1892, as the wise and safe declaration of monetary principles under our existing conditions:

> The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions to be determined by legislation as will secure the maintenance of the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar of paper or coin issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

It is demonstrable that the Republican party by its national policy, so far as it is responsible for the conduct of affairs, has steadily maintained and promoted this policy since resumption of specie payments in 1879. The demonetization of silver in 1873, while the Republican party controlled the Government, had no significance as to monetary conditions, because there was no gold and silver in circulation in the United States, and the use of silver in a bimetallic system was resumed at the resumption of specie payments in 1879 under the law of 1878. From that time on the Republican party has put into monetary use in the United States the utmost amount of silver that can be used and a bimetallic policy maintained.

The free coinage of silver at the ratio of 16 to 1 would be absolutely destructive of bimetallism. It would contract out of circulation all gold. It would bring the American people to the use of silver as the only metal money. It would depreciate all the paper money of the country to the market value of the silver in the dollar. This would cause a loss of hundreds of millions of dollars that the American people could ill afford. It would bring upon them all the monetary evils of a depreciated currency, which our wisest statesmen and the most devoted lovers of the people have so strenuously deplored, and which the disastrous experience of the past warns the people against by the severest of all teaching.

The grave dust has covered Andrew Jackson. Nothing of the bitter political strifes and fierce party contests of his time remains to cloud or obscure the judgment of the present. Nothing remains but the splendor of his patriotism—of his unflinching devotion to the welfare of the people. So his warning voice reaches out from the past he made illustrious to his fellow-citizens of the present in these words of warning in his message as President in December, 1836, in a way they will heed:

> The progress of the expansion or rather a depreciation of the currency by excessive issues is always attended by a loss to the laboring classes. This portion of the community have neither time nor opportunity to watch the ebbs and flows of the money market. Engaged from day to day in their useful toils,

they do not perceive that although their wages are uniformly the same or even somewhat higher, they are gradually reduced in fact by the rapid increase of a spurious currency, which as it appears to make money abundant they are at first inclined to consider a blessing. It is not so with speculators, by whom this operation is better understood, and it is made to contribute to their advantage. It is not until the prices of the necessities of life become so dear that the laboring classes can not supply their wants out of their wages that the wages rise and gradually reach a justly proportionate rate to that of the products of their labors. When thus, by the depreciation in consequence of the quantity of money in circulation, wages as well as prices become exorbitant, it is soon found that the whole effect is a tariff on our home industries for the benefit of the countries that maintain uniformity in money and moderation in prices.

Daniel Webster, the contemporary of Jackson and his peer in patriotism, was even far greater than he in the breadth of his intellect and his comprehensive grasp of public affairs, of those profound principles upon which Governments are based and the welfare and progress of mankind depend, and he said:

The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil. A depreciated currency is the very harvest time of speculators and of the whole race of those who are at once idle and crafty. Capitalists may outlive such times. They may easily prey on the earnings of labor by their cent per cent or they may hoard. But the laboring man, what can he hoard? Preying on nobody, he becomes the prey of all. His property is in his hands; his reliance, his fund, his productive freehold, his all, is his labor. Whether he work on his own small capital or another's, his living is still earned by his industry, and when the money of the country becomes depreciated and debased, whether it be adulterated coin or paper without credit, that industry is robbed of its reward. Whoever attempts, under whatever popular cry, to shake the stability of the public currency, stabs your interest and your happiness to the heart.

I know that the policy of the Republican party as maintained in this nation now is the only safe and possible concurrent use of gold and silver in a bimetallic system. I have heard much said on the floor of this House by the advocates of free coinage of silver at the ratio of 16 to 1, and everything they have said but confirms my opinion that under their policy bimetallism is impossible. I have heard nothing said by the advocates of the free coinage of silver on this floor which leads me or which should lead the American people to reject the wise instructions and warnings of Andrew Jackson and Daniel Webster to follow the lead of any of the teachers that I have heard upon the floor of this House during this debate.

There have been many remedies proposed for any troubles existing in the monetary condition of the world.

One of the proposed remedies is the use of what recent political economists have come to call the multiple standard, and this proposed remedy has received so little public attention and yet has secured the favorable judgment of such high authorities in economic science that it is worth while to call the attention of the people and of legislators to the proposition, so as to enlarge general knowledge of it. Thus J. Laurence Laughlin, who has high rank among American political economists as one who is well versed in the application of abstract doctrines to practical affairs, has said:

As regards national debts, it is distinctly averred that neither gold nor silver forms a just measure of deferred payments, and that if justice in long contracts is sought for we should not seek it by the doubtful and untried expedient of international bimetallism, but by the clear and certain method of a multiple standard, a unit based upon the selling prices of a number of articles of general consumption. A long-time contract would thereby be paid out at its maturity by the same purchasing power as was given in the beginning.

The late W. Stanley Jevons, author of Money and the Mechanism of Exchange, was one of the leading economists of the present century in England. He wrote:

Money, besides serving as a common denominator of value and as a medium to facilitate exchange, is usually employed likewise as the standard of value in terms of which contracts extending over long series of years are expressed. In letting land on long or perpetual leases, in lending money to governments, corporations, and railway companies, it is a general practice to make the interest and capital repayable in legal-tender gold money. But there is abundance of evidence to prove that the value of gold has undergone extensive changes.

Between 1789 and 1809 it fell in the ratio of 100 to 54, or by 46 per cent. From 1809 to 1849 it rose again in the extraordinary ratio of 100 to 240, or by 145 per cent, rendering Government annuities and all fixed payments extending over this period almost two and one-half times as valuable as they were in 1809. Since 1849 the value of gold has again fallen to the extent of at least 20 per cent (1874), and a careful study of the fluctuations of prices shows that fluctuations are from 10 to 25 per cent, and occur in every credit cycle. The question arises whether, having regard to these extreme changes in the values of the precious metals, it is desirable to employ them as the standard of value in long and lasting contracts. We are forced to admit that the statesmen of Queen Elizabeth were farseeing when they passed the act which obliged the colleges of Oxford, Cambridge, and Eton to lease their lands for corn rents. The result has been to make these colleges far richer than they otherwise would have been. The rents and endowments, expressed in money, have sunk to a fraction of their ancient values. I believe there is no legal impediment in the way of a landlord leasing his lands at present for a corn rent or an iron or coal or any other rent. All that the law requires is that the contract shall be perfectly definite and of exactly determinate meaning, so that the kind of commodity intended and the quantity of that commodity shall be exactly ascertainable.

The question thus arises whether the progress of economical and statistical science might not enable us to devise some better standard of value. Can we not conceive a multiple legal tender which would be still less liable to variation than gold and silver money? We estimate the value of £100 ($500) by the quantity of corn, beef, potatoes, coal, timber, iron, tea, coffee, beer, and other principal commodities which it will purchase from time to time. Might we not invent a legal-tender unit which should be convertible, not into any one single commodity, but into an aggregate of small quantities of various commodities, the quantity and quality of each being rigorously defined?

Joseph Lowe, Mr. G. P. Scroope, Mr. G. R. Porter, Mr. Newmarch, president of the Statistical Society of England, and many other political economists have recently favored this method of solving monetary troubles made by the variation of gold and silver, and the resultant necessity of having one standard instead of two and one money instead of two. An American political economist, Mr. G. P. Osborne, in his Principles of Economics, published in 1893, says:

How can we secure a money of uniform value? This is the important quality of a good money. There are many who advocate gold as a standard. But the changes in the value of gold are very great. This bidding of all nations for gold as a reserve for currency can not fail to increase its value—its price as measured by goods.

If all the silver-using nations were to adopt a gold standard for their currency, it would send the values of the gold up nobody knows how far; certainly to double those at present. For many years economists have seen that the tabular standard is the only honest standard of value. It has been proposed to take the wholesale prices of a certain number of commodities from month to month and year to year. These should include all the articles which enter largely into the satisfaction of the wants of the great majority of the people. One hundred articles would give a fair average result. These articles would be taken in the proportion of the values produced each year. Let us see how much a dollar will buy of all these articles on the 1st day of July, 1893, and let this be the standard forever after. A thousand dollars is the quantity of these goods which a thousand dollars of our present money will now purchase. Here is strict justice—justice to the debtor, justice to the creditor. A dollar represents a certain quantity of the world's resources. If one lends it to-day, when the dollar is repaid ten years hence it should buy just as much, no more, no less than when he lent it.

If this method was adopted, then every nation could safely adopt monometallism. It would make no difference then what the money is or how much its volume or how small. As money is only needful as a command over the resources of the world, by the multiple standard method, a dollar under a monometallic or bimetallic system would be a constant quantity and give a constant command over an equal amount of the products of exchange.

Another method to solve the difficulty of contracting the world's money to gold alone is the making of an international agreement by convention of the different nations to use silver as well as gold as a standard money of full volume and for ultimate payment of debts.

Another method is that proposed by the advocates of free silver coinage and embodied in the bill now before the House, which would make this nation establish silver money at whatever amount free coinage at the rate of 16 to 1 would give us as the money of the United States. The question whether this policy should be adopted is the question before the House, if we consider the Senate bill upon its terms as a proposed financial measure.

I have listened carefully to much that has been said on both sides of this question during the pending debate. It will not be invidious if I say that the proposition that the United States should by law proceed to the coinage of free silver as money at the ratio of 16 to 1 has been most ably and eloquently put before this House by my friend from Minnesota [Mr. TOWNE]. He has signalized his entrance as a member of this body by one of the most masterly pieces of argumentation, by one of the most fascinating feats of oratory, ever heard in this body or in any forum. The merits of his intellectual treatment of the case have been heightened by the spirit of devotion to the interests of the people which pervaded his speech.

That is a sentiment to which I am most keenly responsive. That is a sentiment to which the Republican side of this House is most keenly responsive. When he appealed to it in strong and majestic eloquence to give consideration to the interests of what Mr. Lincoln called the common people, this Republican House was warmly responsive, for the heart of the party of Abraham Lincoln still thrills to any appeals made to it in the spirit of Mr. Lincoln's love for the people. I confess I would readily yield to his persuasion of method because of my full sympathy with his full sympathy for the people, if out of the splendor of his argument there could have emerged a perfect conviction that his method would really have served the welfare of the people. It is the doubt the conclusions of his own argument left in my mind as to whether or not his method would promote the welfare of the people that leads me to hesitate. When he was asked at the close of his speech whether or not gold would go to a premium if the United States should coin free silver at the ratio of 16 to 1, he answered at once, with the courage and with the directness of an honest man who knows this subject from real study and full investigation, that no doubt gold would go to a premium.

What is that but to admit that gold goes out of use as money, and that, instead of the bimetallism for which he was speaking as a benefit to the people, this country would be left to silver monometallism. No man has yet dared say that that would benefit the people. No; the case is clear. I repeat the postulate which I have made earlier, and that is that science and fact will control this case. Science and fact will determine what will be. The Gresham law will work inevitably. If gold and silver are coined at a ratio in full and free coinage which is not the commercial ratio of those two metals in the markets of the world, then that metal which is undervalued will go out of use here and into use

in the other nations of the world, and that metal which is overvalued will alone remain as our money, and so full and free coinage of both gold and silver at a forced and unnatural ratio will inevitably leave us upon the basis of monometallism, and no art of persuasion can change that situation or make two moneys remain in this market at a disparity of value when one of those metals finds its profit to its possessors in going to other markets of the world where it can be worth what it is worth as a commodity of commerce.

The Republican party, having pledged itself to a restricted form of bimetallism as the only possible form of bimetallism now possible, has kept faith with the people of America in carrying out that policy to the utmost extent it could do so without destroying the prosperity of the people, which the Republican party tries always to serve. There was never so much silver in use by the American people as now since the Government began; never so large a per capita use of silver in this country as now. Under Republican policies that large use of silver is done with the solvency of the money maintained, and with that solvent money the well-being of the people who use it. The use of silver can not be extended to free coinage at the ratio of 16 to 1 by the United States alone without impairing and destroying the sound-money condition of the American people, and no art of persuasion, no fervor of individual or collective opinion, can overthrow the fact that unsound and deranged currency is always hurtful to any people. I join with the eloquent member from Minnesota in holding to the high maxim of good government—salus populi suprema lex (the welfare of the people is the supreme law). But because I know, with the full warrant of the experience of mankind, the teaching of history, and the postulates of science, that free silver at 16 to 1 would be destrctive to the prosperity of the people and bring them surely and inevitably to silver monometallism—because of that I must reject his conclusions, while I yield myself in willing homage to the charm of his eloquence.

It puzzles many that an increase of money—a larger volume of money—can do harm. Some amount of money being beneficial to a country, they do not see why a larger amount should not be more beneficial. Yet the reason is plain. Mankind strives for property. Each person desires to get property and keep it or its value. Money is the counter by which he gets his property, and it is also the form of storage in which he often keeps his property and by which he always reckons it. When the money volume is sound and stable, it preserves his property for him, both as a counter of its value in trade and as a form of storage. When the volume of money is deranged and inflated, and thereby depreciated, it may cost him the loss of his property, both as a reckoner of its value in buying and selling and as the storage of his property. There is no puzzle about the matter, and the popular instinct which fears and resists inflation and depreciation of money is wise and well founded.

I recognize the logical validity of the definition of bimetallism made by my friend from Minnesota, but I do not know a country in the world where bimetallism exists within his definition. It does not exist in France, nor in Belgium, nor in Italy, nor in any country of the Latin Union, which are always cited when the silver question is up for discussion. Certainly the Senate measure now before us would not give bimetallism, but only silver monometallism. When there is talk of bimetallism there is usually or always talk of a double standard of money.

There is no double standard of money. Alexander Hamilton based our monetary system upon a single standard—a unit of value—resting upon both metals. In the actual result it proved that the unit never rested upon both metals, but alternately upon one or the other.

The amount of money needed by any country is limited, not unlimited. Whether the United States had gold money alone, silver money alone, paper money alone, or any two of these, or all three of them, it would only keep so much money as it needed. And it would keep, reckoned by purchasing power, only so much of any or all of them as it would keep of gold if gold were the only money. By no possibility, then, would even free silver coinage and silver monometallism bring into use in the United States, reckoned by purchasing power, more silver than the amount of gold now in use here, which it would drive out. Hence it is inconceivable that the utmost use of silver money possible in the United States would materially enhance its price, or be of material benefit to the silver producers of this country.

So, while the Republican party, being protectionists, would be glad to give protection to our silver-mining interests, there is no material benefit to the latter by the passage of the Senate bill now pending, while there would be vast harm done to all the people, those in the silver-mining States and districts included, by the derangement and destruction of our present money, which would inevitably follow from making the Senate bill into law.

It should be remembered by the House and the country that the increased and increasing production of gold is a factor in the case which must be taken into consideration. Mark the steady and large increase! The report of the Director of the Mint shows that the yield of gold throughout the world was $146,815,100 in 1892; $157,287,600 in 1893; $180,626,100 in 1894; $203,000,000 in 1895. It was $9,710,500 from 1803 to 1820. When we remember that in 1874 the yield was but $90,000,000, members will see that the flood of gold now being poured by that industry into the world's reservoirs may well allay the fears members have excited themselves and us with during the progress of this debate.

It should also tranquilize us into some serenity of judgment when we recall the incontestible fact that the greatest increase in wealth and the prosperity of a people ever known in the history of the United States or the history of the world has been in the United States since 1850, and that in all that time, in fact, and most of the time in law, silver was not in use in the United States as a standard money. And this Republican House should at least be faithful to the remembrance that the year 1892, the year of Benjamin Harrison and Republican protection—the year of the nation's highest tide of prosperity that the world ever saw—came under the existing monetary system which our free-silver friends declare incompatible with prosperity, and there was less silver money in 1892 than in 1893, the year of adversity, because it was the year of Democracy.

Coin Redemption Fund.

REMARKS

OF

HON. A. C. SHUFORD,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. SHUFORD said:

Mr. SPEAKER: The People's Party, of which I am an humble member, demands in its platform the "free and unlimited coinage of silver at the ratio of 16 to 1." It is the only party that stands squarely and unequivocally upon that proposition or is making an honest effort to restore silver to the position it occupied prior to the act of February 12, 1873. From April 2, 1792, until February 12, 1873, a period of over eighty years, silver and gold were the money metals of this nation, enjoying equal privileges at the mints. Why was this condition, which had existed for more than three-quarters of a century, suddenly changed? No one as yet has been able to give a satisfactory or reasonable answer. Without a single petition ever having been presented to Congress asking for its demonetization, without a single editorial appearing in any of the thousands of newspapers, great and small, throughout the country commenting upon such a measure, with less than half a score of men out of the fifty million or more people at that date knowing anything about the transaction, the destruction of the American silver dollar was accomplished and silver reduced to a commodity like wheat or cotton.

For more than three years after this act had been passed depriving silver of its legal-tender functions the people of this country were in absolute ignorance of the fact. In the summer of 1876, in the course of debate, Senator Conkling put the plain question to Senator SHERMAN, "Is it true there is no American silver dollar?" The answer of Senator SHERMAN that there was none was the very first intimation the people of this country received that one-half of their metal money had been destroyed by an act of Congress. Upon investigation not a single member of the Senate or House, aside from those who manipulated the scheme, could be found who knew anything about it, and President Grant, who signed the bill, was not aware of this provision. All this, however, is history, and I only repeat it to show that there must have been some ulterior motive which prompted such action. An act of Congress which had never been petitioned for, which was not debated, and passed without the knowledge or consent of either Senate or House certainly could not, viewed in any light, represent the expressed wishes of the people. For this reason, I repeat, there must have been some secret motives for such unfair and clandestine legislation.

Mr. Speaker, the money owners of Europe, in conjunction with their copartners on this side of the ocean, controlled the financial

legislation of this country then as they do now, and the reasons for this demonetization can be traced directly to their doors. In 1866 the war debt of this nation amounted to $2,783,000,000 in round numbers, all being payable in lawful money, which at that time consisted of gold, silver, and paper. After considerable agitation and manipulation, these money owners, who had possession of the greater portion of this debt, succeeded in passing what is known as the credit-strengthening act of March 18, 1869. This act changed the contract of this vast amount of indebtedness from lawful money to coin and made it all payable in gold and silver. In order to make sure of this advantage the refunding act of July 14, 1870, was passed, which funded all our interest-bearing debt into bonds running ten, fifteen, and thirty years, payable, principal and interest, in coin. These bonds were originally purchased with greenbacks worth on the average about 54 cents in gold on the dollar.

By this act they were funded into bonds payable in gold and silver worth more than par. Senator JONES of Nevada estimates the profits of these public plunderers through these transactions as follows: From 1862 to 1868 United States interest-bearing bonds were sold to the amount of $2,049,975,700. The amount received for such bonds, discount on coin considered, was $1,371,424,238, leaving a clear profit of $678,551,462. This statement will stand the closest scrutiny, and of itself is simply appalling. But this vast profit did not satisfy the ambition of these conspirators; they aimed at conquest, at the enslavement of the people. Well knowing the truth of the Scripture, which declares "the debtor the servant of the lender," they set about to accomplish this purpose. This enormous debt, which was payable by the terms of the original contract in three kinds of money—gold, silver, and paper—had been changed into a debt payable in but two kinds of money—gold and silver. The object now was to make this payable in but one kind of money—gold. They dared not attempt so soon to change the letter of the contract from coin to gold for fear of being detected in their scheme, and therefore took the less dangerous course of demonetizing silver, which destroyed its legal-tender functions and made it impossible of use in payment of the principal or interest of these bonds, and virtually, in this indirect manner, made them payable in gold alone. That this was one of the objects sought by the destruction of silver as money there can be no doubt.

Neither did it end here. The demonetization of silver meant the destruction of a large amount of the money of the nation and a consequent contraction of the circulating medium. This in turn brought about lower prices for the products of labor and began that industrial enslavement that we now see on every hand.

Our Western silver mines were at that time just being developed, and these money owners feared the stream of white metal that seemed turned toward our mints would increase in volume, make money more plenty, prices for labor and its products higher, the people more independent, and the chance for industrial slavery less certain.

They conspired to make the dollars as dear as possible and to cost more and more sweat and toil each year to obtain. How well they have succeeded can be shown by the business wrecks scattered like autumn leaves throughout the length and breadth of our land, the mortgaged homes all about us, and the weary wanderers who fill the streets. The destruction of our silver currency has been followed by a contraction of over 50 per cent in the volume of national-bank currency, which seems to disclose a systematic attempt on the part of the money owners to reduce the currency of the country to the lowest possible point, in order to force the people further into debt and poverty. The contrast between the economic conditions of our people in 1866, before the successful accomplishment of the schemes of these plunderers, and the present time is almost beyond belief.

In 1866 Mr. McCulloch, then Secretary of the Treasury, declared that the people were comparatively out of debt. Now, out of a total of 12,690,150 families, 8,073,174 are homeless or live in mortgaged homes. Think of this; two-thirds of our people at the present time homeless or living under a mortgage. Then the people were nearly out of debt; now the grand total of national, State, municipal, corporate, and private indebtedness is estimated at $38,000,000,000. In 1866 the number of business failures is given at 632, while for 1895 it is estimated at over 18,000. Then an acre of wheat on the average brought $23; now less than $6. Then an average acre of corn sold for $19; now less than $5. Then a bale of 500 pounds of cotton was worth $150; now it is selling for $30. Then there were no tramps, no unemployed, and all who cared to work could do so at remunerative wages. Now 20,000,000 of our people are virtually unemployed and in distress.

These, in my opinion, are the ripe fruits of a financial policy which began in fraud, and unless checked at once will end in national ruin.

The laborer, the mechanic, the farmer, the tradesman, and the manufacturer all feel the blighting influence of this unfortunate and uncalled-for legislation. They are all suffering from the effects of the law of supply and demand, which obtains in regard to the circulating medium with the same unalterable force that it applies to wheat or cotton. Reduce the quantity of wheat or cotton, leaving the demand the same, and each will naturally increase in price. Increase the amount of wheat and cotton and not increase the demand, and naturally the price will become less. Just so with our currency, increase the number of dollars, the demand for their use remaining the same, and the purchasing power of the dollar will decrease. On the other hand, decrease the number of dollars, leaving the demand for their use the same, and the purchasing power of each dollar will increase accordingly. The more dollars in circulation the less wheat and cotton or other products of labor will be required to purchase a dollar. Just the same as with a large crop of potatoes, they sell for less per bushel than when there is a smaller crop. On the contrary, if we contract or decrease the number of dollars, and at the same time require the same amount of business transactions, each dollar will become dearer, because scarcer, and will require more wheat and cotton and other products of labor to purchase. If we would apply the well known and common-sense law of supply and demand to the currency problem, much of its mystery would be dispelled, and any amount of demagogism and deception would be eliminated from its consideration.

To decrease the price of our product does not, as a rule, affect the price of other products, while a decrease in the volume of currency, which increases the purchasing power of money, affects the price of all commodities alike.

It has been stated on the floor of this House that the cost of production establishes the price of products. This can not be true, as will be seen by a moment's investigation. Suppose the corn crop was a failure in every State save North Carolina, would not the price of corn in North Carolina greatly appreciate? Most certainly. It would follow the law of supply and demand. But the fact that the cost of producing this crop of corn in North Carolina was no greater at this time than previous entirely explodes the theory that labor, or the cost of production, makes the price. When the farmer takes his cotton to market he receives the market price, without any regard for what his cotton cost him in production.

All other conditions remaining the same, it is the number of dollars in circulation that establishes the price of labor and its products. There is not a political economist, living or dead, whose opinion is worthy of record who does not subscribe to the correctness of this statement. I might quote from the writings of hundreds of the most eminent statesmen, writers, and thinkers the world has ever produced to sustain this position; in fact, this proposition is no longer disputed and may be considered as a settled proposition of political economy. This fact, once agreed upon, renders it comparatively easy to show the manner in which our present distress has come upon us.

In 1866 the public records show, beyond successful contradiction, that the per capita circulation amounted to $52. At the present time, according to the best authority, including Senator VEST of Missouri, there is not to exceed $5 per capita in circulation among the people. This wholesale contraction of currency, through methods which are too lengthy to explain at this time, is the direct cause of nearly all the ills that now beset our people. Under this process of contraction the number of dollars was decreased, while at the same time more business transactions were taking place. This situation forced a less number of dollars to perform a double amount of work, which in turn increased their purchasing power, and as a result all values shriveled and fell. The law of supply and demand operated in a double capacity in this case, for not only was the supply of dollars lessened, but the demand for their use was increased. To illustrate the baneful effect of such conditions upon property values, and at the same time disclose by a practical test the infallibility of this law, let us suppose a farmer in 1866 sold his farm for greenbacks and locked those greenbacks in a safety vault until to-day. Can he not buy with these same greenbacks three just as good farms as he sold? Who will dispute this?

Suppose, again, that in 1866 two farmers, Jones and Brown, had each $1,000 in greenbacks to invest in some speculation. Mr. Jones took his $1,000 and invested it in wheat at $2 per bushel, the average price at that date; but Mr. Brown locked his $1,000 in greenbacks in a safety vault. Suppose both kept their holdings until the present time; how would the results of the transactions stand? Mr. Jones has 500 bushels of wheat that he can sell for $300. On the other hand, Mr. Brown has $1,000 in greenbacks with which he can buy 1,666 bushels, or more than three times the amount Mr. Jones has. During these thirty years Mr. Jones's wheat has decreased more than 66 per cent in value, while the greenbacks of Mr. Brown, by a process of lessening the number of dollars in use and at the same time increasing the labor required of each dollar remaining, has increased the purchasing power more than 300 per cent. What is true in this case is true of nearly all the property in this country in its relation to the power of money. I will now undertake to show what the farmers have

lost upon their crops, with little or no compensating advantages on account of falling prices.

In this connection I insert the following extract from the speech of the Senator of Nevada [Mr. JONES] in 1893:

Let us endeavor to reach an approximate estimate of the losses sustained by our agricultural population since 1885, when President Cleveland first advised Congress to repeal the silver-purchase act of 1878 and to stop the coinage of silver dollars:

WHEAT.

Average export price per bushel—	
1875 to 1885	$1.17
1893	.73
Difference	.44

According to the report of the Agricultural Department for December, 1892, the wheat crop of this country for the year then closed amounted to 516,000,000 bushels. On this quantity a loss of 44 cents per bushel, caused by the decline in the price of silver bullion, amounts to an annual sum of $226,600,000 of debt and tax paying power, which amount apportioned among the principal wheat-producing States shows the loss of each of such States to be as follows (I give the figures in round numbers):

Wheat crop of 1892 in—	Bushels.	Loss.
Indiana	40,000,000	$17,600,000
Minnesota	41,000,000	18,040,000
California	39,000,000	17,160,000
Kansas	70,000,000	30,800,000
South Dakota	32,000,000	14,080,000
North Dakota	35,000,000	15,400,000
Ohio	38,000,000	16,720,000
Missouri	25,000,000	11,000,000
Illinois	28,000,000	12,320,000
Michigan	24,000,000	10,560,000
Pennsylvania	19,000,000	8,360,000
Nebraska	16,000,000	7,040,000
Kentucky	12,000,000	5,280,000
Oregon	10,000,000	4,400,000
Washington	10,000,000	4,400,000

There may be added to these figures five to ten million bushels each for the States of New York, Maryland, Virginia, North Carolina, Texas, Tennessee, West Virginia, Wisconsin, and Iowa. The loss on wheat, therefore, suffered by the farmers of this country must be estimated at $200,000,000 annually.

COTTON.

	Cents.
Average price per pound in New York—	
1879 to 1885	11¼
1893	8
Difference	3¼

Taking the crop year 1888-89 as an average year, and, for convenience of calculation, computing the loss at 3 cents per pound, we find that the total annual loss of the planters of the United States amounts to over $100,000,000, distributed among the States as follows:

Cotton raised in—	Pounds.	Loss per year.
North Carolina	230,000,000	$6,900,000
South Carolina	275,000,000	8,250,000
Georgia	480,000,000	14,400,000
Florida	32,000,000	960,000
Alabama	422,000,000	12,675,000
Mississippi	532,000,000	15,960,000
Louisiana	240,000,000	7,200,000
Texas	719,000,000	21,570,000
Arkansas	350,000,000	10,500,000
Tennessee	162,000,000	4,860,000
Total	3,422,000,000	102,680,000

This makes a total loss to the agriculturists of this country in wheat and cotton, by reason of the demonetization of silver, of over $325,000,000 a year.

If these calculations were carried up to the present time the result would be far more startling. I quote further:

But the enormous yearly aggregate of lost purchasing power is comprehensible only when we multiply the acres now employed in growing staples by the declines shown in the acreage value of products since 1870. While very accurately measuring the farmer's loss of revenue by reason of the declining value of the acreage product, even multiplying the acres under staple crops fails to show the whole loss, as no account is thereby taken of the reduction in the value of animals and the thousand and one things produced on the farms of the United States, which have suffered, in many cases, quite as great a decline in value as have the great staples to which this showing is confined.

As 206,000,000 acres are now employed in growing staple crops, it follows that the power of the farmer to purchase is this year $1,563,000,000 less than it would be if he was receiving the prices of 1866–1870 for his great staples. If the prices now realized in the farm markets equaled those received from 1871 to 1875, the farmer would this year be able to spend $1,450,000,000 more for manufactures and other commodities than he will be able to spend with prices at the present level. Were prices now equal to the average of those obtained from 1876 to 1880, the purchasing power of the farmers would this year be augmented by $768,000,000. Should the crops of 1893 give average yields, and the prices equal those current from 1881 to 1885, the farmer's spending power would be $645,000,000 greater than with present prices. Even with prices as low as those prevailing from 1886 to 1890 the farmers of the United States would have $358,000,000 added to their debt-paying and purchasing power in 1893; and like advances on the other products of the farm would create an ample fund for building and general improvement, thus employing more labor.

The least of these sums, added to the sums yearly distributed among the producers of metals and textiles, would afford employment for great numbers, keep the mills in motion, make money abundant, and bring good times.

Much stress is laid upon the necessity of cheap food for the wage worker; but what possible benefit can be derived from a cheapness that deprives the 30,000,000 who produce food and fiber of the ability to keep the wage worker employed by buying the products of artisan and operative?

Doubling the present price of wheat would probably add the price of six or eight days' labor to the cost of the year's supply of bread for the average family; but with wheat at an average of $1 a bushel at the farm markets, and other farm products at proportionate prices, there would be no idle mills, and the earner of wages would have that easily procured and constant work which would assure him the continuous ability to buy bread. Would not that be far better than existing conditions and bread unattainable, though low in price?

Let us ascertain what India, our greatest rival, has been doing during these years. For that purpose I insert the following table, from official sources, which contains a lesson for every farmer in this country:

Statement showing the exports and average export price of raw cotton and wheat from British India during the years ended March 31, 1870 to 1891, and eleven months ended February, 1892, inclusive.

Year ended Mar. 31—	Cotton, raw.			Wheat.		
	Pounds.	Value.	Price per pound.	Bushels.	Value.	Price per bushel.
			Cents.			
1870	524,834,448	$91,579,862	16.51	145,988	$158,035	$1.10
1871	577,600,800	93,412,315	16.18	463,908	498,398	1.07
1872	809,246,032	102,107,664	12.62	1,189,252	1,131,096	.96
1873	494,214,448	67,309,718	13.62	735,486	804,912	1.09
1874	503,966,176	63,418,757	14.59	3,277,781	3,972,509	1.21
1875	627,209,632	73,235,242	11.68	2,004,156	2,358,965	1.18
1876	561,207,920	63,748,603	11.36	4,686,767	4,350,389	.93
1877	510,486,368	56,381,683	10.86	10,428,328	9,396,672	.90
1878	387,583,616	45,059,299	11.69	11,896,563	13,713,552	1.15
1879	332,255,728	37,987,637	11.44	1,972,546	2,496,662	1.27
1880	442,229,312	53,498,174	12.09	4,109,495	5,396,482	1.31
1881	508,653,376	63,560,371	12.50	13,896,167	15,734,122	1.14
1882	630,508,928	71,718,830	11.37	37,148,543	42,573,898	1.15
1883	691,059,376	77,067,638	11.15	26,495,024	29,226,307	1.10

NOTE.—At the request of Mr. George O. Jones the rupee has been reduced to United States money at the rate of 48 cents per rupee.

S. G. BROCK, *Chief of Bureau.*

TREASURY DEPARTMENT,
Bureau of Statistics, April 16, 1892.

It must be understood in connection with this table that the increase in amount of cotton produced in India is greater than the increase in the production of wheat. This does not show in the tables, since a very large per cent of the cotton since 1873 has been retained at home for manufacture.

The silver of the United States since 1873 has aided in building up the India wheat industry from an export of 1,000,000 bushels in 1873 to 54,000,000 bushels in 1893. It has also aided in developing the cotton industry in proportion. Is it not time to stop such a suicidal policy and keep our silver at home to benefit ourselves? If our silver has been such a benefit to India, would it not benefit us in like manner? In my opinion it would.

Not only are our agricultural industries threatened with destruction through this Asiatic competition, but our manufacturers have taken the alarm. Already the manufacturers in many lines, especially where hand labor is used, are being driven to the wall by the overpowering competition of Japan and China. To-day the mechanics and tradesmen of this country are in greater danger than any other class by reason of the competition of these silver-using countries. No tariff can be placed high enough to shut them out, and unless we utilize our own silver, instead of granting them that privilege, these conditions will continue to intensify.

The advantage of these silver-using countries over us lies in the fact that their merchandise is manufactured and their agricultural products made with silver and sold for gold, while we are compelled to use gold in production and receive gold in payment. This gives the silver-using countries an advantage of the difference between the price of gold and silver. For example, the manufacturer in Japan can get just as many yards of cloth made for $5 in silver as the manufacturer in Massachusetts can for $5 in gold. Now, when the manufacturer of Japan meets the manufacturer of Massachusetts in Spain, for instance, in a business competition, he can undersell the manufacturer from Massachusetts by the difference between the cost of $5 in silver and $5 in gold. This difference would be so great under the present low price of silver that the Massachusetts manufacturer would be driven out of the market and his business ruined. What is true with this manufacturer is also true of the wheat grower, the cotton planter, and hundreds of other industries in this country. The foreigner comes over here now and buys our silver product, manufactures it, as it were, into a club with which he beats out our commercial brains. Just how long this suicidal policy will be

continued depends upon the intelligence and the degree of awakening among our people. We are producing about $70,000,000 in silver annually and making no use of it as a money metal. Instead we are selling interest-bearing bonds to buy gold to take its place.

Mr. Speaker, we are met at this point with the plea of overproduction; that we are producing more than we can consume and that prices are forced to their present low level under the law of supply and demand. Not so. The supply is ready, and in abundance, and heaven knows the demand never was so great or so urgent, but the ability to purchase is wanting. It is not an overproduction that threatens our country, but an underconsumption, which has been brought about through the contraction of our currency and the consequent appreciation of the dollar.

If all our people were comfortably fed, housed, and clothed, there neither could nor would be an overproduction, speaking in general terms. It is an indisputable fact that the wants and desires of a community keep even pace with increased production. The luxuries of yesterday become the necessities of to-day, and the whims of to-day become the settled fashions of to-morrow. The old is discarded for the new, and the new is taken with the anticipation of being replaced by something different in the near future. This applies to but one class of producers as a rule. It will hardly apply to the farmer. Wheat makes flour now as it did when first produced. Beef, pork, cotton, and wool fulfill about the same mission among the race as ever, with the exception of being more largely consumed. Production in this direction has been very largely increased. Yet there is no overproduction. There can be no overproduction of wheat or meat while any of our people are suffering from hunger. There is no overproduction of boots or shoes when people are barefoot, or of clothing when people are poorly clad. There is no overstock of laborers when thousands are suffering for want of the articles these laborers could produce, neither are there too many homes when they could be filled with tenants able to pay rent if work could be obtained.

If we take the statistics relating to agricultural products and consider them simply as statistics, the results seem to prove an overproduction, but the moment we consider them in the light of an underconsumption the true condition is discovered at once.

In 1867 50,841,765 acres of wheat and corn produced 980,761,400 bushels of grain, that brought the farmer $1,032,744,850. In 1893 106,665,883 acres of the same cereals produced 2,015,627,856 bushels, that brought the farmer only $804,797,008. That is, double the number of acres and more than double the amount of grain brought $22,947,842 less than in 1867. In 1867 we had $52 per capita, while in 1893 we had less than $5. In 1867 the population of the United States was 36,269,000. The amount of wheat produced was 212,441,400 bushels, or 5⅞ bushels per capita. In 1893, with 70,000,000 people, the product of wheat was 396,131,725, or 5⅝ bushels per capita. These figures disclose no overproduction in 1893 as compared with 1867. In 1867 there was 26,564,607 bushels of wheat exported, or 12.39 per cent of the total production, leaving 187,891,121 bushels for home consumption, 5¼ per capita. In 1893 there was exported 182,276,406, or 46 per cent of the total production, leaving 213,955,319 bushels for home consumption, or 3⅞ per capita.

The overproduction theory does not hold good again. In 1867 we exported only 12.4 per cent of the gross production, while in 1893 we exported 46 per cent. In 1867 we retained for consumption 5⅛ bushels per capita, yet in 1893 we retained only 3⅞ bushels per capita. But we will go to other sources and ascertain the required amount of food products to maintain life and health among our people and compare the result with the actual amount produced—this surely ought to be final.

If it can be shown that the people of the United States could consume this entire amount by being properly fed, then the whole question would turn on the ability of the different countries to purchase. Until it becomes a matter of actual want, which is not looked for in this case, the condition of the people in regard to their ability to buy and consume will determine the volume of export. The ability to purchase must be considered in connection with the ability to hold, or the necessity to sell, since they are all prime factors in the level price of the products of labor. If the people of the United States, in order to be fully and properly fed, demand the entire product of wheat, it must follow that whatever may be exported is because of a willingness to surrender certain comforts that are found in good living for the sake of receiving an equivalent from some other source, or relief from debt or similar obligations. It is not fair to presume that the people of this country or any other would deprive themselves of their natural allowance of bread or food as a mere act of philanthropy. The world has become too selfish for such action. These conditions are only brought about by the necessity to sell, which usually obtains through the medium of debt. The quantity of exports, therefore, in this case becomes a matter of contention between the demands of the stomach on the one side and the importunities of the creditor on the other. It is safe to assume that were all the people of the United States properly fed there would be very little, if any, products remaining for export. As proof of this, reference is made to the following section of the Army Regulations:

A ration is the established daily allowance of food for one person. As now fixed, its components are as follows: Twelve ounces of pork or bacon or canned beef (fresh or corned), or 1 pound and 4 ounces of fresh beef, or 22 ounces of salt beef; 18 ounces of soft bread or flour, or 16 ounces of hard bread, or 1 pound and 4 ounces of corn meal; and to every 100 rations 15 pounds of beans or pease, or 10 pounds of rice or hominy; 10 pounds of green coffee or 8 of roasted (or roasted and ground) coffee, or 2 pounds of tea; 15 pounds of sugar, 4 quarts of vinegar, 4 pounds of soap, 4 pounds of salt, 4 ounces of pepper, 1 pound and 8 ounces of adamantine or star candles; and to troops in the field, when necessary, 4 pounds of yeast powder to 100 rations of flour.

In addition to the above, the following has been made:

1. By direction of the Secretary of War, the following proportions are fixed for issues by the Subsistence Department of the pound of vegetables added to the ration by section 5, act of June 16, 1890, viz:
1. One hundred per cent in fresh potatoes; or,
2. Eighty per cent in fresh potatoes and 20 per cent in fresh onions; or,
3. Seventy per cent in fresh potatoes and 30 per cent in canned tomatoes, or in such fresh vegetables as can be procured in the vicinity of the station, or which it may be practicable to furnish from a distance in wholesome condition, such as onions, cabbages, beets, turnips, carrots, and squash.

The above ration is considered by army physicians as sufficient and proper for the sustenance of a United States soldier, and can with equal propriety be applied to all our citizens, due allowance being made for children. It can not be expected that exact figures can be given or precise results obtained, but approximate estimates can be made from fair and reasonable premises that are both conclusive and convincing. If a deduction of 20,000,000 be made from the present population for children, the 50,000,000 remaining may fairly be considered, so far as consumption of food is concerned, as men and women. Upon this assumption the following results would be obtained:

	Per day.	Per year.	Fifty million people.
	Ounces.	*Pounds.*	*Pounds.*
Beef	20	450¼	22,812,500,000
Flour	18	410¼	20,525,000,000
Beans	2½	57	2,850,000,000
Vegetables	16	365	18,150,000,000

If these enormous sums are reduced to the natural product by reckoning beef at 700 pounds per animal and flour at 38 pounds to the bushel, the result is as follows:

Beef cattle	number	32,589,285
Wheat	bushels	540,131,599
Beans	do	47,500,000
Potatoes	do	304,166,666

From these figures it is seen that the wheat crop of 1893 would fail to supply the home demands by 143,999,874 bushels. Remember this does not allow a single pound for exportation.

In 1892 there were only 52,095,568 head of cattle (estimated) in the United States. In 1893 the total production of potatoes was 183,034,203 bushels, and the crop of beans amounted to about 5,000,000 bushels. It is plain to be seen from this showing that the Government estimate of what is necessary for the support of its soldiers can not be applied to the balance of its citizens. The accuracy or abundance of these rations is not involved in this inquiry; the plain statement of facts is all that has been considered. By substituting other products of equal life-giving qualities in part for some of those mentioned in the rations it will be discovered that, taken as a whole, the annual consumption under these conditions would permit but little, if any, sales abroad. The inquiry and investigation sought to be inaugurated by this showing are, Why are not these products consumed at home? Are other nations better prepared to purchase the products of this country than the people are to hold and consume them? If such is the case, what is the cause and wherein lies the remedy? If the citizens of the United States are not in condition to consume their own products, is it not time to institute a vigorous inquiry as to the reason?

These statistics disclose a condition that should of itself refute the doctrine of overproduction, since it proves conclusively an underconsumption. There are other theories equally as erroneous put forward to account for the distress among the people, but I can only take time to expose the fallacy of the one used with greatest force among the people, that of overproduction. I am in favor of the free and unlimited coinage of both gold and silver at the present ratio and of issuing in addition to this a sufficient amount of full legal-tender paper money so that the aggregate would restore the price of labor and its products to the point occupied in 1872. I believe in the absolute abolition of all banks of issue, and, as Mr. Jefferson said, "restore that function to the Government, where it belongs."

I believe this would be fair to the great, plain people, whose toil and sweat pays for all in the end. I believe such legislation would fill the land once more with prosperity and contentment. The people have discovered that they have been plundered for the benefit of those having fixed incomes. They realize that England, the

robber nation of the earth, through her Rothschilds, are consuming the industries of this country by usury. Well may Mr. Gladstone declare against free coinage and cheaper money when England holds obligations against the people of other nations, as he then boasted, amounting to over $10,000,000,000. Having cornered more than half the gold of the world, they insist on forcing its purchase at their own price. These alien financial buccaneers, having fixed and established the price of gold by law, are determined that silver shall have no such rights. In order to make gold do a double amount of work and thereby enhance its power to oppress they are continually making assaults upon silver in order to degrade it in the eyes of the business world. It is claimed that should silver be remonetized it would remain at a discount as compared with gold. This would prove true if Government officials should pursue the same course as at present. If in payment of obligations the Secretary of the Treasury should, as now, refuse to pay out silver and utterly discard its use, of course it would fall to a discount. With the bill granting free coinage I would enact the following, as presented by Senator BUTLER recently in the Senate:

SEC. 4. That the issuance of interest-bearing bonds of the United States for any purpose whatever, without further authority of Congress, is hereby prohibited; and that the Secretary of the Treasury when redeeming United States notes, commonly called greenbacks, and Treasury notes issued under the provisions of the act of July 14, 1890, and when liquidating either the interest or principal of any of the Government's coin obligations, is hereby directed to make such payment in gold coin whenever the market value of 25.8 grains of standard gold is less than the market value of 412½ grains of standard silver, and to continue to pay in such gold coin until the market value of 25.8 grains of standard gold shall be equal to the market value of 412½ grains of standard silver; but when the market value of 25.8 grains of standard gold shall be greater than the market value of 412½ grains of standard silver he shall pay the interest and the principal of said coin obligations as they become due in silver coin, and continue to pay the same in silver coin until the market value of 412½ grains of standard silver shall be equal to the market value of 25.8 grains of standard gold, and said notes, commonly called greenbacks, when so redeemed, shall be reissued, as provided by the act of May 31, 1878.

I will quote from Senator BUTLER upon that subject:

The provisions of this section are perfectly simple and plain. It simply directs the Secretary of the Treasury, in express terms, with no option, to do what everybody thought he or any patriot would do in exercising the option of the Government in paying our coin obligations. The law expressly declares that he shall use this option to keep gold and silver at a parity. If that law means anything it means that whenever, for any cause, there is a greater strain on gold—that is, a greater demand for gold than for silver—that then he shall use the Government's option to pay our coin obligations in silver, and, on the other hand, whenever silver is scarce, whenever there is a greater demand for silver and the price goes up, that then he shall equalize the demand for the two metals by paying our coin obligations in gold and continue the strain on gold until the two metals come back to a parity.

I will illustrate. We can coin gold and silver on equal terms, but the Secretary of the Treasury can send silver to a premium or gold to a premium, just as he chooses, by an improper use of the option which is vested in him by law of paying out gold or silver on our coin obligations. This option was vested in him so that he could keep the two metals at a parity, but if he cares nothing for his oath of office, or for the interests of the people, or the credit of this Government, he can use this option to cause a disparity between the two metals. So far he has used his option for the profits of the gold trust, against the interests of the American people, and to the detriment of the credit of our Government.

It was intended in accord with the law of supply and demand that the two money metals should be kept at a parity by transferring the demand from one metal to the other. There is no other method by which this parity can be maintained. Now, this option has been transferred from the debtor to the creditor, who stands as the controlling power. Under the amendment of Senator BUTLER the free coinage of silver would not be a disturbing factor as is now prophesied. The fact that interest-bearing bonds are being sold in a time of profound peace for the purpose of preventing the free use of silver is both a crime and a disgrace and should drive any party from power who would consent to or become responsible for such infamous transactions. When we realize that all these sacrifices are being made to satisfy the rapacity of alien investors the enormity of the crime is fully disclosed.

When silver was stricken down and our currency contracted our people were compelled to borrow from the alien what our own Government refused to furnish. Our people were compelled to go to the alien money lender to borrow a medium of exchange that our own chosen representatives had stealthily or ignorantly taken from them. It was the contraction of our own currency that has entailed this enormous foreign debt that now hangs like a millstone about the necks of our people. Had we at all times been furnished with a sufficient amount of domestic currency, whether of gold, silver, or paper, we would not owe at this time a single dollar to the alien shylock. It is this criminal collusion on the part of our lawmakers with the money owners of Europe that has brought the people to their present unfortunate condition. For my part, I want this foreign alliance broken up as soon as possible and an American policy, with no alien complications, inaugurated in its place.

I am in favor of the free and unlimited coinage of silver, not because it will be a final settlement of this financial question or bring about complete relief from the evils under which we now suffer, but it will right a grievous wrong and afford a certain degree of relief; and besides it is close at hand. It is now in the minds of the people; they are clamoring for it, and will pay but little attention to other reforms until this has been secured. The free coinage of silver lies very near the great American heart of this country, and all other measures will count for naught until this has been fully and finally established. The demand for free coinage is spreading rapidly, and I sincerely believe there is not a State or a single Congressional district in this Union that could not be carried for free coinage upon that square issue alone. For one I am in favor of an American Government in the true sense of the term. I am in favor of an American system of finance such as our 70,000,000 of free, intelligent people should have and enjoy. I am opposed to an international currency, as being both dangerous and unsettled. What we want, in my opinion, is a domestic currency of gold, silver, and paper, all a full legal tender and of sufficient volume to bring about and maintain remunerative prices for labor and its products.

Let us make laws for our own people, for the whole of our own people, and let other nations do the same. Let us defend our people from every foe, whether they come in the shape of armed men or as cunning manipulators of our legislation. Let us stand squarely upon our rights as a free and independent people in all respects. In order to bring about such conditions speedily we should at once determine upon an independent American system of finance. Why should 70,000,000 of Americans bend the knee to the alien Jews of London? Why should this great nation go begging for gold when silver mountains high lies piled up waiting for use within its borders?

Mr. Speaker, we should open the mints to the free and unlimited coinage of silver and reap the benefits of this vast wealth of silver that so long and so invitingly awaits. It would make the dollar cheaper and correspondingly loosen the bands of industrial slavery that now are so galling to our people. It would make the day's work more profitable and the burden of debt less difficult to carry. It would make the day's works more plentiful and bring comfort where there is now distress, bread and meat where there is now hunger, and clothes where there is now rags or nakedness. It would dispel the dark clouds that now hang low and threatening and bring the glad sunshine of peace and prosperity in its stead.

We can inaugurate a system that will bring these much-desired results by guaranteeing the free coinage of silver, after which we can take up other measures and in the ultimate establish once more a government of the people. The power of the gold trust would be broken by such a course and the power which money now has to oppress would be destroyed. Having destroyed this plundering monopoly, we could successfully attack the next most oppressive, and in time wipe out the entire brood. This, I assume, is in line of duty with reform principles, and as such I am both willing and anxious to give it my earnest support.

Coin Redemption Fund.

SPEECH

OF

HON. WILLIAM P. HEPBURN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. HEPBURN said:

Mr. CHAIRMAN: Upon many questions I would accept the statement of the gentleman from Kentucky as of undoubted authority, but I am not willing to accept him as an authority when he discusses economical or historical facts. The gentleman has adverted to the fact that he was a member of the International Monetary Conference.

I have wondered, Mr. Chairman, why it was that the strength of the cause of those men who appeared as members of that conference, urging an international agreement with reference to the coinage of silver at an agreed ratio had failed of success. I do not wonder so much now after the gentleman has just announced that "the law of supply and demand always fixes value." If he announced that doctrine before the savants that composed the tribunal at Brussels I do not wonder that they failed. [Laughter.]

Supply and demand, Mr. Chairman, fix price, not value. Value is fixed by the cost of production, not by the law of supply and demand.

The gentleman has been equally unfortunate in his reference to historical facts. He made the astonishing announcement here that the Republican party of this country had demonetized silver. Mr. Chairman, he gave that statement something more than the character of an ignorant misstatement by his reference to the coinage laws of the United States, showing that he had at least some familiarity with the legislation on the subject.

Mr. McCREARY of Kentucky. Will the gentleman allow me to interrupt?

Mr. HEPBURN. For a question, yes; for a statement, no.

Mr. McCREARY of Kentucky. I only wish to state that what I said was that the Republican party had dropped the coinage of the dollar by the act of 1873, and I think if the gentleman will read the act he will find that they dropped the coinage of the silver dollar in that year.

Mr. HEPBURN. The gentleman said that "the Republican party had demonetized silver." I call the gentleman's attention to the fact that at the close of the Administration of Buchanan there was probably not one dollar of silver in the United States that had full tender quality. We had coined but $8,000,000 in all during the history of the country. There is probably not one man within the sound of my voice who, prior to 1878, ever saw a dollar weighing 412½ grains. The dollars that we had disappeared, and in 1853 the Democratic party had taken from the foreign coin, at the same time estimated at about $100,000,000, its legal-tender qualities. We did not demonetize silver; it was the action and inaction of the Democratic party that has caused silver to disappear in this country as metallic money. The Republican party, Mr. Chairman, has been the only party ever existing in this country that by its deeds has shown that it was the friend of silver.

Mr. LIVINGSTON. Are you willing to restore it?

Mr. HEPBURN. I am when you will restore the old conditions to the silver. You say that you "want to restore silver"; now let us have the old conditions. "We want the 'dollar of the daddies,'" is your cry. What was the dollar of the daddies? It was the dollar of 412½ grains of standard silver, coined out of silver worth $1.29 per ounce. [Applause.] That was the dollar of the daddies. Restore its quality—restore its value as silver bullion and we stand ready to restore the dollar of the daddies.

Mr. LIVINGSTON. How can you——

Mr. HEPBURN. Answer that yourself; don't put it to me.

Mr. LIVINGSTON. Let me complete it. How can you do that unless you restore the demand for it?

Mr. HEPBURN. You are asking for the restoration of the dollar of the daddies. You propose to restore its value by mere coinage, and yet you all acknowledge that that will not do it.

Mr. LIVINGSTON. I don't acknowledge it.

Mr. HEPBURN. Something more than coinage is necessary. If the Republican party were to consent to the free coinage of silver, that would not restore the dollar of the fathers. It would restore perhaps that quantity of silver as a part of the money of this country; but it would require something more than that to give it its full value in the money markets of the world. It would require that other act of friendship that the Republican party has illustrated, namely, that of injecting the credit of the United States to make good the deficient value of the bullion. And in that the Republican party, more than all else, has shown its friendship.

Mr. LIVINGSTON. What would happen to gold if you took away the Government indorsement?

Mr. HEPBURN. If the Chair would repress the sometimes irrepressible gentleman from Georgia, it would be a pleasure to me.

Mr. LIVINGSTON. I have no doubt of it.

The CHAIRMAN. If the gentleman from Georgia desires to ask a question, he will rise and address the Chair. Otherwise the Chair hopes he will remain in order.

Mr. HEPBURN. Why is it, Mr. Chairman——

Mr. LIVINGSTON. Mr. Chairman, may I ask the gentleman a question.

The CHAIRMAN. Does the gentleman yield?

Mr. HEPBURN. Yes, I yield.

Mr. LIVINGSTON. If you take away the indorsement by the Government of gold bullion or the gold dollar, what will be the price of gold bullion?

Mr. HEPBURN. I think it would remain precisely the same as it is to-day.

Mr. LIVINGSTON. If the indorsement of the world was withdrawn from it, as it has been from silver?

Mr. HEPBURN. You said "the Government of the United States."

Mr. HARDY. When did the Government of the United States ever indorse gold bullion?

Mr. HEPBURN. The silver dollar has two elements of value, entirely distinct——

Mr. LIVINGSTON. May I ask the gentleman another question?
